### Reciprocal-Trade Agreements

#### EXTENSION OF REMARKS

OF

HON. FRANK H. BUCK

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 3, 1940

Mr. BUCK. Mr. Speaker, from reports carried in the newspapers generally throughout the country during the recess of Congress, it appears that those who have hitherto opposed the reciprocal trade agreement policy of the administration have renewed their attacks with the hope of preventing the extension of the Trade Agreements Act beyond the date on which it is now due to expire, June 12, 1940. As usual, these attacks have been accompanied by misrepresentation and by misstatements as to the objects of the agreements, the manner in which they are negotiated, and the results that have come from them.

About the end of November last one of the candidates for the Republican nomination for the Presidency this year, the senior Senator from New Hampshire, Hon. STYLES BRIDGES, delivered a speech on the subject of trade agreements in the city of Sacramento, Calif. It was a very bitter attack against them. It aroused editorial comment in both the morning and evening dailies published in that city. The latter, the Sacramento Bee, editorialized as follows:

#### A FACTUAL STUDY OF TRADE PACTS IS NEEDED

Senator STYLES BRIDGES, of New Hampshire, who is now on tour of the country promoting his own candidacy for the Presidency, in his address in Sacramento recently, made a vitriolic attack on the trade treaties negotiated by the Roosevelt administration.

Without going into details he declared the effects of concessions made in these treaties have been adverse to American interests, particularly to agriculture, and declared if the negotiations of such treaties were to be continued they should be made subject to ratification by the United States Senate.

On the other side, Congressman FRANK BUCK, of this district, who certainly cannot be charged with not having the interests of agriculture at heart, has been one of the champions of the pacts, declaring they have opened wider markets for numerous California products.

The whole subject is to be given a thorough going over in the next Congress, for the very good reason that the authority to negotiate these pacts expires on June 12, 1940.

It will be unfortunate if the question of whether this authority is to be renewed or denied is settled on a purely political approach—the Democrats being for renewal, the Republicans against

it—on partisan grounds only, and making all their arguments from that angle.

Some 20 of these pacts are in effect.

Some of them have been operating for 4 years.

And it should be possible to determine, not from the political but the economic angle, what have been their actual effects.

In the discussion of these and kindred subjects, where partisan feeling and advantage are engaged, the tendency is to generate heat rather than to seek the light.

Must this always be so?

Must policies of this character always be determined by appeals to prejudice and emotion rather than by impartial diagnosis and study?

Why not more of the laboratory approach, a willingness to get all the data and then study it with an open mind before jumping to violent conclusions?

An expert fact-finding body, with no axes to grind, no thesis to support, and no votes to solicit, could be named by the President to go into this reciprocal trade treaty business thoroughly and render its verdict according to the facts it developed.

Then the average voter, as well as Congress, would have something concrete to chew on in making up his own mind as to what the national policy should be. Now he hears only the too strident voices of those who know they are right because prejudice and partisanship tell them so.

The writer of that editorial is an able man, well-educated, and versed in public affairs, which it is his duty as editor to follow and to comment upon. Yet even he felt called upon to ask questions which indicated he did not realize that the "laboratory approach" which he suggested should be used was in fact the method now in effect. If that was so in his case, I reasoned, would it not be even more so in the case of thousands of our citizens who have not had presented to them a true picture of the manner in which trade agreements are entered into? It is therefore my purpose this afternoon to explain something of organization and methods of negotiation under the Trade Agreements Act.

When that act was passed the preliminary question was how to devise an effective method to carry out the task imposed upon the President of negotiating these agreements. At that time there was in the Department of Commerce the Bureau of Foreign and Domestic Commerce, which had been working to develop foreign trade. The Bureau of Agricultural Economics in the Department of Agriculture was then, and still is, studying and reporting on foreign agricultural conditions and their effect on American agricultural exports. The Tariff Commission maintained a group of economists engaged in surveying the effect of various imports on domestic production of competitive commodities. The Treasury Department was likewise interested in this same subject of foreign trade.

It must be remembered that the men who were and are engaged in these studies and surveys are practically all of them civil-service employees. They do not owe their appointment to any political, in the sense of partisan, consideration. They are experts, and therefore they constitute expert fact-finding bodies. It must be further borne in mind that the groups I have referred to had operated with little or no coordination, although in November 1933 the President had authorized the creation of a policy committee of high-ranking officials of the agencies concerned in order to coordinate and centralize in the hands of a single agency the supervision of Government action as it might affect our import and export trade. This was named the Executive Committee on Commercial Policy, and it has continued to function since that date, meeting weekly.

Using this committee as a model, when the Trade Agreements Act was passed in 1934, a similar interdepartmental organization was built up, consisting of several committees. The first created was the Trade Agreements Committee, established by the Executive Committee on Commercial Policy, on June 22, 1934. High officials from the Departments of State, Commerce, Treasury, and Agriculture, the Tariff Commission, and the Agricultural Adjustment Administration, constitute this committee. It is strictly non-partisan, and those who compose it have been experts in the study of foreign and domestic trading problems for many years past. This committee has appointed subcommittees, composed of civil service economists and experts, for pursuing specific studies. For example, when it is thought possible that an agreement might be entered into with "X Country" an "X Country Committee" has been appointed to make detailed studies of our trade with that country. Similarly, "commodity committees" have been named to deal with specific groups of commodities, and technical committees have been appointed to deal with exchange or quota problems, or trade discriminations.

In addition to these committees and subcommittees, the President, by Executive order, on June 27, 1934, created the Committee for Reciprocity Information. Representatives from all the departments concerned in foreign trade comprised this committee. It is the contact committee between the public and the Inter-Departmental Trade Agreements Committee. Since it is composed of permanent Government officials it has, as the Sacramento Bee suggests such a body should have, no axe to grind, no thesis to support, and no votes to solicit. The sole object of the committee is to secure factual information. Its verdicts have been rendered according to the facts it has developed.

Since Section 4 of the Trade Agreements Act provides that before any trade agreement may be concluded opportunity shall be given interested persons to present their views, this committee receives the written views of any interested person on any subject in connection with the proposed trade agreement. It also gives opportunity in open hearings for oral presentation of these views. After an agreement has been concluded, its experts follow the course of its working and the actual operation of the agreement is analyzed and digested for the benefit of the various governmental departments concerned with foreign trade.

Every effort has been made to make the people, and particularly the farmers, believe that the public is not heard nor listened to. Farmers have been led to believe that the Department of Agriculture is not consulted in the negotiations. These are pure, bald misrepresentations of fact. Let me set out the text of section 4 of the Trade Agreements Act:

Before any foreign trade agreement is concluded . . . reasonable public notice of the intention to negotiate an agreement . . . shall be given in order that any interested person may have an opportunity to present his views to the President, or to such agency as the President may designate, under such rules and regulations as the President may prescribe; and before concluding such agreement the President shall seek information and advice with respect thereto from the United States Tariff Commission, the Departments of State, Agriculture, and Commerce, and from such other sources as he may deem appropriate.

With this in mind, Mr. Speaker, perhaps it would be advisable for me to say a word about the manner in which these agreements are initiated. Naturally, informal discussions between officials of the State Department and other departments to determine whether the negotiation of any

trade agreement seems to merit consideration and if the foreign government with which it is proposed to negotiate is in a receptive mood form the basis for a preliminary report from the Trade Agreements Division of the Department of State, recommending consideration of the question by the Trade Agreements Committee. This Committee then covers the whole field of our economic and trade relations of the country under consideration. What concessions we may obtain; what will be the effect on domestic industries resulting from tentative proposals; what trade barriers could we reduce ourselves; problems of exchange and quota control—are all carefully gone into by the experts who compose the Trade Agreements Committee.

If, after a thorough and impartial consideration, the agreement seems practicable, the Trade Agreements Committee appoints an Interdepartmental Country Committee, to which I have previously referred, and this Country Committee gets down to the real work, which may take months. The Department of Agriculture, as well as the Department of Commerce, is represented on the Country Committee, as well as on the Trade Agreements Committee, each by one or more experts who are responsible for preparing detailed studies of the products we export to the country concerned, foreign tariff rates, prospects of reduction in them, and similar questions. There is on each of these committees a member designated by the Tariff Commission, and that member is charged with preparing studies, analyzing in the same detail information regarding our imports from the country under consideration. These studies discuss the question of what concessions might be made by the United States, consider conditions in competing American industries, and conclude with recommendations either for or against a concession on any given subject.

After these full studies are completed, the Country Committee prepares a list of commodities imported by the country in question from the United States on which concessions are to be requested, together with their recommendation of whether there should be a tariff cut, quota change, binding of duty, or some combination, and the extent thereof. It similarly prepares a list of concessions which the United States might consider granting in return. Let me repeat that partisan or purely political considerations play no part throughout this long study. Each commodity is carefully examined in the light of its past tariff history, of the relation of imports to domestic production, of the probable effects on domestic production of greater imports and effects on competing domestic commodities before any concession is recommended for consideration. It has been stated before, and I repeat, that "the sole criterion is economic cause and effect; the sole objective is improvement of American commerce, foreign and domestic, from the viewpoint of the country as a whole."

These studies sometimes run into many volumes before they are submitted to the Trade Agreements Committee as final arbiter, as to whether any or all of the recommendations of the Country Committee shall be further considered in any negotiation.

Let us assume that in the meantime the State Department has found that the country in question is willing to consider the negotiation of an agreement. Let us assume that the decision of the Trade Agreements Committee is favorable to such an agreement. All of this, of course, so far has been tentative and has merely been the amassing of factual data.

The Secretary of State now issues the usual preliminary announcement that negotiations are contemplated with the country in question. The purpose of this preliminary announcement is to enable any interested person in the United States to suggest to the Committee on Reciprocity Information that such and such an export or import commodity should be included in the negotiation. Such suggestions are received by the committee, and they are likewise all carefully analyzed, and many times are added to the schedules, which have previously been prepared by the Country Committee. Usually about a month after the preliminary announcement, the Secretary of State gives a formal public notice of intention to negotiate. This notice is accompanied by a list of products as to which the United States will consider granting concessions to the other country. The reason this list is made public is to save the necessity of anyone filing a brief

covering commodities which are exchanged between the two nations but which are certain not to be included in the negotiations. The mere listing of a commodity, however, is no indication whatsoever that it will be the subject of a concession. The history of previous negotiations clearly demonstrates this.

The formal notice fixes a closing date for filing of briefs before the Committee on Reciprocity Information, and also the dates for oral presentation of arguments. These briefs and statements are then as carefully digested by the various departments involved and by the representatives on the Country Committee as were the original data submitted by the experts. The Country Committee may, and frequently does, revise its tentative recommendations as a result of these hearings. Its final conclusions are then reported to the Trade Agreements Committee, which again studies the two schedules of concessions to be given and concessions to be asked for, with the result that considerable modification generally occurs. When the schedules are finally approved by the Trade Agreements Committee they are then submitted to the Secretary of State, and ultimately to the President for their consideration, modification, or approval.

It is not until after all of this preliminary work has been done, and open and public hearings held, that the formal negotiations begin with the country in question. Every effort has been made to safeguard the preparation of the data required for negotiation from partisan or political influence. If there could be more of a laboratory approach than is now actually in existence under the present set-up, I would be the first to urge its adoption. We must realize, however, that the appointment of a group of men outside of the departments to pursue this same work would be almost a physical impossibility. There would be the fundamental difficulty of securing disinterested and dispassionate men engaged in any field of trade, commerce, agriculture, or finance, who would be able to give their time to complete the work on any one agreement, let alone all those which have been negotiated. Then there would still remain the problem of such a body securing the necessary factual data, on which to base their conclusions. In my opinion, they inevitably would have to come back to the experts in the departments of the Government at Washington for their figures, and for such statistical material as they would need. They would have to come to those same experts and technical advisers who are now serving on the various committees to which I have referred. Finally, since, as I have pointed out, these experts and advisers are practically all civil-service men, career men, they are far freer from political considerations than would be any group of men taken out of ordinary life, who naturally have leanings one way or the other politically.

The real truth of the situation is that the violent imprecations, such as were made in Sacramento by the gentleman from New Hampshire, are made because the Trade Agreements Act has already provided such a nonpartisan method of approach to the tariff question that it no longer permits politicians, lobbyists, and special interests to write the tariff policy of the Government. It will be developed in the course of this session, I am sure, that the interests of the industry, commerce, and agriculture of the United States have been protected in every agreement entered into so far, and I have no doubt they will continue to be protected.

The life of the Trade Agreement Act should be extended, not because there are so many other nations with which, with the world at war, we might now write agreements, but because we need to have this trading policy in effect and at hand to use as our contribution to the restoration of some sane economy of the world when war shall end. Failure to extend the life of the act would be notice to the rest of the world that we will not lift a hand to prevent an international economic debacle following the next peace similar to that which followed the end of the first World War. To repudiate our trade-agreement policy now would be a deadly blow to our moral leadership in behalf of international cooperation and peace. The minority Members of Congress have proposed to investigate the results of these agreements. The majority members of the Ways and Means Committee, which is responsible for this policy in the House, will not only gladly welcome

such an investigation but propose to develop to the full the actual benefits that have resulted from the negotiation of the agreements to date. Today I have not time to discuss these in detail; I shall go into the subject further, later.

What I emphasize today is that, though I personally may disagree with some of the details of the agreements, and while I might have found differently in some cases, nevertheless the agreements are the result of laboratory approach, made by experts with willingness, desire, and ability to get together all the necessary data.

I want to assure my good friend the editor of the Sacramento Bee that there will be no appeals to the emotions, no generating of heat by the majority, but we will depend upon facts and not upon reckless misstatements and distortions of figures and bitter appeals to prejudice for the sake of partisan advantage.

In conclusion, I might suggest to my Republican investigating friends that it might be well for them to adhere to facts as well. In proof I offer the other editorial that I referred to at the outset of my remarks. The Sacramento Union, an out-and-out Republican newspaper, spoke thus in its leading editorial of November 30, 1939:

#### NO RED HERRINGS

We profoundly believe the welfare of the Nation demands the ouster of the Democratic administration at next year's election.

In addition to an orgy of spending and haphazard experimentation, we hold the Rooseveltian new dealers accountable for the building up of a vast bureaucracy which dangerously threatens our democratic processes of government.

But the Sacramento Union intends to hold to the fundamental issues (good and sufficient in themselves) and will not be a party to red-herring tactics.

Senator STYLES BRIDGES, of New Hampshire, speaking here Tuesday in the interests of his own candidacy for the Republican Presidential nomination, emphasized integrity, decentralization in government, economy, and peace.

On those four general points we agree 100 percent. But when he goes on to drag in the "red herring" of the reciprocal-trade treaties we not only disagree but must say that such vote-courrying arguments do not enhance Senator BRIDGES' chances of being the G. O. P. standard bearer.

Secretary of State Cordell Hull is by long odds the ablest member of the Roosevelt Cabinet, and the principle of his trade treaties is sound. Furthermore, figures show that the pacts have achieved their main purpose—an increase in the Nation's exports.

If the United States is to sell its products abroad it is axiomatic that it also must buy abroad. However, to be in a position of favorable trade, we should sell more than we buy—a situation in which we happily find ourselves.

Our foreign trade had shriveled alarmingly at the time Secretary Hull, seeking to revive it, negotiated the first of the reciprocal treaties. The resulting uptrend kept pace with the signing of additional pacts.

Therefore, for Senator BRIDGES to say that the trade treaties have injured American agriculture and constitute a threat to the American standard of living simply does not accord with the facts.

The treaties have not benefited some agriculturists and some manufacturers, it is true, but that cannot be avoided under any system of trade regulation. If the cotton raisers of the South have benefited somewhat at the expense of the lumber interests of the Northwest, this has been offset by the fact that less Government aid (the burden of which is shared by the lumbermen) has been required by the cotton producers. If the pork producers and packers have been hurt some by the treaties, on the other hand, they have proved a boon to the fruit industry in California and Florida. In weighing the effects of the pacts, one has only to visualize what would happen in all lines if our foreign trade shrank to a mere trickle. We repeat, if we as a nation expect to sell, we also must buy.

#### John Andrew Martin, Late a Representative from Colorado

#### EXTENSION OF REMARKS

OF

#### HON. LAWRENCE LEWIS

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 3, 1940

EULOGY ON THE LATE JOHN ANDREW MARTIN, OF COLORADO,  
BY HON. CHARLES A. PLUMLEY, OF VERMONT

Mr. LEWIS of Colorado. Mr. Speaker, the Honorable JOHN ANDREW MARTIN, Representative in the Congress of the United

States from the Third Congressional District of Colorado, died in Washington, D. C., early Friday morning, December 23, 1939. Escorted by a committee of Senators and Representatives his body was removed to Pueblo, Colo., his home for over 40 years, where on Thursday afternoon, December 28, 1939, funeral services were held in the city auditorium by his Masonic brethren and by his comrades of the World War. Interment was made in Mountain View Cemetery in the city and State which he loved and served so well.

On Tuesday afternoon, December 26, 1939, shortly before the departure of the funeral party from Washington, D. C., more than a hundred colleagues and other friends of Representative MARTIN gathered informally to pay to his memory their last tribute of affection and respect. On this occasion the following eulogy was delivered by the Honorable CHARLES A. PLUMLEY, the Representative in the Congress from the State of Vermont:

JOHN ANDREW MARTIN, late of Colorado, came first to Congress in March 1909. Across the aisle from him as they first took their oath of office as Representatives in the Congress of the United States stood my father, the late Frank Plumley, of Vermont.

Differing diametrically in their partisan politics, these two men were personal friends who had many attributes and characteristics in common. They served together two terms. JOHN MARTIN declined a reelection in 1913 and later was induced to return to Congress. My father declined reelection in 1915, and never again was a candidate for reelection.

Nothing that I can say can add to the fame of either of these two gentlemen. Both, honored by their State and Nation, lived lives studded with extraordinary achievement, and their rank among those with whom they lived and worked was higher than any position either of them ever held; their honor was greater than that of any office bestowed upon or held by either of them.

Our friend JOHN ANDREW MARTIN saw in the holding of public office an opportunity which belongs to no man who does not feel the consequent responsibility and who is not determined to measure up to its obligations. Public life, in his estimation, is honorable only to such as honor it, and the scroll of fame, in his opinion, was for those only who can write their own name on it. Such were the demands he made upon others and which he set for himself. He gave all he had to the faithful and efficient discharge of the onerous and arduous duties of the offices which he held, and, taking and holding office, he met in full measure the high standard of public duty he set for others and for himself, with an eye always single to the honor and glory of the State from which he came and of the country that he so devotedly loved. The highest obligation which he owed his country as a citizen JOHN ANDREW MARTIN liquidated in full.

"That man is great, and he alone  
Who serves a greatness not his own,  
For neither price nor pelf;  
Content to know and to be unknown  
Whole in himself."

The welfare of this country depends upon such courage and spirit and understanding as actuated our friend with his undeviating sense of honesty, justice, and truth, together with those other virtues and qualities of character he inherently possessed, all of which made him great in spite of himself. Qualities and characteristics which at any time, and at all times, in any person, have won and always will win a positive and indestructible claim to a place among the select nobility of mankind.

Occasions such as this that make us meet here this afternoon give us to understand how William Dean Howells felt, and we can appreciate just what he was thinking about and know exactly what he meant when he wrote his never-to-be-forgotten poem entitled, "The Bewildered Guest"—who speaks as follows:

"I was not asked if I should like to come,  
I have not seen my host here since I came,  
Or had a word of welcome in his name.  
Some say that we shall never see him, and some  
That we shall see him elsewhere, and then know  
Why we were bid. How long I am to stay  
I have not the slightest notion. None they say,  
Was ever told when he should come or go.  
But every now and then there burst upon  
The song and mirth a lamentable noise,  
A sound of shrieks and sobs, that strikes our joys  
Dumb in our breasts; and then, some one is gone.  
They say we meet him. None knows where or when.  
We know that we shall not meet him here again."

"But in the night of death hope sees a star, and listening love can hear the rustle of a wing," and John Burroughs, born the same year as his contemporary Howells and who survived him for 1 year, strikes a sweeter and a different chord, comforts us by making us temporarily unmindful of our bewilderment, and under circumstances similar to those in which we find ourselves today, he writes:

"Serene I fold my hands and wait,  
Nor care for wind, nor tide, nor sea.  
I rave no more 'gainst time or fate.  
For lo! my own shall come to me!"

"The stars come nightly to the sky:  
The tidal wave unto the sea,  
Nor time, nor space, nor deep, nor high,  
Can keep my own away from me."

I have lived long enough to know that there is no heroic poem in the world but in reality is a biography of a man; that there is no life of a man faithfully recorded but is in itself an heroic poem, rhymed or unrhymed. So it seems to me that—

"Perchance beyond the veil unreal there lies  
Somewhere fulfillment we now court in vain;  
Perchance beyond this haggard life that dies  
Dwells that for which our spent ideals strain.

"We play with life, a game that ends in losing,  
And yet still must be played, though cards are stacked.  
What matter if the deal is not our choosing?  
What matter if we play with bodies racked

By pain or filled with joy? The game is such  
We gamble till death shows the winning hand.  
Yes: truly we must trust God overmuch  
To play a game we do not understand.

It might be that the game is never ended  
Though death may win from life, there still may be  
A power beyond time, uncomprehended,  
That does not fear to fight for such as we.

To futures that forever will endure  
This life and death may be the overture."

Finally, I doubt if I could pay our friend a finer or more deserved tribute than to say that through the years as I have observed him and heard him and known him he constantly reminded me of Abraham Lincoln. Many, many others have been similarly reminded.

Lincoln-like he was; and as Edwin Markham said of Lincoln, so may we say of JOHN ANDREW MARTIN:

"He held his place—  
Held the long purpose like a growing tree—  
Held on through blame and faltered not at praise—  
Towering in calm, rough-hewn sublimity.  
And when he fell in whirlwind, he went down  
As when a lordly cedar, green with boughs,  
Goes down with a great shout upon the hills,  
And leaves a lonesome place against the sky."

### Third-Term Bugaboo

#### EXTENSION OF REMARKS

OF

HON. HAMPTON P. FULMER

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 3, 1940

EDITORIAL FROM TIMES AND DEMOCRAT, ORANGEBURG, S. C.

Mr. FULMER. Mr. Speaker, under leave to extend my remarks in the RECORD, I want to insert an editorial from the Times and Democrat, a daily paper at Orangeburg, S. C., referring to 1940 politics, entitled "Here's What You Will Hear," as follows:

#### "HERE'S WHAT YOU WILL HEAR"

The third-term bugaboo will be trotted out to head off the President and to discount his influence upon the convention. The conservative Democrats—and there are a number in this country—will dedicate their efforts to peace and harmony, so-called, and they will urge the selection of a pseudo-liberal who will gradually alter policies to conform to the ideas that all but wrecked the Nation during the mumbo-jumbo era of Harding, Coolidge, and Hoover.

There will be some talk about burdensome taxes and many crocodile tears shed over the fate of the poor man who has to bear them. Nothing much will be mentioned about the reduced interest rates that save most people more than they pay in taxes, and you will hardly know that there is a social-security program in operation. The battle cry will be "Let business promote recovery," and the Government will be urged to make it easy for business to make prosperity in the good old American way.

This would be laughable if the people could be depended upon to remember as far back as 1929, but the bright boys who control the Capital of the Nation bank heavily upon the fact that the people have little memory and less brains. Business had the reins up to 1932. Under the Harding regime, when the boys on K Street were raking the Nation, and under the Coolidge administration, when the Government did everything that business thought would lead to greater profits, and likewise under the Hoover leadership, when two cars and two chickens were to be located in every garage and pot, respectively, the business boys had their day, and when they finished the game of profits for themselves there was little left in the Nation.

WAS ORANGEBURG COUNTY AFFECTED?

Did any of this evil penetrate into Orangeburg County? Well, how many banks closed in this county between 1920 and 1932? How many farmers lost their farms? Even some of our so-called well-to-do can tell you of the "investments" they made in "gilt-edge" stocks during the big days when poverty was being banished from America. Some of our bankers, if they care to talk about the dark days, will be able to show you how some of the money from this county went into foreign countries, from which it probably will never return. All this, mind you, in the good old days when the big boys of business were showing America the way to permanent prosperity under the doctrine of individual initiative and private enterprise.

We could go on, but why dig up a corpse? We do not blame the financial wizards who yearn for their lost profits if they desire the defeat of the policies set in motion by President Roosevelt. We do not blame manufacturers, protected by an absurd tariff, if they fight farm benefits and the reciprocal trade-treaty program. In fact, we do not blame those who expect to make huge profits out of cooperation with the Government if they yearn for a new day in which to walk hand in hand with the Chief Executive.

ATTEND YOUR CLUB MEETING

For much the same reason we suggest to the people of this area that they take a decided stand in favor of the administration that has done so much to make their opportunity greater. Individuals who favor active democracy and have some faith in the ultimate improvement of mankind ought to be in favor of continuing the New Deal. Farmers who have gone through the past decade and a half and who face an uncertain future ought to be interested in maintaining in office those who have exhibited concern over their plight.

Out of my observation in speaking with people on an extensive western trip recently, holding hearings on the forestry problems of the United States, I was able to ascertain that they were deeply conscious of the wonderful efforts on the part of President Roosevelt in his many legislative programs and policies instigated in the interest of the great common masses of the people.

I also know that this is true with the people in the Southland.

It is true that some of the policies of the President have been miserably administered, and perhaps we have not gotten the results that were in the mind of the President. However, this certainly cannot be charged to the man in the White House.

The large majority of the people who are kicking the President today are those who came to the administration in 1933 on bended knee begging that something might be done to relieve the serious situation which this country had gotten into because of uncontrolled, wild, speculative, monopolistic, selfish price fixing, all of which absolutely bled the country white.

The only thing that is holding down normal prosperity at this time and a square deal to the average citizen of this great Republic is selfishness and greed, all of which is doing more to breed communism than anything else.

If these selfish, monopolistic groups, who are spending millions in propaganda and doing everything possible to break the President's neck, and defeat the policies of this administration, would join in heartily in working out a broad, constructive program whereby the unorganized millions in this country would have a chance, the months and years would not be many before we would have a happy, contented people—a people who would be owners of their own homes and farms, and the unemployed would be employed, thereby enjoying some of the real benefits from the great natural resources of our country, to which they are clearly entitled.

I agree with the editor in this editorial that it is time for the people to give serious thought to the propaganda that will be carried in the press and over the radio, and especially in books and magazines written or paid for by these selfish individuals for the sole purpose of defeating those who are interested in any program whereby the unorganized might be given an equal opportunity with the organized and a square deal as to fair wages and a fair price for that which they produce.

I am sure that if the people will keep this in mind and vote accordingly in the coming election the months and years will not be many until these monopolistic groups will be forced to operate on a live and let live basis, and that thousands of parasites who are now operating between producers and con-

sumers, sapping the very lifeblood out of both of these great classes of people, will be weeded out.

Why are the Finns today putting up such a brave and courageous fight? They have something to fight for.

Perhaps 90 percent of the Finns own their own property, they are a happy and contented people. I know that this is true in a great many of the Scandinavian countries.

In the coming session of Congress there will be many lengthy and loud speeches made for the purpose of spending untold millions in building airplanes, battleships, and so forth, in the name of preparedness while, as a matter of fact, there is no possible indication of any foreign country coming over and interfering with this country, and certainly we do not expect to go overseas to engage in the present war or any other foreign war.

If Great Britain and France should win, and I hope that they will, certainly we need not fear any aggression on the part of these countries, and if Germany should win or lose, anyone with any experience out of the past wars that we have had should certainly realize that it would take Germany from 25 to 40 years to get in any position to even protect herself against the aggression of any other country, let alone coming over and tackling the United States.

If this is true, may I ask: "What other countries are we fearful of making raids on the United States?"

My friends, it is all propaganda by the War and Navy Departments, and those who would love to see the United States get into war, those who have a selfish purpose, who are anxious to make profits by producing millions of dollars' worth of implements of war at the expense of the taxpayers, which would be perfectly useless between now and any time that this country may ever have to engage in a war in defending our own country.

I agree with the President, in his message to the Congress today, wherein he stated:

The building up and preserving of our natural resources for the people, and in doing those things that would make out of our people a happy and contented people, would be one of the greatest moves on our part in building up our defenses.

If only we had more men in Congress deeply conscious of our domestic problems, who would give of their time and attention in building up our natural resources, rehabilitating the great, unorganized masses of the people in such manner that they might be able to secure some of the benefits from the great resources of our country, to which they are clearly entitled, which would enable them to own their own homes and farms, securing proper prices for that which they produce, to my mind we would be able to do more to build up our defenses and in preparing our people and our country for war or any emergency than anything that could be done.

I do not believe the people of this country will forget the determined efforts on the part of President Roosevelt during his administration in their behalf, especially the great masses of the people.

Abraham Lincoln, a great defender of the people, on one occasion said:

You can fool all of the people part of the time, and part of the people all of the time, but it is impossible to fool all the people all the time.

William I. Sirovich

EXTENSION OF REMARKS

OF

HON. JOSEPH A. GAVAGAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 3, 1940

EULOGY BY RABBI ELIAS L. SOLOMON

Mr. GAVAGAN. Mr. Speaker, ladies and gentlemen of the House, as a friend of our lately lamented colleague,

Dr. WILLIAM I. SIROVICH, of New York, I think it fitting and appropriate that the beautiful eulogy delivered at his bier by the Reverend Rabbi Elias L. Solomon be inserted in the CONGRESSIONAL RECORD.

We have come here to bemoan the great loss which the entire community has sustained through the sad passing of our friend, Congressman WILLIAM IRVING SIROVICH. We are all fellow mourners, for Dr. SIROVICH belonged to the community and to the Nation whom he served faithfully in great things as in small. His life and achievements give evidence of what a democracy like ours can produce.

His parents came here some 60 years ago. The simple piety and homely virtues amidst which he was raised, coupled with the ideals of our great Republic, molded the sterling and admirable character of Dr. SIROVICH. He appreciated to the full his double heritage—his heritage as a son of the great historic people, Israel, and his heritage as a citizen of the United States of America—and he repaid both in full measure by his lifelong, intelligent, and devoted service.

Dr. SIROVICH was a champion of his people—a proud, upstanding, self-respecting Jew. He understood full well that the Jew is truest to our beloved America when he is truest to the best things in his spiritual inheritance. He knew that the intelligent, worthwhile non-Jew respects the Jew of genuine faith—and SIROVICH was that. He was loyal to the God of his fathers, regular in his devotions and observances of his ritual, attached to the synagogue—a Jew in every fiber of his being.

He early learned the quality of Jewish hospitality, and his home was an open house to countless men and women of all creeds who came to him for help, advice, and guidance. In all this was manifest the beneficent influence of his pious parents—his sainted father, Rabbi Jacob Sirovich, and his revered mother, Rose Sirovich.

He possessed what our ancient Talmudic sage regarded as the best asset anyone can acquire, the "lev tov"—the "good heart." In his breast beat a heart overflowing with the "milk of human kindness" and as a great humanitarian he will be remembered by thousands.

His humanity is best shown by the following episode:

One of his college professors once visited him in his office and complimented him on his progress to fame and fortune. Modestly and wittily SIROVICH replied: "As to fame, I don't know anything about that; and as to fortune, this is the situation: You see here about 25 patients; of these, 15 I treat gratis. To 5 or 6 I will have to give a few dollars to enable them to pay for the prescription; the rest will probably give me promises of payment."

After giving up his practice to attend to his official duties in Washington he still treated many of his patients gratis on Saturdays and Sundays, visiting the poor in their wretched homes on the lower East Side.

Congressman SIROVICH loved his country with all the ardor of his soul, and eloquently he preached American ideals. He was unsparing of himself in the performance of his duties. He strove for better government and for the better administration of justice.

The author of Proverbs says: "Seest thou a man diligent in his work? He shall stand before kings." WILLIAM SIROVICH was diligent and faithful in his work, and he stood before kings and princes. He stood before the greatest in the land and won the esteem and the friendship of all—the President of our country, the Governor of our State, the mayor of our city.

Now SIROVICH is standing before the Supreme King on high. He can say, "Father, judge me. My hands are clean; my heart is pure. I have ever striven to perform my duty in accordance with my ability. I have faithfully served my God, my country, my people, and my fellow men."

The life and achievements of our friend can serve as an object lesson to the whole world as to the possibilities of development and accomplishment in a free, democratic country like ours.

May the memory of his noble life be a source of solace and inspiration to his stricken sisters, his beloved nephews and nieces, and the rest of the family. May God heal the broken-hearted and wipe away tears from off all faces and send healing to all suffering, sorrowing humanity.

### A Splendid Man Passes

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 3, 1940

EDITORIAL FROM THE WASHINGTON POST REGARDING THE LATE ROBERT FECHNER

Mr. RANDOLPH. Mr. Speaker, it was my privilege to personally know Robert Fechner during the years he was associated with the Civilian Conservation Corps. It was my pleas-

ure on several occasions to have him visit my home State and town. He was a quiet, unassuming gentleman who rendered outstanding service to his Government. That splendid organization, the C. C. C., will stand as a lasting tribute to his genius and ability. I include the following editorial from the Washington Post of January 1, which I believe is a fitting testimonial:

[From the Washington Post of January 1, 1940]

ROBERT FECHNER

Robert Fechner has been so closely identified with the Civilian Conservation Corps that the success of that organization must be counted as a part of his record of public service.

Early in the Roosevelt administration Mr. Fechner was called to Washington to organize the C. C. C. From that day until his untimely death yesterday Mr. Fechner had devoted virtually all his energy to the development and supervision of the C. C. C. Indeed, his devotion to that task and his long hours of work to make it a success are said to have been one reason for the ailment which led to his death.

Under the careful direction of Mr. Fechner the C. C. C. has become a symbol of human reclamation. A total of 2,500,000 young men have learned the discipline and healthful routine of C. C. C. camps. Taken from the road, from street corners, and from homes in distress, young men were taught to work and given a new outlook on life. The useful tasks they have performed are numerous, but the greatest achievement of Mr. Fechner was in rescuing these young men from blind alleys and giving them new opportunities they could not otherwise have enjoyed.

President Roosevelt's statement on the passing of the C. C. C. Director indicates deep appreciation of the work he has done. Appreciation can best be shown, however, by preserving the C. C. C. in the form in which Mr. Fechner developed it. The Director had vigorously resisted every move to militarize the conservation camps, because that would divert them from the worthy purpose they now serve. It would be a pity if that sound policy should be weakened now that Mr. Fechner has passed on.

### Education of Indian Children

#### EXTENSION OF REMARKS

OF

HON. JAMES F. O'CONNOR

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 3, 1940

ADDRESS BY ROBERT YELLOWTAIL

Mr. O'CONNOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech delivered by Robert Yellowtail, superintendent of Crow Indian Reservation, Crow Agency, Mont., upon the question of the necessity of educating Indian children:

WHAT SHALL WE DO TO BE SAVED?

An avalanche, in a form of a highly complicated and swiftly changing economic order involving every phase of our economic rehabilitation in the United States of America, has enveloped our people. The question now is: What shall we do to adjust the untutored mind of the Indian to the many problems presented and developed by this crisis.

Work and education alone will liberate the Indians as a self-sustaining and contributing people. Without work of a constructive nature or an education sufficient to understand the swiftly changing complicated economic order and problems of today, the Indians as a people and as individuals are sunk. They will remain dependents, incompetents and in a ward status as long as the Government will permit.

Honest work of any kind, be it either common labor or otherwise, is honorable. Abraham Lincoln, before he educated himself as a lawyer, split rails (the hardest kind of common labor) for a living.

The command of God to Adam and Eve in the Garden of Eden, namely: "By the sweat of thy brow shalt thou eat bread," is as true today as then. The Indians are no exception to the rule—they too must roll up their sleeves and by the sweat of their brows feed the hungry stomachs of those dependent upon them for support and food.

The world owes no one a living and this includes the Indians. Work or starve is the rule we all must bow down to. The lazy and those who refuse to work must begin their starvation process—the minute they cease to work; they suffer not alone—his wife and children starve and suffer with him to a greater degree.

The great liberating force is education or intellectual development. This need not be in books alone, it may be in a mechanic's

workshop, or it may be behind some musical instrument, or some other one of the many arts. Yet, whatever it be, it is above the common laborer's status, and brings to the recipient no drudgery connected with the work of the hands, feet, and back muscles which brings only a miserable pittance as pay.

The ideal station of life is to develop the intellect to that degree where you may command a remuneration commensurate with your needs and of those dependent upon you for support and, in addition, the ability to accumulate and lay aside something for your support and comfort in old age.

The educated man's talents and ability know no bounds, except the deep-blue sky above and the utmost bowels of the earth and that of the sea, while the uneducated can perform only as common laborers and receive a mere pittance for such labor. It, therefore, appears that the salvation of the Indians individually and as a people is constructive work and education, and the ability to apply same to some useful ends. These are the only doors that open to the economic salvation and the intellectual deliverance of the Indians of the United States.

#### EDUCATION

Education, taken from the Latin word "educare," to lead out, is a never-ending process. It begins the day we are born and ends the moment we die.

There are two schools in which we seek our education:

1. The public-school system in all of its successive grades from the kindergarten to the university; and
2. The outdoor school of experience in which we are jostled about by hard knocks in an effort to stand on our feet in competition with others.

The question is: Which one of these two schools shall I take my training in?

A recent investigation into the worth in dollars and cents of an education by a large insurance company discloses the following interesting figures:

1. \$1,440 is the average yearly income of an eighth-grade graduate.
2. \$2,020 is the average yearly income of a high-school graduate.
3. \$3,500 is the average yearly income of a college graduate.

Their figures prove conclusively that a higher education pays large dividends and is absolutely necessary to meet the complicated problems of today.

Regardless of the above figures the education road is strewn with those who quit, give up, and refuse to inform themselves of the things that they should know in order to be able to compete with others on equal terms under the highly competitive economic conditions that we are forced to live under today.

The first group composes those who quit the free schools—those who prefer to work with their hands, feet, and back muscles instead of their heads.

The second group are those who choose the schoolhouse, with all of its successive grades, complete their training therein, and profit by the experience gained then and thereafter, and are now at the end of the education road enjoying the rewards of a full and understanding life. Their lot is a never-ending opportunity to better and advance themselves because of their training and perseverance. The lot of the other group, which might properly be called quitters, is despair and regret, with all of its attendant circumstances.

#### THE COMMON LABORER

The common laborer, like the horse and buggy, belongs to an era that has passed—never to return.

Organized labor in all its subdivisions refuses to recognize him as a competent artisan worthy of membership in their ranks or unto whom employment should be extended. The highly mechanized industrial set-up under which laborers seek employment looks for trained artisans in all the branches of the labor organizations; and hence they, too, refuse to recognize him or extend employment to him. He, therefore, is forced to seek employment wherever he can get it and principally to the farms of the country, which also are now highly mechanized and require trained mechanics to operate the farm's machinery.

Where shall the common laborer go to find employment in order that he may feed and clothe his family and those depending upon him for support is the most serious question that confronts him. Indeed, whenever he is given employment at odd jobs, it is at a low and miserable wage.

Statisticians give us some interesting figures in connection with his plight. They are as follows:

"Out of every hundred men looking for work only 17 will find work as common laborers."

The foregoing truth should be an urge to the rising generation, which includes the Indian boys and girls, to educate themselves out of the common-laborer class by mastering some useful occupation or line of work that will assure them of the ability to lay aside something now in the days of their youth for happiness and comfort in their old age.

The lot of the common laborer, under our highly mechanized industrial set-up, is work only once in a while and then at a miserably low wage that is entirely out of proportion to his needs.

Let us all strive to educate ourselves out of the common laborer's class, which is the pick-and-shovel squad, the grief squad, and the squad of despair and despondency.

#### Census Jobs

#### EXTENSION OF REMARKS

OF

HON. OSCAR YOUNGDAHL

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 3, 1940

Mr. YOUNGDAHL. Mr. Speaker, under leave to extend my remarks in the RECORD I wish to again call to the attention of this body the bill which I introduced at the last session of this Congress, H. R. 7148.

Briefly, that bill provides that all persons given temporary employment in the taking of the 1940 census, other than those under veterans' preference and civil service, be taken from the rolls of those certified as being in need of public relief.

I have just returned from my own State of Minnesota. I know there are hundreds of well-qualified persons in Minnesota who need this Government work. I have been told that already married women whose husbands are employed in private industry have been engaged for this work. I do not doubt but that other States are in exactly the same position as my State.

With millions of persons desperately in need of employment, I feel that it is unjust for the United States Government to give out these census jobs purely on a basis of party patronage and political favor. If the Government has jobs to offer, let us give them to those who need them as long as those persons are qualified to do the work.

I intend to press for consideration of this bill and to demand its passage.

#### The Old Pioneers

#### EXTENSION OF REMARKS

OF

HON. JAMES F. O'CONNOR

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 3, 1940

EDITORIAL FROM THE BIG TIMBER (MONT.) PIONEER

Mr. O'CONNOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial appearing in the Big Timber Pioneer, of Big Timber, Mont., dedicated to the pioneers of that locality, written by the Honorable Jerome Williams, editor of the Big Timber Pioneer:

[From the Big Timber (Mont.) Pioneer]

#### TO THE OLD PIONEERS

This golden jubilee edition of the Big Timber Pioneer is dedicated to the pioneers, living or dead, who came here a half century or more ago by covered wagon, bull team, saddle horse, or slow-moving train, not by auto or airplane.

The work of preparation has been extremely arduous, handicapped by lack of equipment usually found in a country office, and a force limited to four.

With this explanation, it is presented to you, also to many who have moved to other places but still retain memories of Big Timber and Sweet Grass County.

Good or bad, it is your golden jubilee edition.

Journeying back 50 years or more, as you scan its pages, it will revive events of other days, better days, days that will never return. Changing conditions prevent that.

You will recall the time when men lived within their income, when their credit was good at any store, their word accepted at face value, their debts paid when due, in full; sheriff's sales very seldom.

Also the days when parents supported their children, and in time children returned the favor. Today relief, old-age assistance, social security, and unemployment compensation support both.

Days of the horse and cattle thief still linger in memory lane, but, numerous and active as they were, each, in time received his just desserts. Today you meet the unreliable promoter, come and

go boomer, worthless-stock salesman, defaulting banker, ever-present deadbeat.

Originally you started for the county seat at 5 a. m., team and wagon, made your purchases, and returned home in time to milk. Today you leave at 5 p. m. by auto, make your purchases, attend a movie, and are home by bedtime.

Further back you recall the day of no telephone, few decent roads, doctors traveling by saddle horse or buggy, arriving many times after death had paid the first visit.

You remember the midnight candle or kerosene lamp midwife, bringing one more into the world in a squatter's cabin, one who in later years picked up the labor you had been forced to lay aside, and carried on the pioneer development of a pioneer father.

Today the hospital trained nurse in uniform, attending physician by telephone call, brings in a member of the third or fourth generation, assured of a white-collar job at any time he presents a high school or college diploma.

Then, turning backward the pages of memory, you recall the oldest pioneer of all, Father Time.

First you picture him with his small force of captains and lieutenants—pneumonia, rheumatism, consumption, fever, Bright's disease, dysentery, smallpox, paralysis, diphtheria.

Today you see him surrounded by an ever-increasing official staff, an army of recruits and regulars—general debility, major operation; captains or lieutenants heart attack, embolism, cancer, ulcer, obstruction, myocarditis, arthritis, neuritis, sinus, gland, infantile paralysis, tonsil, adenoid, appendicitis, with orderlies and corporals galore.

You find that diet, rest, fresh air, ear drum, bifocal, false teeth afford a temporary but ineffective resistance.

Father Time, a persistent and relentless enemy, moves slowly but surely.

So, as you turn the many pages of the Golden Jubilee it will revive the enthusiasm of youth, bring back faces almost blurred on memory's page. Streets and buildings, unique wearing apparel, whisker, mustache, saddle horse, bull teams, jerk-line caravans may cause an occasional tremor of the lip, tear in the eye. Then eyes will brighten as in days of yore; pulse beat faster, step quicken; and laughter, real laughter, will ring with all the vigor of youth. And then—

And then what?

The answer is given in the following beautiful poem, written more than 50 years ago by Bessie Chandler, whoever she may have been:

#### KEYS

Long ago in old Granada, when the Moors were forced to flee,  
Each man locked his home behind him, taking in his flight the key.  
Hopefully they watched and waited for the time to come when they  
Should return from their long exile to those homes so far away.  
But the mansions in Granada they had left in all their prime  
Vanished as the years rolled onward 'neath the crumbling touch of  
time.

Like the Moors, we all have dwellings where we vainly long to be,  
And through all life's changing phases ever fast we hold the key.  
Our fair country lies behind us; we are exiles, too, in truth,  
For no more shall we behold her. Our Granada's name is Youth.  
We have no delusive daydreams, and rejoice when, now and then,  
Some old heartstring stirs within us, and we feel our youth again.  
"We are young," we cry triumphant, thrilled with old-time joy and  
glee,

Then the dream fades slowly, softly, leaving nothing but the key!

### Old-Age Insurance

#### EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 3, 1940

EDITORIAL FROM THE NEW YORK TIMES

Mr. RANDOLPH. Mr. Speaker, when I voted for the Social Security Act I realized that it was only a beginning in our efforts to bring about aid to the aged, assistance to the unemployed, and benefits to the crippled and blind. I shall support an extension of aid to these groups. In this connection I include the following timely and thought-provoking editorial from the New York Times of Friday, December 29, 1939:

[From the New York Times]

On January 1 the Federal old-age insurance plan, for which the country has been paying taxes for 3 years, will go at last into full effect. As of that day the Government will begin paying benefits under the plan. It will be a notable day, certainly, in American social history, for prior to the passage of the original Social Security Act the United States lagged far behind other great coun-

tries in the provision made for its aged. Next month it will begin payments to aged men and women under a social-insurance system far broader and more liberal than any ever undertaken by a government.

The history of the Social Security Act supplies an outstanding example of the great advances possible under a cooperative democratic process. The original act was passed somewhat hastily; the administration was more interested in establishing a broad principle and in meeting a great need than in scrutinizing methods or details. But with the passage of time the original act was seen to have many inherent weaknesses. These weaknesses and their possible remedies were uncovered by study and discussion. The study was carried on officially by the Social Security Board and, more importantly, by the Social Security Advisory Council appointed by a Senate committee and the Board for that very purpose. Outside of official circles there was much illuminating discussion by economists, actuaries, and others. The changes made in the law in the last regular congressional session grew out of this educational process.

In popular discussion the weakness of the old law that was most frequently emphasized was the attempt to build up a huge reserve fund. But it came to be recognized in time that this contemplated fund was merely the byproduct of deeper weaknesses in the whole original nature and scale of benefit payments. It was seen that the old law was based on a false analogy with private insurance, which rests on the principle of individual equity; whereas social insurance, as one able commentator has put it, should be "designed primarily to serve society as a whole—not the particular individual." This is the objective of the Social Security Act as now revised. It recognizes, as the original law did not, that benefit payments are useless unless they are adequate. It recognizes, also, more clearly than the original law, that benefit payments cannot be justified under a governmental plan if they are much more than adequate. Finally, it recognizes that the family, not the individual as such, is the important financial unit in any social plan.

It is on these principles that the present plan is based. So that the payments that begin immediately may be adequate, they are based on the individual's average earnings rather than, in the old plan, on his total or accumulated earnings. And so that payments may provide for genuine needs, they are varied in accordance with family requirements—providing for aged wives, for widows and dependent children—and not in any strict accordance with previous earnings. The bureau in charge of the plan is now busily engaged in searching out those entitled to benefits and notifying them accordingly. Those who establish their claims in time will receive their first checks from the Government at the end of January.

Though the present Federal old-age insurance plan appears to be in many ways admirable, the scale of benefits and the qualifications necessarily represent a series of compromises, and experience will no doubt bring out anomalies and abuses. We should be ready to correct these promptly when they appear. Serious problems confront us, also, in connection with extending the coverage of the plan in the future and in financing it in later years when larger payments are necessary. These problems will require expert study. An excellent model has already been established in the appointment of the Social Security Advisory Council. Congress would do well if in the coming session, instead of rushing into any new social legislation, it were to appoint similar bodies to study and report upon the great problem of health insurance and the question of framing unemployment-insurance programs more satisfactory than those which we have at present.

### The Late F. A. Silcox

#### EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 3, 1940

EDITORIALS FROM THE WASHINGTON POST AND WASHINGTON EVENING STAR

Mr. COFFEE of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herein an editorial from the Washington Post of December 21, 1939, in which the brilliant editor of that great daily newspaper, in superb English and trenchant phrase, pays condign tribute to the late Dr. F. A. Silcox, Chief of the United States Forest Service.

I had the good fortune to be a warm friend of Dr. Silcox and heartily concur in the sentiments expressed in this editorial. In the passing of this great public figure the United States has sustained a heavy loss. Dying as he did, a few weeks subsequent to the passing of Robert Marshall, brilliant

and distinguished Chief of the Recreation Division of the Forestry Service, that branch of the Federal Government has sustained telling blows.

Mere words are feeble as instruments with which to eulogize a man of such distinction. I therefore leave it to the editorial to express the feeling entertained by thousands of sincere admirers of the late Dr. F. A. Silcox:

#### A GREAT PUBLIC SERVANT

F. A. Silcox, Chief of the United States Forest Service since 1933, was the very paragon of a public servant.

A man of fine presence, keen intelligence, and superb technical competence, he never demeaned his service as a Government official by regarding it merely as a means of livelihood or as a stepping stone to greater material rewards outside. Private avenues of preferment constantly beckoned to him. During the post-war years, as well as during his earlier days in the Forest Service, he had proved himself to be a man of unusual administrative ability with a remarkable capacity of winning the loyalty and enthusiastic cooperation of his subordinates.

But Mr. Silcox refused to be lured away from his professional career. He was equally uninterested, as his refusal recently to accept the post of Under Secretary of the Interior indicates, in offers of higher administrative posts in the Government if it meant the abandonment, even in part, of the task of saving America's dwindling forests. To that task he had consecrated himself. And he performed it with high devotion and unflagging energy.

The Nation, the Government, and a host of friends in Washington and throughout the country are poorer by his untimely passing.

Subsequent to writing the above there was published in the Washington Evening Star of December 22 another editorial relating to F. A. Silcox. Because this editorial is so eloquent and pays such a deserving tribute to the deceased scholar and public official, I am likewise incorporating it in this extension of remarks. The editorial referred to is as follows:

#### MAJOR SILCOX

In the estimation of those who knew him well and comprehended the value of his work, every tree in the United States may be regarded as a monument to Maj. Ferdinand Augustus Silcox. His services as Chief of the Forest Service of the Department of Agriculture justified such appreciation. Among citizens who have chosen to devote their talents and their energies to their country's welfare he always must be remembered with gratitude.

Major Silcox pledged himself to a single career. A native of Columbus, Ga., born on Christmas Day, 1882, he was educated at the College of Charleston and at Yale University, specializing in science. High ideals for the protection of the Nation's natural resources prompted him to enlist in the Forest Service at a time when conservation was little understood. He rose from the ranks to the post he occupied from 1933 until his sudden death.

The philosophy which Major Silcox undertook to put into practice was one which still requires explanation to the lay public. He believed that the forests should be used, but objected to their being wasted. From abundant experience he was qualified to deplore the wreckage of whole acres of timber by lumber operators interested in cutting only a few trees. With his own eyes he had seen the havoc which a merciless policy can effect. A moral indignation rose in his soul, and he launched a campaign of correction whose results already are apparent.

But Major Silcox was never a fanatic. He possessed stern convictions and guarded them with care, yet he also was endowed with "a sweet reasonableness" which made him popular with other men. His success as an arbiter of labor difficulties testified to his diplomacy and tact. If on occasion he "laid down the law" in terms which could not be challenged, he took pains to be certain that he was right before he spoke. His methods were not adventurous; he was not an experimenter in his attitude toward facts. Perhaps his scientific training was responsible for the dignity of his procedure and the delicacy with which he dealt with the problems he was called upon to solve.

Major Silcox has passed from the world too soon. He was an American who could ill be spared in an age when vision and a genius for achievement are wanted.

### Just What Political Activity Is "Pernicious"?

#### EXTENSION OF REMARKS

OF

HON. JAMES A. SHANLEY

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 3, 1940

ARTICLE FROM THE WASHINGTON POST

Mr. SHANLEY. Mr. Speaker, I ask unanimous consent to extend and revise my remarks and include therein a very able

summary of the Hatch Act as given in the Washington Post. I think the subject is so important that any attempt to gather together both the summaries of the Department of Justice and the opinion of Senator HATCH himself is worth while.

Many of us have been literally besieged by inquiries during the last few months as to the implications of this act. I appreciate that Senate Document No. 135, relative to pernicious political activities, is extremely helpful, but I also think that the availability of the outstanding features of this pamphlet in the CONGRESSIONAL RECORD would also be helpful, and while supplementary in many cases, in others would be a source of information.

#### GALLERY GLIMPSES—A SENATOR IS ASKED TO EXPLAIN HIS ACT—JUST WHAT POLITICAL ACTIVITY IS "PERNICIOUS"?

North of the border, down New Mexico way, Senator CARL A. HATCH is being kept busier than a one-armed caballero explaining his own act.

Seems everybody had about forgotten his act until these Democratic \$25-down Jackson Day fiestas came along to hurl doubts at the conscience of Federal officials and worry State officers soliciting funds.

Yes; all knew that the Hatch Act banned "pernicious political activities." But none knew whether a \$25 contribution was pernicious and what that had to do with food and speeches served up for all tried and true party men at a political dinner. Were they illegal as well as indigestible?

After all, this was the first real test of the Hatch Act.

Most gun-shy of all were some of the State officials to whom the National Democratic Committee passed the buck of collecting the funds and staging the January 8 rallies.

Beset by doubts, they manfully mailed out the notices, and then wondered:

Was the mere asking of all good men to come to the aid of the party pernicious?

Was inviting a Federal official to plunk down \$25 doubly so?

And was just attending a Jackson Day dinner a "political activity"?

Somebody happened to remember that the Democrats themselves complained the Hatch Act would put the kibosh on Jackson Day dinners before the bill actually became a law.

Among those who worried was Ralph Trigg, chairman of the New Mexico Jackson Day dinner. His problem was doubly troubling, because it was a fellow New Mexican, Senator HATCH, who put him on that spot.

And then a brilliant idea occurred. Why not ask Senator HATCH? He wrote the law. His opinion ought to be pretty authoritative. Now Trigg no longer worries. It is HATCH's turn. It is his law and he has to explain it.

HATCH rose courageously to the occasion.

"It is not against the law to solicit money from Federal employees or to accept it from them for political purposes," ruled the New Mexico Senator.

"They may attend the dinner, of course, and may make such contributions to political parties as they wish."

Then HATCH had to explain some of the exceptions—that Federal employees themselves may not actually solicit the funds, even though they may be solicited.

That cleared up everything except what to do about one point—speakers at the dinners. About this time you get down to hair-splitting, but it seems attending a Jackson Day dinner isn't political activity, but speaking at the dinner is. And that bars from speeches all Federal officials except Members of Congress, Cabinet officers, and others in policy-making positions exempted from the law.

HATCH himself has some doubts about how far down in the Government the exemption extends, and whether certain members of Federal commissions are eligible for the speaker's table.

So that leaves Trigg still with one small problem—how to find a speaker who is eligible to speak and is still a drawing card.

The moral in all this for United States Senators is—one better think twice before framing a law, because sooner or later he will have to explain it.

HATCH hasn't received all of the queries on the intricate workings of his act. The bulk has gone to Attorney General Murphy and the Justice Department.

With Jackson Day nigh, they have grown more and more numerous as State Democratic campaigners ponder that dread word "pernicious" and conjure up visions of the jug.

District attorneys, too, have received their fair share of anxious questioning but have generally passed on the problem to Mr. Murphy, who has his answer ready.

It is all wrapped up in a little eight-page pamphlet labeled "Senate Document No. 135—Relative to Pernicious Political Activities—Interpretation of the Hatch Political Activities Act." There Jackson Day chairmen may learn that officers and employees of State and local governments are exempt from the act, even though their employment involves the expenditure of Federal funds.

The National Democratic Committee made sure of that before they placed their \$25-per-head Jackson Day campaign on a State drive basis.

As for Federal officials (nonpolicy making) who come under the ban, Murphy has seven prohibited political activities all neatly listed for their benefit.

Lest they forget, pernicious Federal official deeds are:  
 Holding office in a political party or a political club.  
 Attending political conventions as a delegate or alternate.  
 Serving on committees of a political party or a political club.  
 Distributing buttons or printed matter in support of any candidate.

Serving at party headquarters or as watchers at the polls, or otherwise assisting a party or candidate in any primary or election campaign, whether or not Federal offices are involved.

Being a candidate for elective office—Federal, State, or local.  
 Soliciting funds for a political organization or campaign fund.  
 Now, these don't say anything against eating political dinners or even forking up \$25 for the privilege. But they bar one from ringing the gong or yelling "Soup's on."

So Federal employees had best just slip in quietly and not kick about the service. A protest to a waiter might be a political speech.

The Hatch Act isn't hampering the Republican fund-raising drive. One reason is there won't be any Lincoln Day dinners next year. Another is there are not enough Republican Federal officeholders to meet Chairman Hamilton's minimum 15-cent-contribution requirement. A third is, if Republicans solicited Federal employees for funds it wouldn't be "pernicious," but just plain futile.

So Chairman Hamilton will be content with raising his party's \$655,000 deficit the easy way—collecting \$1,000 subscriptions from 655 affluent and generous nonoffice-holding Republicans. And the Hatch Act doesn't say anything about that.

Forced to take the hard-way detour around the Hatch Act in their \$750,000 Jackson Day campaign, the Democratic National Committee can't ignore departments filled with loyal party men. But employees will be given the option of easy installment payments—\$12.50 down and the balance to come.

### Money From Heaven

#### EXTENSION OF REMARKS

OF

HON. DEWEY SHORT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 3, 1940

ARTICLE BY HARLAN MILLER

Mr. SHORT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Harlan Miller:

[From the Washington Post of December 8, 1939]

OVER THE COFFEE

(By Harlan Miller)

MONEY FROM HEAVEN

You and I don't get any money from the Government, and I'm not so sure about you. But almost half the rest of our fellow Americans do know the bitter-sweet taste of "Washington money."

Here's a thumbnail portrait of the Republic's pay roll, plus other Government benevolences. You can paste it in your hat, look at it for cheer when you get that bilious attack of tax illness. Use is like smelling salts.

To begin with, perhaps the most deserving: 397,412 war vets got last year, an average of \$40.24 monthly for war ailments, \$27.33 for non-war ailments; 113,418 widows, orphans, or surviving parents got from \$15 to \$45 a month.

Vets may get from \$10 to \$275 a month, only a few of the most war-torn drew the top figures, and those richly deserved it. It all amounted to \$242,865,913 last year, or \$3,880,233,265 since the war. Some 329,263 other war pensioners average \$572.96 yearly, totaling \$173,837,953, including one pensioner of the War of 1812 who gets \$240 a year.

Some 5,248,796 farmers last year got an average of \$84 a year for soil conservation. You thought it was more, eh? At that, 62 percent of them got less than \$60 for the year. But it added up to \$440,000,000.

In these families were 22,000,000 persons.

Since W. P. A. began 7,500,000 different persons (whose families totaled 28,000,000 persons) have drawn a little over seven billions. Now there are 1,986,999 on W. P. A.; they draw from \$31.20 to \$94.90 a month for 130 hours' work, and average \$55 a month.

Nearly 300,000 C. C. C. boys draw \$30 a month—\$8 for themselves and \$22 for their destitute families—plus their own board and room.

This number may soon be increased by 200,000 boys for military training at only \$5 a month.

Retired wage earners who have been anteing for at least 3 years will be getting from \$20.60 a month for those whose monthly wages averaged \$50 up to \$41.20 a month for plutocrats whose wages averaged \$250 a month, under social security.

By these scales their widows and orphans will get from \$15.45 (lone widows) up to \$72.10 a month for a widow with two tots. In 1940 these pensioners will total 912,000, drawing \$114,000,000.

Destitute oldsters—who haven't been anteing—are now averaging \$19.17 a month in Federal aid to their State grants. Washington money is now going to 1,896,982 of these. But some niggardly States are paying only around \$6 a month. To States paying up to \$30 Washington contributes half; after January 1 Washington will contribute half of grant up to \$40 monthly. (Which makes the official \$19.17 average payment now seem too high.)

Down to here we have survivors of normalcy, refugees from Coolidge prosperity, except, of course, the vets.

Some, but not all, of the above is largess. Not largess, but still Washington money, is upward of a billion going to about 1,000,000 full-time Federal employees, from Franklin Delano Roosevelt and the Justices down to \$900-a-year clerks and postmasters.

The Federal shilling goes also to more than 500,000 soldiers and sailors of the Army, Navy, Marine Corps, Reserves, and militia. Last year this totaled \$418,696,598, not mentioning cost of board and room.

Also, Washington money is behind 149,000 loans on houses, at 5-percent interest or less, running from 4 to 25 years. These loans are for 80 to 90 percent of the value of houses up to a \$16,000 maximum. These home loans average \$4,362.42, and the total is \$650,000,000. But it's partly private money.

In a way, the wage and hour law ought to be mentioned here. It now requires 30-cents-an-hour wages a week of not over 42 hours, with time and a half for overtime, or a princely minimum wage of \$12.60 a week. The law affected 1,380,000 this year, and next year it will bring more than 3,000,000 down to a 40-hour week; the hour wage goes up to 40 cents in 1945.

But that's the boss' money, by courtesy of the New Deal.

Did I say I don't get any money from the Government? I had forgotten. On second thought, I remember a check for some ninety-odd dollars last time I did 2 weeks' active duty as a captain in the Reserve Corps.

If you add up all the Republic's beneficiaries and multiply by 3.76, the average number of persons in a family, it'll total half of our 130,000,000 Americans partly on the Republic.

Maybe Gallup should poll these people about 1940.

### America's Duty to Civilization in the Russian Aggression Against Finland

#### EXTENSION OF REMARKS

OF

HON. WILLIAM A. PITTINGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 3, 1940

Mr. PITTINGER. Mr. Speaker, with the opening of this Congress the United States starts the eighth year of New Deal control and domination in the affairs of government. Leadership and responsibility rest with the party in power. This Congress faces the opportunity and duty to help shape legislative enactments. Since adjournment at 6:35 p. m. on November 3, 1939, of the second session of this Seventy-sixth Congress, there have been world developments which directly concern this country. I refer to the Russian invasion of Finland on November 29, 1939, and to the fact that that communistic country has been carrying on a warfare against its small neighbor, Finland, ever since that date. True, the Russian high command predicted that the war would be over in 10 days. True, the Russian high command was mistaken, and the heroic struggle of Finland against the greatest odds ever faced by a free people from an aggressor nation is at this moment still in progress.

This war, if such it can be called, is more than an attempt of a small republic to escape destruction at the hands of a large and powerful nation. The conflict represents a menace to our type of civilization. If Russia wins, it marks the possible beginning of the triumph of communism as a rule of life as against what we call our present-day civilized world.

Therefore the duty of this Congress and of the leadership in our Government is clear and unequivocal. This country should help the Finnish people, so far as that help is needed, with every resource at our command to the end that the challenge of communism to the rest of the world may receive a death blow. So today, and not tomorrow, is the time to cut the red tape of bureaucracy and to furnish resources and supplies to Finland. The time element is important, and every aid, so far as the United States deems it proper, should be furnished without delay.

We cannot look upon the destruction and conquest of small and peace-loving countries by those more powerful as anything less than a blow at the fundamental rights of mankind and as a direct attack upon human decency in the realm of government. The very recent past compels us to note the fate of other small countries—Ethiopia, Albania, Austria, Czechoslovakia, Danzig, and Poland. The ruthless, merciless, and cutthroat methods employed against these countries are still fresh in our memory. It was only a few weeks ago that Poland was outraged, dismembered, and ruined. We should heed the lesson of that tragedy. Such a procedure is a mockery at government and shocks the sense of decency of man. If condoned, we recognize the rule of the gangster in the role of nations.

If civilized countries are to approve of this procedure, then what is to happen to other small countries, not only Norway, Sweden, Denmark, but Holland, Belgium, and so forth? There is but one answer. The fate of those countries will be the same as that of Poland.

If there is any question as to the fact that fair-minded people everywhere have been not only surprised but horrified at what has taken place, let me quote from the press. I note that ex-President Hoover said at Duluth, Minn., on December 30, 1939, in an address at a public meeting there:

Civilization struck a new low with the communistic attack upon peaceful Finland. It is a sad day to every decent and righteous man and woman in the world.

Then I have before me the proclamation of the mayor of Biwabik, Minn., in which he says:

Biwabik joins the world in condemning Russia's attack upon Finland as a new high in brutality, and Biwabik also joins the entire world in praying that these people may yet be saved.

Let me say in conclusion, Mr. Speaker, that we in America ought to wake up to the peril of communism in this Republic of ours. Communism has made progress in the United States. I note on December 29, 1939, an account of the action of the American Students Union meeting at Madison, Wis., and that this organization refused to name Russia as the aggressor in the war in Finland. This is only an incident that points out to me the inroads that Stalin has made against freedom. When we have students in universities who are so blind to the facts as to condone what Russia is doing, then it is high time that we looked into the question as to whether universities serve any useful function in this country. If these students are typical of the results of education, then a higher power than human will have to help save America.

Mr. Speaker, may I again remind you that now is the time and here is the place for work to be done to help Finland in its leadership in efforts to save world civilization.

Need for prompt help for Finland is emphasized in an editorial in the Washington Post this morning, in which is pointed out the necessity of promptness and the importance of—

That form of assistance which alone can stop the Communist bombings—antiaircraft guns, ammunition, and pursuit planes in quantities. \* \* \* Today Congress convenes. The new session should not be many hours old before steps are taken to translate the will of the people into a form of Government help which would be wholly consonant with the neutrality law.

### Compare Here and Over There

#### EXTENSION OF REMARKS

OF

HON. WILLIAM L. NELSON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 3, 1940

Mr. NELSON. Mr. Speaker, in December, with the approach of the Christmas season, I suggested in the following press release to the newspapers of the Second Congressional District of Missouri that we compare our United States of America with other places, almost any other place:

Butchering hogs here, butchering humans over there; carols and singings here, crying and sinkings over there; corn shocks here, shock troops over there; electric light and telephone lines here, Maginot and Siegfried lines over there; football fields here, fighting fields over there; lighting our streets for Christmas here, "black-outs" of cities for safety over there; bringing in coal from mines for comfort here, putting out floating mines for destruction over there; building homes here, bombing buildings over there; happy boys in C. C. camps here, miserable men in concentration camps over there; a President fighting to keep men working here, dictators working to keep men fighting over there; freedom for every man to worship God as he wills here, restrictions as one man wills all worship over there; a free press and free speech here, censorship and suppression of truth over there; every man having some say in government here, one man having all say in government over there; prayers for "peace on earth" here, a war that few want and nobody wins over there.

### Preserve American Sugar Market for American Farmers

#### EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 3, 1940

RESOLUTION BY THE ASSOCIATED CHAMBERS OF COMMERCE OF SOUTHWESTERN IDAHO AND EASTERN OREGON

Mr. ANGELL. Mr. Speaker, one of the outstanding problems that confront this Congress is finding adequate markets for American agricultural products. The northwest portion of the United States has developed a great industry in the growing of sugar beets. My own State of Oregon has developed this industry with remarkable success. I took occasion earlier in this Congress to call attention to the fact that the new sugar refinery erected by the Amalgamated Sugar Co. at Nyssa, Oreg., set a record on a 112-day run, producing 750,000 bags of sugar, which was 100,000 higher than its anticipated production. In addition to this, the company fed 8,000 head of cattle from beet pulp as a pulp-feeding demonstration.

Oregon has great areas under irrigation which are admirably adapted to the production of sugar beets. However, the A. A. A. crop-control program has restricted this industry to such an extent that large portions of the sugar-beet land cannot be placed in production, and curtailment is threatened in the areas already in use. The one plant above referred to has added a million dollars to the assessed value of Oregon.

Not only Oregon, but many other States in the western United States, are admirably adapted to this industry, which, if permitted to develop to its full capacity, will be a big factor in restoring profits to farmers.

Notwithstanding the fact that our own country is admirably adapted to the production of sugar, we import a large portion of our sugar demands from Cuba, the Philippines, and elsewhere in direct competition to our own product. It seems a short-sighted policy to refuse to permit the American sugar-beet and sugarcane growers to supply the American market insofar as they are able to do. A proper policy would be to permit full development of our own industry in the American market, giving only the surplus to foreign producers. We want to help the farmers. This is one way it can be done without raiding the Federal Treasury.

The Associated Chambers of Commerce of Southwestern Idaho and Eastern Oregon, on December 15, 1939, adopted a resolution which is worthy of our consideration in connection with this important problem. By it they memorialize the Congress to right the wrongs suffered by the farmers, processors, and wage earners engaged in the growing and manufacturing of beet sugar by proper legislation to permit the progressive, orderly expansion of the production of sugar within the continental limits of the United States and to maintain the production market by quota regulations and adequate

tariffs on foreign sugar. I ask permission to include this resolution as a part of my remarks and respectfully urge my colleagues to consider the facts set forth in the resolution in connection with legislation on this important subject.

[Associated Chambers of Commerce of Southwestern Idaho and Eastern Oregon. Member chambers: In Idaho—Boise, Caldwell, Emmett, Fruitland, Homedale, Nampa, New Plymouth, Parma, Payette, Weiser, Wilder; in Oregon—Nyssa, Ontario, Vale]

EMMETT, IDAHO, December 15, 1939.

The following resolution was made and adopted at the regular bimonthly meeting of the Associated Chambers of Commerce in New Plymouth, Idaho, December 11, 1939:

"Whereas only 29.5 percent of domestic sugar sales are allotted to domestic producers at present, Cuba has practically the same amount, and our insular possessions 41.5 percent, American producers are rightfully entitled to all of the domestic market that they are able to supply; and

"Whereas the import quotas of raw sugar set at the present time have brought the farmers, the workers in the sugar factories, and the laborers in the beet fields in direct competition with the poorly paid labor in the sugar-producing territories outside of continental United States; such competition has the direct result of lowering the standard of living of these farmers and laborers to a level incompatible with the American way of life; and

"Whereas sugar beets can be effectively grown at a reasonable profit in western United States and there is no food more valuable to the consumer in nutritive worth even at a much higher price than at present; and

"Whereas the production of sugar beets provides employment at good wages for many times as many workers as the same acreage of other crops adapted to western agriculture and any control of the expansion of sugar-beet acreage means more unemployment and more relief clients who could otherwise make a living in this industry; and

"Whereas there is grave danger that the present policy, if continued, will result in many now employed in this country losing their means of livelihood, thereby further increasing the already tremendous burden of unemployment; and

"Whereas our beet growers, if permitted to make a reasonable amount of money are, due to their standard of living, many times better customers for eastern industry than are foreign sugar laborers and planters; and

"Whereas an orderly and sound expansion of beet plantings in accordance with the development of suitable land and the building of new factories to take care of the increased production is a reasonable and necessary process to the building up of our Western States and should be encouraged; and

"Whereas the expansion of the domestic production of sugar should be encouraged as a policy of national economy and defense; the acute shortage of sugar during the World War having demonstrated our need for a much higher continental sugar production in time of emergency; and

"Whereas because of the adaptability of this crop to the needs of this region and the dearth of substitutes, the restriction of the beet industry means the throttling of our agriculture by eliminating the best cultivated crop in a proper rotation for maintaining soil fertility and for control of weeds and crop pests; and

"Whereas the development of profitable agricultural operations is vital to the business of Western States, and therefore should be given most serious consideration by our lawmaking bodies; and

"Whereas the Associated Chambers of Commerce have given serious and careful consideration to the present sugar quotas, and the above facts have been definitely established: Now, therefore, be it

*Resolved*, That it is the prayer of your memorialists, the Associated Chambers of Commerce, that the Congress of the United States should, by proper legislation, right the wrong suffered by the farmers, processors, and wage earners engaged in the growing and manufacturing of beet sugar, by proper legislation to permit the progressive, orderly expansion of the production of sugar within the continental limits of the United States, and to maintain the protective market by quota regulations and adequate tariffs on foreign sugar; be it further

*Resolved*, That a copy of this memorial be sent to the Secretaries of Agriculture, Interior, and State, and to the Members of the Senate and House of Representatives of western States in Congress."

## We Should Double the Mighty Handful

### EXTENSION OF REMARKS

OF

HON. JAMES C. OLIVER

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 3, 1940

### A TESTIMONIAL TO THE UNITED STATES MARINE CORPS

Mr. OLIVER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following testimonial

written by Thomas Earle Dwyer, a distinguished citizen of Maine, in commemoration of the one hundred and sixty-fourth anniversary of the birth of the United States Marine Corps, which anniversary occurred on November 10, 1939:

#### WE SHOULD DOUBLE THE MIGHTY HANDFUL

(By Thomas Earle Dwyer)

The 10th of November richly deserves an honored place amid the historic anniversaries dearest to the hearts of all Americans, for it was upon that day of that month of the year 1775 that the Continental Congress authorized the recruiting of the first military organization to serve the embattled Colonies in their war destined to strike off the yoke of British tyranny and to establish the Republic and the right of freemen to life, liberty, and the pursuit of happiness.

Entering upon that great struggle for liberation, before a single vessel of the Navy was sent to sea, before, in fact, the Regular Navy was organized, the Congress resolved:

"That two battalions of marines be raised, consisting of one colonel, two lieutenant colonels, two majors, and other officers as usual in other regiments; that they consist of an equal number of privates with other battalions; that particular care be taken that no persons be appointed to offices or enlisted into said battalions but such as are good seamen, or so acquainted with maritime affairs as to be able to serve to advantage by sea when required; that they be enlisted and commissioned to serve for and during the present war between Great Britain and the Colonies, unless dismissed by order of Congress; that they be distinguished by the names of the First and Second Battalions of American Marines."

The magnificent fruit of that resolution of the Continental Congress is emblazoned upon the history of the 164 years which have elapsed since the birth of the United States Marine Corps. Even as the sparsely settled, weak, and poverty-mantled Thirteen Colonies of 1775 have waxed great and become the heart of the richest, the most powerful, and the most blessed Nation upon the face of this earth, so has waxed the fame and the world-wide prestige of a peerless corps sprung from those two battalions of dauntless soldiers of the sea of Revolutionary days, a corps the entire history of which has been one of active service. No military organization of its kind in all the history of the world boasts a more glorious record nor more justly deserves the acclamation and the whole-hearted support of the Nation it serves.

During the American Revolution our marines distinguished themselves in action under Commodore Hopkins and John Paul Jones at sea and with Washington's army in battle at Trenton and Princeton and during subsequent engagements leading to the victorious culmination of that struggle for freedom. They served in the naval war with France from 1798 to 1801, and in the war with Tripoli from 1801 to 1805. The War of 1812 found them sharing in the most glorious actions asea and ashore, including the victory of Lake Erie, the invasion of Canada, the defense of Baltimore, and the Battle of Bladensburg.

From the War of 1812 to the War between the States, action followed action for the "mighty handful." They fought against the Indians in Florida and against the pirate strongholds in the Caribbean. They assisted in the capture of Veracruz and formed part of Scott's column in the march on Mexico City in 1847. They took part in many actions upon land and sea in connection with the conquest of California during the years 1845-47. And during the years subsequent to the Civil War, a period marked by general inactivity upon the part of our naval and military forces, the fame of our Marine Corps increased with its every expedition to disturbed areas wherein the lives and property of Americans were imperiled.

The Spanish-American War found marines distinguishing themselves afloat and ashore, with the battle fleet and in Cuba and the Philippines during the war, and in the pacification of disturbed areas. They nobly defended the legation quarter of Peking during the Boxer Rebellion and performed heroic deeds in performance of duty with the relief column. And the brilliant record made by them while serving with our Army in France remains too fresh in the memories of all Americans to require recounting.

Yet few Americans are aware that since the Boxer Rebellion our marines, in addition to their various regular duties upon ships of the Navy and in guarding our navy yards and shore stations about the world, have taken part in no less than 35 expeditions beyond our shores for the protecting of American citizens and have successfully intervened in civil strife in Santo Domingo, Haiti, and Nicaragua, withdrawing to leave those countries with stable governments, with public-health facilities, schools, roads, and public works which stand as a monument to our civilization and to the efficiency of the United States Marine Corps.

All too truly has it been written that such is our faith in the ability of the Marine Corps to handle any emergency that may confront it, that the moment we are told it is on the job our anxiety vanishes. No finer compliment could be paid to any servant of our Nation; no fact more fully demonstrate our utter confidence in our marines. Yet in so niggardly a fashion have we provided for the maintenance of that corps that today it has a strength of but about 1,280 officers and 21,000 enlisted men, which it is striving to recruit to 25,000.

In the present unsettled state of the world every thoughtful American well may devote consideration to the truth expressed by the Saturday Evening Post when, under date of February 18, 1933, it editorially declared:

"Since time out of mind we have been doing lip service to the Marine Corps. Time and again it has thrilled us with its exploits

and its traditions. Its very mention brings to American faces an expression of sympathetic admiration. That was all very well when we were wanting it to do for us some little job a thousand miles from home, which, by the way, was always done with neatness and dispatch; but now it is time for us to do something for the corps.

"These leathernecks of ours are a race apart. They spend most of their time away from home, afloat and ashore. They fight in the jungle, take chances with native snipers, tropical fevers, and every variety of hardship all for about a dollar a day. Why do they do it? The dollar a day is no answer. Their real pay is the chance they get to be on hand whenever there is trouble—that and their pride in the traditions of the service to which they belong. Semper fidelis, always faithful, is the motto of the corps. If it has lived up to this sentiment—and we know it has—we owe it some loyalty in return. The least we can do for it is to maintain it on a decent footing, so that it may carry on in the future as it has in the past."

In this one hundred and sixty-fifth year of the existence of the corps let it be our hope and our prayer that the Congress it has served so faithfully and so well will see fit to reward its fidelity. For, in the face of the menace of a war-mad world, what action more certainly could instill respect and hesitance in the minds of possible aggressors than the resolution of our Nation to strengthen the ranks of those leathernecks, whom militarists the world over know and respect and prefer to leave strictly alone?

Indeed, now it is time for us to do something for the corps. We should double the mighty handful.

### Some Lessons From the Armistice

#### EXTENSION OF REMARKS

OF

HON. JOSEPH J. O'BRIEN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 3, 1940

ADDRESS BY FRANK E. GANNETT

Mr. O'BRIEN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address by Frank Gannett delivered on Armistice Day before the American Legion and Chamber of Commerce, Rochester, N. Y.:

Again and again, in recent weeks, there has flashed across my mind that poem written by Col. John McCrae, who was in command of a Canadian regiment in the World War. You're all familiar with it. But let me repeat it:

"In Flanders fields the poppies blow  
Between the crosses, row on row,  
That mark our place; and in the sky  
The larks, still bravely singing, fly,  
Scarce heard amid the guns below.

"We are the dead. Short days ago  
We lived, felt dawn, saw sunset glow,  
Loved and were loved, and now we lie  
In Flanders fields.

"Take up our quarrel with the foe!  
To you, from failing hands we throw  
The torch—be yours to hold it high,  
If ye break faith with us who die,  
We shall not sleep, tho poppies grow  
In Flanders fields."

We gather here today for two purposes. First, to celebrate the end for us of the World War; second, to rededicate ourselves to the cause of peace, so that those men who sleep "neath poppies in Flanders fields" and on other battlefields of Europe shall not have died in vain.

#### TIDINGS OF JOY

Naturally our thoughts go back to a November day 21 years ago, to the eleventh hour of the eleventh day of the eleventh month of 1918. We remember with what frenzied joy we all received those glad tidings of peace. Mothers and fathers, brothers and sisters of the 4,000,000 men who had gone into service for our country rejoiced as if they had gone mad; for their loved ones were no longer to be targets for deadly guns, bursting shells, and exterminating gases. Never in our lives had we seen such unbounded happiness as prevailed throughout the world that memorable day.

At 10:55 that morning guns were thundering the length of the western front from Switzerland to the English Channel. At 10:59 guns were still thundering; men were dying. One minute later silence fell, a silence that for more than 4 years had not been known along the boundaries of "no man's land."

On either side of the line soldiers scrambled out of their trenches, utterly bewildered. They had lived to see the end of the war. One minute before 11 o'clock—war. To kill men was then a patriotic act. One second after 11—peace. To kill a man now was murder.

Seven hours earlier, in a dining car on a railway siding in a French forest, the armistice was signed. A few hours later Marshal Foch, Generalissimo of the Allied armies and the man who dictated the terms of the armistice, was in Paris talking to the premier of his Government. "My work is over," he said, "yours has just begun."

But alas, the work of war leaders was not yet over. Last August, baffled statesmen said to their generals, "We've done our best; we can do no more. Now your work has begun."

#### ECHO FROM THE PAST

And so, 21 years after the end of the last war, we have another war in Europe and again we are told—how it sounds like an echo from the past, a voice from the dead—we are told that this is a war for the defense of civilization. It is being fought by the sons of the men who waged the last war. Already some of them stand where their fathers rest under rows of small white wooden crosses.

Some 10,000,000 young men have been mobilized to fight this new war. It is difficult for our minds to grasp this figure. If these 10,000,000 men could be marched past us in military formation, 55 days and nights would elapse before that vast army could pass. That is the number of men already called up in the warring countries.

What tragic irony! That is the number who died in the last war—10,000,000 dead! Ten thousand miles of wooden crosses!

#### COUNTING THE COST

But death of millions was only part of the great cost of the World War. Two hundred billion dollars' worth of property was destroyed, twenty millions were maimed for life, thousands of hospitals were filled with men who never again can live normal lives. Worst of all, perhaps, in country after country, the war turned back the hands on the clock of liberty 150 years.

We went into the last war with the highest ideals. We were told it was to be a war to end war. We were told it was a war to make the world safe for democracy. We sought nothing for ourselves, we spurned all the prizes of war, refused to take any spoils from victory.

Another war is now under way in Europe which may be still more horrible than the one whose end we are celebrating. With this new war in progress, we meet today with mixed emotions. While celebrating that great event of 21 years ago—when we said "it must not happen again"—we are today gravely concerned, frightened over the state of world affairs, hoping and praying for a second Armistice Day that will end this useless waste of lives and property, and remove this great threat to civilization.

It is needless to discuss the absurdity and stupidity of war. We see it crystal clear. We know from that awful experience of 1917 and 1918 what a devilish, devastating, murderous, useless thing is war. Every country that participates must be the loser. No matter who may be called the victor on the battlefield, both sides are victims.

#### WAR DESTROYED LIBERTY

In spite of our tremendous sacrifices, in spite of the staggering cost in lives and property, the war we fought did not make the world safe for democracy. It had rather the opposite effect. Out of the muddled peace came totalitarian governments which destroyed political, religious, and economic rights, deprived men and women of life, liberty, and the pursuit of happiness, took away their freedom, and made millions of helpless people mere vassals of the state, doomed to a bare existence.

Five European nations, it is true, did rid themselves of their monarchs and set themselves up as republics. Encouraged by the doctrine of self-determination of peoples, six new republics were founded. Today, of the five former monarchies which became republics, four have succumbed to dictatorships. Of the six new republics, but one, Finland, is left, and today she fears the Russian menace. Czechoslovakia is gone. Poland is gone. The three Baltic republics are under the bloody thumb of Moscow. And so war comes again, this time not against autocracy, but against totalitarian tyranny.

Instead of making the world safe for democracy, they made it unsafe for democracy. Indeed it is difficult to see where, so far as Europe is concerned, anything was gained from those terrible losses.

#### OUR COSTLY LESSON

But, for America, our tremendous sacrifices may not have been in vain. If the lessons that we learned from that experience serve to keep us out of another World War, then we shall not have broken faith with those who died, and they may sleep undisturbed "where poppies blow in Flanders' fields." It is a terrible price to pay, but if those sacrifices do save this country from war for generations to come, they will not have been futile.

No war is justified except a war of defense to protect our homes. It is fitting today, therefore, that we here solemnly resolve to keep out of this new war in Europe. There is no doubt that our deep sympathies are for the democracies. We abhor totalitarianism. But we must not let these sympathies and our emotions lead us into this present struggle, which Europe may find in the end to be as much in vain as was the last.

Let us not be misled; this war does not threaten America. No matter what may be its outcome, we, in this hemisphere, thanks to the Atlantic Ocean, can be made immune from subjugation by any Old World dictator.

#### A RINGING KEYNOTE

National Commander Kelly, of the American Legion, surely has sounded the keynote for this Armistice Day in saying it should be

devoted to strengthening our determination to remain neutral—to keep out of this war.

Here are his words, which I heartily endorse: "More than 4,000,000 men and women, who served this country in the World War, feel more deeply about the observance of this Armistice anniversary than we have at any time since 1918. We who have known war want peace."

"We will combat propaganda vigorously, of whatever kind and regardless of its source, when it is designed to break down our neutrality. Make Armistice Day an occasion to warn our fellow citizens against the hysteria of propaganda."

Let us then, upon this 21st day of remembrance of our World War sacrifices, make this our unyielding resolution: "Millions for defense, but not one man for Europe."

We must resolve with equal firmness that there be no armistice, now or at any time in the future, in our struggle to preserve here at home our system of constitutional democracy, which will be in grave danger should war come.

#### FACE STAGGERING DEBT

Conditions today are different. Then we had a national debt of only a billion dollars. Today it is forty-five billion. Then we had little unemployment; today nine or ten million are unemployed. Should we enter the war, we might easily spend another \$50,000,000,000 and create a public debt that could never be paid. Such a debt would bring inflation, wipe out all values, make insurance policies and savings-bank deposits worthless and destroy the financial structure of our country. We should be in such dire straits that only a dictator could then save us from complete ruin.

Just as unbearable economic conditions made possible the dictators in Europe, so intolerable economic conditions here would bring dictatorship upon us.

Plans already have been carefully drafted, after years of study, for efficient but ruthless regimentation of the country for prosecution of war, if it comes. We should surrender all of the rights and privileges we now enjoy. Not only would our youth be sent to battle but every man and woman would be drafted for some form of service.

#### SURRENDER ALL RIGHTS

The Government would have complete control over our lives, over our whole economic system. The Government, in case of war, would say for how much and how long we should work, what and how much we should eat, how much light and heat we should have in our homes. Freedom of the press, freedom of radio would disappear. Should we enter the war, our Government would have all the dictatorial powers now in the hands of the rulers of totalitarian states in Europe.

If we are to preserve our system of constitutional government, our freedom, and our liberty, we must make sure we do not enter this war.

There are, of course, many who would now like to help the Allies, a few who would even take up arms on their side. But for my part I am puzzled over the question what this war is all about, what can be accomplished by it. Certainly no one yet has stated the cause in a way that convinces me that our own vital interests are at stake.

We can understand why France and Britain feel that they must overthrow Hitler who, they are convinced, is the aggressor, the liar, the murderer, the man who cannot be trusted. We can understand how these nations must have an end to the terrorism under which they live.

#### POLICING THE WORLD

But it is not our business to police the world or to determine what kind of government the German people shall have, or what kind of government the Russian people shall have, or the kind of government any other people shall have. We do not permit any country to interfere with our ideas of government. Why should we interfere with theirs?

If, on the record of oppression and aggression, we feel we should take up arms against Hitler, we should also take up arms against Stalin. Indeed, today Stalin is a greater menace to the world than is Hitler. Surely because of our desire to see democracy fostered and protected, we cannot take upon ourselves the titanic task of overthrowing all the dictators of the world.

No; our task is to make America great and strong, to develop here a country so happy and prosperous that other nations of the world will be drawn to emulate us.

#### EXAMPLE FOR THE WORLD

What an example we already have set for the rest of the world. Here in America live people from all the countries of the globe. They reside side by side in peace. They become friends. They intermarry. There is never a thought that anyone should attack another because the governments of their fatherlands in Europe may be on unfriendly terms, or even at war.

If people of all nations can live here as brothers and friends, why cannot they so live in the Old World?

None of the peoples in those countries now at war in Europe wanted this war. Yet this world catastrophe is man-made. There are many factors in the situation, but most potent of all, perhaps, is the urge, on the part of the governments, to provide tolerable economic conditions for their peoples. But when this urge takes the form of greed for power and territory, the resulting aggression does not solve the problem, but creates more economic distress.

Five years ago, returning from Europe where I had the opportunity to see and talk with leading statesmen, premiers, and dictators, I predicted in this very hall that unless representatives of the

various nations were called to a conference for settling their difference around the table, we should have this horrible situation in which Europe finds itself.

#### NEED ABLE LEADERSHIP

Sooner or later there must be an armistice to end the present war. Why wait until millions more of the promising youth of the world are slaughtered and all the dire consequences of war suffered? Why not a real peace effort now and thus avoid the frightful losses, the ruin and disaster of war? Are there not statesmen able and strong enough to formulate a plan that will put an end to this greed for territory and power, bring about disarmament, provide greater social and economic justice, and thus take from the backs of suffering humanity the burdens that are crushing so many nations?

The world cries out for statesmanship and able leaders, statesmen free from selfish motives, free from hatred and prejudice and fear—frank, generous, just men who follow the teachings of the Prince of Peace and His commandment to "love thy neighbor as thyself."

While waiting for that happy day when this war will end there may be little for us to do about it except to build up our defenses and make them adequate to protect us against any aggressor or any emergency. We must, however, keep always in mind that what we seek is a peace among nations that will make armaments unnecessary.

#### SANE PREPAREDNESS

In the early days on our western frontier every man was armed. But the time came when it was found that guns could be laid aside, under the protection of officers of peace. If men have found it unnecessary to carry arms, why can't nations adopt a similar policy, of course, within limits that will make possible the enforcement of law?

So long as we must arm, it is gratifying to see the American Legion urging a program of preparedness, sane preparedness. You men who went through the World War know too well how unprepared we were. Men just out of civilian life were rushed to France. Some were sent into battle without ever having been taught how to load and fire a rifle. Thousands of American lives could have been saved had we been better prepared in 1917.

Today our military preparedness is not being overlooked. We can, I am sure, find a way to make our defensive forces adequate and effective without making this a military nation.

#### PRESERVATION OF DEMOCRACY

But let us think not merely of war; rather of peace, where greater victories can be won than on the battlefields; can be won not with guns and bullets but with minds, hearts, and ballots. We must fight for the defense and preservation of the ideal for which we were willing to go to war, our ideal of democracy. We must fight not to kill some foe, but for equality, for opportunity for all, for equal justice for all, for freedom to say what we believe, freedom to worship as we believe, to assemble and live as we wish so long as we do not harm others; fight for freedom to achieve our ambitions.

In short, we must fight for the privilege of enjoying life, liberty, and the pursuit of happiness. We must resist the interference of any despot or dictator; we must be sure that the Government does not assume control, regiment or regulate the life of the individual.

We must see to it that none of us becomes a subject of the Government. Instead we must keep the Government subject to the people.

#### PRODUCT OF THE AGES

In the 19 centuries of our Christian era, some 40,000,000,000 of people have lived and died. Those 19 centuries saw the destruction of Roman civilization, followed by the intellectual vacuum of the Dark Ages. Then came the sunrise of the Middle Ages, the Renaissance, the discovery of America, the beginnings of a constitutional government, and finally, in this country, the drafting of a document which was not a grant of powers to the people won by them or grudgingly given them, but was a grant by the people of limited powers to their Government.

And thus it is that in the 19 centuries since the birth of Christ less than 3 percent of those 40,000,000,000 beings ever knew what freedom was, and less than 1 percent ever had opportunity of enjoying it as we enjoy it today in America.

How precious is such a heritage. It must not be jeopardized.

One reason why democracy is such a rich heritage is that it had to be won. It has never been given to a people. What autocrat or dictator, ever suddenly and of his own volition, decided to make his people free? No people ever gained freedom without a struggle, and once it has been won the struggle must go on.

Since it was adopted, there have been, again and again, threats to our Constitution. Recently terrific forces have arisen to menace it. Only eternal vigilance and effort by every citizen will save from these destructive forces our Constitution and our democracy.

#### LEGION IN FOREFRONT

The American Legion, with its large membership, has already seen this great opportunity to serve our country again, and has been in the forefront of the fight against those who would overthrow our democracy and substitute for it some foreign "ism." I am hopeful that, with equal zeal, they will fight against every move that would increase the authority of our Federal Government or give to any President powers that may lead toward a dictatorship.

The experience of those hapless countries of Europe proves that when the people once surrender powers it is too often impossible to regain them. Our liberties and our freedoms must be held so dearly that we will never surrender them to anyone. It was only

through appalling sacrifices over the centuries that we are free men—free from slavery to government. We must not now lose this liberty and freedom through cowardice and indifference.

On this occasion it is good, also, not only to look back but to look ahead—to look at America's future.

#### KEEP OUT OF WAR

If we preserve our form of government, protect our Constitution and our system of free enterprise, keep out of war, except in case of attack; if we accept our full responsibilities of citizenship and see to it that we have what we should have—the best government on earth—then there will be no limit to the development of our great country.

We have not reached the last frontier, for new frontiers are opening up to us every day. In research laboratories throughout the land science is drawing aside the curtains and giving us a glimpse of a new world. If we're only allowed to develop our possibilities, even the wonderful progress that we have made in the 150 years under our Constitution—the greatest progress the world has ever seen—will be dimmed by new achievements, and we shall advance into a world of abundance and happiness the like of which the greatest dreamer never dreamed.

As we have fought the foe on our battlefields, we must fight our enemies of peacetime. We must wage unceasing war on poverty, disease, ignorance, intolerance. We must wage war against special privilege and see to it that everyone has an opportunity to improve himself and develop to the utmost his talents. In these battles for a higher standard of living and prosperity, for the enjoyment of our freedom and liberties, we need men of the same courage as our soldiers showed in the World War. We need sane, patriotic leadership. We can win this war for a better world as we have won all our other wars. We must win.

#### GUIDED BY A SUPREME POWER

Today let us all resolve anew to battle everlastingly for peace, to keep up our efforts to end all war, to carry forward the torch the men who fought in the World War have passed on to us.

Repeatedly through our history it has seemed that the destiny of this great Nation has been guided by a supreme power. We have passed through many dark, discouraging days only to find that hard, bitter experience ultimately has meant progress toward a better world.

Some day I feel sure we shall realize that the 4,000,000 men who went into service in the World War, the men whom we honor today, not only did their full part to win the war but through their sacrifices nobly helped to bring us closer to that day of which mankind has dreamed ever since the Nazarene lived His sacrificial life, when there shall be "Peace on earth, good will toward men."

### "Peace on Earth, Good Will to Men"

#### EXTENSION OF REMARKS

OF

### HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 3, 1940

ADDRESS BY HON. JENNINGS RANDOLPH, OF WEST VIRGINIA,  
AT THE PROGRAM ON THE EVENING OF DECEMBER 24, 1939,  
AT THE LIGHTING OF THE NATIONAL COMMUNITY CHRISTMAS TREE

Mr. RANDOLPH. Mr. Speaker, it was my high privilege to preside as chairman at the lighting of the national community Christmas tree. The President of the United States gave an excellent message, and my colleague Representative LOUIS LUDLOW has placed that speech in today's RECORD. I presented the Chief Executive as a man who not only believes in peace but who works for peace. I have that firm conviction.

At this point I include the brief remarks which I made as a part of the program:

Of all time-honored festivals Christmas awakens in our consciousness the strongest and most-treasured associations. We think of carol singers, candle-lighted churches, and happy homes.

We sense a sacred and solemn feeling that blends with our gladness and elevates the spirit to a state of hallowed and lofty joy. The dominant theme, both human and religious, is peace—the peace of the first Christmas when heralding angels bestowed their benediction on the earth.

To us in America this perception of peace should be acute this Christmas Eve. In parts of the world tonight the angelic salutation of the first Christmas goes unheeded. Its message is scorned. Some men choose to follow the dark stars of their own destiny instead of the luminous Star of Bethlehem. Their lust for power has led them far from the path of those ancient and wiser rulers, the three kings who sought to pay homage to the Prince of Peace.

LXXXVI—App—2

The people in those nations are restless for peace but, all too sadly, their leaders have failed to realize the true meaning of the Nativity.

For ourselves we are deeply conscious of a happier and a nobler realization. The message of Christmas is conveyed to us this year with a clarity that is strikingly significant in contrast with the dull rumble of the wars about us. We are at peace, and we intend to preserve that peace as a part of our national substance.

With a full comprehension of the preciousness of our possession, and in the genuine spirit of this joyous season, it is our fervent prayer that the blessing of the peace we cherish so dearly may descend in all its fullness on those less fortunate than ourselves. In that prayer, and in our earnest desire for its fulfillment, we shall give to our fellow men the most magnificent Christmas gift we can bestow. This Christmas Eve the power of peace needs regeneration in the hearts of all.

Let us in America dedicate ourselves to the preservation of the ideal of the first Christmas—"Peace on earth; good will to men." May the peace of our Christmas overflow the world until the sense of an unbroken joy is experienced by mankind everywhere.

I trust that this sense of unity and universal good will may enter into all hearts and bring hope and promise for the New Year.

#### A United America

#### EXTENSION OF REMARKS

OF

### HON. J. THORKELSON

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 3, 1940

Mr. THORKELSON. Mr. Speaker, a question to be decided some future day is unification of the many groups into which our Nation is now divided. Such unification is desirable and simple if all citizens can meet on a common ground.

Suppose we now assume that all of our people believe in the principles as set forth in the Constitution of the United States. What would be the result? The result would be a united patriotic Nation composed of patriotic and loyal American people. It is upon these principles that all Americans must unite, and those who cannot do so must be looked upon as problem groups by their own selection, unassimilable, and therefore anti-American.

#### SOCIETY AND GOVERNMENTS

Let us now for an illustration compare the peoples of a nation to a pyramid, the base representing the plain or common people, and the apex, the titled and rich people. We have in such picture a fair contrast of society levels, from the highest to the lowest. A nation is, of course, composed of many social groups, but to serve my purpose I shall for simplicity divide society into two groups; that is, the much-discussed and publicized "haves" and the "have nots." To carry out this illustration, I now divide the people into two political groups, each forming a distinct type of government: The "right," an autocracy under the rule of a king or emperor, comprising the titled and the rich people wielding the power of money; the "left," a democracy under the rule of a dictator or despot supported by the police and the military, wielding the power of force. Both types of such governments are undesirable and will, as they swing to the right or left, become unbearable to the people over which either type rules.

Russia provides examples of both types. Under the Czar, the Russian Government was an aristocratic despotism, "autocracy." Under the present dictator the Russian Government is a democratic despotism, "democracy." Of these two types, the present "communistic democracy" is the most pernicious and destructive, reason for which may be found in the fact that the Russian Government is anti-Christian.

Lenin and Trotsky paved their road to power with the bodies of murdered innocent people. The despotic dictator, Stalin, has maintained his position by liquidating all opposition in the present Russian "democracy."

The imperialistic Russian Government under the Czar was also a despotism, but it was Christian and, therefore, less obnoxious. The Czar did not engage in mass liquidation but committed political offenders to Siberia. His leniency toward such political offenders as Trotsky and Lenin eventually brought about his own downfall.

The founders of our country having lived under tyrannical masters were well familiar with aristocratic and autocratic despotisms. It was with this knowledge fresh in mind that they set to work to organize the first Government of the United States. The first attempt was a failure, for the Articles of Confederation did not establish balance or unity, but left each of the Thirteen States independent and free, with little responsibility to the Central Government. The Articles of Confederation, while forming the basic principles of the Constitution of the United States, was in reality nothing more than a mutual-defense pact among the Original States. I quote articles 2 and 3:

ART. 2. Each State retains its sovereignty, freedom, and independence, and every power, jurisdiction, and right which is not by this confederation expressly delegated to the United States in Congress assembled.

ART. 3. The said States hereby severally enter into a firm league of friendship with each other for their common defense, the security of their liberties, and their mutual and general welfare, binding themselves to assist each other against all force offered to or attacks made upon them, or any of them, on account of religion, sovereignty, trade, or any other pretense whatsoever.

It is clearly evident, after reading the Articles of Confederation, that the draftsmen had two definite objects in mind: First, that each State retain its sovereignty, freedom, and independence; second, that the United States should control the Federal Government. The manner in which this was to be accomplished is set forth in article 5:

ART. 5. For the more convenient management of the general interests of the United States, delegates shall be annually appointed in such manner as the legislature of each State shall direct, to meet in Congress on the first Monday in November in every year, with a power reserved to each State to recall its delegates, or any of them, at any time within the year and to send others in their stead for the remainder of the year.

Each State shall maintain its own delegates in a meeting of the States and while they act as members of the committee of the States.

In determining questions in the United States in Congress assembled, each State shall have one vote.

It is quite evident that the gentlemen who wrote these paragraphs into the Articles of Confederation had the same thing in mind when they wrote the Constitution of the United States, for in it provision is also made for State representation in the Senate of the United States and for the withdrawal of such representatives when they violate their obligation by misrepresenting their State.

The States, after operating under the Articles of Confederation for 9 years, found the instrument incomplete, and to correct the error and provide a balanced government, "In order to form a more perfect union," they called the Constitutional Convention in Philadelphia, May 1787. The Constitution was ratified on September 17, 1787. In regard to this, Washington said:

I conceive, under an energetic general government, such regulations might be made and such measures taken as would render this country the asylum of pacific and industrious characters from all parts of Europe—a kind of an asylum for mankind.

Of the many governments that have ruled nations throughout the ages our Government, as formulated in the Constitution, is the best, for it blends the better elements of the two major types. It is not an aristocracy and it is not a democracy, but it is instead a democratic republic in which the people, by electing the government of each State, provide an instrument of their own choice—the State legislature—with power to select two men to represent the State in the Senate of the United States. In this manner the party in power and the State legislators, in a certain sense, sponsored and put their stamp of approval on their State senators. This procedure of selecting Senators established State control of the United States Senate. It was through this representation in the Senate that the 48 United States directed the Federal Government in its international relations and national administration.

It is clearly evident, after reading the Constitution, that the entire Federal Government is subservient to the Congress of the United States. Congress, in transferring its power to the Executive and other Federal departments, reversed this wise provision of the Constitution by unconstitutional dispensation of its delegated powers. The Executive and all

executive departments through their chiefs are directly responsible to the Senate, the Senators are responsible to their State governments, and the Senate to the United States of America. That is clearly evident after reading article II.

Mr. Speaker, I now charge that State rights and direct State representation and equal suffrage in the United States Senate were abolished when the seventeenth amendment was adopted. I further charge that this drastic change removed balance and destroyed our republican form of government as set forth in the Constitution of the United States.

To prove my assertion I quote:

ART. IV, SEC. 4. The United States shall guarantee to every State in this Union a republican form of government.

And—

ART. V. \* \* \* No State, without its consent, shall be deprived of its equal suffrage in the Senate.

It is my desire to call attention to the fact that a republican form of government and equal suffrage in the Senate cannot be abolished except by unanimous consent, because the 48 States, according to article IV, section 4, guarantee these rights to themselves and to each State in the words:

The United States shall guarantee to every State in this Union a republican form of government.

Since adoption of the seventeenth amendment there has been no State suffrage in the Senate and, therefore, no legislative balance. It was State influence and control in the Senate that provided balance in the Government, and it was that which was destroyed when this amendment was adopted. There is a technical question involved in the adoption of this amendment because of the wording in the Constitution, as already expressed. If the adoption of this amendment was not ratified unanimously, there is a possibility that it is now null and void.

It should now be clear that if we continue operation under the seventeenth amendment the Government will in time swing entirely to the left and we will then have a true democracy in its real meaning. To this I believe every patriotic American will object; and if we fail to provide correction by restoring States' rights, the final result will be revolution. Americans will never submissively kneel to a dictator.

### Americanism

#### EXTENSION OF REMARKS

OF

HON. JOHN G. ALEXANDER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 3, 1940

ARTICLE BY K. L. BROWN

Mr. ALEXANDER. Mr. Speaker, the Elks recently offered a prize of \$100 for the best definition of "Americanism." The prize was won by K. L. Brown, Scout executive of the Boy Scouts of America. I submit Mr. Brown's article to the House because it carries and amplifies the expression I have so often made that Americanism is the practical working application by government of the principles of Christianity in our everyday lives. Here is Mr. Brown's definition:

Americanism is an abiding faith in the correctness and justice of the principles contained in the Declaration of Independence, the Constitution of the United States, and the Bill of Rights.

Americanism is a way of life, based on this abiding faith. It is a willingness to live in peace and harmony with our fellow men, regardless of political or religious faith.

Americanism is a willingness to apply the principles of free speech, free press, and freedom to worship God to our fellow men, even when their ideas and speech and methods of worship are opposed to our own.

Americanism is a willingness to live for the principles of America in peacetimes, as well as a willingness to die for American principles in wartimes.

Americanism brings to each American liberty under law, and a regard for law which means liberty and happiness for each of us.

Think this over and see what a very good definition it is.

**The Late Robert Marshall, Director of the Division of Recreation and Lands, United States Forest Service**

**EXTENSION OF REMARKS**

OF

**HON. JOHN M. COFFEE**

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, January 3, 1940*

ARTICLE FROM THE NEW REPUBLIC OF DECEMBER 27, 1939

Mr. COFFEE of Washington. Mr. Speaker, under leave to extend my own remarks in the RECORD, I include herein an article from the New Republic of December 27, 1939, entitled "Gap in the Front Lines," written by several coauthors and dealing with the life, achievements, and significance of the work of the late Robert Marshall.

I happen to have had the good fortune of knowing Bob Marshall intimately. He was a source of inspiration to me in my work as a Congressman. His engaging personality, his unflinching geniality, his brilliant analytical mind, his philosophic bent, all combined to make him a man among men. His passing at the premature age of 38 from the world's scene makes a gap which it will be very difficult to fill.

Bob Marshall was a man possessed of an immense income, but who lived modestly and used his income for the purpose of helping others. Inconspicuously and without fanfare he donated a fortune every year in order that indigent individuals and pecuniarily embarrassed liberal groups might have their ambitions and objectives made nearer of accomplishment. I call him an ameliorator.

The article is as follows:

[From the New Republic of December 27, 1939]

**GAP IN THE FRONT LINES**

(By Catherine Bauer, Thomas and Catherine Blaisdell (executive secretary, Temporary National Economic Committee), Lillian and John Coffee (Member of Congress), John Collier (Director, United States Indian Service), Gardner and Dorothy Jackson (ex-"brain truster," prominent publicist, and nationally known liberal), F. A. Silcox (now deceased, was Chief Forester of the United States), Raphael and Anna Zon (forester and publicist))

SIR: Robert Marshall, who died suddenly on November 11 at the age of 38, would have deplored any time, space, or energy devoted to a solemn eulogy of himself or his works. If convinced that some memorial was unavoidable, he would certainly have advised his friends to take a 30-mile walk, get dressed up and go dancing, or engage in a good rousing fight with the most obstructive stuffed shirt available.

But a lot of very fundamental qualities—absolute honesty, realism, belief in human beings—took on a kind of inspired and flashing force in Bob. And these qualities, rarely enough found among the intellectuals even in less crystalline form, are vital to the difficult process of improving this world—particularly when they are directed with such systematic energy toward the concrete and useful ends which Bob had always before him.

And so, in a season marked by more than usual cynicism and confusion, it seems imperative to notice publicly the painful gaps created by his death. Perhaps there are some able youngsters coming along who will be encouraged to know that such a whole-hearted and at the same time hard-boiled idealist as Bob not only can be extremely useful and effective but also have a very swell life.

Here are some of the things Bob was. No one person can be exactly this again, but the country needs everyone who can do any part of his work.

He was the protector of the remaining wilderness areas, passionate enough to know that the fight is worth while, even though it may be a generation before the masses of the people have the chance to find pleasure and recreation in them, but also convinced that the fight will not have been worth while until that is achieved. The right person must be appointed to Bob's old job in the Forest Service—Director of the Division of Recreation and Lands—the job which was made for him and which marked the Forest Service's first major recognition of the recreational value of our forests and wilderness. (One of the primitive areas he helped to save will soon be named for him.) And the Wilderness Society, that compact and useful mouthpiece and educational instrument, must be kept going and strengthened. Within the next few years Bob would certainly have written the classic book on natural environment in America and there have outlined a long-term social-economic policy

for our natural heritage. Someone must step into the breach and train himself for this responsibility.

He was a lively and insistent cross-current in the Washington scene. The great tragedy of even the best bureaucrats is that they tend to mill around in ever smaller and smaller circles, caught in a sort of downward vortex of expertise and office gossip. Great ideas and fundamental principles become embarrassing in ordinary conversation. But Bob had the nerve systematically to get all kinds of people together—Congressmen, prima donna "brain trusters," professional civil servants, promoters of this or that—hand them a dubious drink, and then insist that they debate seriously and exhaustively on some such topic as the public ownership of resources, Soviet Russia, or our refugee policy.

He was an unwearied, unsentimental, common-sense radical who never supported any movement without participating in it wholeheartedly and responsively. His ideals were always fitted to real people and real situations, and he was therefore never swallowed up by the frustration which sooner or later overcomes intellectuals who embrace abstract credos and then confuse the salvation of their own souls with the common weal. The organization of the unemployed and the sharecroppers he saw and supported as necessary immediate steps, whatever might come thereafter.

He was a scientist who, on the one hand, applied a disciplined objective method in even the most trivial observations, and who, on the other hand, loved all kinds of people because he understood them so well and could satisfy his insatiable curiosity about people because he loved them so well. He never took one of his 40-mile walks without making a dozen friends and learning something valuable about the people as well as the landscape. Even the simplest souls liked and trusted him enough (though he may often have seemed rather a "nut" to them) to give him something of themselves and to accept something of him in return. His "Arctic Village" is an extraordinarily fresh and significant work in the field of social and regional analysis. More studies need to be made in this spirit.

He was an effective and energetic public servant who proved that candor plus knowing your "stuff" can often work more miracles than the smoothest guile, but who very well understood how the wheels go round, and when and where to fight, to ridicule, to accept. Enjoying his own work thoroughly (and embroidering the civil service occasionally with such stimulating deeds as his heroic burlesque fight with the dead hand of the Comptroller General's office), he was the one guy who could always pull you out of the "squirrel cage" and make you feel again the excitement, importance, and opportunity in what you were trying to do. When he died he was just about to take 2 months' leave to write a book which had long been in his head—a book on Federal public administration, which would certainly have given pleasure, a sharp and witty picture, realistic information, and useful advice to those numerous responsible citizens who curse or praise Washington by the hour but haven't the faintest understanding of the actual workings of this gigantic instrument which is in their hands. Here's another job for someone.

**Robert Fechner's Fine Service**

**EXTENSION OF REMARKS**

OF

**HON. WILLIAM L. NELSON**

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, January 3, 1940*

EDITORIAL FROM THE ST. LOUIS GLOBE-DEMOCRAT

Mr. NELSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the St. Louis Globe-Democrat:

The inclination to evaluate the fine service of Robert Fechner, Director since its inception of the Civilian Conservation Corps, in terms of field, forest, and farm betterment, leaves the most valuable part of his work practically unsung. We may measure the worth of soil-erosion projects carried on under his direction, count the trees planted and the forest stands improved, show in miles the truck trails and minor roads constructed, add up the check dams erected, streams bridged and cleared, and fish planted, give worth to insect and rodent control, and weigh hundreds of other projects up to real values. But we have no way of laying a yardstick on the worth to youth itself this emergency device has offered by taking some 2,400,000 young men of the Nation off of street corners, teaching them arts and industry, and handing most of them back to their communities ready to fend for themselves.

Mr. Fechner, who died Monday, of particular fitness for the work, made the most of his opportunity. His chief thought in processing idle youth during the depth of the depression when youth was at loose ends was to turn them back to civil life better prepared to care for themselves than when they left it to enlist in the corps. There are hundreds of thousands of instances, no doubt, which will stand as living examples of the effectiveness of the method.

Mr. Fechner himself followed the work road upward. He was at an apprentice's bench in a machine shop at 16 and as a journeyman was a "boomer" machinist, following his trade in Central and South America for a number of years until he realized the worth of settled roots, as a railroad employee in Georgia. From that point he advanced in labor circles, and was active during the World War in settling labor disputes in various war industry factories. Later he was invited to lecture to students of Harvard University and other institutions.

But his most useful service was that of organizing and directing the first emergency relief effort of the Government in March 1933. First known as the Emergency Conservation Work, the agency became the Civilian Conservation Corps, and it is doubtful if any man could have armed it as promptly or as effectively for its purpose of getting unemployed youth off of the streets and into useful work as it was armed by Mr. Fechner. His understanding was immediate and his methods of administration undoubtedly gave the new picture the fine color it has borne to this day. No agency of public relief has a comparable record, and no method of human rescue will have more lasting effect of betterment without dregs.

### God Bless America

#### EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 3, 1940

ARTICLE BY M. M. GUHIN

Mr. MUNDT. Mr. Speaker, I ask unanimous consent to extend my remarks by including a thoughtful and patriotic Christmas sentiment sent out by one of the distinguished citizens of my congressional district, Mr. M. M. Guhin, of Aberdeen. I take the liberty of calling the attention of this body to this statement, which is entitled "God Bless America," because it seems to me it conveys some significant thoughts which it behooves us all to ponder carefully as we enter upon our duties on this first day of the closing session of the Seventy-sixth Congress. I find myself in whole-hearted agreement with the sentiment expressed herein, and I hope that each of us may receive something of inspiration from the reading of this patriotic Christmas expression.

GOD BLESS AMERICA

(By M. M. Guhin, Aberdeen, S. Dak.)

The theme of this song is both a thanksgiving and a prayer. God blessed America even in its geologic formation. Its mountains were inlaid with veins of gold, silver, coal, and iron ore; its forests, if conserved, would have provided dwellings for men as munificently as they did for birds; its Great Plains were the potential garden spot of the world; and great subterranean lakes of oil lay placidly waiting for man's ingenuity to develop and utilize them.

God blessed America when He piloted the Pilgrims to its lonely shore. They came from southeast England, descendants of the Angles and Saxons, who, centuries before, migrated from old Fredonia, a province which had never fully yielded to the power of Caesar. It was in the homeland of the Pilgrims, too, that the English barons wrested the Magna Carta from stubborn King John. With a centuries-old background of liberty-loving aspirations, the Pilgrims sought self-government and the right to worship God as their conscience dictated; the Mayflower Compact was a prophecy of the Constitution. Other persecuted peoples soon joined the Pilgrims in America—Puritans in Massachusetts, Quakers in Pennsylvania, Catholics in Maryland, poor debtors in Georgia, and Royalists in Virginia. Challenges to autocratic power permeate colonial history. With invincible courage and fortitude, Bacon, Hutchinson, Roger Williams, Franklin, and other prophets of liberty asserted man's right to self-government and to freedom of speech, press, religion, and assembly.

God blessed America by inspiring faith and hope in the great patriots of the Revolution, led by the immortal Washington in the field of battle, and by Jefferson in the field of thought. The story of the Revolution is the illad of liberty and self-government striving for realization. Dark days of near chaos, "the times that tried men's souls," followed the Revolution before the God-given inspiration of union gave promise of an enduring nation. The Constitutional Convention was the greatest assemblage of statesmen in the world's history. It produced the American Constitution, called by Gladstone, "The greatest document ever conceived by the mind and purpose of man." Truly it was destined to be "the wonder and the admiration of all future generations and the model on which all future governments shall be built." The Nation was singularly

blessed, too, by having Washington, as President, initiate the greatest experiment in democracy in the annals of history. True, a dark cloud of impending evil hung over the land in the form of slavery, but God gave us martyred Lincoln as the savior of the Union when the crisis came which tested the fundamental principles of the Declaration of Independence and of the Constitution. From the awful carnage of Civil War emerged a chastened and purified nation dedicated for all time to "liberty and union, now and forever, one and inseparable." Gradually fundamental principles of justice were crystallized in other reforms, such as the Australian ballot and the enfranchisement of women.

God blessed America by making it the refuge of the oppressed, the persecuted, and the suffering from many lands—German refugees from the revolution of 1848, Irish from plague-stricken Erin, Scandinavians from their crowded homelands, Hollanders, Poles, Russians, Italians, and migrants from the Balkan states. All were impelled by a desire for greater opportunity, more freedom, and more self-determination. The leaven of democracy permeated the Nation, and invariably the immigrant became "an American and nothing else." Thus for the first time in the history of mankind there evolved a nation free from bonds of tribe or clan, camouflaged now by the term "race." We are not a race but a melting pot of 60 different races. Racial consciousness, racial hates, racial superiority complexes have no place in America's destiny. Americanism has no racial import; Americanism signifies the acceptance of certain eternal laws of rectitude, certain axiomatic principles of government based upon the postulate of the Fatherhood of God and the brotherhood of man. Americanism denies that there is, or ever can be, a man great enough to rule his fellows without their consent. Americanism means the elimination of all class distinctions and discriminations based upon race, color, religion, or economic status. Americanism is the soul of America in the individual striving for realization in everyday life. As Rabbi Wise said: "America seems destined, in the providence of God, to be the meeting place of all the peoples, to be the world's great experiment in human brotherhood—all of us learning that other races are not inferior, other nations are not barbarians, and other faiths are not Godless."

God bless America, however, is an invocation as well as a thanksgiving. Never since the frail *Mayflower* dared the storms of the Atlantic has democracy faced greater perils than it does today. Great nations have repudiated it for dictatorial government; war stalks like an evil spirit in two continents, threatening the very existence of white civilization. The world seems to be facing the terrible dilemma of having "Truth forever on the scaffold, Wrong forever on the throne." Save us, O Lord, from the awful horrors of modern warfare! Give us continuing peace, that we may be a ministering angel to a blood-drenched and war-weary world, when men again listen to the angel chorus paying homage to the Prince of Peace—"Glory to God in the highest, and peace on earth to men of good will." May we cherish faith, hope, and charity; may we still believe that—

"Behind the dim unknown

Standeth God within the shadows keeping watch above His own."

God bless America and help it prove the efficacy of democracy. The fate of Christianity, the fate of democracy will not be settled on the battlefield. Christianity did not die when its Founder was crucified, leaving only His 11 loyal apostles to carry on the work of redemption. Democracy did not die when colonial farmers, numbering less than Chicago's present population, challenged a great empire; it did not die when a rebel army was threatening Washington City. Democracy will not die if men are loyal to the belief in a Supreme Being who created and endowed man with a dignity which only a democracy can satisfy. Democracy will not die if we retain the faith of our fathers in both religion and government, if we cherish the glorious history of our country; if we keep troth with the countless dead, who sacrificed all that democracy might live. Democracy cannot die if "We here highly resolve that these dead shall not have died in vain; that this Nation, under God, shall have a new birth of freedom; and that government of the people, by the people, and for the people shall not perish from the earth."

God bless America and help us eliminate those national taints which afford arguments against self-government. May we cease to be the most lawless Nation on earth, with an annual crime bill of \$15,000,000,000. May we find a way to end the age-old struggle between capital and labor. May we eliminate the anomaly of surpluses and human suffering as coexistent evils. May democracy function not only in government but in industry, in economics, in education, and in social living. May we realize America's tremendous responsibility to all future ages as the custodian of those priceless privileges to maintain which myriads of young men died. The principles of human brotherhood, equality, liberty, self-government—all that our flag symbolizes, all that our country means—are ours to preserve for all future ages. America!

"Lo, before us gleam her campfires, we ourselves must Pilgrims be. Launch our *Mayflower* and steer boldly through the desperate winter sea;

Nor attempt the Future's portal with the Past's blood-rusted key."

God bless America, that we may think more in terms of the general welfare and less in terms of sectional, State, or personal gain. America was not instituted nor maintained by asking, "What do I get out of it?" or "Am I my brother's keeper?" but by noble self-sacrifice, wholehearted patriotism, and martyrlike devotion to high ideals. May we realize what America means to destiny and resolve that it shall not pass away; may we strive to exemplify its principles in our daily lives. America is the world university in govern-

ment, the refuge of the oppressed, the citadel of liberty, the cradle of religious toleration, the land of freedom, the world laboratory in human brotherhood, the great exponent of man's inherent dignity; surely it cannot die if we are worthy of the priceless privilege of American citizenship.

America!

"Humanity with all its fears,  
With all its hopes of future years,  
Is hanging breathless on thy fate."

God bless America. On this holy festival, may you, my friend, and I, and every loyal American bow our heads in sincere reverence, too awed to be proud, our souls overflowing with gratitude for what America means and the glorious peace that pervades it today, and, rededicating all that we are or ever hope to be to its perpetuity, let us humbly pray with Tiny Tim, "God bless us every one"; let us pray, "God bless America."

## What Started State Rackets?

### EXTENSION OF REMARKS

OF

HON. J. THORKELSON

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 3, 1940

Mr. THORKELSON. Mr. Speaker, 1 year ago many new Members appeared on this floor, and I predict many more will be seen here next year. I hope the new crop will be statesmen instead of "yes" men, for the Government needs a thorough cleaning from top to bottom.

Deterioration in our Government is an old story, but we have today greater deterioration than ever before, and this in spite of the fact that the Government is now composed of professors, teachers, and social and economic experts.

The daily press and other periodicals are filled with their advice on problems that should in reality be the sole concern of Congress. In this group of egotists and self-elected rulers, we find the heads and underlings in nearly all departments except the Navy. Strange as it may seem, the Navy Department has not even given advice on maritime affairs, which I am sure that Department knows more about than the Department now giving such advice.

It is not my intention to unduly criticize expert ability, for where such ability exists results may embarrass the critic. I am, however, of the opinion that our Nation is being deprived of a very valuable service in retaining these gentlemen as department heads and molders of administration policies, when they could serve a greater good as leaders in industries. This change in employment would also be a more valuable experience to them, for as operators of industries dependent on private capital, they would be more cognizant of the danger now confronting our Nation. As employers, creators, and producers of wealth on their own capital investments, the steadily increasing Federal operative cost would become more realistic to them, and so would the steadily mounting national debt.

Mr. Speaker, the object of this discourse is to discuss an article recently released in a New York paper, which appeared under this heading:

#### KILL THIS STATE RIGHTS' RACKET

Secretary of Commerce Harry L. Hopkins proposes formation of a thoroughgoing Government committee to study and coordinate the Government's activities in combating the trend toward interstate trade barriers.

Mr. Hopkins states the case conservatively when he says:

"In the past few years the problem of interstate barriers to free trade between the several States has grown to be a serious threat to the economic life and business well-being of our country. It has resulted in loss of business generally."

It has done and is doing something else as bad as or worse than that. It is fanning up interstate ill will, envy, hatred, and malice.

Numerous States have set up what amount to customhouses at "ports of entry" on their borders, meaning at points where big highways cross their borders. At these "ports of entry" various kinds of fees are extorted from truckers and tourists and business travelers seeking to enter the State—inspection fees, tolls, in many cases actual though disguised tariffs on certain kinds of goods whose home producers the State wishes to protect from other-State competition.

It is my desire to call the Secretary's attention to the fact that State rights were killed in 1913, when the seventeenth amendment was adopted, and what we need now is an inquest.

We are today, instead of 48 united States with representation in the Senate of the United States, 48 separate feudal States, each with little interest in the others. In other words, in eliminating State control of the United States Senate, we removed the very principle which makes this a Republic of 48 united States. Hence nothing can be expected except that of which the writer complains; that is, 48 socialistic Commonwealths upset with dissension and class hatreds. It is this unhappy state that is gradually but persistently leading us toward dictatorship. This chaotic condition is clearly evident as each State fights for the larger share of Federal appropriations. Little consideration is given to the fact that all money is borrowed on the credit of each State. It is instead, as with pirates of old, a division of spoils, even if the spoils are a mere mirage.

No thought is given by the pillagers to the fact that exhaustion of credit spells ruin and destruction. No indeed; no sanity or reason is evident in these statesmen, who, antipodally bent, deplete the national exchequer. Other statesmen, not to lose face at home, must participate in this orgy, for how can they go home and face their constituents without treasury scalps in their belts? The fact that all this is planned by the same group that developed planning in Russia, England, and France escaped many of our astute lawmakers. Many of our legislators do not grasp the fact that our domestic money is prepared for us by this group of planners, and is, in fact, of no greater value than the inflated marks they turned loose in Germany.

The point to bear in mind is that when credit is exhausted, when the till is dry, no matter what money is used, someone takes the loss. The question we, the people, should ask ourselves is, Who absorbs this loss? Is it the national and international financiers? No indeed; for they are well protected in the ownership of gold, real estate, and other industrial property. It was planned so for them by agents of the invisible government now planning in the New Deal administration.

It is you, Mr. Citizen, who takes the loss. It is the owners of Government bonds, life insurance, and all paper investments that are knocked over when the lions of finance take you for a ride. Provision has also been made for your care when you find yourself unsaddled, with your nose stuck in the mire of the financial coliseum, for the keepers of the lions hope to flank the vestal virgins with the Army and Navy, to give you thumbs down should you object to the ride.

This planning is not quite complete, and it is for that reason the Secretary suggests another Government committee. This is not only in line with his own dictatorial policies, but it is also intimately interwoven in Government planning.

The question may be asked, Where is the money to come from that is to pay the salaries of over 1,000,000 Federal employees and the operating expenses of the many bureaus and committees? Why is new legislation required to care for this so-called State racket when regulation of State rights is clearly defined in the Constitution of the United States:

ART. I, SEC. 9. No tax or duty shall be laid on articles exported from any State.

ART. I, SEC. 10. No State shall, without the consent of the Congress, lay any imposts or duties on imports or exports, except what may be absolutely necessary for executing its inspection laws; and the net produce of all duties and imposts laid by any State on imports and exports shall be for the use of the Treasury of the United States, and all such laws shall be subject to the revision and control of the Congress.

These two paragraphs clearly defined limitation on States' rights, and the following quotation states equally clearly the procedure to correct violations:

ART. I, SEC. 8. The Congress shall have the power to regulate commerce with foreign nations and among the several States and with the Indian tribes.

It is therefore the duty of Congress to regulate the interstate commerce among the several States by directing the

Interstate Commerce Committee to proceed against such States as violate this provision of the law. Should Congress foolishly follow the advice of the Secretary, as proposed in the article, it would in such legislation violate the Constitution and aid in the concentration of greater power in the executive department.

It is this unwarrantable and unconstitutional transfer of power from the legislative to the executive department that is responsible for the deplorable condition in which we find ourselves today. I do not believe anyone will disagree with the article and its condemnation of "rackets," but "let he who is without guilt cast the first stone." What racket is greater or more pernicious than the Federal racket of planned destruction?

What racket is greater than Federal invasion of private industries? Invasion and usurpation of the States' and the people's right? Negotiation of trade pacts and treaties destructive to agriculture and other production? Confiscation of gold and gold securities? Inflated and unsecured domestic currency? Studious tolerance toward the Communists, the anti-Americans, within our gates?

As a matter of fact, is not the Federal Government, in its planning, engaged in a most contemptible racket, which has for its purpose conversion of private industries to Federal ownership? Is it not a fact that premature exposure of planned conversion of the Government is an obstacle that the administration is now facing in its planned Federal control? Is it not a fact that there are too many loyal Americans in the Army and Navy opposed to such conversion? Is it not a fact that the power of impeachment, which Congress still retains, may be employed as a weapon of justice? Is it well to remember that Congress still holds the power and can act in the common defense and for the general welfare of the United States.

The Secretary of Commerce, Mr. Harry L. Hopkins, does not hesitate in conniving for more power to satisfy the administration's dictatorial desire, for the article to which I refer ends as follows:

The Federal Constitution forced on these stubborn States the principle of free trade within our own national borders—and that principle, more than any other, is to blame for our present-day wealth.

We can't picture little local politicians stopping the throat cutting on their own initiative.

It looks to us as if Congress will have to pass some stern laws prohibiting interstate trade barriers of all kinds, those laws to be enforced by militant and far-reaching endeavors on the part of the executive branch.

One thing that would help would be a network of Federal roads, with "port of entry" robber roosts ruled strictly off them, and with Federal police regulating them to the exclusion of State and local police. That would drive the State-regulated roads into free-trade practices.

Let's get going on this reform before we come undone as a nation.

I have taken the liberty to quote from this article because it follows closely the philosophy of Stalin, the communistic despot of Russia.

The first paragraph in this quotation is obscure, both in its premise and its conclusion, for the Constitution of the United States was voluntarily ratified by each State and is not the Federal Constitution, but is instead the Constitution of the United States, in which the people provide protection for themselves from the Government of their own creation. In this document the people reserve all rights to the States and to themselves that are not specifically delegated to the three branches of the United States Government.

The reference to the "throat-cutting little politicians" is ill-timed, for they are only finishing the cutting which the big politicians missed when they cut the Nation's throat. It is even possible that these little politicians may aid in relieving pressure on the higher-ups when all of them are driven to cover.

We have two national political organizations with headquarters in Washington and the expenses of both are paid by the actual rulers of this Nation. In this oligarchy are those who controlled the national monetary wealth and it is this group that I have labeled "the invisible government."

It is this group that selects the Presidential candidates, and is it any wonder? Certainly not, for they are the "sugar daddies" of both parties. Do you, Mr. Citizen, believe that such influence is for the better interest of the Nation and the general welfare of the people? If you do, look around and take stock, observe dormant business, closed factories, and the idle walking the street looking for work. That should be sufficient evidence that we need a change. Unfortunately this group has acquired more and more power since you, Mr. Citizen, destroyed this Republic by abolishing State representation in the Senate of the United States. Those who have followed my remarks will find that I have already referred to this deplorable change in the Government, but the actual extent of the damage will become more acute as balance in government breaks down. As a further result of this, each State is now attempting to protect itself by establishing barriers around its borders. This can only lead to centralized dictatorial government, and it is that very thing those "anti-Americans" had in mind when they promoted and the people foolishly adopted the seventeenth amendment.

What is needed today more than anything else is a national party composed of all patriotic Americans in both major parties. This will leave the remainder of the two parties a party of anti-Americans, crooked politicians, and their cohorts.

We need a Congress composed of men who will adhere to their obligation "to preserve, to protect, and to defend the Constitution of the United States" as it was given to us by the founders of this Republic.

We need a President who is independent in thought and action—a real "he" American—who will unflinchingly adhere to his obligation:

I do solemnly swear (or affirm) that I will faithfully execute the office of President of the United States, and will to the best of my ability preserve, protect, and defend the Constitution of the United States.

The President of the United States must be free from entangling alliances, national as well as international. He must not be dominated or controlled by monetary or other predatory interests now so destructive to our Nation. He should, instead of asking for extension of power, insist that Congress repeal all powers granted to the Executive which are in conflict with the Constitution. He should insist that Congress assume full responsibility for the Government of the United States and that congressional committees be appointed to operate within Federal departments in order to familiarize themselves with their delegated duties. He should recommend changes in banking which will leave money available for development of outlying districts. Control of money should not be allowed to remain as it is now—in the hands of a selected few. He should recommend that the Government withdraw from all business which is competitive and destructive to private industries. He should insist that each State resume its constitutional status so that the 48 States will again be represented in the Senate of the United States.

There is nothing wrong with the Constitution. Our difficulty may be found in the fact that we are not operating according to this document. It is therefore the duty of the people to take notice thereof now, as failure to do so can only end in national disaster.

A nation, to operate for the general welfare of all, must be equally as careful in administration and operative cost as a well-managed business.

The attitude taken in the editorial quoted—that is, coercion and Federal policing—is anti-American and dangerous. The American people will, I am sure, be glad to cooperate and aid in national reconstruction, but they should not and will not submit to persecution by ill-advised public employees.

I live in the hope that everyone will take a greater interest in our Government and, as the danger of the seventeenth amendment is recognized, that a general public demand will be made for its repeal. Do not be deceived, for the time will come when we, the people, must set the Government right.

## The President's Yuletide Address

## EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 3, 1940

Mr. LUDLOW. Mr. Speaker, in the city of Washington on Christmas Eve President Roosevelt delivered a sublimely beautiful yuletide message, in which he pointed out to a war-cursed, sorrowing world the great truth that the way to salvation lies by the Rock of Ages.

The President on that night stood erect and foursquare as the moral leader among the rulers of the world when he invoked the beatitudes and humbly prayed that the peoples in all the nations which are at war "may read, learn, and inwardly digest" the deathless words spoken by the Saviour in His Sermon on the Mount.

Those who have read and pondered over the President's yuletide address and have given thoughtful consideration to its importance and its widespread implications in a world of strife have found in it somewhat the charm of Lincoln's address at Gettysburg. Its deep significance is in the fact that with humanity in so many lands sunk to the lowest levels of distress and suffering; with the better instincts of so many mortals submerged in barbarism; with man's inhumanity to man making countless thousands mourn, he suggests what amounts to a program of a great moral and spiritual resurgence to lift the world out of hell.

It recalled another occasion a few years ago when in a statement born of true inspiration he said:

No greater thing could come to our land today than a revival of the spirit of religion—a revival that would sweep through the homes of the Nation and stir the hearts of men and women of all faiths to a realization of their belief in God and their dedication to His will for themselves and for their world. I doubt if there is any problem—social, political, and economic—that would not melt before the fire of such a spiritual awakening.

In calling the attention of the warring nations to the saving power of the Sermon on the Mount, the President at the same time gave to us in America a lesson that should have a tremendous effect in shaping sentiment at home in conformance with high ideals of peace, morality, and religion. Today we have before us a new concept of America's opportunity. It is based not on death and destruction, but on a conservation of life and hope. Not by slaughtering a single human being, not by creating a single widow nor by orphaning a single child, nor by causing the shedding of a single tear, but by precept and example we may do a grand part in safeguarding democratic institutions and putting an end to war. The magnificent destiny which we contemplate for America is not based on battleships and battalions but on the moral righteousness that is so brilliantly reflected in the President's yuletide message.

Because I think no finer address ever graced the pages of the CONGRESSIONAL RECORD than this address of President Roosevelt I have today secured unanimous consent of the House to insert it in the Appendix of the first issue of the RECORD following its delivery, and I hope that as a document of the highest worth it will go on and on doing good in a troubled world. It is as follows:

The old year draws to a close. It began with dread of evil things to come and it ends with the horror of another war adding its toll of anguish to a world already bowed under the burden of suffering laid upon it by man's inhumanity to man.

But thank God for the interlude of Christmas. This night is a night of joy and hope and happiness and promise of better things to come. And so in the happiness of this eve of the most blessed day in the year I give to all of my countrymen the old, old greeting—"Merry Christmas—Happy Christmas."

A Christmas rite for me is always to reread that immortal little story by Charles Dickens, A Christmas Carol. Reading between the lines and thinking as I always do of Bob Cratchit's humble home as counterpart of millions of our own American homes, the story takes on a stirring significance to me.

## NEIGHBORLINESS SPREADS

Old Scrooge found that Christmas wasn't a humbug. He took to himself the spirit of neighborliness. But today neighborliness no longer can be confined to one's little neighborhood. Life has become too complex for that. In our country neighborliness has gradually spread its boundaries—from town, to county, to State, and now at last to the whole Nation.

For instance, who a generation ago would have thought that a week from tomorrow—January 1, 1940—tens of thousands of elderly men and women in every State and every county and every city of the Nation will begin to receive checks every month for old-age retirement insurance—and not only that but also insurance benefits for the wife, the widow, the orphan children, and even dependent parents? Who would have thought a generation ago that people who lost their jobs would, for an appreciable period, receive unemployment insurance; that needy, the blind, and the crippled children are receiving some measure of protection which will reach down to the millions of Bob Cratchits, the Marthas, and the Tiny Tims of our own "four-room homes"?

In these days of strife and sadness in many other lands, let us in the nations which still live at peace forbear to give thanks only for our good fortune in our peace.

Let us rather pray that we may be given strength to live for others—to live more closely to the words of the Sermon on the Mount, and to pray that peoples in the nations which are at war may also read, learn, and inwardly digest these deathless words.

May their import reach into the hearts of all men and of all nations.

## BASIS OF MESSAGE

I offer them as my Christmas message:

"Blessed are the poor in spirit, for theirs is the kingdom of heaven."

"Blessed are they that mourn, for they shall be comforted."

"Blessed are the meek, for they shall inherit the earth."

"Blessed are they which do hunger and thirst after righteousness, for they shall be filled."

"Blessed are the merciful, for they shall obtain mercy."

"Blessed are the pure in heart, for they shall see God."

"Blessed are the peacemakers, for they shall be called the children of God."

"Blessed are they which are persecuted for righteousness' sake, for theirs is the kingdom of heaven."

## So-called Predictions Which Are Not Intended as Predictions

## EXTENSION OF REMARKS

OF

HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 3, 1940

Mr. MURDOCK of Arizona. Mr. Speaker, it is the right of a Congressman's constituents to know how their Representative in Congress stands on public questions and on vital issues, and it is the privilege of the Congressman, as well as his duty, to make his stand and attitude plain and unmistakable, as nearly as he can, to those whom he represents. It is my desire and intent to represent the majority of my constituents in Arizona on all important matters, and to make my attitude understood on all vital matters. I may seem to some to be provincial in having greater concern for those matters that pertain directly to Arizona and having less for those that pertain to the Nation at large and still less for those that are international in their aspects. If this be provincialism, it is necessary, because it is impossible for me to be informed thoroughly about all the matters which come before the American Congress. Having nothing to conceal, I am always glad to try to let my constituents know what I have done as their Representative at Washington and, again, as far as it is humanly possible, what I propose to do in the public interest. Accordingly, I have been glad to accept invitations to speak before various groups, such as patriotic clubs, political organizations, and civic bodies. In a limited way, I have tried to keep the press informed through releases from time to time and also, to a certain extent, by this privilege of extending my remarks in the CONGRESSIONAL RECORD.

I am often asked by citizens of Arizona to forecast or predict the outcome of great issues before the country, or to furnish "tips" on what will be done at Washington. As I

frequently say to my friends, "I am not a prophet or the son of a prophet, and it ill behooves me to prophesy." In fact, I have an aversion to predicting. I know it is foolhardy for me to predict the outcome of certain proposed measures before Congress, especially if they be of a highly controversial nature, because any ordinary mortal cannot be sure. Especially am I cautious in regard to predicting the passage or failure of certain bills, and I dislike to indicate how I shall vote on any bill before it reaches the voting stage. This is not because I wish to keep my proposed vote secret, but because I do not know the precise provisions of the proposed law very many minutes in advance of the time for voting. Bills are subject to so much amendment that one may need to change his mind and also his vote just a few moments before the roll call. That is why I feel it unwise to predict my own vote on this or that bill.

During my recent trip to Arizona I was credited with having predicted concerning several things of great interest in the public mind. I did not intend as predictions those that are attributed to me. For instance, I never predicted the exact outcome of a trade agreement now in the process of study and negotiation between the United States and Chile. I hoped for a certain outcome in that case and worked toward that end, and it happened. It is true that I relieved my own mind and tried to relieve the distress in other minds by stating that I believed the chief Assistant Secretary of State having charge of this particular matter had become convinced that copper ought not to be included. That was a wish and hope on my part, but was not intended in any sense as a prediction, though it may have been misunderstood as such. What I wanted to happen was evidently misunderstood also.

Fortunately, the State Department made a certainty of the matter by the announcement that there was no intention to include copper in a trade treaty with Chile. That hoped-for announcement certainly brightened Christmas in Arizona.

Again I was credited with having predicted that Russia would win in the European war. Some individuals seemed inclined to regard that not only as a prediction but something more than a prediction; and again I must say that I intended to make no predictions with regard to the outcome of the European war, and I announced to my audience that I made no predictions. On that occasion I was not discussing Russia or the European war but referred to it incidentally while giving a service club a picture of the situation with regard to our efforts to keep out of war through the recent neutrality legislation.

Sometimes a few words, not the principal theme of a speaker, lifted out of their context and overemphasized, make it appear that a speaker said something that he never even had in mind. Such was the case in regard to my last accredited prediction. I never made any prediction that Russia would win the European war in a military sense and become the sole state in Europe. I did say that it seemed to me that Stalin had already "won the war," having no reference, however, to the unequal struggle at this moment going on between Russia and Finland. My own sympathies are naturally with Finland. I sincerely hope that this courageous, plucky, self-respecting, debt-paying nation of the Far North may very decisively turn back the "red" horse from her borders. If Finland is able to do this, it will be a splendid stroke, not for Finland only but for the whole world and for civilization itself.

What I had in mind about Stalin and this war was not a prediction but a fear. My fear is that, due to the alliance between Hitler and Stalin, with Russia benefiting without military participation, the war in Europe might be long drawn out until the chief contesting parties were utterly exhausted while Russia grew in strength. In such a case Russia might become a far greater factor in European affairs than if this general war had not occurred. My fear is that because of the turn of events—not counting the stubborn resistance of Finland—communistic Russia might succeed completely in turning her face toward the west instead of the east, where she logically belongs, and thus become an arbiter in European affairs. Prior to the outbreak of the European war Russia seemed cut off from western outlets, faced definitely toward

Asia, and the red menace of communism, with its anti-Christian forces, seemed on the wane.

The trend of some recent events has enabled Stalin, without the loss of blood, to possess a large portion of Poland, to exert his influence toward the Baltic Sea, and likely to revive the dangerous zeal of bolshevism through such conniving. This change in Russia's condition is a fact and not a matter of prediction. To my mind, it is a matter to be feared. I do not want such a system of human society, as represented by Stalin's regime, to become a dominating force in Europe. The possibility that it might is all the more reason why the United States of America should build a strong American system of society in a democratic American way, so as to be superior in power, in quality, and in every other respect to such a possible communistic force in Europe. It is because we must use all our energies to build a better and stronger America that I made any reference to the possible menace abroad.

I have just listened to the President's address today at the opening of the second regular session of Congress. I noticed that, although he approached the state of the Union through a discussion of foreign affairs, he emphasized the importance of our domestic problems. With that I thoroughly agree. One sentence from the President's message struck me with great force. He said:

The social and economic forces which have been mismanaged abroad until they have resulted in revolution, dictatorship, and war are the same as those which we here are struggling to adjust peacefully at home.

While I favor adequate military and naval defense, I have always favored a sound political, economic, and social life for all American citizens as the best possible scheme of national defense. Let none of my constituents think for a moment that I am making predictions concerning the ultimate outcome of any European ideologies or expressing sympathy for any totalitarian dictators. Let them know for a surety that I want America to have that defensive posture of which George Washington spoke. I would have American life so sound and firm through our building on the democratic process that we need fear no storms from without because properly safeguarded from storms within. I make no pretense of knowing the future, but I certainly have a right and duty to hope and work for a desirable future for our state and country.

## Cooperation of Religious Organizations for Peace

### EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, January 4, 1940

LETTERS FROM THE PRESIDENT TO THE POPE AND OTHER RELIGIOUS LEADERS AND THEIR REPLIES AND AN ADDRESS BY THE POPE

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the Appendix, the letters from the President of the United States to the Pope, Dr. George A. Buttrick, president of the Federal Council of Churches of Christ in America, and Rabbi Cyrus Adler, president of the Jewish Theological Seminary; their replies to the President; and a recent address of the Pope to the College of Cardinals on the basis of world peace.

Never in recorded history has humanitarian and far-sighted leadership been so necessary to the ultimate salvation of the civilized world. Cooperation in the cause of peace by these great leaders has won grateful thanks wherever freedom, justice, and international good will have a welcome place in the hearts of men.

There being no objection, the correspondence and address were ordered to be printed in the RECORD.

The President's letter to the Pope reads in full as follows:

DECEMBER 23, 1939.

YOUR HOLINESS: Because at this Christmas time the world is in sorrow, it is especially fitting that I send you a message of greeting and of faith.

The world has created for itself a civilization capable of giving to mankind security and peace firmly set in the foundations of religious teachings. Yet, though it has conquered the earth, the sea, and even the air, civilization today passes through war and travail.

I take heart in remembering that in a similar time Isaiah first prophesied the birth of Christ. Then, several centuries before His coming, the condition of the world was not unlike that which we see today. Then, as now, a conflagration had been set; and nations walked dangerously in the light of the fires they had themselves kindled. But in that very moment a spiritual rebirth was foreseen, a new day which was to loose the captives and to consume the conquerors in the fire of their own kindling; and those who had taken the sword were to perish by the sword. There was promised a new age wherein, through renewed faith, the upward progress of the human race would become more secure.

Again, during the several centuries which we refer to as the Dark Ages, the flame and sword of barbarians swept over western civilization; and again, through a rekindling of the inherent spiritual spark in mankind, another rebirth brought back order and culture and religion.

I believe that the travail of today is a new form of these old conflicts. Because the tempo of all worldly things has been so greatly accelerated in these modern days, we can hope that the period of darkness and destruction will be vastly shorter than in the olden times.

In their hearts men decline to accept for long the law of destruction forced upon them by wielders of brute force. Always they seek, sometimes in silence, to find again the faith without which the welfare of nations and the peace of the world cannot be rebuilt.

I have the rare privilege of reading the letters and confidences of thousands of humble people living in scores of different nations. Their names are not known to history, but their daily work and courage carry on the life of the world. I know that these, and uncounted numbers like them in every country, are looking for a guiding light. We remember that the Christmas star was first seen by shepherds in the hills long before the leaders knew of the Great Light which had entered the world.

I believe that while statesmen are considering a new order of things, the new order may well be at hand. I believe that it is even now being built, silently but inevitably, in the hearts of masses whose voices are not heard, but whose common faith will write the final history of our time. They know that unless there is belief in some guiding principle and some trust in a divine plan, nations are without light and peoples perish. They know that the civilization handed down to us by our fathers was built by men and women who knew in their hearts that all were brothers because they were children of God. They believe that by His will enmities can be healed; that in His mercy the weak can find deliverance and the strong can find grace in helping the weak.

In the grief and terror of the hour these quiet voices, if they can be heard, may yet tell of the rebuilding of the world.

It is well that the world should think of this at Christmas.

Because the people of this Nation have come to a realization that time and distance no longer exist in the older sense, they understand that that which harms one segment of humanity harms all the rest. They know that only by friendly association between the seekers of light and the seekers of peace everywhere can the forces of evil be overcome.

In these present moments no spiritual leader, no civil leader, can move forward on a specific plan to terminate destruction and build anew. Yet the time for that will surely come.

It is therefore my thought that, though no given action or given time may now be prophesied, it is well that we encourage a closer association between those in every part of the world—those in religion and those in government—who have a common purpose.

I am therefore suggesting to Your Holiness that it would give me great satisfaction to send to you my personal representative in order that our parallel endeavors for peace and the alleviation of suffering may be assisted.

When the time shall come for the reestablishment of world peace on a surer foundation it is of the utmost importance to humanity and to religion that common ideals shall have united expression.

Furthermore, when that happy day shall dawn, great problems of practical import will face us all. Millions of people of all races, all nationalities, and all religions may seek new lives by migration to other lands or by reestablishment of old homes. Here, too, common ideals call for parallel action.

I trust, therefore, that all of the churches of the world which believe in a common God will throw the great weight of their influence into this great cause.

To you, whom I have the privilege of calling a good friend and an old friend, I send my respectful greetings at this Christmas season.

Cordially yours,

His Holiness PRUS XII,  
Rome, Italy.

FRANKLIN D. ROOSEVELT.

The President's letter to Dr. Buttrick reads in full as follows:

DECEMBER 23, 1939.

MY DEAR DR. BUTTRICK: Because at this Christmas time the world is in sorrow, it is especially fitting that I send you a message

of greeting and of faith. Realizing the spiritual kinship of all who believe in a common God, I have sent a like greeting to the Pope as head of the Catholic Church and to Rabbi Cyrus Adler as an outstanding leader of the Jewish faith.

The world has created for itself a civilization capable of giving to mankind security and peace firmly set in the foundations of religious teachings. Yet, though it has conquered the earth, the sea, and even the air, civilization today passes through war and travail.

I take heart in remembering that in a similar time Isaiah first prophesied the birth of Christ. Then, several centuries before His coming, the condition of the world was not unlike that which we see today. Then, as now, a conflagration had been set and nations walked dangerously in the light of the fires they had themselves kindled. But in that very moment a spiritual rebirth was foreseen, a new day which was to loose the captives and to consume the conquerors in the fire of their own kindling, and those who had taken the sword were to perish by the sword. There was promised a new age wherein through renewed faith the upward progress of the human race would become more secure.

Again, during the several centuries which we refer to as the Dark Ages, the flame and sword of barbarians swept over western civilization; and, again, through a rekindling of the inherent spiritual spark in mankind, another rebirth brought back order and culture and religion.

I believe that the travail of today is a new form of these old conflicts. Because the tempo of all worldly things has been so greatly accelerated in these modern days we can hope that the period of darkness and destruction will be vastly shorter than in the olden times.

In their hearts men decline to accept for long the law of destruction forced upon them by wielders of brute force. Always they seek, sometimes in silence, to find again the faith without which the welfare of nations and the peace of the world cannot be rebuilt.

I have the rare privilege of reading the letters and confidences of thousands of humble people living in scores of different nations. Their names are not known to history, but their daily work and courage carry on the life of the world. I know that these, and uncounted numbers like them in every country, are looking for a guiding light. We remember that the Christmas Star was first seen by shepherds in the hills long before the leaders knew of the Great Light which had entered the world.

I believe that while statesmen are considering a new order of things, the new order may well be at hand. I believe that it is even now being built, silently but inevitably, in the hearts of masses whose voices are not heard, but whose common faith will write the final history of our time. They know that unless there is belief in some guiding principle and some trust in a divine plan, nations are without light, and peoples perish. They know that the civilization handed down to us by our fathers was built by men and women who knew in their hearts that all were brothers because they were children of God. They believe that by His will enmities can be healed; that in His mercy the weak can find deliverance, and the strong can find grace in helping the weak.

In the grief and terror of the hour these quiet voices, if they can be heard, may yet tell of the rebuilding of the world.

It is well that the world should think of this at Christmas.

Because the people of this Nation have come to a realization that time and distance no longer exist in the older sense, they understand that that which harms one segment of humanity harms all the rest. They know that only by friendly association between the seekers of light and the seekers of peace everywhere can the forces of evil be overcome.

In these present moments no spiritual leader, no civil leader can move forward on a specific plan to terminate destruction and build anew. Yet the time for that will surely come.

It is, therefore, my thought that, though no given action or given time may now be prophesied, it is well that we encourage a closer association between those in every part of the world—those in religion and those in government—who have a common purpose.

I therefore suggest that it would give me great satisfaction if you would, from time to time, come to Washington to discuss the problems which all of us have on our minds in order that our parallel endeavors for peace and the alleviation of suffering may be assisted.

When the time shall come for the reestablishment of world peace on a surer foundation it is of the utmost importance to humanity and to religion that common ideals shall have united expression.

Furthermore, when that happy day shall dawn, great problems of practical import will face us all. Millions of people of all races, all nationalities, and all religions may seek new lives by migration to other lands or by reestablishment of old homes. Here, too, common ideals call for parallel action.

I trust, therefore, that all of the churches of the world which believe in a common God will throw the great weight of their influence into this great cause.

To you, whom I have the privilege of calling a good friend, I send my sincere greetings at this Christmas season.

Cordially yours,

FRANKLIN D. ROOSEVELT.

DR. GEORGE A. BUTTRICK,

President, Federal Council of the Churches of Christ in America, 297 Fourth Avenue, New York, N. Y.

The President's letter to Rabbi Adler reads in full as follows:

DECEMBER 23, 1939.

MY DEAR RABBI ADLER: Because at this Christmas time the world is in sorrow, it is especially fitting that I send you a message of greeting and of faith. Realizing the spiritual kinship of all who

believe in a common God I have sent a like greeting to the president of the Federal Council of Churches of Christ and to the Pope, as head of the Catholic Church. You will perhaps permit me to send this message through you, as president of the Jewish Theological Seminary of America, to all members of that faith, among whose rabbis I have many friends.

The world has created for itself a civilization capable of giving to mankind security and peace firmly set in the foundations of religious teachings. Yet, though it has conquered the earth, the sea, and even the air, civilization today passes through war and travail.

I take heart in remembering that in a similar time, Isaiah first prophesied the birth of Christ. Then, several centuries before His coming, the condition of the world was not unlike that which we see today. Then, as now, a conflagration had been set, and nations walked dangerously in the light of the fires they had themselves kindled. But in that very moment a spiritual rebirth was foreseen—a new day which was to loose the captives and to consume the conquerors in the fire of their own kindling—and those who had taken the sword were to perish by the sword. There was promised a new age wherein, through renewed faith, the upward progress of the human race would become more secure.

Again, during the several centuries which we refer to as the Dark Ages, the flame and sword of barbarians swept over western civilization; and, again, through a rekindling of the inherent spiritual spark in mankind, another rebirth brought back order and culture and religion.

I believe that the travail of today is a new form of these old conflicts. Because the tempo of all worldly things has been so greatly accelerated in these modern days we can hope that the period of darkness and destruction will be vastly shorter than in the olden times.

In their hearts men decline to accept for long the law of destruction forced upon them by wielders of brute force. Always they seek, sometimes in silence, to find again the faith without which the welfare of nations and the peace of the world cannot be rebuilt.

I have the rare privilege of reading the letters and confidences of thousands of humble people, living in scores of different nations. Their names are not known to history, but their daily work and courage carry on the life of the world. I know that these, and uncounted numbers like them in every country, are looking for a guiding light. We remember that the Christmas star was first seen by shepherds in the hills long before the leaders knew of the Great Light which had entered the world.

I believe that while statesmen are considering a new order of things, the new order may well be at hand. I believe that it is even now being built, silently but inevitably, in the hearts of masses whose voices are not heard, but whose common faith will write the final history of our time. They know that unless there is belief in some guiding principle and some trust in a divine plan, nations are without light and peoples perish. They know that the civilization handed down to us by our fathers was built by men and women who knew in their hearts that all were brothers because they were children of God. They believe that by His will enmities can be healed; that in His mercy the weak can find deliverance and the strong can find grace in helping the weak.

In the grief and terror of the hour these quiet voices, if they can be heard, may yet tell of the rebuilding of the world.

It is well that the world should think of this at Christmas.

Because the people of this Nation have come to a realization that time and distance no longer exist in the older sense, they understand that that which harms one segment of humanity harms all the rest. They knew that only by friendly association between the seekers of light and the seekers of peace everywhere can the forces of evil be overcome.

In these present moments no spiritual leader, no civil leader, can move forward on a specific plan to terminate destruction and build anew. Yet the time for that will surely come.

It is therefore my thought that, though no given action or given time may now be prophesied, it is well that we encourage a closer association between those in every part of the world—those in religion and those in government—who have a common purpose.

When the time shall come for the reestablishment of world peace on a surer foundation, it is of the utmost importance to humanity and to religion that common ideals shall have united expression.

Furthermore, when that happy day shall dawn, great problems of practical import will face us all. Millions of people of all races, all nationalities, and all religions may seek new lives by migration to other lands or by reestablishment of old homes. Here, too, common ideals call for parallel action.

I trust therefore that all of the churches of the world which believe in a common God will throw the great weight of their influence into this great cause.

To you, whom I have the privilege of calling a good friend and an old friend, I send my sincere greetings at this Christmas season.

Cordially yours,

FRANKLIN D. ROOSEVELT.

RABBI CYRUS ADLER,  
President, Jewish Theological Seminary of America, Broadway and One Hundred and Twenty-third Street, New York, N. Y.

The President received the following acknowledgments to the Christmas letters he addressed to the Pope, as head of the Catholic Church; to Dr. George A. Buttrick, president of the Federal Council of the Churches of Christ in America, as a Protestant leader; and to Rabbi Cyrus Adler, president of the Jewish Theological Seminary of America, as a leader of the Jewish faith:

NEW YORK, N. Y., December 23, 1939.

The PRESIDENT:

This telegram gratefully acknowledges your Christmas message of hope and faith. We are glad that through your action we have the public opportunity to extend our cordial greetings to His Holiness, the Pope, and to Dr. Cyrus Adler, and to all whom they represent. We share your confidence that men and women in every land have a basic faith in God, and therefore in human brotherhood, and that even in the present chaos and darkness they are preparing a better day. We join you in the prayer that a lasting peace of justice and good will may soon bless mankind. Your invitation to the continued opportunity of conference is gratefully accepted. The Federal Council of the Churches of Christ in America pledges itself through you to the people of America and of every church and land to seek under God a world order in which unmerited poverty and lurking fear and the threat of war shall be banished. Appreciating the leadership indicated in your telegram, we assure you of our Christmas wishes and our prayers that God may guide you.

GEORGE A. BUTTRICK,

President of the Federal Council of the Churches of Christ in America.

WASHINGTON, D. C., December 25, 1939.

The Most Reverend FRANCIS J. SPELLMAN, D. D.,

Archbishop of New York,

452 Madison Avenue, New York City, N. Y.

YOUR EXCELLENCY: His Eminence, the Cardinal Secretary of State, requests me to acknowledge receipt of the message of the 23d instant of His Excellency, the President of the United States of America, to His Holiness, Pope Pius the Twelfth. I am charged to assure the President, through Your Excellency, that the message brought very great joy to the heart of the Holy Father, coming from so exalted a source, inspired by such noble sentiments, and containing such high hopes of spiritual and civil benefits for the cause of peace. While the Holy Father desires himself to make a personal and official reply to His Excellency, the President, for so important and significant a document, I am requested to express to the President His Holiness' profound gratitude for the choice of the Honorable Myron Taylor as the representative of the President of the United States of America, with the rank of Ambassador Extraordinary. The Holy Father desires to assure the President that his representative will be cordially received in a manner befitting the highly important mission entrusted to him.

The Holy Father invokes the heavenly assistance of Almighty God, on the occasion of Christmas, upon the President of the United States and the whole American Nation.

In transmitting this letter to Your Excellency, I desire to request that you express graciously to the President my own sentiments of deepest esteem.

With cordial good wishes, I remain,

Sincerely yours in Christ,

A. G. CICOGNANI,

Archbishop of Laodicea, Apostolic Delegate.

PHILADELPHIA, Pa., December 24, 1939.

The PRESIDENT,

The White House:

I am only now able to acknowledge your telegram of December 23, owing to delay in delivery of the message, which has just reached me. Your fellow countrymen and the world at large take new courage from the fact that you are again throwing your vivid and forceful leadership into the cause for peace.

It is a noble deed to bring the forces of religion together. I have the confident hope that the leaders will unite the members of their churches and synagogues into a unanimous support of your efforts. I gladly take the opportunity to send good wishes to His Holiness the Pope and to Dr. Buttrick, and feel sure that all true men of good faith will in their several ways follow your inspired leadership.

I shall, of course, convey your message to the various rabbinical associations for transmission to their congregations, but I can say without qualifications that the watchword of the Jewish people in Israel's mission is peace, and that this holds true for all the scattered communities to which the Jewish people have been dispersed and are now, alas, being further dispersed with great brutality.

I take this occasion to express to you our grateful thanks for the bringing together of the Evian conference and the further efforts you have made in aid of the sorely tried refugees.

It will be a privilege for me to have the opportunity to visit you at the White House. With the hope that you will have the time to spend a happy holiday with your family, I am faithfully yours.

CYRUS ADLER,

President, Jewish Theological Seminary of America.

[From the New York Times of December 25, 1939]

**AN UNOFFICIAL TRANSLATION OF THE TEXT OF THE CHRISTMAS EVE ADDRESS DELIVERED BY POPE PIUS XII TO THE 25 CARDINALS RESIDING IN ROME**

Amid the strife and tumults of various happenings in the world, imperturbability of spirit is the real joy which is placed in the power that withstands storm with trust in God and we unite with Christ, principal and fount of every grief and joy.

Where others lose themselves, where the waters of affliction and desperation submerge souls in cruelty, those who trust in Christ can do everything and in harmony with order and the justification and magnificence of God arise above the disorders and storms of the world with equal courage and order.

The indescribable disaster of war, which Pope Pius XI with profound and extreme regret foresaw, and with the indomitable energy of his noble and most high spirit wished by all means to avert, has broken out and is now a tragic reality.

Before this tremendous war an immense bitterness overcomes our souls, sad and worried that this holy feast of Christmas, this feast of the Prince of Peace, must be celebrated to the funeral roar of cannon and under terror of flying war missiles, in the midst of menaces and dangers of armed navies.

It seems that the world has forgotten Christ's message of peace, the voice of reason, and Christian brotherhood. We have been obliged to see a series of irreconcilable acts, irreconcilable both in regard to international law and to principles of national law and to the most elementary sentiments of humanity, acts that show in what chaotic and vicious circles has the sense of justice been deviated from useful consideration.

In this category are premeditated aggressions against a small, industrious and peaceful people on the pretext of a threat that neither exists nor is desired nor is possible.

**"CRY FOR VENGEANCE OF GOD"**

Atrocities and the illegal use of means of destruction, even against noncombatants, refugees, old persons, women, and children, and the disregard of human dignity, liberty, and life are acts that cry for the vengeance of God, as does evermore extensive and methodical anti-Christian and even atheistic propaganda, mostly among young persons.

To preserve the church and her mission among men from every contact with such anti-Christian spirit is our duty, and this is also our sacred and intimate wish as the father and teacher of the faith.

With anguished worry we are forced to contemplate the accumulating spiritual ruin before us, accumulating because of the mixing of ideas that more or less voluntarily shadows and distorts truth in the souls of many people, whether involved in war or not.

We, therefore, must think with fright of the immense work that will be necessary—when a world tired of fighting wants to restore peace—to break down the walls of aversion and hatred that have been built up in the heat of the fight.

Aware of the excesses to which that way of life leads and of the doctrines and works of policy that ignore the laws of God, when the dispute became critical we attempted, as you know, with every endeavor and right to the last, to avoid the worst and to persuade men in whose hands power was and whose shoulders bore the grave responsibility to abstain from armed conflict and so save the world from inestimable disaster.

These efforts and those coming from other influential and respected sources failed to produce the effect hoped for, above all because of profound and apparently immovable distrust—mistrust grown during recent years, which raised insurmountable spiritual barriers.

**MISTRUST STOOD IN THE WAY**

The problems were not unsolvable, but this mistrust, originating from a series of particular circumstances, stood in the way with almost irresistible force and to such an extent that there no longer was hope for promises made or for the duration of possible amicable conventions.

Finally every effort to promote a peaceful solution became hopeless. There was nothing left but to try and lighten the burdens of war, although the action of bringing Christian charity to regions where the most urgent need of it would be felt was obstructed by difficulties not yet overcome.

With undescrivable anguish we watched this war initiated and proceeding in such unusual circumstances.

If up to now—excepting the blood-stained soil of Poland and Finland—the number of victims may be considered fewer than was feared, the total sorrows and sacrifices have reached such a point as to inspire great anxiety in those concerned with the future economic, social, and spiritual conditions of Europe and not Europe alone.

**DANGER BECOMES MORE ACUTE**

The more the war monster strives for, swallows, and allots itself material means that are placed inexorably at the service of war needs that mount from hour to hour, the more acute becomes the danger for nations directly or indirectly hit by the conflict of what we might call pernicious anemia, and they are faced with the pressing question, How can exhausted or weakened economy at the end of the war find means for economic and social reconstruction among difficulties that will be enormously increased and which the forces of disorder that lie in wait will seek to make use of in the hope of being able to give the final blow to Christian Europe?

Such consideration of the present and future must cause considerable worry to the leaders and sane members of every people, even in the fever of the fight, and cause them to examine the effects and reflect on the aims and justifiable finalities of war.

We believe those who look on these serious forecasts with watchful eyes and consider the evolution of events will, notwithstanding war and its horrible needs, hold themselves entirely ready to define clearly, so far as they are concerned, the fundamental points of a just and honorable peace at the opportune moment and would not flatly refuse negotiations whenever the occasion presents itself with necessary guaranties and security.

**FIVE-POINT PEACE PROGRAM**

First, the fundamental condition of a just and honorable peace is to assure the right to life and independence of all nations, large, small, strong, or weak. One nation's will to live must never be tantamount to a death sentence for another. When this equality of rights has been destroyed, injured, or imperiled, juridical order requires reparation whose measure and extent is not determined by the sword or selfish arbitrary judgment but by the standards of justice and reciprocal equity.

Second, that order reestablished in such a manner may be tranquil and durable—the cardinal principles of true peace—nations must be liberated from the heavy slavery of armaments and the danger that material force instead of serving to protect rights become the tyrannical violator of them. Conclusions of peace that did not attribute fundamental importance to disarmament mutually accepted, organic and progressive both in letter and spirit, and did not take care to carry it out loyally would sooner or later reveal their inconsistency and lack of vitality.

Third, in any reorganization of international neighborliness it could conform with the maximum of human wisdom for all parties concerned to deduct the consequences of past gaps or deficiencies, and, in creating or reconstructing international institutions that have a mission so high but at the same time difficult and full of serious responsibilities, account should be taken of experiences that arose from the inefficacy or defective functioning of similar previous initiatives.

And since it is so difficult—one would be tempted to say almost impossible—for human weakness to foresee everything and assure everything at the time of peace treaties, when it becomes difficult to be free from passions and bitterness, constitution of juridical institutions which would serve to guarantee loyal and faithful carrying out of terms and, in case of recognized need, revising and correcting them, is of decisive importance for honorable acceptance of a peace treaty and to avoid arbitrary unilateral breakings and interpretations of treaty terms.

Fourth, a point that should attract particular attention, if a better arrangement of Europe is wanted, concerns the real needs and just demands of nations and peoples as well as of ethnical minorities; demands which, if not always enough to form a strict right when there are recognized or confirmed treaties or other juridical documents that oppose them, deserve anyway benevolent examination to meet them in a peaceful way and even, where it appears necessary, by means of an equitable, wise, and unanimous revision of treaties. Once real equilibrium among nations is thus brought back and the basis of mutual trust is reestablished, many incentives to resort to violence would be removed.

Fifth, But even better and more complete settlements will be imperfect and condemned to final failure if those who guide the fates of peoples and the peoples themselves do not let themselves be penetrated evermore by that spirit that alone can give live authority and obligation to the dead letter of articles in international arrangements; by that sense, namely, of intimate, acute responsibility that measures and weighs human statutes according to the holy, unshakable rules of divine law; by that hunger and thirst for justice that is proclaimed in the beatitudes in the Sermon on the Mount, and which has as a natural presupposition moral justice; by that universal love that is the Christian ideal and therefore throws the bridge also toward those who do not have the benefit of participating in our own faith.

**RECOGNIZES GRAVE DIFFICULTIES**

We do not fail to recognize the grave difficulties that interpose themselves against the accomplishment of the aims that we outlined in order to lay foundations, to put into effect and to preserve a just, international peace.

But if there ever was an aim worthy of the meeting of noble, generous spirits, if ever there arose a spiritual crusade that with new truth sounded the shout, "God wills it," it is truly that high aim and this crusade engaged to lead peoples back from the muddy gulf of material and selfish interest to the living fountain of divine law, which alone is powerful and gives that morality, nobility, and stability of which a lack has been felt far too long, and which is gravely needed to repair the damage done to most nations, to humanity, and to these ideals that are at the same time the real ends of peace based on justice and love.

We await and hope that all those who are united to us by the bond of faith, each at his post within the limits of his mission, will keep both mind and heart open so that when the hurricane of war ceases and is dispersed there will rise up in every nation and among all peoples far-sighted and pure spirits animated by courage who will know how and will be able to confront the shady instinct of vile vengeance with the severe and noble majesty of justice, the sister of love, and companion of all truth and wisdom.

Of this peace, which alone can create and assure peace, we and those who are listening to us know where to find a sublime example, intimate impulse, and sure promise.

Let us go to Bethlehem. There we find lying in the manger the newborn Son of Justice and by his side the Virgin Mary, the mirror of justice and the Queen of Peace, with her holy guardian Joseph, a

just man. Jesus is the Awaited of Gentiles, the prophets called Him this and sang His future triumphs.

When this heavenly Child was born another Prince of Peace reigned on the banks of the Tiber and had with solemn ceremonies dedicated an Ara Pacis Augustae, whose wonderful but broken remains, buried under the ruins of Rome, have been resurrected in our own days.

On that altar Augustus made sacrifices to gods who do not save. It is permissible, however, to think that the true God and eternal Prince of Peace, who a few years later descended among men, heard the petition of that time for peace and that the august peace anticipated that supernatural peace which only He can give and which every true earthly peace must include.

#### BETHLEHEM'S GUIDE TO PEACE

That supernatural peace is gained not with steel but with the wood of the cradle of this infant Saviour and with the wood of His future cross of death, stained with His blood—not the blood of hate or rancor but that of love and pardon.

Let us go then to Bethlehem, to the grotto where the new-born King of Peace is heralded by a choir of angels, and kneeling before Him in the name of this troubled and upset humanity—in the name of numberless legions without distinction of race or nation, who are bleeding or dying or plunged into tears and misery or have lost their country—let us direct to Him our invitation to peace and good will, for aid and salvation, with the words the church puts on the lips of its sons in these days in which it prays God to save all mankind.

While in this prayer we express our insatiable desire for peace in the spirit of Christ, mediator of peace between heaven and earth, and warmly exhort all faithful Christians to join with us in their prayers and sacrifices; we impart to you, venerable brethren, and to all whom you have in your hearts, to all men of good will, especially all sufferers, anguished, persecuted, imprisoned, and oppressed, of every region and every country, with an unchanging affection and as token of grace and consolation and celestial comfort, the apostolic benediction.

### War, Peace, and the American Farmer

#### EXTENSION OF REMARKS

OF

HON. SCOTT W. LUCAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Thursday, January 4, 1940

ADDRESS BY HON. CORDELL HULL

Mr. LUCAS. Mr. President, in December last the American Farm Bureau Federation held its annual convention in the city of Chicago. On the evening of its annual banquet the Honorable Cordell Hull, Secretary of State, appeared on the program as the principal speaker. The title of his address was War, Peace, and the American Farmer.

I have read the speech and analyzed it. I am constrained to say that, in my humble opinion, it is a masterpiece of logic, clarity, and sound reasoning upon current economic world problems as they affect agriculture and other industry in this Nation. I hope those who are looking for economic light instead of political heat upon the industry of agriculture as it is affected by the reciprocal-trade agreements may find the time to read and digest the remarks of this great American. I ask unanimous consent that the address may be incorporated in the RECORD as part of my remarks.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

This annual meeting of the American Farm Bureau Federation is an appropriate occasion for examining every essential phase of our agricultural problem, in both its domestic and its international aspects. Both phases are of the utmost importance, and both should be given the fullest attention.

In the present world crisis it is the first duty of every nation still at peace to be on the alert for its safety and security. To this end, in a country like ours, an informed and unified public opinion in support of a sound program of foreign policy was never more important. Tonight we may well consider, in the light of recent experience, some outstanding problems as they affect the future welfare of American farmers and of all other citizens as well.

Throughout the long period of tension which preceded the outbreak of present hostilities, our Government strove untiringly to strengthen the forces of peace. For many months it had been all too clear that, unless policies of peaceful and constructive cooperation could be made to prevail over policies of armed threat and conquest, the only possible outcome which would be a major war.

Our efforts for peace failed. Today a large part of the world is engaged in armed conflict. With the same zeal with which we strove to avert this catastrophe our Government is now seeking to provide every possible assurance against our being drawn into it. The recently enacted neutrality legislation and other measures which have been and are being taken testify to this fact. This country should not, and must not, be drawn into war.

But even though we remain at peace we cannot insulate ourselves from the economic and other effects of a major war anywhere in the world. Already we have begun to feel the impacts of this conflict. Wartime controls, with their disrupting effects, have replaced the normal processes of trade with areas where hostilities are in progress.

As the warring nations readjust their import trade increasingly to war necessities, both agriculture and industry in this country feel the effects. Some branches of industry experience the temporary stimulus of war demand. On the other hand, tobacco growers, fruit growers, and other producers of farm products not regarded as strictly essential to the prosecution of war are suddenly cut off from important markets. Many kinds of manufactured exports likewise feel the weight of such restrictions.

For the duration of the war we must be prepared to accept as unavoidable many of these temporary disarrangements. Nations at war give their first concern to military purposes. Naturally this Government is striving to keep foreign markets for our products open and to secure a relaxation of restrictions newly imposed. But there are broader and more far-reaching problems involved. Temporary difficulties must not blind us to the importance of following policies which will both cushion the shock of current developments and enable us to grapple successfully with the colossal problems of the future.

In the welter of disruptive forces unleashed by the war, it is vital that we omit no step which will help to keep this country united and strong. One of the foundation stones for such unity and strength is a sound and prosperous agriculture. In February 1938, before the National Farm Institute, at Des Moines, I said:

"I believe it to be vital for the Nation's stability and security that our farming population be adequate in proportion to other parts of the population. A wise policy for the Nation requires that the conditions under which those engaged in agriculture live and labor shall be just and fair and that life on the farm should be attractive and adequately rewarding."

No one will question the soundness of this objective. The only problem is how best to promote it.

To attain that objective one of the basic facts that must be recognized is that the prosperity of agriculture in this country is tied in with that of the Nation as a whole. Upswings and downswings in factory pay rolls are reflected in rising and falling demand in our cities for products of the farm, just as ups and downs in farm prosperity influence factory pay rolls and thus affect the incomes and purchasing power of city people.

Second, full and stable prosperity for our Nation is definitely linked to economic conditions in the rest of the world. Full employment by domestic measures of our national economic welfare is, of course, always essential. But it is idle to expect a satisfactory degree of sustained economic recovery in this country while the buying power of other countries is reduced to a mere fraction of what it ought to be. When we cannot sell abroad our great exportable surpluses of farm and factory products, agriculture, industry, and labor—all three—must pay a heavy penalty. Agriculture suffers from the loss of its foreign markets. It also suffers from the shrinkage in its home market that takes place when great manufacturing industries find their export outlets curtailed, with resulting unemployment and reduced purchasing power in our cities for products of the farm.

In brief, the thing that I want strongly to emphasize is that the prosperity of agriculture and of the whole Nation is closely tied up with the presence or absence of a healthy flow of trade between nations. The existence of actual military warfare abroad, with its disrupting effects upon production, trade, and finance, does not in any sense change the fundamentals; it only aggravates the problem and delays the solution.

On this subject of foreign trade, unless every farmer and every other American citizen thoroughly understands the lesson of what happened after the World War, we shall merely repeat the disastrous experience of that period.

By the close of that war the whole international economic machine had been thrown violently out of gear. Normal channels of trade and finance had been disrupted. Everywhere the condition was one of serious maladjustment and dislocation in both agriculture and industry.

The obvious need was for the restoration of normal and healthy trade relations among nations as the only possible means of establishing secure foundations for enduring peace and for the economic well-being of the peoples of all nations. But that is exactly what did not happen. Instead the world pressed headlong down the perilous road of narrow nationalism. On all sides there grew up a vast network of trade restrictions and other impediments to normal economic intercourse imposed on the mistaken theory that such extreme measures would bring greater prosperity. Instead new dislocations were added to old. Agricultural and other surpluses piled up in some parts of the world, with no way to sell them. At the same time other regions were living on short rations, their purchasing power seriously reduced by inability to sell their industrial and other surpluses to foreign lands.

Finally, at the end of the twenties, came the sharp descent into the severest depression the world has even known—followed by a

further intensification of the very same policies of narrow nationalism which had done so much to bring on the general economic collapse. Every conceivable device for restricting trade was brought into play. Higher tariffs, quotas, import licenses, exchange control, barter arrangements, currency manipulation, and many other devices increasingly choked off international trade.

Grave mistakes of policy on the part of the United States, as well as of other countries, contributed greatly during the twenties to the impairment of the whole world economic situation, culminating in the general break-down at the end of that decade.

We refused to face the realities of the situation. We raised our tariff sharply and indiscriminately and thus made it impossible for other countries to keep up their purchases of our farm and other products, and at the same time make payments on their debts to us. We then tried to escape the consequences by loaning the money to pay for our own exports. Finally, after announcing in 1928 our intention of once more raising our tariff, we capped the climax of an ever-narrowing economic policy by putting on our own statute books in 1930 one of the most ill-timed and costly pieces of legislation in the entire history of this country—the Hawley-Smoot Act.

What followed is painful history. Foreign countries retaliated by drastically increasing their tariffs and other trade barriers against our products. Our exports of farm and other products slumped heavily. The claims of those who had blandly asserted that farmers and others would be assured permanent prosperity by this embargo tariff legislation were at once exposed to the relentless test of facts. Surpluses of farm and other products were dammed up; prices collapsed; factories were closed; many millions were thrown out of employment; and agriculture was in a state of bankruptcy.

It was to cope with this extreme economic emergency that Congress enacted the trade-agreements program. This program while retaining thoroughly ample safeguards for our domestic producers, is designed to reopen the clogged-up channels of mutually beneficial trade between our country and other countries. An emergency program to deal with emergency conditions, the trade-agreement policy is the only practicable method open to us for the purpose in view. The only suggestions seriously put forward today by opponents of the program are poorly disguised maneuvers to return this country to the Hawley-Smoot embargo policy, or its equivalent.

Solid progress has been made during the past 5 years in the operation of the trade-agreements program. We have negotiated agreements with countries that account for practically three-fifths of our total foreign trade. Valuable benefits, through safeguarding or improving our access to foreign markets, have been secured for literally hundreds of products, both agricultural and non-agricultural. On farm products these benefits (including guaranties of continued duty-free entry of certain items, notably cotton) cover nearly half (47 percent) of our total exports of farm products to all countries. They affect about three-fourths of our total exports of farm products to the trade-agreement countries themselves.

A few illustrations will be helpful.

After a period of less-than-average supplies, the corn-hog industry is again becoming heavily dependent upon export outlets. Reduction of barriers against our exports of pork, ham, or bacon has been obtained in 10 countries. On lard 9 countries have reduced barriers, while 3 others have agreed not to impose new restrictions. Of special significance is the removal in the agreement with Great Britain of a burdensome preferential duty on lard, originally imposed in retaliation for some of the superprotectionist provisions of the Hawley-Smoot tariff.

On grains and grain products, foreign-trade barriers have been lowered in most of the agreements now in effect. Great Britain has removed its discriminatory duty on wheat, also originally imposed in retaliation for our action under the Hawley-Smoot tariff, and has agreed to keep corn on the free list.

Fruits, vegetables, and a long list of other farm products have also materially benefited from the concessions obtained in the trade agreements.

That these benefits have been helpful in disposing of our agricultural surpluses is sufficiently indicated by the fact that between 1935 and 1938 our exports of farm products to trade-agreement countries increased by nearly 50 percent, whereas to other countries they did not increase at all but declined slightly. In addition, of course, the benefits obtained for exports of nonfarm products have created employment in our cities, and hence a better domestic market for farm and other products.

We have thus gone far toward safeguarding and reopening important foreign markets for our farm and other products. The agreements which we have negotiated are standing us in good stead now, at a time when, as a result of the war, our exports are faced with severe new trade restrictions in many countries. They provide an effective means of insuring better access to these markets than we would otherwise be able to get.

The work of rebuilding international trade on a sound basis, thus begun and substantially carried forward has been for the present rendered more difficult by the outbreak of a new major war. The scope of operation of the trade-agreements program in the immediate future will, of course, be restricted by war conditions. But that is no reason, as some contend, for abandoning the entire program for the duration of the war. These counsels of despair and defeat overlook the all-important fact that the chances of sound economic restoration after the war, in which we shall have a vital interest, will be almost nonexistent if we now abandon our work in behalf of sound trade policies and cease our efforts to induce other

nations to keep alive the imperative need for such policies. This is no time to strip ourselves of necessary means of action.

If there is anything certain in this world, it is that, after present hostilities come to an end, there will be an even more desperate need than there was in recent years for vigorous action designed to restore and promote healthy and mutually beneficial trade among nations. The fact that during the past 5 years 21 nations showed their willingness, by entering into reciprocal-trade agreements with us, to modify their trade policies in a more liberal direction offers a solid basis for the hope that, with peace regained, there will be a good opportunity for completing the work of trade restoration. That precious opportunity will be lost if we, who have in the recent past taken a position of leadership in this vital work, should now reverse our own policy and turn our face straight back toward suicidal economic nationalism, with its Hawley-Smoot embargoes.

It is in all these implications, that the trade-agreements program should be considered by our people. Much of the propaganda that is being poured out upon the farmer brushes aside lightly not only the inherent soundness of the program itself in its relation to domestic prosperity but also its decisive significance in connection with the whole problem of the restoration and maintenance of enduring peace and of general economic reconstruction and progress. The central claim of such propagandists is that the trade-agreements program has caused an increase in our imports of agricultural, or so-called agricultural, products, and that this has hurt agriculture.

Let me say to you in perfectly plain language that if there were the slightest suspicion in my own mind that farmers in this country were being hurt rather than helped by the trade-agreements program I would be the first to favor dropping it. But the facts tell a different story.

Let us look at the latest figures. During the first 9 months of 1939 we imported into this country \$795,000,000 worth of agricultural, or so-called agricultural, products. Those who use our agricultural import figures as a basis for attack on the trade-agreements program would have the country believe that these imports mean that American farmers have lost that much of their home market. Never was a more palpable and insidious falsehood perpetrated on our farm people.

What are these imports of agricultural products that you hear so much about? None of the self-styled friends of the farmer will ever tell you the fact that two-thirds of what we brought in during the first 9 months of 1939, or about \$530,000,000, were products which even the authors of the Hawley-Smoot tariff considered so incapable of displacing our own farm production and so indispensable for our people that they were left on the free list in the Tariff Act of 1930. Among these were such products as coffee, rubber, raw silk, bananas, cocoa beans, tea, carpet wool, and sisal, etc., which we do not produce at all in this country. What farmer was hurt by the \$121,000,000 of rubber we brought in during this period? Or by the \$101,000,000 of coffee? Or the \$75,000,000 of raw silk? Or the \$22,000,000 of bananas, the \$20,000,000 of cocoa beans, the \$19,000,000 of carpet wool, or the \$15,000,000 of tea, and so on?

The products comprised in the remaining third of the total agricultural imports are predominantly of the two types: First, commodities of which we do not produce enough for our domestic requirements, notwithstanding that we have for years imposed—and still today impose—high tariffs on most of them; and second, products—most of them also subject to high duties—which we import because of special quality or use, or differences in marketing season, or other special considerations. These imports do not displace—they supplement—our deficient domestic supplies. Without hurting our domestic producers, these imports are also necessary for the economic well-being of our Nation and the comfort of our people.

Those who are responsible for the maneuver of laying so much unwarranted stress on farm imports claim that these limited importations are materially hurtful to American agriculture. Where is their evidence? If farmers had been hurt, it would be reflected in farm income. That is the real test for every farmer.

By 1932, after 2½ years of Hawley-Smoot tariff embargoes, farm cash income had fallen to 4.6 billion dollars. By 1938, after 4 years of trade-agreement policy, it had risen to 7.5 billions, excluding benefit payments. Were farmers hurt by this \$3,000,000,000 increase in farm income?

The most reckless claims of injury have been made regarding the dairy and cattle industries. Yet the fact is that the income of the dairy industry—which had declined, under tariff embargoes, from \$1,844,000,000 in 1929 to \$991,000,000 in 1932—rose, under our trade program, to \$1,398,000,000 in 1938. Does this indicate injury? The income of the cattle industry—which, under tariff embargoes, fell from \$1,495,000,000 in 1929 to \$620,000,000 in 1932—rose, under our trade program, to \$1,144,000,000 in 1938. Does this indicate ruin?

And bear in mind that even in the period of our heaviest dairy importations, back in 1924-29, imports of dairy products never exceeded 1½ percent of our domestic production. In 1938 the imports were only one-half of 1 percent. Bear in mind, too, that the cattleman has today, as he has always had, 95 to 98 percent of the home market.

What about farm prices? None of us can ever forget how prices crashed between 1929 and 1932 when the Hawley-Smoot embargoes ruled the day. But let us not forget either how they have come back in recent years.

What farmer was hurt by the increase in the average farm price of wheat from 39 cents a bushel in 1932 to 66 cents in 1938? What

was injurious about the increase in the farm price of corn from 28 cents in 1932 to 49 cents in 1938? What farmer was aggrieved by the increase in hog prices from \$3.34 a hundred in 1932 to \$7.74 in 1938? What cattleman suffered from the rise of cattle prices from \$4.25 a hundred to \$6.53 a hundred? What dairyman was hurt by the increase of butterfat prices from 17.9 cents a pound to 26.3 cents? What wool grower found reason to complain over the rise of wool prices from 8.6 cents a pound to 19.1 cents? On most of these products prices today are higher than they were a year ago. Hog prices are off at present but are still nearly double the 1932 figure.

Not for one moment would I want to suggest that conditions for farmers today are nearly as good as they ought to be. First, last, and all of the time I am for improving them. But I know that agricultural conditions cannot be satisfactorily improved without the expansion of both domestic and foreign markets. That is precisely why I have faith in the effectiveness of the trade-agreements program, which is the best method in the continuing emergency for accomplishing this result.

If experience is any teacher at all, it should have taught every one of us by now that the notion that farmers can be saved by embargo tariffs is a snare and a delusion. It is politically impossible to grant tariff embargoes to some groups and withhold them from others. When such embargoes are granted generally the result, as was the case in 1930-32, is a collapse of our foreign trade, vanishing foreign markets for our farm and other surpluses, a prostrate agriculture, and a prostrate Nation.

It is not a question of giving the American market to the American farmer or taking it away from him. He has already got practically all of the American market, as he has always had it, except—as I have said—for a few types of products that we do not grow in sufficient quantities for our own needs, even though we impose high tariffs on most of them. Nobody proposes to adjust any tariff rate in such a way as to diminish the sales of American farm products in the home market. The sole aim is, rather, to increase such sales in both the domestic and the foreign markets.

We all know that the home market just will not absorb our large surpluses of cotton, corn and pork products, tobacco, wheat, and fruits of various kinds, not to mention other products. We must either find outlets abroad or else see these surpluses back up on us until we are overwhelmed by them.

The contrast between our present trade policy, which contemplates an expansion of both the domestic and foreign markets for farm products, and the embargo policy, which shrinks both of these markets, has been admirably stated by Secretary Wallace as follows:

"By all means let us make the most of the home market. But I want you to think seriously about the fact that farmers have more to lose through nationalistic policies than any other group. In the present year, 1936, farmers are cultivating probably thirty-five to forty-five million acres that are going to produce things which will be sold abroad. The most additional land they could use by cutting out imports would be perhaps 10,000,000 acres. It just wouldn't be good sense to risk having to leave thirty-five or forty-five million acres idle in order to try to gain a market for 10,000,000 acres. I don't think farmers are foolish enough to trade dollars for quarters, no matter how strong the pressure may be by those who are busy grinding their own axes."

To sum up, the case for trade agreements comes down to the simple proposition that by reducing excessive and unreasonable tariff barriers and inducing other countries to do likewise, thus permitting a healthy growth of mutually advantageous trade, we greatly enlarge the purchasing power and the market outlets for our farm and other surpluses, both at home and abroad, to the benefit of American agriculture, American industry, and American labor.

The best test of the trade-agreements policy and its administration is to be found in the 22 agreements already negotiated. No tariff adjustments have been made in our trade agreements without the utmost care to see to it that the branches of production concerned, in agriculture or in industry, are amply safeguarded. What warrant is there for assuming that whatever tariff adjustments may be made in the future will not be as carefully considered and as adequately safeguarded as those made in agreements already negotiated?

The record of achievement under the trade-agreements program is an open book. I invite any person to show a single instance of general tariff readjustment either upward or downward, in the entire fiscal history of the Nation, wherein there has been exercised as much impartiality, care, and accuracy as to facts as has uniformly characterized the negotiation of our 22 trade agreements—or any more solicitude for the welfare of agriculture, labor, business, and the population of the country in its entirety.

Full and stable prosperity for our Nation can be achieved only in a world which is at peace. War and threat of war, even when we succeed in keeping ourselves free from embroilment in actual hostilities, imposes upon us a heavy burden of expenditure for armament and an even heavier burden of economic dislocation. This burden of economic maladjustment persists long after the guns of war are stilled. And hope of enduring peace among nations is little short of an illusion unless there can be provided for it a solid foundation of economic well-being for all nations. For this, healthy and sound international trade relations are indispensable.

In the difficult days which lie ahead, the greatest of all issues will be whether or not the world will be reconstructed along lines

of economic security and of firmly established order under law, which will make unthinkable a repetition of conditions of international lawlessness and of economic chaos such as we have witnessed in recent years. In the resolving of this issue, the weight of our country's influence may well prove to be decisive. By adhering to the trade policy which we now follow, we can throw our influence on the side of economic progress and of peace and order—to our own immense benefit. Were we to abandon this policy, under the pressure of narrow and short-sighted attitudes on the part of some of our people, we would render infinitely more difficult the process of building an orderly and prosperous world, and would thus inflict upon ourselves an incalculable injury.

This is a truly national problem. With so much at stake in the dangerous world of today, a united public opinion in support of the type of trade policy we have so far pursued has never been so essential to our country's welfare. A nation cannot prosper in a disordered world any more than an individual or a group can prosper within a nation when the country as a whole is in the throes of destructive chaos. Upon each and every one of us rests the responsibility for the choice of the course of action which we as a people shall pursue.

## Life Insurance and the Monopoly Investigation

### EXTENSION OF REMARKS

OF

HON. EDWARD R. BURKE

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Thursday, January 4, 1940

ADDRESS BY HON. EDWARD R. BURKE, OF NEBRASKA

Mr. BURKE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me on December 21, 1939, at Omaha, Nebr., before the Association of Life Underwriters on the subject, Life Insurance and the Monopoly Investigation.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I consider it a great honor to have the privilege today of addressing this Association of Life Underwriters. Everyone who is interested in the welfare of our country recognizes how great a service has been rendered by those responsible for the marvelous development in the field of life insurance. It has been the instrumentality of saving countless homes, preserving unnumbered business institutions, and making life tolerable for untold millions of bereaved dependents.

With these thoughts in mind, the vast army of policyholders, and others interested in the business of insurance, are closely watching the hearings being conducted by the so-called Monopoly Committee. It is gratifying to note the remarkable tributes which have been paid before that committee to the soundness of American life-insurance companies, and to the efficiency and devotion to the public interest of their officers and directors. Nevertheless, it should be recognized that the probable result of this inquiry will be proposals for an extension of the Federal Government's regulatory authority into the field of life insurance.

If current reports may be accepted, the implications are disturbing. Fundamental issues respecting the function of the Federal Government in the field of economic planning and regulation and its attitude toward large aggregations of wealth as represented in leading insurance companies are shaping up for consideration by Congress.

Suggestions which have been heard are that Federal regulation may be superimposed upon the present supervision of life-insurance companies by the States; that the Securities and Exchange Commission may be given control over the investments of the companies; that this Commission or some other Federal agency, perhaps a brand new addition to the already long list of bureaucratic bodies, will take charge of elections of directors of mutual insurance companies; and that a limitation may be placed upon the size of companies.

If any or all of these proposals are made effective, it will mean that new impetus will be given to the movement toward socialization of business and industry, that the Federal Government will encroach further upon the sovereignty of the States, that the burdens and problems of the insurance companies will be vastly increased, that a Federal bureaucracy will create new maladjustments in the economic structure through its attempts to apply untried social and economic theories, and that citizens in their capacity as taxpayers will suffer from the new costs of regulation and in their capacity as policyholders will feel the adverse effects of unwarranted interference with private management.

The monopoly investigation was authorized by Congress about a year and a half ago. The investigating group created under the terms of a joint resolution is officially designated as the Temporary

National Economy Committee. Its printed hearings bear the heading "Investigation of Concentration of Economic Power."

The resolution for the inquiry authorized the committee to investigate questions raised in a message by the President on April 29, 1938, with respect to "monopoly and the concentration of economic power in and financial control over production and distribution of goods and services" with a view to determining "(1) the causes of such concentration and control and their effect upon competition; (2) the effect of the existing price system and the price policies of industry upon the general level of trade, upon employment, upon long-term profits, and upon consumption; and (3) the effect of existing tax, patent, and other Government policies upon competition, price levels, unemployment, profits, and consumption." The very broad scope of the inquiry as thus indicated is further extended into the monetary field with a mandate to the committee also to "investigate the subject of governmental adjustment of the purchasing power of the dollar so as to attain 1926 price levels."

The resolution provided for a committee of 12, consisting of 3 Senators, 3 Representatives, and 1 representative each of the Department of Justice, the Treasury Department, the Department of Labor, the Department of Commerce, the Securities and Exchange Commission, and the Federal Trade Commission.

The inquiry is unusual in that it is conducted jointly by representatives of the legislative and executive branches of the Government. Each of these coordinate branches has six members on the committee. Nominally neither branch has an advantage, but actually the executive branch is in the better position to dominate the proceedings. The six Members of Congress were selected on a bipartisan basis, four of them being Democrats and two Republicans. They represent different viewpoints with respect to social and economic policies and may not always vote as a unit. The six members from the executive branch, on the other hand, represent departments and agencies which are a part of the administration. Presumably they will be in substantial accord on controversial issues. Furthermore, the major part of the funds of the committee was appropriated directly to the President for allotment among the six departments and agencies. Under the practice followed studies of various phases of the broad problem of monopoly and concentration of economic power are conducted by the different departments and agencies, and they present the evidence before the whole committee. Thus, the presentation of evidence is largely controlled by the administration. Final recommendations of the committee will be similarly controlled if one or two of the six Members of Congress approve proposals of the six departmental representatives.

Senator JOSEPH C. O'MAHONEY, of Wyoming, chairman, and Representative HATTON W. SUMNERS, of Texas, vice chairman, have tried to keep the investigation on an objective basis and to avoid anything resembling a "witch hunt." They have been successful to a considerable degree. The public hearings, which commenced in December a year ago and are still in progress, have been on a much higher level than most investigations of a comparable nature. The facts assembled and analyses made will be of great value in the consideration of economic problems covering a wide range. No similar inquiry of a comprehensive character has been made for many years. The facts and conclusions in earlier studies are out of date by reason of economic changes during periods influenced by the World War, the recent depression, and the new European war.

While the usefulness of the assembling of basic facts must be conceded, this does not mean that the interpretation placed upon them by the committee of its recommendations should be accepted without careful consideration.

The line of inquiry, as required by the resolution of authorization, has followed the course charted in the President's message to Congress. The social and economic views of the administration have been dominant.

Specifically, the departmental representatives who have been most conspicuous in the hearings have a strong bias against big business. They believe firmly that a concentration of power in the Federal Government is necessary to break up a concentration of power in private industry. They see monopoly in every large aggregation of capital and are prone to overlook such benefits as are derived by the masses of our population. They think our economic system has failed and that far-reaching changes must take place. The structure which they envision has more resemblance to Socialist and Fascist states than to the American system of free enterprise.

That the subject of life insurance should be brought into an investigation of monopoly is symptomatic of the astigmatism which has affected the viewpoint in these quarters. No one has made any charges reflecting on the soundness of the management of life-insurance companies. There were not even assertions as to the absence of competition between the larger companies and those with a less formidable array of assets. The public generally had been impressed with the manner in which the insurance companies survived the depression. Only the inhibitions of limited incomes were holding back a tremendous rush toward the use of savings in insurance in preference to all other forms of investment.

The one and only reason for the investigation of insurance companies may be found in the large amount of wealth represented in these companies. In this aggregation of wealth were seen evils because of a concentration of economic power.

The original suggestion for the inclusion of insurance companies in the inquiry may be found in the President's message to Congress. He said:

"The tremendous investment funds controlled by our great insurance companies have a certain kinship to investment trusts, in

that these companies invest as trustees the savings of millions of our people. The Securities and Exchange Commission should be authorized to make an investigation of the facts relating to these investments with particular relation to their use as an instrument of economic power."

The President's statement was referred to as the basis of the inquiry when the Securities and Exchange Commission commenced its presentation of evidence with respect to insurance companies before the Monopoly Committee on February 6, 1939.

William O. Douglas, then the Chairman of the Securities and Exchange Commission and a member of the Monopoly Committee and subsequently appointed as an Associate Justice of the United States Supreme Court, said in an introductory statement:

"The President, in his message to the Congress, spoke of the tremendous investment funds controlled by our great insurance companies and asked that authorization be given to investigate the manner in which these investments are used as 'an instrument of economic power.' It is on this broad problem that we will present to the committee facts concerning the insurance business. \* \* \*

"It is our present task to survey the economic power inherent in the vast investment funds controlled by the insurance companies and to study the impact of that power upon our national economy. The scope of our problem is as broad as the sphere of influence of the insurance companies themselves. Inquiry into that problem of necessity takes us from Wall Street to Main Street, from the capital markets and financial centers of the East into the farm lands of the West and South. It will properly bring us in time to a consideration of the extent to which insurance-company influence permeates areas of national importance, such as the capital markets, the supply of mortgage funds available to farmers, railroad reorganization, and perhaps the financing of low-rent housing. It will of necessity demand inquiry as to the future of investment banking in this country, and, indeed, the extent to which insurance companies have come to dominate security issuers, underwriters, and investors. These are not boundaries of our making. They inhere in the character of the insurance business."

Examination of part 4 of the printed hearings of the committee, which consists of nearly 500 pages of testimony and exhibits relating to insurance, discloses much evidence as to the soundness of insurance companies, the efficiency of their management, their large resources, and the commanding position they occupy in the financial world. One searches in vain, however, for specific charges as to any conspiracy among the insurance companies for the use of their resources in a concerted program involving the exercise of economic power, or even as to the use of funds of any particular company with a view to exercising such power. Nowhere in the testimony does there seem to appear any evidence that the effect of the investments made by the insurance companies as a whole has been injurious to our economic structure.

The preliminary report made public by the committee last July contains a section on insurance, but here again it is impossible to find anything indicating that the concentration of economic power in the insurance companies through large investment funds has had adverse effects upon the general public. In this report it is stated that "the first hearings on insurance were primarily important for establishing certain facts with respect to concentration of control of life-insurance assets and perpetuation of management." It is noted that in 1937 there were 398 legal reserve life-insurance companies with total assets in excess of \$27,650,000,000, that these companies had about 64,000,000 policyholders, and that at the end of 1938 the insurance in force amounted to about \$110,000,000,000. It is further noted in the report that legal-reserve life-insurance companies have absorbed more and more of the country's savings, that in 1937 the assets of these companies exceeded by almost \$10,000,000,000 the combined assets of savings banks and building and loan associations in this country and were far greater than the savings deposits in State and national commercial banks. It is also noted that while the population has doubled since 1890, the insurance assets have been multiplied 25 times. So great have the assets become, the report states, that industry and Government discover themselves increasingly dependent upon life-insurance companies for essential financing. To illustrate this point the report states that on December 31, 1938, the 49 largest legal-reserve life-insurance companies owned 11 percent of the direct and guaranteed debt of the United States Government, 9.9 percent of all State, city, municipal, and political subdivisional debt; 22.9 percent of all railroad bonds; 22 percent of the entire public-utility debt; 15 percent of the industrial debt; 11 percent of all farm mortgages; and 14 percent of all city mortgages.

To a layman these figures would seem to offer impressive evidence that the insurance companies have played a tremendously helpful part in the financing of our industry and agriculture and in making it possible for our governmental bodies to operate on a deficit basis without disaster.

The report contains not a word of criticism as to the use made by the insurance companies of their funds. There is not a line to indicate that a single policyholder in a solvent company has ever lost a dollar. Not a word is said about any insolvent companies, which evidently have been so few in number as not even to justify mention. There is no suggestion of the need of emergency or other legislation. Presumably that will come later.

One gets only a vague hint as to what is in the wind. The report notes that the 25 largest insurance companies own 87 percent of all the assets, 16 of the 25 own 80 percent, and the 5 largest own 54 percent. It is further asserted that the direction of

the investment of the huge reservoir of funds rests with the officers of a comparatively few companies in a limited eastern area, and that 16 companies, whose home offices are located in the New York area and in New England, own 74 percent of all the assets.

General observations with which the committee concludes its preliminary report also are significant. The committee states that the tendency toward the concentration of control of the economic system in fewer and fewer business executives seems proved, that the consequence of the tendency is a steadily lessening number of competitors, that the financial and other resources required for economic endeavor are becoming increasingly difficult for the ordinary enterprise to obtain and that concentration of economic power and wealth is accompanied by increasing unemployment and narrowing markets.

In its preliminary report the committee did not offer a remedy. It is obvious that in the final report some sort of a plan or plans will be presented for greater governmental control of business and industry.

In a nutshell, the investigation of insurance companies seems intended to establish the existence of a concentration of wealth which will be offered as *prima facie* evidence of the need of governmental control.

The premise in this inquiry, as in others recently conducted, is that big business is essentially evil and that the existence of unemployment proves that contention.

This particular matter represents merely one phase of the movement toward a planned economy, a movement so dear to the hearts of many advanced thinkers. It is proposed, and much of the program already has been enacted into law, that Federal bureaucrats shall supervise the management of our industry, agriculture, and finance. Control is to be taken away from private businessmen, farmers, and financiers, and vested in the Government. The pattern is strikingly similar to that which has been followed in the totalitarian countries of Europe but is in violent conflict with our system of free enterprise.

In this particular case the economic planners want to obtain control over the investment of funds by the insurance companies. It is part of a policy for a rationing of capital as a means of directing the course of industry and agriculture.

The drive against the insurance companies, which undoubtedly will result in a proposal for legislation to give the Securities and Exchange Commission and possibly other agencies authority over them, is not actuated by any concern for the safety of the funds of policyholders but is part of a much broader movement to vest in the Government complete economic power. Again and again during the hearings it was emphasized that no question was being raised as to the soundness of the companies.

Mr. Douglas in his opening statement said: "At the outset I want to make clear that this inquiry does not attack and in no way questions the adequacy of the reserves of any insurance company within its scope. Under State laws the legal reserve companies are required to set aside in restricted investments, funds sufficient to assure that each policyholder will receive the amount of his policy when his risk matures. No policyholder need have any concern that any fact brought out in this inquiry will in any way jeopardize the protection which he counts upon through his insurance policy."

Dr. Donald H. Davenport, special economic consultant to the insurance section of the Securities and Exchange Commission, one of the chief witnesses presented by the Commission, told the committee that, despite the depreciation of real estate and similar losses, the strength of the insurance companies was unimpaired and that there was no suggestion of possible insolvency.

In connection with a chart showing the operations of the four chief types of savings institutions, the life-insurance companies, the mutual savings banks, the building and loan associations, and the savings departments of the commercial banks, Dr. Davenport said:

"The chart based on the aggregates reflecting the growth of these four principal types of savings institutions in the United States raises certain questions to which we cannot give final answer at this time; however, it is apparent that the life-insurance companies have never shown a decline. Every year for which figures are available, total assets of life-insurance companies show an increase over the assets of the year before. This was true in 1918, the year of the influenza epidemic, when death losses were exceptionally high. It was also true throughout the depression years of 1932, 1933, and 1934. In this respect the life-insurance companies are unique among financial institutions. The reasons for the momentum which has carried the life-insurance companies ever upward are many. Among them may be mentioned the fact that premium receipts, which constituted about 72 percent of their total income in 1937, have been almost always more than sufficient to meet expenditures for all purposes."

At the conclusion of the insurance hearings, Senator O'MAHONEY, chairman of the committee, in a statement to the press, asserted that the evidence submitted had "amply justified" the statement by Mr. Douglas at the outset that "no policyholder need have any concern that any facts brought out in the inquiry would in any way jeopardize the protection he counts upon." Senator O'MAHONEY said that "nothing whatever has developed at the hearings to reflect upon the integrity or the ability of the men who administer these huge organizations."

Senator O'MAHONEY added:

"I am personally satisfied that there is not a single responsible official of any of these companies who is not as sincerely interested

in restoring and promoting economic prosperity in the United States as is any public official, and I cannot forego taking advantage of this opportunity to thank the insurance leaders for the cooperation which they gave to the committee.

"It would be a mistake to let the testimony which was produced with respect to the pure formality of the election of officers and directors in some of the companies cast a reflection on either the companies or their officers, and I trust that no one has gained any such impression. So far as any testimony produced before the committee is concerned, all of these companies are operated in full compliance with the laws of the State by which chartered and in which they operate."

Although the attorneys and experts of the Securities and Exchange Commission who were in charge of the presentation of evidence were not greatly interested in anything except a possible concentration of economic power, the hearings contain considerable testimony as to the valuable contribution of the insurance companies to the prosperity of the Nation. Besides providing protection for the future and safeguarding savings of the policyholders, the companies were shown to have done much toward promoting the health of the people and extending the average length of life.

Another aspect of the insurance situation which those presenting the evidence to the Monopoly Committee were not anxious to emphasize was the adverse effect of present Government policies upon the companies and upon policyholders. The so-called easy-money policy, which has been promoted by the administration both as a means of providing low interest rates to industry and to facilitate the financing of Treasury deficits, has seriously affected insurance companies, endowments, and other institutions, and private citizens dependent upon income from investments. Testimony before the Monopoly Committee showed that the insurance companies have had increasing difficulty in finding investments with satisfactory yields because of the prevalent low interest rates and that the lower earnings have been reflected in dividends to policyholders. Furthermore, the companies have been forced to increase greatly their holdings of Government securities. The large percentage of the public debt held by the insurance companies is not due to any desire of the companies for economic power but rather to the increasing monopolization of investment opportunities by the Government which has made such a trend unavoidable.

Inflationary trends under the present administration also have been a menace to the insurance companies. If there should be a runaway speculative boom, which could easily occur on the basis of enormous excess banking reserves, the depreciation in the purchasing power of money would deal a severe blow to holders of insurance policies. If interest rates should rise to a level which was normal a few years ago, it would mean a decline in the market value of the companies' large holdings of Government securities to a point below par, with a consequent heavy loss.

Statistics which appear in the printed hearings of the committee show that on December 31, 1938, 17.9 percent of all life-insurance assets was represented by securities of the United States Government. A decade ago, in 1929, only 2 percent of life-insurance assets consisted of Government securities. The part of total assets represented by farm and city mortgages has greatly increased, which may be attributed to the responsibility assumed by the Federal Government in these fields.

Various Federal policies, including low interest rates, enormous expenditures of the Government in disregard of a balanced Budget, and the paternalistic trend shown in relief and social-security programs, have all tended to weaken the habit of thrift which formerly was ingrained in the American people. The alarming tendency to depend on the Government for security, not only in old age but in the prime of life, cannot fail to retard the expansion of the business of the life-insurance companies.

Another possible menace to the companies is Federal competition. The proposal has recently been renewed for a voluntary system of old-age pensions under the Government. Under the plan the Government would engage in the insurance business for the purpose of providing annuities to persons with small income at a cost less than is possible through private companies. Congress refused to approve this scheme when it was presented by the administration at the time of the enactment of the Social Security Act because of possible injurious competition in an important field of private business. That the proposal should be renewed is indicative of the constant trend toward a socialization of business and industry.

Just what the Federal bureaucracy would desire with respect to a new allocation of investments by the insurance companies in various fields of industry, agriculture, and finance is not clear. It seems obvious that the concentration of economic power in Washington would be far more dangerous than any present concentration in the areas where the principal financial markets are located and which operate under our system of free enterprise.

Furthermore, the need of the assumption of regulatory authority by the Federal Government has not been made evident. The evidence before the Monopoly Committee does not appear to show any laxity in the supervision of the insurance companies by the States. Any regulation imposed by the Federal Government would be superimposed upon that of the States. While the Federal Government may encroach upon the sovereignty of the States, as it is doing increasingly with respect to the regulation of business, industry, and agriculture, it cannot destroy their sovereignty. The result of Federal regulation would be a new burden on the insurance companies. Already the taxes to which they are subject both at the hands of the States and the Federal Government are very heavy. Any extension of Federal authority probably would mean more

special taxes, ostensibly in part to finance the added cost of administration. The policyholders would lose more than they could possibly gain from Federal supervision.

The movement with respect to Federal control of the life-insurance companies presents a definite challenge to American principles of government. It represents an encroachment upon the sovereignty of the States which has not been shown to be justified. It involves an assumption of economic power in the Federal Government which follows trends in Europe but is inconsistent with practices generally accepted until very recently in the United States. It raises an issue which must be met if the tendency toward a startling centralization of power in Washington is to be checked.

## Laying the Cornerstone of Jefferson Memorial

### EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Thursday, January 4, 1940

ADDRESS BY THE PRESIDENT

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the Appendix the address delivered by the President of the United States on the occasion of the laying of the cornerstone of the Jefferson Memorial at Washington, D. C., November 15, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

In the earliest days of the Republic, under the Constitution, the Representatives of the several States were in substantial agreement that a National Capital should be founded in a Federal district set apart from the jurisdiction of any individual State. This purpose was in a true sense a symbol of a realization of national unity; and the final location of the National Capital proclaimed a proper compromise between the interests of the North, the South, the seaboard, and the interior, as they existed at the time.

In all of the hundred and fifty years of our existence as a constitutional nation many memorials to its civil and military chiefs have been set up here. But it has been reserved to two of these leaders to receive special tribute in the Nation's Capital by the erection of national shrines perpetuating their memories over and above the appreciation and regard tendered to other great citizens of the Republic.

Today we lay the cornerstone of a third great shrine—adding the name of Thomas Jefferson to the names of George Washington and Abraham Lincoln.

I have spoken of the national character of the District of Columbia itself, a capital which represents today the vitality, not of 13 Atlantic seaboard States but of 48 States which encompass the width of our continent.

This vitality envisages many-sided interests, and it is therefore fitting that among hundreds of monuments to famous Americans the three great shrines are dedicated to men of many-sided qualities.

Washington represented abilities recognized in every part of the young nation and in every part of the civilized world, for he was not only a great military leader, not only a great moderator in bringing together discordant elements in the formation of a constitutional nation, not only a great executive of that nation in its troublous early years, but also a man of vision and accomplishment in civil fields, talented engineer and surveyor, planner of highways and canals, patron of husbandry, friend of scientists, and fellow of political thinkers.

Lincoln, too, was a many-sided man. Pioneer of the wilderness, counsel for the underprivileged, soldier in an Indian war, master of the English tongue, rallying point for a torn nation, emancipator, not of slaves alone, but of those of heavy heart everywhere, foe of malice, teacher of good will.

To those we add today another American of many parts—not Jefferson, the founder of a party, but the Jefferson whose influence is felt today in many of the current activities of mankind.

When in the year 1939 America speaks of its Bill of Rights we think of the author of the statute for religious liberty in Virginia.

When today Americans celebrate the Fourth of July 1776, our minds revert to Jefferson, author of the Declaration of Independence.

When each spring we take part in the commencement exercises of schools and universities, we go back to the days of Jefferson, founder of the University of Virginia.

When we think of Benjamin Franklin as the experimenter in physics, we remember that Jefferson was an inventor of numerous small devices to make human life simpler and happier, and that he, too, experimented in the biology of agriculture and livestock.

In the current era of the erection of noble buildings we recognize the enormous influence of Jefferson in the American application of

classic art to homes and public buildings—an influence which makes itself felt today in the selection of the design for this very shrine for which we lay the cornerstone.

But it was in the field of political philosophy that Jefferson's significance is transcendent.

He lived as we live in the midst of a struggle between rule by the self-chosen individual or the self-appointed few and rule by the franchise and approval of the many. He believed as we do that the average opinion of mankind is in the long run superior to the dictates of the self-chosen.

During all the years that have followed Thomas Jefferson the United States has expanded his philosophy into a greater achievement of security of the Nation, security of the individual, and national unity than in any other part of the world.

It may be that the conflict between the two forms of philosophy will continue for centuries to come, but we in the United States are more than ever satisfied with the republican form of government based on regularly recurring opportunities to our citizens to choose their leaders for themselves.

Therefore, in memory of the many-sided Thomas Jefferson and in honor of the ever present vitality of this type of Americanism, we lay the cornerstone of this shrine.

## Politics as a Profession for Businessmen

### EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, January 4, 1940

ADDRESS BY HON. JAMES A. FARLEY

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the RECORD an interesting and timely address delivered by Hon. James A. Farley before the Wharton School of Finance, University of Pennsylvania, at Philadelphia, Pa., December 4, 1939. The subject of the address is Politics as a Profession for Businessmen.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a privilege for me to address the members of a great university which, among its other functions, maintains one of the best-known schools of business in the world. I am particularly glad to talk to you quite frankly and simply about politics. One of the most useful things that any of us can do is to look occasionally at the other man's job. It would be very helpful if all politicians could look occasionally at business through a businessman's eyes, and if all businessmen could occasionally have a glimpse of public affairs through the eyes of politicians.

I am a politician, and am proud of being one. I am also a businessman, and I am proud of that. But I do think it is fair to say—though politicians frequently do not say it—that in politics we probably have to take account, and do take account, of the views of businessmen perhaps even more than businessmen take account of political factors.

Politicians probably stand more abuse, year in and year out, than perhaps any other group of individuals. And yet the success of our democracy in large measure is directly and continuously dependent on them and on their work. Public opinion in a democracy has to find some way of expressing itself in an orderly and effective fashion. This we do through political parties, which give effective form to the desires of the public and the views of our citizens. The organization of political parties and the using of them to express the public will is the work of politicians. It is they who must harmonize conflicting points of view; who must reach compromises; who must look always for the greatest common divisor of public opinion and give the result form and substance. In practice this means reaching agreements on candidates, on policies, and on legislation which meets the needs of the country.

One may almost say that whenever the politician fails, democracy fails. In some countries abroad, where politicians were unable to work out a general unity, when parties divided and subdivided to an intolerable degree, and when agreement could not be had on men and measures, the structure became so weakened that dictatorship was invoked as a relief from confusion.

The vices of the politician have so often been attacked that I think it is fair, for a change, to fire a shot in his defense. A well-known author once wrote a most elaborated study about politics and politicians, taking careful account of all their virtues and of all their failings; but he wound up with the conclusion that, after all, in the prevailing state of the world, politics was one of the noblest professions in the world. It did endeavor to create, maintain, and safeguard the public order, within which individuals everywhere could work out their own lives in peace and freedom.

Is politics a profession for businessmen? I think it can be, and should be, if certain facts are appreciated. Many of the qualities required for success in both callings are the same. At bottom, as usual, they turn on character. A businessman's greatest asset is his reputation for keeping his engagements; and the greatest asset of a politician is the knowledge that his word is 100-percent good.

A politician's promise is called by other politicians a "contract." It is frequently not the kind of contract that businessmen talk about—that is, an arrangement by which one man promises to do something in return for the promise of his opposite party to do something for him. More often than not in political matters it is a promise to try to work out some particular problem; or to take a particular position, and there is no consideration of any kind received for the promise. When in political life it is said of a man, "He keeps his contracts," he has achieved the first essential to success. This is exactly what a businessman has attained when the banker, his customers, and his competitors, all know that he is a man of his word.

Likewise, a politician, like a businessman, has to be extremely careful about giving his word. He has to try to estimate whether, when he gives his word, he can fulfill it. Men who are experienced in public life are very cautious about giving their word. They know that all kinds of considerations enter into the problem; and they know that it is much easier to promise than to make good. This is also the characteristic of a cautious and capable businessman.

A third requirement is certainly the same for success in both politics and business. This is the kindly quality of courtesy and generosity. There is temptation in both fields to say unkind things about other men or to belittle their motives; yet experience teaches that lack of generosity, and willingness to take liberties with other men's reputations, eventually spoils the most promising career. The other man is entitled to his point of view, and nothing is gained by not recognizing that he is probably honest about it. Political battles, like business competition, are hard fought; but successful fighting does not descend to personalities. Where you hear of personal attacks in politics, you usually find that an amateur is back of them.

Again, in both fields, moderation and self-control are essential. To take undue advantage of a situation is always a mistake, if only because in the fast-moving panorama of human events situations are apt to reverse themselves. Moderation in the hour of triumph rests on something more than mere self-preservation. It is essential to democratic government. If the successive political victories of various groups were followed in each case by an attempt to make trouble for the defeated party, democracy would soon break up in a set of meaningless rebellions. Politicians know, just as businessmen know, that if an advantage is pushed too far, eventually a day of reckoning comes.

But if the qualities needed for the profession of business and of politics are somewhat the same, it must be recognized that the profession of politics does require certain elements which businessmen frequently do not need to have. In public affairs men are never entirely their own masters, nor are they masters even over the particular situations in which they appear to be dominant. A businessman can, within limits, give an order. He can settle policy according to his own best lights. A politician has not only to make up his own mind as to what he thinks ought to be done, but he must also find out as well as he can what the public thinks or will think about a situation. In fact, his ability to estimate public opinion is one of the very reasons why he is able to mobilize that opinion so as to bring about some definite result.

Public opinion is not simple. It is made up of an endless number of strands. There are groups with special interests; and others with sentimental attachments; and still others with directly opposed interests; and all of these have to be considered. Frequently students, professors, or analysts, are at work on advanced ideas in any particular situation; ideas which have not yet won public support, but which may do so in the future. All of these have to be taken together and appraised. Frequently the appraisal of them is instinctive; because good politics, like good business, is an art; and there is a genius of politics, just as there is a genius of business. Understanding and estimating currents of public opinion is not a thing which most businessmen have to do; and learning the art is sometimes not easy.

In public life I have often seen men come from business into public affairs. In some cases, I have noticed that their first feelings are unhappy. They consider a problem; make up their own minds about it; and then go to work to get something done. This is what they would do in their own business. Suddenly they discover that a number of people do not agree; or that a great number of people who are only incidentally interested feel that they have a right to be consulted. The press somehow presents their ideas in an unhappy light.

To a man new in public life, the process seems interminable and cumbersome. Why in the world, they think, can you not make a straightforward decision and give quick answers to plain questions? Yet when action is taken without going through all of this troublesome process of consultation, consideration, and cooperation, the measure is often not successful. Things crop up which were not considered before. Units in the government whose existence is hardly suspected, have to carry out the policy; and unless these units are sold on the idea, the results seem not too happy. Some men never do learn the process.

But there are others, and many of them, who do realize the difference in the two processes. Among them have been some of the most successful of public servants, outstanding in political life. In every case, I think, you would find that these men had learned not only to make up their own minds, but to consider that the public business means also meeting the minds of all kinds and sorts of people, and considering the interests of many and varied groups. These men have usually learned that ambition is just as legitimate a human motive as is the desire to make a profit—provided it is used moderately, and provided the means of attaining the ambition, like the methods used in making a profit, are honorable.

Ambition is to politics very much what the profit motive is to business. It is right and just that it should be so. As a legitimate profit ought to rest on a legitimate service rendered, so ambition to rise in the public service is worthy when it is satisfied by the faithful performance of useful work. In very large measure political ambitions are satisfied by cooperation rather than by competition; I myself have found that the best method of working with many men is to try to help as many of them as possible to satisfy their legitimate ambitions, as an honest reward for work in the public interest.

A business grows more complex as it gets larger, and political problems grow more difficult as they cease to be local and become national. In this respect I believe the United States is peculiar. It is the largest group of people anywhere on earth which endeavors, through political processes, to work out measures suitable to 130,000,000 people spread over a huge empire. Though conflicting interests have to be considered even in the smallest local district, they are as nothing compared to the conflicting interests in national matters.

Yet our economic success is due directly to the fact that we have been successful in finding common measures suitable, at least in part, to all; for otherwise, instead of having one republic, we should long since have been cut up into regional units each endeavoring to take advantage of the other; and we should probably be headed toward the tragic chaos in which the continent of Europe finds itself today. That we were able to escape this is not merely good fortune. It was due, first, to the singular clear-sightedness of the men who drew the Constitution of the United States specifically in order to form a more perfect union. But it was also due to the fact that American politicians, whatever their sins, in general have realized that their task is to make the machinery work, and not to find ways by which it can be made to fail.

Let me say a word about a phrase which is often heard in these days. People ask for "more business in government." There is a great deal of truth in this, but only if some of the limitations I have tried to note above are kept in mind. The methods of government can certainly be improved. We are a long way from that smooth, clean-cut efficiency in public affairs which all of us hope to see. But when that is said, it nevertheless is true that government is a great deal more efficient than many people suppose. Do you know anything, for instance, on which you can depend with greater certainty than you can on the United States Post Office? Year in and year out, I think any fair-minded person would agree that it is as dependable and effective as any other business.

Even the process of legislation, I think, stands up pretty well by comparison. It is true that there are endless delays and compromises and modifications in order to work out a measure which will finally have the general support of the people. But if you have ever tried to secure agreement on a measure in, let us say, a trade association representing a large number of businessmen, I think you will agree that the process is almost as difficult as in a legislature. In trade associations or other conventions, there are endless modifications and delays; discussion is easy, but action difficult. What is more, you will find that in the trade association, as well as in the State legislature or in the Congress, if action is hasty, if there is not this full discussion, the job is apt to be badly done.

Businessmen sometimes complain of this, thinking of their own desks where they can make decisions by themselves. And yet even there, I think, a wise businessman knows that though he seems to decide the question by himself, in reality, he does a good deal of consulting first. He consults his technical people and his plant managers. Frequently he consults the representatives of his labor as well, and the decision he finally takes is a composite of all their views. Unless he does this, his business decision is likely to have disappointing results. When it is remembered that even a small task in government is huge compared to most tasks in business, you begin to discover that there is a reason for this apparent slowness and delay.

I believe that there is a great opportunity in public service for businessmen. The certainty of the business method, the search for the thing that can be done instead of for the impractical idea, the insistence that the customer shall be satisfied—all are qualities of the highest use in public affairs. But to these must be added a certain sensitive quality—the ability to understand public opinion; the willingness to compose differences; the realization that in politics no one can act alone, whether the affair concerns the fifth precinct of the sixth ward or the national interest of the United States. I do not hold out any hope of great material reward, nor even of great reputation, as an incentive. Frequently the only reward a politician ever has is the feeling that a great many people are happier because of his labor, and the friendship of the men with whom he has worked. Often he works unseen; still more often he is

viciously attacked. Occasionally the fortunes of the game, the loyalty of his friends, and the triumph of his ideas will carry him to great heights.

Politicians, like businessmen, can go wrong; too often they do. But in the main the politician carries on the fabric of American political life, and it is today the most successful government in the world. He parallels the businessman who carries on the fabric of our economic life, which likewise is today the most effective economic organization in the world. Our country has made good use of both; it has every reason to be proud of both. It has every reason to demand of both groups that we improve our methods and enlarge our ideas. But it has every cause to believe that if the two professions understand their own tasks and understand each other our democracy is well served and our country is safe.

### Laying of Cornerstone of Roosevelt Library

#### EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, January 4, 1940

ADDRESS BY THE PRESIDENT

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address delivered by the President of the United States on the occasion of the laying of the cornerstone of the Franklin D. Roosevelt Library, Hyde Park, N. Y., on November 20, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Half a century ago a small boy took especial delight in climbing an old tree, now unhappily gone, to pick and eat ripe sickle pears. That was 100 feet to the west of where we stand. Just to the north he used to lie flat between the strawberry rows and eat sun-warmed strawberries. In the spring of the year, in hip rubber boots, he sailed his first toy boats in the surface water formed by the melting snows. In the summer with his dogs he dug into the woodchuck holes of this same field. The descendants of those same woodchucks still inhabit the field and I hope they will continue to do so for all time.

It has, therefore, been my personal hope that this library, and the use of it by scholars and visitors, will come to be an integral part of a country scene which the hand of man has not greatly changed since the days of the Indians who dwelt here 300 years ago.

We know from simple deduction that these fields were cultivated by the first inhabitants of America—for the oak trees in these fields were striplings 3 centuries ago and grew up in open fields as is proved to us by their wide spreading lower branches. Therefore, they grew in open spaces and the only open spaces were the cornfields of the Indians.

This is a peaceful countryside, and it seems appropriate that in this time of strife we should dedicate the library to the spirit of peace—peace for the United States and soon, we hope, peace for the world.

At the same time we can express the thought that those in the days to come who seek to learn from contemporaneous documents the history of our time will gain a less superficial and more intimate and accurate view of the aspirations and purposes of all kinds of Americans who have been living in these times.

Of the papers which will come to rest here I personally attach less importance to the documents of those who have occupied high public or private office than I do to the spontaneous letters which have come to me and my family and my associates from men, from women, and from children in every part of the United States, telling me of their conditions and problems, and giving me their own opinions.

To you who have come here today to take part in the laying of the cornerstone, you who have contributed so greatly to the building of this library, and to you who have also helped who could not be present, I give my appreciation and thanks.

This wholly adequate building will be turned over to the Government of the United States next summer without any cost whatsoever to the taxpayers of the country. During the following year the manuscripts, letters, books, pictures, and models, will be placed in their appropriate settings and the collections will be ready for public inspection and use, we hope, by the spring of 1941.

All of you who have been so generous in making this library possible—all of my friends and associates who have given so greatly of their time and their interest in the planning of the work—will join me, I know, in feeling well rewarded if for generations to come the people of the United States approve our planning and believe that the life of our Nation has been enriched.

### The National Health Act

#### EXTENSION OF REMARKS

OF

HON. EDWARD R. BURKE

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Thursday, January 4, 1940

ADDRESS BY HON. EDWARD R. BURKE, OF NEBRASKA

Mr. BURKE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me on December 6, 1939, before the Chicago Medical Society on the subject of the National Health Act.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The so-called National Health Act, S. 1620, introduced by Senator ROBERT F. WAGNER, of New York, in February 1939 and considered at extensive hearings before a subcommittee of the Senate Committee on Education and Labor during April, May, June, and July, is approaching a stage requiring a decision by the Congress. It is assumed that the bill may be reported to the Senate during the coming session and that it may be pressed to a vote in both Houses while the primary and election campaigns of 1940 are in progress.

Seldom has more formidable propaganda in behalf of legislation been organized than in the case of this measure. The bill had its genesis in the work of committees organized under the President's Committee on Economic Security, which formulated the general outlines of the program incorporated in the Social Security Act of 1935. Following the enactment of that law President Roosevelt, in August 1935, appointed the Interdepartmental Committee to Coordinate Health and Welfare Activities. This committee, with the assistance of a technical committee selected from Government departments, prepared the comprehensive program which is the basis of the present Wagner bill. A general conference, selected for the most part from groups known to be favorable, considered the program in July 1938. President Roosevelt submitted the report of his committee, together with his own endorsement, to Congress in January 1939.

The bill upon its introduction in the Senate was referred to the Committee on Education and Labor rather than to the Committee on Finance, which was in charge of the Social Security Act and which in the 1939 regular session reported and obtained the enactment of comprehensive amendments to the original law. The present Wagner bill is in the form of amendments to several titles of the Social Security Act, with all of which the Finance Committee is intimately familiar. The assumption is that the proponents of the bill believed the prospect for complete approval of their far-reaching plan was better at the hands of the Committee on Education and Labor, whose members were selected chiefly because of their interest in subjects related to education and labor, rather than if it were entrusted to the Committee on Finance, whose members have as their primary responsibility the raising of revenues to meet the costs of the Government.

The subcommittee which conducted hearings was composed of Senators JAMES E. MURRAY, of Montana, chairman; VIC DONAHUE, of Ohio; ALLEN J. ELLENDER, of Louisiana; and ROBERT M. LA FOLLETTE, of Wisconsin.

Emphasis upon objectives rather than methods has become a common practice in the promotion of panaceas for existing evils. The official title of the bill, "the National Health Act of 1939," appears to indicate a program to which no objection can be advanced. The title, however, typifies the objectives rather than methods of accomplishing them. Everyone wishes to promote the national health. Anyone found in opposition is accused of sinister motives. A Member of Congress seeking reelection takes his political life in his hands when he ventures to vote against a bill which on its face, advances the health of the Nation and provides better care for the underprivileged portion of the population.

The Federal Government has taken long strides in its recent assumption of responsibility for social welfare. This trend has had a large measure of justification in the unusual conditions of the depression which swept over the world in 1929. Sufficient time has elapsed, however, to make it clear that the actions of the Federal Government have not always proved wise and that the schemes of well-meaning enthusiasts require more careful examination than has sometimes been given. The rejection in some of the recent State elections of fanciful old age and other social security plans was a hopeful sign. The people are turning their attention more to methods and do not propose longer to be confused by those who stress worthy objectives but fail to put forward a proper mechanism for their attainment.

Objections to the pending National Health Act may be grouped around four points, as follows:

1. Enactment of the legislation would be a further step toward a centralization of authority in the Federal Government and a destruction of the sovereignty of the States.

2. Paternalistic features of the plan would weaken the moral fiber and tear down habits of self-reliance and the exercise of individual initiative which have been fundamental characteristics of the American people under our system of government.

3. The origin and manner of presentation of the program afford a striking example of the tendency of bureaucracy to expand its power.

4. Cost of the program, on top of tremendous obligations already assumed for social services, would be a serious drain on the budgets of Federal and State Governments, and its financing would add a further obstacle to the functioning of our economic structure.

The dual system of government, under which the Federal Government and the States each possess sovereignty in their respective fields, has been one of the checks and balances which has kept the United States on an even keel through the years. It has helped to prevent a centralization of authority in the Federal Government, which inevitably would have led to abuses of power resulting in a breakdown of the governmental system. Except for the existence of the checks and balances provided by the dual form of government, the division of powers of the Federal Government among three coordinate branches, and the guaranties of individual liberties in the Bill of Rights, the United States might have been caught in the world movement toward dictatorships. Even with the existence of these checks we have witnessed an alarming tendency toward centralization of power.

From the beginning of our Government matters relating to the health of the people have been primarily the concern of the States and local governments. It has been contrary to our system to regiment our people from Washington, even if the regimentation is intended to improve their health. We tried through a constitutional amendment to have the Federal Government control the drinking habits of citizens, but an aroused electorate finally instructed Congress to propose repeal of the amendment.

In the past decade the storm and stress of depression have been responsible for a very great increase in Federal power at the expense of the States. To some extent this movement has been based on necessity. The financial plight of our local governments made it impossible for them to bear the entire burden of relief and other activities intended to relieve the distress of victims of the depression. At the same time, many of those who favored Federal appropriations for social purposes have recognized that the new system would lead to waste and extravagance and might be responsible for a new generation of people without the sturdy, self-reliant characteristics of previous generations. Because of the abuses and injurious effects of our present relief system a future Congress is likely to restore a greater measure of responsibility to the States and local governments.

The proponents of the National Health Act emphasize that it does not provide for Federal administration of the expanded health program. As described by the President in his special message to Congress last January, "the essence of the program recommended by the committee is Federal-State cooperation." It is true, as he stated, that the bill, instead of proposing a great expansion of Federal health services, provides for a comprehensive program to be administered by States and localities with the assistance of Federal grants-in-aid.

Nevertheless, the program contemplates the expenditure of Federal funds to meet a very considerable part of the costs and requires Federal approval of the original plans of the States and of their administration. The Federal Government proposes to coerce the States into embarking upon elaborate health programs, whether or not an acute need may exist or whether the local share of the funds might be better expended for other purposes. Thereafter, the Federal Government proposes to remain in complete control, a State exercising its discretion only at the peril of being cut off from Federal funds.

The Federal Government will be in a position to coerce the States to adopt health programs. If a State does not choose to accept Federal money it is passing by an opportunity to share funds contributed by taxpayers of the entire Nation. Furthermore, regardless of whether the State takes Federal money, taxes paid by its own citizens to the Federal Government will be used for health programs of other States. Under the circumstances, few if any States will refuse the grants-in-aid. Acceptance means that the States themselves must expend very considerable amounts for the same purposes, these amounts being expended not at the discretion of State or local officials but as required by the Federal bureaucracy in Washington. The expenditures of State or local funds may mean that no money will be available for purposes which in the judgment of resident citizens are more urgent.

In effect, the sovereignty of the States will be destroyed. The administrative agencies in the States will become mere puppets of the Federal Government. All of this would not be strange in a totalitarian government of Europe, but it would represent a flagrant violation of our principles of government.

An examination of the provisions of the Wagner bill will help to make the situation clear.

The first part of the bill provides for grants to States for maternal and child welfare. Under this heading are (1) maternal and child health services, and (2) medical services for children and services for crippled and other physically handicapped children.

The second part provides for grants to the States for public-health work and investigations.

The third for grants to the States for hospitals and health centers.

The fourth for grants to the States for medical care.

The fifth for grants to the States for temporary disability compensation, or in other words, for compulsory health insurance.

Under the first subdivision of the first part of the bill grants are authorized "for the purpose of enabling each State, as far as practicable under the conditions in such State, especially in rural areas suffering from severe economic distress, to extend and improve services, supplies, and facilities for promoting the health of mothers and children, and medical care during maternity and infancy, including medical, surgical, and other related services, and care in the home or in institutions, and facilities for diagnosis, hospitalization, and after-care." The grants under the second subdivision are "To extend and improve services, supplies, and facilities for the medical care of children and services to crippled and other physically handicapped children in need of special care, such services and facilities to include medical, surgical, corrective, and other related services and care in the child's home or in institutions, and facilities for diagnosis, hospitalization, or other institutional care."

In the second part of the bill grants are authorized to enable the States "to extend and improve public-health work, including services, supplies, and facilities for the control of tuberculosis and malaria, for the prevention of mortality from pneumonia and cancer, for mental health, and industrial hygiene activities, and to develop more effective measures for carrying out the purposes of this part of this title, including the training of personnel." As a second subdivision under this part appropriations are made to the Public Health Service through the National Institute of Health for investigations relating to health, disease, sanitation, and matters pertaining thereto.

The third part of the bill authorizes grants to enable the States "to construct and improve needed hospitals, to assist the States for a period of 3 years in defraying the operating cost of added facilities, and to develop more effective measures for carrying out the purposes of this title."

The fourth part of the bill authorizes grants to enable the States "to extend and improve medical care (including all services and supplies necessary for the prevention, diagnosis, and treatment of illness and disability), and to develop more effective measures for carrying out the purposes of this title, including the training of personnel."

The fifth part of the bill authorizes grants to assist the States "in the development, maintenance, and administration of plans for temporary disability compensation."

The authorizations for appropriations under the first part of the bill are: For maternal and child-health services, for the first 3 fiscal years, \$8,000,000, \$20,000,000, and \$35,000,000, respectively, and for medical services for children and services for crippled and other physically handicapped children, for the first 2 fiscal years, \$13,000,000 and \$25,000,000, respectively.

Authorizations of appropriations under the second part of the bill are: For grants to the States for public-health work, for the first 3 fiscal years, \$15,000,000, \$25,000,000, and \$60,000,000, respectively, and for investigations by the Public Health Service through the National Institute of Health, for the first 3 fiscal years, \$3,000,000, \$3,500,000, and \$4,000,000, respectively.

Authorizations of appropriations under the third part of the bill for grants to States for hospitals and health centers for the first 3 fiscal years, are \$8,000,000, \$50,000,000, and \$100,000,000, respectively, with additional unestimated amounts for each year for mental and tuberculosis hospitals, and also an annual amount, commencing at \$1,000,000, for administrative expenses of the Public Health Service.

The authorization of appropriations under the fourth part of the bill for grants to States for medical care, for the first fiscal year, is \$35,000,000.

The authorization of an appropriation under the fifth part of the bill for grants to States for temporary disability compensation, for the first fiscal year, is \$10,000,000, with \$250,000 additional to the Social Security Board for administrative expenses.

In each case the authorization provides for continuing appropriations for an indefinite period of such amounts as are "deemed necessary" or are "sufficient" for the specified purposes.

These sums, including amounts for the second or third years equal to the authorizations for the first or second years but not including the unestimated amounts for mental and tuberculosis hospitals, total \$93,250,000 for the first fiscal year, \$169,750,000 for the second fiscal year, and \$270,250,000 for the third fiscal year.

According to the sponsors of the plan, total expenditures of the Federal Government and the States by the time the program has been in operation for 10 years will amount to as much as \$850,000,000 annually. The Federal part of this cost will be considerably more than the \$270,000,000 indicated for the third fiscal year.

The five separate parts of the bill contain somewhat similar provisions with respect to conditions which must be met by the States before they can obtain the Federal grants-in-aid. In each case broad power is vested in a Federal bureau or board. The Chief of the Children's Bureau, subject to the approval of the Secretary of Labor, is the controlling official in the case of grants for maternal and child-health services, and for medical services for children and services for crippled and other physically handicapped children. The Surgeon General of the Public Health Service is the official who must approve the plans of the States in connection with public-health work. The same official controls grants to the States for hospitals and health centers. The Social Security Board is given jurisdiction over grants to States for medical care and for plans for temporary disability compensation.

Some idea of the maze of red tape which will be involved in the contacts between the States and the Federal Government may be gained from this scattering of authority among these three different Federal agencies. It is more than likely that in most States all of the health services will be under a single agency, which will be subject to the orders of three Federal agencies, the Children's Bureau, the Public Health Service, and the Social Security Board.

The power of the Chief of the Children's Bureau in the case of grants to States for maternal and child-health services is typical of the authority vested in the Federal bureaucracy under each of the five parts of the bill. The amount of allotments to the various States will be determined in accordance with rules and regulations prescribed by the Chief of the Children's Bureau with the approval of the Secretary of Labor. Factors to be taken into consideration are (1) the total number of births in the latest calendar year for which statistics are available, (2) the number of mothers and children in need of the services, (3) the special problems of maternal and child health, and (4) the financial resources of the States.

Before a State can get its money it must submit a satisfactory plan. This plan must provide for financial participation by the State. It must provide for a State-wide program or for extension of the program each year so that it shall be in effect in all political subdivisions in need of the services within 5 years. It must provide for the administration of the plan by the State health agency or for the supervision by that agency of any part of the plan delegated to another State or local agency. It must provide such methods of administration as are found by the Chief of the Children's Bureau to be necessary for the efficient operation of the plan, including methods relating to the establishment and maintenance of personnel standards on a merit basis, and methods of establishing and maintaining standards of medical and institutional care. It must provide for an advisory council or councils composed of members of the professions and agencies, public and private, that furnish services under the State plan, and other persons informed on the need for or provision of maternal and child services. It must provide that the State health agency shall make such reports, in such form and containing such information, as the Chief of the Children's Bureau may from time to time require, and comply with such provisions as that official may from time to time find necessary to assure the correctness and verification of such reports. It must provide for cooperation and, when necessary, for working agreements between the State health agency and other public agencies. It must provide that the State health agency shall have authority to make such rules and regulations as are necessary for efficient operation of the service.

Besides the advisory council or councils to be set up in the States the Chief of the Children's Bureau is authorized to establish one or more such bodies. It is noteworthy that in the case of none of these councils is there a requirement of representation of the professional organizations, such as the American Medical Association. Members of the interested professions are to be on the councils, but they may be hand picked by the Federal bureaucracy rather than by the profession itself.

The requirements with respect to grants for other purposes are very similar to those outlined relating to maternal and child welfare. In the case of grants for the development and maintenance of plans for temporary disability compensation, certain general specifications are provided for such plans. It is stipulated that the legislatures of the States in enacting laws for what the bill refers to as temporary disability compensation, but which is more commonly known as health insurance, must surrender their sovereignty. The State laws must contain provisions giving the Federal social security the final voice in the determination of administrative plans. The State agencies administering health insurance must make reports to the Social Security Board in conformity with its regulations.

Considerable discretion is vested in the Federal bureaucracy in the determination of allotments to the various States under the different grants. In the case of health insurance the Federal Government would bear one-third of the total cost under approved State systems. With respect to the four other types of grants the States will fare inversely to their financial resources. The Secretary of the Treasury, the Secretary of Labor, and the Chairman of the Social Security Board are authorized to determine the financial resources of the States annually on the basis of their per capita income. The percentage of the total cost of State programs for maternal and child welfare, public health, and hospitals and health centers will vary from 33% to 66% percent, the richest States to get the smaller allotments and the poorer States larger amounts. In the case of State programs for medical care the percentages will range from 16% to 50. Intermediate percentages between the low and high amounts will be worked out by the Federal officials in an exact rating of the financial standing of the various States.

It requires no further elaboration of the details of the legislation to prove that the Federal Government will be in complete control of activities which under our system of government are the primary responsibility of the States, counties, and municipalities. The system of dual sovereignties is completely destroyed with respect to these activities.

The entire program smacks of paternalism. It is proposed that the Government do for citizens what they have been accustomed to do for themselves. Such a program is not out of place in socialistic or Fascist governments, but is in sharp contrast to the habits

of individual initiative and self-reliance which have formed the basis of our system of free enterprise.

Our experience with relief programs in recent years has given everyone first-hand evidence of the demoralizing effects of a paternalistic system. Provision for relief has been necessary, but it has been demonstrated conclusively that the dispensing of relief on too liberal a basis and without local responsibility for its cost is weakening the moral fiber of our citizens.

The testimony before the Senate subcommittee made it evident that the health program has been drafted on a basis far more liberal than can be justified by actual needs.

Health insurance figures prominently in the program, although details as to the proposed State laws seem to be kept purposely in the background. While the Wagner bill says nothing about compulsory health insurance, there is no question but that it is in contemplation. It means that Federal bureaucracy will exert pressure upon the States to enact laws making this form of insurance compulsory to the same extent as unemployment insurance and old-age pensions. The model bill of the American Association for Social Security, which has been introduced in many State legislatures, provides for contributions from employers, insured employees, and the State government, the three classes of contributions totaling 6 percent of the wages of insured persons.

It is not strange that the American Medical Association has objected to health insurance with its regimentation of the medical profession to provide treatment in wholesale quantities to persons insured. The doctors are well aware that the treatment thus given in European countries which have health insurance is vastly inferior to that under our system of private practice; that the availability of health insurance in those countries has encouraged idleness of workers with minor ailments; that the medical statistics of such countries show that, instead of improving the health of the people as a whole, the opposite has been true; and that far greater progress has been made in the United States without any system of subsidized medicine.

It has long been recognized that one of the greatest evils of a government bureaucracy is its tendency to perpetuate and expand its power. No more glaring instance of such a tendency has ever come to light than the movement for the adoption of the National Health Act. The program was drafted within the Federal bureaucracy with a singular disregard for the opinions of organizations of the professions most familiar with existing needs.

The original sponsors of the program were Government officials and employees. The committee which presented the plan to the President was named by him and designated as the Interdepartmental Committee to Coordinate Health and Welfare Activities. Chiefly responsible for the details of the plan was a group known as the Technical Committee for Medical Care. The only members of this committee were employees of the Children's Bureau, the Social Security Board, and the Public Health Service. The testimony before the Senate subcommittee shows that the American Medical Association, the American Dental Association and various organizations of other similar groups with a recognized standing were not consulted in the original framing of the program. The suggestions made subsequently by these groups when so-called conferences took place were completely ignored.

There is a mass of evidence before the subcommittee to show that many of the assertions with respect to the need for the legislation are erroneous. Sponsors of the program are accused of exaggerating the situation with respect to a present lack of adequate medical care. Spokesmen for religious as well as other groups which maintain hospitals testified that their capacity is greatly in excess of actual demands, and that construction of public hospitals on the scale contemplated is unnecessary and would be injurious to existing institutions.

The public has become so accustomed to loose methods in the expenditure of public funds that proposals requiring annual expenditures running into the hundreds of millions no longer attract much attention. There is danger that sufficient consideration will not be given to the cost of the health program under the Wagner bill.

If nothing had been done to provide social security the situation would be different. A recent daily statement of the Treasury shows that during the fiscal years 1936, 1937, 1938, 1939, and 1940, up to the end of October, there had been collected by the Federal Government in taxes under the Social Security and Railroad Retirement Acts a grand total of almost \$2,000,000,000. In the same period grants to the States under the Social Security Board, the Public Health Service, and the Children's Bureau, the three agencies named in the pending bill, amounted to nearly \$925,000,000. Expenditures for the administration of the Social Security Act, the Railroad Retirement Act, and the Railroad Unemployment Insurance Act, in the same period, amounted to about \$75,000,000. Besides amounts raised from Federal taxes the Treasury has had the custody of funds raised under State unemployment insurance laws amounting to an aggregate of about \$2,135,000,000, about \$1,400,000,000 of which remains on deposit in the form of investments in Government securities.

Under the present Social Security Act it is expected that annual collections from Federal taxes for old-age pensions alone eventually will approach \$2,000,000,000, or half the amount of all expenditures of the Federal Government.

The permanent obligations of this character which have been entered into by the Government aggregate an amount so huge that there is no present prospect of raising sufficient funds by taxation to avoid an annual deficit.

Not only do the ever-increasing expenditures for social and other purposes constitute a serious menace to the Budget, but any increase in taxation will aggravate further an excessive burden on the functioning of our economic institutions.

Congress, in its recent amendments to the Social Security Act, recognized that the pay-roll taxes were a factor in retarding business recovery. The effective dates of increased tax rates, the total of which will eventually be 9 percent of the amount of pay rolls, were deferred. It is obvious that additional pay-roll taxes in the States to finance health insurance, together with such financing methods as are used to raise the Federal Government's share of the cost, would be a further depressing influence on business, tending to offset any benefits to the population as a whole.

In the face of the realities of the situation the proposal recently made by the trustees of the American Medical Association for the creation of a Federal Health Agency, headed by a Secretary in the President's Cabinet, or a commission including competent physicians deserves consideration. The program suggested for coordination of health functions of the Federal Government, the appropriation of funds by Congress for allotment to such States as show actual needs in connection with the prevention of disease, promotion of health, and the care of the sick, continuance of primary local responsibility for the public health, utilization of existing medical and hospital facilities to the utmost continued development of the private practice of medicine, and such expansion of public health and medical services as is consistent with the American system of democracy seems eminently sound.

Unless the American form of government is to be gradually broken down, the United States should not tolerate a socialization of medicine or the complete assumption by the Federal Government of responsibility for the public health at the expense of the sovereignty of the States. Congress should resist the movement sponsored by the Federal bureaucracy for the broadening of its powers under the terms of the so-called but misnamed National Health Act.

### Cost of Government

## EXTENSION OF REMARKS

OF

HON. PAT HARRISON

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Thursday, January 4, 1940

ADDRESS BY ALFRED H. STONE

Mr. HARRISON. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a very able address delivered by Hon. Alfred H. Stone, president, The National Tax Association, before the San Francisco conference, on October 16, 1939. Mr. Stone is chairman of the Mississippi State Tax Commission and is recognized as an outstanding authority in the field of taxation and governmental administration. I am sure that Members of the Senate will find his address most interesting and informative.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I

Conferences of the National Tax Association are held, I take it, for two primary purposes: First, for the discussion by specialists of subjects of consequence in the general field of taxation; second, for affording opportunity for the commingling of men and women of common interests for the informal exchange of ideas, opinions, and experiences. On these annual occasions the president of the association should not take himself too seriously. Notwithstanding the somewhat ponderous quality of the subject of these reflections, I shall endeavor this evening to observe my own injunction. And I shall ask you to bear in mind that the president speaks only for himself. He submits no brief and makes no commitments for either the association or its members.

My thesis is simple. So simple, in fact, as to subject me perhaps to the charge of dealing with something which is so obvious and indisputable as to be inherently removed from the category of debatable subjects. But this is only a surface view. Some years' experience as a member of a State legislature, as chairman of its house committee on ways and means, more than 7 years' experience as an administrator of tax laws, and many years of critical observation have convinced me that the problem of governmental costs, with its far-reaching implications, is a matter of supreme importance to the American people—something which should challenge their profound concern while there is yet time to translate such concern into effective thought and action. My proposition is that, under our system, the Government costs what the people who constitute the Government are willing for it to cost. Governmental costs are, first and last, subject to the determination of

the people who compose the Government, who pay its taxes, furnish its revenues, share its responsibilities, and enjoy its benefits. When we talk about the ever-rising tide of taxes in this country as something which is threatening to engulf and destroy us, we are simply using other terms for describing the ever-rising cost of government—Federal, State, and local. Increased taxes, in the main, represent the response of lawmaking bodies to a demand for an expansion of governmental services already established or for the creating of new services not previously enjoyed. This demand may be a normal growth or it may be artificially created and stimulated. Or it may be a combination of the two. In either event, the results are the same—higher taxes, more bond issues, greater public debt. And there is never a corresponding cessation of the demand for more services. The impulse is never backward. The tide never recedes.

II

One of my lifetime habits is that of reading local newspapers as I travel about. I always give my Pullman porter a standing order for such papers as he may be able to secure at railway stations as we pass through the country. Not a bad way to study America. Coming south from New York, in the summer of 1933, my newspaper reading did not yield much of interest until we crossed from Virginia into Tennessee. Then, in a Knoxville paper, I found this arresting item, under a Pound, Va., date line:

"The little town of Pound continues to grow. Six new houses have just been completed. Only recently it was connected with a power line and a water system was installed. Now it has a fire department, with a Mr. Banks as chief. The chamber of commerce has begun a move to build sidewalks."

We have here, within the compass of a brief statement, of evident simplicity and sincerity, an epitome of the history of the beginnings of the growth of the governmental functions which are the foundation stones of all governmental costs. At all levels of government, the course of the story runs true to form: Six new houses just completed, electric lights, waterworks, and a fire department; a chamber of commerce to promote the construction of sidewalks. With few exceptions, the great cities of the world were once as small as the little town of Pound. Each and all of our units of government have grown through essentially similar processes of expansion. More people mean more houses. More houses mean more electric lights, more waterworks, and a larger sewerage system. Houses must be protected against fire, and people and property against crime; hence, the need for fire and police departments. More people mean more children, and more children mean more schools, and more equipment, and more teachers, and all the other paraphernalia of the educational system. And all these things mean more taxes and more officials to collect and to spend them. And always there must be a chamber of commerce, and a group of civic clubs, to think up and promote new programs of progress—more sidewalks and more suburban additions, more parks, more swimming pools, more playgrounds, more municipal golf links and tennis courts, larger and finer and more accessible landing fields for airplane services, larger collections of wilder animals for the municipal zoo, and so on to the end of the chapter. But the chapter has no end—not as long as human nature and human impulses remain as they are, and as they have been through all the generations of mankind.

The Little Town of Pound is simply New York, Chicago, Boston, Philadelphia, or San Francisco, in embryo. Just as long as this or any other little town itself takes care of its expansions, so long as it meets its increasing governmental costs from its own increasing revenues, so long as it looks the world in the face and meets its obligations from its own resources, so long as it educates its children, cares for its afflicted, ministers to its poor and needy, feeds its hungry, and buries its dead—it will present no problem, either to State or Nation. More, much more, than this—it will likewise preserve and foster one of the oldest, most fundamental, and most valuable of all American traditions—that of independence and self-reliance.

But in some evil hour the officials and citizens of the Little Town of Pound, no longer in swaddling clothes, will learn that a benevolent National Government, under a new conception and a new dispensation, has billions to bestow, for all the uses and purposes and projects which the most progressive chamber of commerce can devise. When this happens, only a miraculous endowment of wisdom and independence of spirit will prevent the Little Town of Pound from joining the endless procession which moves on Washington, and on State capitals and county seats throughout the Nation—a procession which adds millions to the cost of government in America, every hour of the day.

III

To quote my own words, as used elsewhere:

"It is a common belief that our forefathers fought the Revolutionary War mainly because of taxes. This belief is not justified by the facts. Revolutionary unrest was not provoked by taxes, per se, but rather by the form and circumstance of their imposition and collection. The Declaration of Independence makes this distinction clear. Among the numerous counts in its indictment of George III, only two, directly or indirectly related to taxes. One of these was: 'He has erected a multitude of new offices, and sent hither swarms of officers to harass our people, and eat out their substance.' The other was 'for imposing taxes on us without our consent.'"

The Revolution and the Constitution forever removed in this country the condition of taxation without the consent of the taxed. If the power to tax involves the power to destroy, according to John Marshall's dictum, that power has been removed from alien hands, and in our country placed directly within the control of the people themselves. If taxation ever results in the destruction of the governmental fabric of either the Nation or the State, it will be self-destruction. It will be a case of political and economic suicide. No indictment may now be brought against any foreign dictator, "For imposing taxes on us without our consent." The disease and the remedy are within our own hands. We not only have the exclusive privilege of imposing taxes upon ourselves, but we are exercising this prerogative to an extent never dreamed of in their day by George III and his ministers. And when it comes to erecting a multitude of new offices and filling them with swarms of officers, we have demonstrated a capacity which would put George III to shame. The difference is that the offices are of our own creation, and the officers are part of our own wonderful system of political patronage.

I am not an alarmist. But I believe in facing the facts. The trend in American life is increasingly in the direction of self-indulgence and away from the habits of self-help. And this trend is particularly marked in the matter of getting the Government to gratify our desires, to give us what we want, with the expenditure of a minimum of effort upon our part. The change of attitude and outlook toward the functions of government, at all levels, which has gradually come over the people of this country, and with increasing emphasis in recent years, is the greatest of the underlying causes of the constant expansion of governmental services, which is, in turn, the primary cause of increased governmental costs, with the inevitable sequence of greater tax burdens, larger bond issues, and greater public debt. And more than all these combined, this change of attitude means a gradual undermining of the moral fiber of our people, a loss of stamina and of the vital spirit of individual independence upon which this Government was founded—a trend toward the drying up of the source and substance of the qualities which have made us great.

This is old stuff, you say? Perhaps it is—more's the pity. But if the real heart of this country is to endure, if it is to continue as the great outstanding example of liberty and democracy achieved through sacrifice and made secure through the preservation of undying ideals—if this is to be accomplished, it must be through a return to the consecration of our fathers. There must be a regeneration of faith in the individual man as a symbol of American destiny and achievement. Tennyson's poetic utterance, "The individual withers and the world is more and more," may be true in abstract fact, but it sounds a false note as an expression of governmental philosophy.

## IV

On February 16, 1887, Grover Cleveland sent to Congress a short veto message which has been frequently quoted, and often misquoted, during recent years. The present Department of Agriculture, dealing in hundreds of millions of money, was then merely a Commissioner of Agriculture, without Cabinet rank. The sum involved was trifling, a pittance, as such things are measured by current standards. The difference between the sums dealt with then and now, great as that difference is, is dwarfed by the difference between the governmental concepts expressed by Grover Cleveland and the theories and practices of the present time. Congress had passed a bill to authorize the Commissioner of Agriculture to distribute seed in certain drought-stricken counties of Texas, and had appropriated \$10,000 for the purpose. Mr. Cleveland wrote:

"And yet I feel obliged to withhold my approval of the plan, as proposed by this bill, to indulge a benevolent and charitable sentiment through the appropriation of public funds for that purpose. I can find no warrant for such an appropriation in the Constitution, and I do not believe that the power and duty of the General Government ought to be extended to the relief of individual suffering which is in no manner properly related to the public service or benefit. A prevalent tendency to disregard the limited mission of this power and duty should, I think, be steadfastly resisted, to the end that the lesson should be constantly enforced that, though the people support the Government, the Government should not support the people. \* \* \* Federal aid in such cases encourages the expectation of paternal care on the part of the Government and weakens the sturdiness of our national character."

On October 31, 1936, another American President gave utterance to another conception of the duties, functions, and responsibilities of this Government of ours. Mr. Roosevelt was addressing the American people on the eve of a momentous national election. His enumeration of the things which he thought the Government should do, and which he had advocated during the 4 years of his first administration, marked the culmination of the tendency against which Grover Cleveland had warned 50 years before, and against which he had implacably set the full force of his rugged and uncompromising character. Those who agree with Mr. Roosevelt's conception of governmental functions may call it progress. Those who, like myself, are old enough to have voted for Grover Cleveland, and who, regardless of party affiliations, believed then and believe now, in the principles for which he stood, as the very bedrock of our national life, regard it as something potentially dangerous, if not actually destructive of the living roots of our governmental system.

In Abraham Lincoln's first inaugural address, on March 4, 1861, he discussed the two conflicting theories and conceptions of the nature of the Government which then stood upon the brink of war; one, that the American Union was a nation, with all the powers and attributes of any other nation; the other, that the relation of the States to each other was of the nature of a purely contractual agreement, from which any member might withdraw at will. The contrast between these two concepts, the distance between them, was not greater nor the difference more profound, than is the difference between the conception expressed by Mr. Cleveland and that which so largely obtains at the present time. Please do not misunderstand me. Mr. Cleveland was neither more honest, more patriotic, more sincere, nor of finer character than is Mr. Roosevelt. The difference is not to be found in the personal qualities and attributes of the two men. It transcends all personal considerations. It goes to the very fundamentals of the relationship between the citizen and the State. The conception which many of us still have of what that relationship should be was once expressed in these words by another great American—Henry W. Grady, then editor of the *Atlanta Constitution*:

"Exalt the citizen. As the State is the unit of government, he is the unit of the State. Teach him that his home is his castle and his sovereignty rests beneath his hat. Make him self-respecting, self-reliant, and responsible. Let him lean on the State for nothing that his own arm can do, and on the Government for nothing that his State can do. Let him cultivate independence to the point of sacrifice and learn that humble things with unbartered liberty are better than splendors bought with its price."

## V

I have used no figures in this approach, and please keep in mind that it is only an approach, to a consideration of the problems of the cost of government. Concrete figures are not of first importance for our present purpose. No matter how impressive their totals, they, in fact, merely indicate the distance traveled between such dates or decades as we may select for purposes of comparison. It is not a matter of primary consequence to know that the cost of government under the first administration of Mr. Roosevelt exceeded that of all previous administrations combined, since and including those of George Washington. Granting the statement to be true, and I neither affirm nor deny it, it is of little significance or value merely as a statement of fact. Regardless of their volume, it is only as we analyze these figures and study their composition that their true relation to the real problem of the cost of government becomes apparent. When we thus bring into view the picture of the uses of the vast sums which have been and are being expended, their application to purposes not heretofore dreamed of as governmental functions, we realize that we are dealing with something fundamentally much more serious than a mere statistical exhibit, no matter how staggering its size. We are concerned here with a philosophy of government rather than with the implements of governmental operation. We are witnessing the process of a gradual but sure decadence, if I may so express it, a certain lowering of the standards, of a liberty-loving, individually independent, self-reliant people into dependent masses and groups, bringing upon the Nation and the State every conceivable form of pressure for securing for themselves every conceivable form of governmental service or benefit. We see enacted before our eyes the tragedy of a bloodless revolution, through which all units and levels of government, even sovereign States themselves, apparently have come to be willing to sacrifice their pride, and all but literally subscribe to pauper's oaths, in order to obtain what they call "our share" of public bounty. We are undergoing a test of our capacity for self-government under the forms of a representative democracy.

While I yield nothing of my personal allegiance to the principles for which he stood, as a practical man I know that we have now gone too far to permit an orderly return to the ultraconservative position held by Grover Cleveland. On the other hand, we have gone far enough in the opposite direction, far beyond the limits of emergency excuse, to realize the dangers involved in attempting to give effect to new and novel visions and ideals of service, no matter how noble, through their incorporation into permanent policies of government. There must be found some sane and substantial ground between the two extremes. To discover and determine the location of this zone of safety, to fix its reasonable boundaries, and by fair trial to prove it—this is the duty, as it should be the privilege, of all patriotic Americans, regardless of whether they look with apprehension or approval upon some presently popular governmental policies and trends.

## VI

It is not within the province of the National Tax Association to attempt a solution of the problems presented by the progressive costs of government in this country. This association has no such function, just as it has no responsibility whatever for these statements and views as to the problems themselves. But, as members of the association, we may with propriety discuss this or any other problem. As individual citizens we may, in our several capacities and spheres, each take his stand, according to his particular inclination and belief. So, venturing again to express a personal conviction, when we face the facts and clarify the issues, certain conclusions seem to me to be beyond escape. The redemption of commitments made under present policies and practices will require the continuance of expenditures upon a vast scale. The reactions of these policies and expenditures upon the States, counties, and municipalities of the Nation are pronounced and potentially dangerous. These projects, programs, and commitments, National and

State, mean the collecting of huge amounts in taxes from those from whom the money may be collected—from all who are able to pay or who may be made to pay.

How far may we extend with safety this social-service theory of taxation? How far may we go in the present direction without realizing Grover Cleveland's apprehension of a weakening of our national character through encouraging a constantly increasing dependence upon paternalistic governmental care? How much further may we go without inviting ultimate economic, social, and political confusion?

We may count ourselves fortunate if, at the end of our calculations, we are able to confine our exhibit of governmental costs strictly to monetary terms—if the debit side shows only a loss in dollars and cents. There are qualities and attributes of character which are no less valuable to governments than to men.

Nature has endowed our country with an incomparable situation and with incomparable resources. Providence endowed our forefathers with incomparable courage and wisdom. Through no merit of our own we are the heirs of an incomparable heritage. But these endowments do not perpetuate themselves. There is no guaranty in nature or government against the consequences of the exercise, in whatever degree, of the liberty of self-destruction.

### Temporary Custody of Magna Carta by Library of Congress

#### EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Thursday, January 4, 1940

ADDRESSES BY LORD LOTHIAN AND ARCHIBALD MACLEISH

Mr. MURRAY. Mr. President, on November 28, 1939, Lord Lothian, British Ambassador to the United States, and the Librarian of Congress, Mr. Archibald MacLeish, participated in an interesting ceremony at which the temporary custody of the Magna Carta, the great charter of English liberty, was entrusted to the Library of Congress. I ask leave that the able and significant addresses delivered on that occasion by the British Ambassador and by Mr. MacLeish be printed in the Appendix of the RECORD.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

REMARKS OF THE RIGHT HONORABLE THE MARQUESS OF LOTHIAN, C. H.,  
BRITISH AMBASSADOR TO THE UNITED STATES

This copy of Magna Carta—the best of the four original versions—is the property of the Dean and Chapter of the Cathedral of Lincoln, and their most treasured possession. It was brought to the United States early this year, safely enclosed in the bronze airtight casing in which you now see it, to be the central exhibit in the British pavilion of the New York World's Fair. There it was guarded by day and by night. This ancient document, for 700 years treasured and honored in Britain, has been welcomed and honored not less deeply in the United States. In the last 6 months more than 14,000,000 people passed along the gangway and bent down to read its obsolete Latin legal phraseology, which none but a handful of experts now understand.

Why all this fuss and trouble about a medieval relic? If one reads Magna Carta with the cold objective eye of the historian, it is clear that the protagonists in the historic struggle against the exactions and oppressions of the Crown were not the people but the barons of England. And the barons were certainly more concerned to preserve their own rights and privileges than to extend the liberties of commoner and villein. Yet from that day in 1215 when Magna Carta was signed on the field of Runnymede, by the Thames, a site now fortunately a national preserve, the almost self-evident truths it pronounced have echoed through the pages of history. They have been repeated decade after decade, century after century, by individual citizens and subjects, by groups of petitioners, by rebels and conservatives, by parliaments and congresses, as the sufficient ground on which to base their claim for liberty and responsibility.

Here are some of its redoubtable sentences: "No freeman shall be taken, imprisoned, disseised, outlawed, banished, or in any way destroyed, nor will we proceed against or prosecute him except by lawful judgment of his peers or the law of the land." "To no one will we sell, to none will we deny or defer, right or justice." "No scutage or aid shall be imposed in our kingdom unless by common council thereof, \* \* \*"

In these immortal words, and in others, inscribed on the musty parchment before us, we see the nucleus of most of our liberties,

of trial by jury, or habeas corpus, of the principle of no taxation without representation, of the Bill of Rights, and of the whole constitutional edifice of modern democracy, and of what my predecessor in office, Lord Bryce, described as "the supremacy of law over arbitrary power." From those days they have been the inspiration which nerved the hands of my countrymen who struck for freedom and who in later generations built the institutions which secured it.

The principles which underlay Magna Carta are the ultimate foundations of your liberties no less than of ours. Samuel Adams appealed to "the rights of Magna Carta to which the colonists, as free subjects, have an undoubted claim." It was in their name that your ancestors threw the tea into Boston Harbor and rejected the claim of King George III to tax the Colonies for defense. It was in their name that, after bitter sacrifices and frustration, they drew up that Constitution which Mr. Gladstone, one of the greatest champions of human freedom, described as "the most wonderful work ever struck off at a given time by the brain and purpose of man." And it was in their name that Abraham Lincoln fought a 4-years' war to loosen the fetters from the slaves and to preserve the Union which alone could ensure that the anarchy of national sovereignties, the insatiable breeder of war in Europe, should not appear on this continent.

It has therefore been a true and penetrating instinct that has come to regard with peculiar veneration a document which has represented, not the findings of philosophers or the dreams of idealists but a victory in the grim struggle of national life for the principles of freedom from which we draw our being.

But if seven centuries have passed since they were first formulated, in these times their full meaning has still to be understood and realized. We still have our liberties, though at the moment they are being challenged by totalitarian imperialism, both from the right and from the left. But the fulfillment of the infinite promise they contain depends upon the way in which we use them. The correlative to freedom is responsibility. Without responsibility, freedom fails. Individual self-government, which begins with fidelity to principle, is the only lasting foundation for democracy. If we enjoy free government today, it is because the makers of our parliamentary system and of your Federal system felt deeply the moral responsibility which rests upon free citizenship and rose nobly and heroically to the sacrifice of self and the creative social imagination which it requires. There is a no less vast task of achievement before our generation today if Magna Carta is to come to its full fruition.

It was, therefore, but natural that when the second great war of this century descended upon us this autumn the British Government should have hesitated to imperil so priceless a possession by trusting it to the angry transit of the seas back to its cathedral shrine. It, therefore, instructed me to enquire whether a home for it could be found in the Library of your National Congress for the duration of the war, or till it was needed elsewhere. To our great delight, the Librarian has granted our request, and his courtesy has found for Magna Carta this wonderful position, where it lies alongside its own descendants, the Declaration of American Independence and the American Constitution, and where, like them, it will be guarded by day and by night. Mr. Librarian, I have the greatest pleasure in entrusting Magna Carta to your benevolent care.

REMARKS OF ARCHIBALD MACLEISH, THE LIBRARIAN OF CONGRESS

Mr. Ambassador, it is with pleasure that I accept the trust—pleasure that an American library should be honored with the custody of so notable a document—particular pleasure that the library so honored should be the Library of Congress. For the deposit in the Library of Congress of the Great Charter of 1215 has, or so it seems to me, a peculiar and a deeply moving significance. The Library of Congress is, as its name implies, the library of the people's representatives in the Federal legislature. The Magna Carta is one of the great symbols, to all English-speaking peoples, of liberty within the law. The deposit of such a document in such a place is an action full of meaning for our time.

I am aware of course that the precise historical significance of Magna Carta is in dispute among the doctors. I am aware that a skeptical generation of scholars has found much to question in the view, so confidently held by Bishop Stubbs and Sir Edward Coke and Sir William Blackstone, that the barons who dictated the Great Charter "in the meadow called Runnymede between Windsor and Staines" were acting for the people of England to establish the people's rights. Fierce-sniffing philosophers like Prof. Edward Jenks, who can smell out the errors of the intellect even in the muniment room of Lincoln Cathedral, after innumerable generations of vicars and occasional generations of the vicars' pigeons, have strongly implied that the barons of Runnymede were less concerned for the rights of the people of England than for the privileges they had planned to pocket for themselves.

But this dispute, like so many disputes between the doctors, has little reference to realities. The liberties of the people, throughout the popular experience of liberty, have often been established by those who had no interest in the people. It is not important in the long view of history whether the limitations upon absolute power were limitations imposed by a particular class for the intended advantage of that class, or whether they were limitations imposed by popular will. It is only important that the limitations should exist. The far-carrying phrases which you, sir, have just quoted, may have been meant by their contrivers to safeguard the

vested rights of a few landowners and deer killers in thirteenth century England. They have inured to the benefit of the people of seven centuries and of continents of which their authors never heard.

No learned dissertation will persuade the Americans that the document you have so generously deposited in their national library is not a witness to the ancient warrant of their rights. Nor will any amount of scholarly dissension blind them to the meaning of its presence here. The deposit of the Magna Carta in the library of the people's representatives in Congress is a plain and intelligible statement of a plain intelligible fact—the fact, namely, that the institutions of representative government are the protectors, and the only possible protectors, of the charters of the people's rights. For generations past we have taught our children in this Republic that our institutions of representative government were dependent on our constitutional charter for their existence. We have more recently learned, and now believe, that the opposite is also true: that without the institutions of representative government the charters of the people's rights cannot be saved.

There are those in this country, sir, as there are those in yours, who have told us by direction and by indirection that we should abandon representative institutions. There are those who disparage the people's representatives in Congress and who lose no opportunity of publication or of public speech to explain that representative government is not efficient government in a complicated and industrialized society like our own. But though there is much talk there is little listening. For we have been brought to observe, in these last several years, that government by the people's representatives, whatever else it may or may not be, is the one government of which history has record under which the people's liberties have been secure.

Government by the people's representatives, like other governments, can be misled. Government by the people's representatives may, from time to time, mistake for true defenders of the people's rights, the false defenders of the people's rights—the demagogues, the same in every generation, who appeal to liberty in order to destroy it. Government by the people's representatives may, from time to time, substitute inquisitions and espionage for the equal protection of the laws, and may permit the inquisitors, in their reckless search for enemies of liberty, to break down liberty. But government by the people's representatives is the one government which has never suffered these dishonors long—the one government in all experience of governments, which has always, in the end, restored of its own will the people's limitations on its powers.

History has many curious and circuitous passages—many winding stairways which return upon themselves—but none, I think, more curious than the turn of time which brings the Great Charter of the English to stand across this gallery from the two great charters of American freedom. Thomas Jefferson, who was the true founder of this library as well as the true author of the noblest of our charters, would have relished the encounter. But Thomas Jefferson would perhaps have relished it with a different understanding from our own. For Jefferson was a man who dared to think of history in timeless terms, and of the rights of men as rights which have existed, and which would exist, in every time and every country, rights which nothing done by tyranny had ever yet destroyed or ever could.

To Thomas Jefferson, the deposit, beside the Declaration of Independence, of this charter of the liberties of those from whom we won our independence, would not have seemed incongruous but just and fitting—an affirmation of the faith in which this Nation was conceived.

### The Third Term

#### EXTENSION OF REMARKS

OF

HON. MILLARD E. TYDINGS

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Thursday, January 4, 1940

EDITORIAL FROM THE BALTIMORE SUN

Mr. TYDINGS. Mr. President, appearing in yesterday's Baltimore Sun was an editorial entitled "The Third Term," which is written so temperately and so logically and is so steeped in Democratic philosophy that I should like to have it printed in the RECORD immediately following my remarks. I am offering the editorial not because I suspect any particular person of thinking about a third term—I do not believe the present President will seek a third term—but because it is so concise and clear, and so in consonance with real liberalism and democracy, that I hope it may serve for

all time to express the logical and unanswerable point of view on this question.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Baltimore Sun of January 3, 1940]

#### THE THIRD TERM

Mr. Roosevelt should declare publicly his obedience to the unwritten law against a third term. The rule has the sanction of history. It has been given the approval of the most popular and the most powerful of Mr. Roosevelt's predecessors. It has been confirmed and reinforced in validity by the enormous expansion of power in the Presidential office during Mr. Roosevelt's own service.

From time to time, in the Congress and elsewhere, there is research into the views of the fathers on this subject. Their views as stated in several documents are less important than their acts. They were erecting a new political system for a new continent and in their discussions they occasionally became speculative and occasionally changed emphasis in opinion. Their final decision is clear.

Washington surrendered the office after two terms. Jefferson, perhaps the most powerful politician ever to hold the Presidency, surrendered it after two terms, and so did each of the two lieutenants, Madison and Monroe, who followed him. Jackson surrendered it. Grant was put under pressure to obey the rule. Theodore Roosevelt and Calvin Coolidge leaned backward to respect it, though neither served two full terms.

These examples from the past must have great authority in the minds of sober and thoughtful people. They disclose the judgment of men who made the most of the Presidency and, therefore, may be accepted as the most competent of witnesses on all opportunities of the office—including the opportunities for unwise or dangerous or evil developments in long-continued exercise of Executive power.

But if the two-term rule had not been given to us by the fathers and those who followed, we should today be under the necessity of inventing it.

We have lodged in the Presidential office such power as Washington and Jefferson, in their prescient concern for the future, never imagined. We have given the President command of a veritable army of officeholders, and the potentialities of this army are known to every politician in the land. We have given the President control, direct or indirect, over payment of subsidies to citizens which run into billions of dollars annually. We have given the President, acting through obedient subordinates, authority to make regulations which have the force of law in governing the lives and the property of 130,000,000 human beings.

This unprecedented power must not remain for long in any man's hands.

It ought voluntarily to be laid down after such a reasonable period in its possession as is permitted under the two-term rule.

In insisting upon this, one need not talk excitedly of a Hitler. Nor need one talk excitedly of the power of a President to reelect himself indefinitely. It is very doubtful that Mr. Roosevelt, possessing vastly more power than any other President and also enjoying widespread personal popularity, would be able to win reelection, although he might be able to force renomination.

The great danger is that a serious effort to break the two-term rule, by an audacious and resourceful politician, will set in train grave and permanent abuse of the power of the Presidential office, with the result of insidious wasting of our substance and subverting of our institutions.

It has been an axiom of American politics that a President in his first term devotes much of his energy and uses much of his resources to assuring himself of a second term; and that in his second term, facing permanent retirement, he is free to devote himself more wholeheartedly to the service of the people and to the accomplishment of public purposes.

Let the two-term rule be challenged by a powerful and popular President, let continuous tenure become a possibility, and a temptation is created for every President to act in every term as most Presidents have acted in their first terms. A temptation is created for every President in every term to be preoccupied with continuance in office and so with politics. And this temptation will be a temptation to make full political use of the veritable army of officeholders of the swollen subsidies, and of the regulatory commissions.

With all deference to Mr. Roosevelt, no one can doubt that he will set an example of full political use of the power of his office, should he challenge the two-term rule. In fairness, let it be said that most of his predecessors have, in varying measure, used the power of the office to advance their own political aims. But with equal fairness, it must be said that Mr. Roosevelt has made no attempt to destroy this custom. The flagrant use of the resources of the Presidency against Senator TYDINGS is known to all.

No politician in this country doubts that, in the event of Mr. Roosevelt's candidacy for a third term, the army of officeholders will be brought into action. No politician doubts that such a subsidy-dispensing authority as the Department of Agriculture will strain every nerve to bring and hold the millions of farmers under his banner. Some of the regulatory commissions probably will become political instruments.

If Mr. Roosevelt should challenge the two-term rule and triumph, this will become the chronic condition of the office.

Every President will, as in the past, seek a second term and play politics up to the hilt in his first. The popular and the powerful will seek third terms, and they will play politics up to the hilt in their second terms.

The brake of the two-term rule will have been removed. In the 150 years behind us, that rule has been a standing check on the vicious circle of using office to create a great political machine of officeholders and subsidy-receivers and of then using the political machine of officeholders and subsidy-receivers to retain power. When the two-term brake shall have been removed, the vicious circle will whirl continuously. The emphasis in the Presidential office will permanently be on political self-preservation.

It will mean, in the natural course of politics, enlargement of the army of officeholders, expansion of subsidies, manipulation of regulatory commissions. It will, therefore, mean the wasting of substance and the subverting of institutions, in a way more dangerous in a free country than would be any direct challenge from a politician ambitious to be a despot.

To these fundamental considerations, arising from the nature of our political organism, are to be added certain particular considerations. It is gravely to be doubted that any man is physically and mentally capable of bearing the present strains of the Presidential office for more than 8 years. Mr. Roosevelt possesses extraordinary energy and resilience, but 12 years would be a savage tax upon any man.

This danger of overtaking the strength of a man in this office becomes the more serious when it is considered in relation to the cry that a given President is indispensable. This cry will always be put forth in defense of a third term. And the cry of indispensability will not only go into the ears of the people. It will go into the ears of a President, who is surrounded by deference and adulation. It is possible to have a President accepting the theory of indispensability, and accepting it at the time that he is slowing down.

A more perilous combination of facts for the American people would be hard to imagine.

There are further particular considerations to which Mr. Roosevelt should give heed. One has to do with the course of events should he seek a third term and be successful in the Democratic convention and in the general election. The other has to do with the course of events should he seek a third term and win the nomination, but lose the election.

If he should be renominated and reelected, he will face a revived and militant Republican Party. Every indication at this time points to a Republican Party largely restored to strength. If to its own present popular strength is added the strength which will come to it from Democratic and independent voters who are opposed to a third term, the Republican Party will be a powerful force after 1940 in the Congress and in the popular forum, even though it may be defeated. Allied with it, in sympathy if not in formal relations, will assuredly be a band of Democratic leaders who will be equally militant.

And on all the familiar grounds of opposition and distrust—Mr. Roosevelt has been singularly gifted in arousing opposition and distrust—will be superimposed the vehement, passionate suspicion created by his flouting of the tradition established by Washington and Jefferson. The consequence may be impossibility of cooperation between the Executive and the Congress, with millions of citizens supporting the Congress. Distrust, fanned to fever heat by the flouting of the historic tradition, may, indeed, cause a condition approaching paralysis in the relations between the Executive and powerful forces in the Congress.

In peace or in war, firm decision and firm action by the President and the Congress may thus become impossible. Distrust may go so far, as a result of flouting of the rule against a third term, that the President would fail to hold effectual parliamentary and popular support in some national crisis.

Should Mr. Roosevelt seek a third term and be defeated in the general election, he must consider the danger of turning discriminating resistance into indiscriminating revulsion, with opportunity for release of the blinder forms of reaction.

The gentlemen now mentioned as available for the Republican nomination are all men of character and would not wish the defeat of Mr. Roosevelt to be the signal of blind reaction. The Republican Party itself is not now arrogant. It is chastened. But it is possible to unloose forces which will get out of control. A people who are overstrained, and who crave a period of thoughtful moderation, cannot be subjected to accumulating emotional tensions without the danger of which we have spoken—the danger that discriminating resistance will be turned into indiscriminating revulsion. If this should occur, the most patriotic leadership may be unavailing against reaction.

There is a lesson for all in the end of Mr. Wilson's administration. He was sick unto death and his unusual political skill departed, leaving only an imperious will. He refused adjustment and compromise in the face of a tired people who wished relaxation of mind and spirit. The consequence was the turning of resistance into revulsion and a landslide, which left the cool prudence of a Republican Root as futile to influence the people as was the passionate fervor of a Democratic Wilson. The consequence of that was the lifting of effectual popular restraint upon the Harding administration and the opening wide of doors for the corrupt and the stupid among the Republicans.

If Mr. Roosevelt, using the enormous powers at his command, forces renomination and seeks a third term, he must include in his

calculations the danger of such a revulsion among large sections of the people as will destroy critical popular thought and make easier the way of blind reaction.

Measuring all these considerations, general and particular, Mr. Roosevelt's candidacy for a third term would be a peril in the life of the American people. In the long view it would be a peril to our national economy and our political institutions. In the immediate future it would be a peril to orderly relations within the Government, whether the immediate future holds in store for this Nation peace or war.

It is a peril which ought definitely to be removed. And the threat of that peril ought definitely to be removed. These are not times for the growth of such suspicion, in the Congress and in public places, as must inevitably follow from silence on Mr. Roosevelt's part while members of his Cabinet and his diplomatic corps, and others within his intimate group, openly attempt to promote a third term. These are times when, above all else, there is need for that mutual trust and that sense of solid foundations which follow from respect in high places for tested principles and tested precepts.

Mr. Roosevelt should declare publicly his obedience to the unwritten rule against the third term.

### Tribute to the Late Representative Sirovich, of New York

#### EXTENSION OF REMARKS

OF

#### HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, January 4, 1940

EDITORIAL BY HARRY H. SCHLACHT

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial tribute to the late Representative WILLIAM IRVING SIROVICH, of New York, by Harry H. Schlacht, published in the East Side News of New York City of December 23, 1939.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the East Side News of December 23, 1939]

CONGRESSMAN WILLIAM IRVING SIROVICH—A SOLDIER OF HUMANITY  
(By Harry H. Schlacht)

The East Side is grief-stricken at the untimely demise of Congressman WILLIAM IRVING SIROVICH. Few men have played so brilliant a part in the Congress of the United States as the celebrated East Sider who for nearly two decades has been a great leader of American opinion. Truly, "a great oak has fallen in the forest of our public life. It fell not when its leaves had gone and its branches were bare, and it had lost its beauty, but at the very height of its perfection, of its usefulness and its charm. It was still putting forth its branches; its leaves were yet green; its roots struck daily deeper into the soil of our affection."

No spirit shines by its own illumination and none can transmit more light than it receives. Hence the strength and range of his influence reflected Divine Providence which "shapes our ends, rough hew them as we may." Dr. SIROVICH faced a sequence of events for which his poise and steadiness were exactly fitted. The tumult of our times with its complexity of problems enlarged his capacity for human service. He combined in one symphonic splendor the amazing unity of discordant elements about him. Indeed, he made such use of his equipment that the country he served idealized him as a model of representative government and its finest personal embodiment.

Dr. SIROVICH comes of a long line of pious and devout ancestors—Talmudic scholars—whose learning was as plain as their thinking was high. It was from his noted rabbinical father and mother—whom I had known so well—that he derived the flame of intellect, the glow of spirit, and the beauty of temperament that was so unique. It was his saintly mother who taught the infant lips to lisp the first prayer. She shared his childhood griefs; she stood in the doorway to give her blessings as the lad started for school, and when the young man went forth to college and his ultimate graduation as school teacher and later as physician. Wherever he wandered her prayers followed him. In truth, from the moment SIROVICH saw the light of day until his premature grave, the Bible saturated his being. His addresses—classics of American oratory—are sprinkled and studded with Biblical ideas and phrases. And thus upon this solid rock of the Scriptures, he built his career.

The East Side is the shore front to Ellis Island. Throughout the years he has been in a special sense the friend of all comers. Just as he broadened the visions of school teachers, social workers, and physicians, so he stretched the imagination of his fellow

Americans of older stock as the interpreter of the stranger within the gates; interpreter also of one race to another; of one generation to another; and of one economic class to another. The common brotherhood of man was not a phrase to him. He knew people. He knew moreover the psychology of human conflict. His opposition to war and militarism was deeply rooted in his experience as a neighbor of all races on the East Side.

His blazing intellect, fed and enriched by the constant study of the best thoughts of the great minds of all ages; his all-persuasive eloquence, his teeming and radiant imagination electrified his audience; his brilliant and sporting fancy illuminated the most arid subject with a glow of sunrise; his prodigious and never-failing memory and his playful wit always bursting forth with an irresistible impulse had been the subject of wide commendation in all circles.

It was his steadfast conviction that we are a nation of immigrants and that all have played a conspicuous and majestic role in the establishment of a great nation and that all races from the *Mayflower* down the corridors of time have marched to one measure, to follow the one flag. Dr. SROVICH has added new glory to old glory.

In the Chambers of Congress he was a faithful disciple of President Franklin D. Roosevelt, and bore aloft his standard. He felt that no greater dream ever rose in the minds of men than that vision which came to the founding fathers. It was his great brain that designed, his flaming heart that forged, and his sublime eloquence that sounded the cry for old-age pension legislation. And for that alone he has procured for himself a niche in the Temple of Faith. And yet, who shall deny him preeminence in the cause of education, in the promotion of relief for the poor and needy, for silencing the cry of the widow and the orphan, and in his last great struggle for the underprivileged of the Nation.

Dr. SROVICH, the scholar, the statesman, the philanthropist and great American is not dead. His record of achievements will ever be green and vivid in our memories and will blossom in our lives with a supernatural beauty. He was a soul of statesmanship. He made the world his debtor as a soldier in the service of humanity. And when he died in the supreme hour of life, the human race lost one of its noblest examples, and all friends of freedom and justice, in whose cause he lived and died, joined hands at his grave.

"Statesman, friend to truth of soul sincere,  
In action faithful and in honor clear,  
Who broke no promise, served no private end,  
Who gained humanity's title and who lost no friend."

## Principles of the Hatch Act and the Possibility of Their Extension to State and Local Governments

### EXTENSION OF REMARKS

OF

HON. CARL A. HATCH

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Thursday, January 4, 1940

ADDRESS BY GEORGE C. TAYLOR

Mr. HATCH. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an address delivered by Hon. George C. Taylor, attorney at law, of Albuquerque, N. Mex., at a dinner meeting of the New Mexico Business and Government Conference, held at the University of New Mexico on December 8, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

"Government has become the predominating influence in our internal affairs. As government penetrates more pervasively our daily occupations the necessity for emphasis upon the maintenance of an effective public service becomes of increasing importance."

So says Stanley Reed, United States Supreme Court Justice.

'Twas not ever thus. Once upon a time we had a widely scattered, sparse population, a few small towns and cities, and 90 percent of our people lived in tiny farm communities that were virtually self-sufficient little worlds. Today 90 percent of our people are utterly dependent on an intricate, complex system of cooperation, specialized occupations, transportation, and trade. A century ago most of us would have lived a lifetime without paying a sales tax, meeting a traffic cop or milk inspector, or seeing a burial permit. Today—well, what you are "gripping" about is not too much government, but too much rank incompetence in Government employees. Democracy won't work today, and neither will dictatorship, as long as you put a barber in a judge's job, a groceryman making loans on

sheep, and an embalmer in charge of title records to your home. The world over, the same conditions have necessitated a growing increase in governmental functions, and, in my humble opinion, for weal or woe, we may certainly anticipate more of the same.

But perhaps I had better mention my text. Senator HATCH's pet law does this:

It promises 1 year's free board at the Leavenworth pie counter, plus \$1,000 fine, to any person who may "intimidate, threaten, or coerce so as to interfere with the right of any other person to vote as he pleases." It is another crime for any person, directly or indirectly, to promise a job or any other benefit made possible by any act of Congress as a reward for any kind of political activity. It is a crime for any person to "deprive, threaten, or attempt to deprive" any person of any job, compensation, or other benefit made possible by any act of Congress appropriating funds for work relief or relief purposes on account of race, creed, color, or any political activity. This last clause is only a more specific way of phrasing the rather general first clause. Please note the use of the term "any person." Also, please note it is not limited to national elections, but is limited to national funds. To illustrate: It will be perfectly legal (until we have an adequate State law) in the next city election for Mayor Tingley to promise me a job on the city police force, because Congress did not make that job possible (and provided the Lobo football squad does not protest). It will violate the Hatch bill, however, if the mayor promises me a P. W. A. job or an increase in veterans' compensation, in exchange for my political support. The distinction emphasizes the need of appropriate State legislation to supplement the Federal act.

Another provision of the act relates to any governmental administrative official, and makes it a crime for him to use his official authority for the purpose of interfering with or affecting the election of any candidate for Federal office. To illustrate this clause as I get it, the official—the mayor, sheriff, or Governor—may legally have me arrested or pardoned to get a vote for any sheriff, member of the legislature, or other State or county officer, but must beware of a candidate for Federal office. Hereafter the Governor, the sheriff, or mayor, as well as any other person, must be cautious in advocating the election of the United States Senators and Congressmen and the President. "Governmental administrative official" may be restricted by courts to Federal officials.

I need hardly remind you that laws, like automobiles, need good drivers to go places and see things. The Hatch bill must be administered by the very drivers it seeks to curb. Let us pray.

The Hatch bill, of course, is negative, but it seeks to eliminate the most vicious element of our present Federal public service, and it invites us to go places and do things toward the establishment of a real merit system in the Federal, State, and local administration of governmental functions.

Let's see briefly what we have.

For the first 40 years following the adoption of the Federal Constitution and the setting up of a government of the United States the apparent wishes of the founding fathers were followed, and practically all civil employees were appointed for life or during good behavior. Relatives of George Washington who sought Government jobs while he was President received only reprimands. President Adams removed only 19 of Washington's appointees. When Jefferson went into office he found practically every Federal officeholder bitterly opposed to him politically, and yet he removed less than one-fourth. In 1820, the term of 4 years was fixed for the most important Presidential appointees. Even after the passage of this law President John Quincy Adams offered to continue the appointment of a Cabinet officer who had opposed Adams, and did keep the Postmaster General, who was using his job to promote Jackson's candidacy. Washington refused to give veterans any preference, except in the Army, and refused one veteran on the ground that the job required a good penman rather than a good swordsman or sharpshooter.

With all these earlier Presidents, fitness and training for the particular job constituted the only criterion. After Jackson, the only criterion became political affiliations. As might be imagined, public service went from bad to worse. A Polish general living in Washington, who read and spoke eight languages, was employed as a translator in the State Department. Tammany Hall had him replaced by one of its members who spoke only Tammany English. By Cleveland's time, civil-service reform had become a national issue, and the United States adopted its first civil-service law in 1883. New York State adopted a similar law in the same year. By now about one-third of the States have some sort of merit-system law, as have quite a number of cities and a few counties. The British merit system got a start in 1855, and by 1879 had about reached the stage that our civil service has now attained through the Hatch bill. The British civil service today gets the pick of England's college graduates. A British civil-service employee holds as honorable a position, with a commensurate income, as a man practicing any of the other professions. Many of the highest official positions in England are held by men who entered as civil-service clerks. In France the highest judicial offices have been filled from their merit-system employees.

Let me give you a concrete illustration of what we have under the existing system. A young engineering student at State university had helped his fraternity house to get a new radio in exchange for some political work. When graduation time approached,

like other students, he bethought himself of a good engineering job; so he visited the political friend, and was promised an engineering job if the student would help out in an approaching election. The student helped to the extent of persuading other students to have their names registered as voters; later, when election day came, he persuaded some of them to vote illegally, and himself voted several times by using the names of those registered who had failed to vote. A few days after graduation he had his job. Soon thereafter he was assigned the duty of locating a proposed new road. The boy was somewhat ashamed of his election-day exploits, and resolved to do a job in keeping with the best engineering tradition.

Eventually he brought in his sketch of the road. The sketch showed a minimum of curves and bridges and expensive grade work—a good road at low cost. The politician looked it over, and then ordered certain changes in the sketch. The road had to pass in front of so-and-so's filling station. Then it had to make a bad turn across an arroyo so as to go by Mr. Whosis' general store, then back over the arroyo and into the main line again. Result—two bad curves, two additional bridges, considerable additional filling, and the taxpayer got an inferior, dangerous road at a greatly increased cost.

The political leader had prostituted his office and time to accomplish a black eye for his administration and the young engineer had discovered that he was not holding an engineering but a political job. When the administration changed and he went out to seek private employment he made the sad discovery that 2 years' experience as a politician did not enhance his standing as an engineer.

A bad curve in a political highway near Albuquerque has cost several lives, many injuries, wrecked automobiles, and lawsuits. Mrs. ——— paid her taxes, got a receipt, and lost her home because an incompetent county treasurer credited the payment to the wrong person and then sold Mrs. ———'s property for delinquent taxes; and our Supreme Court could not save her. Charge that to the spoils system. Many suits to quiet title originate with incompetent employees in the county officials' offices.

Is a postmaster more or less efficient because he believes in a high tariff or the Immaculate Conception? Does operating a machine gun or getting married have any relation to making out your tax receipt or teaching arithmetic? Did you ever see a Republican adding machine or a Democratic typewriter? Did you hear about the county clerk who requisitioned a new typewriter? His reason was that he was tired of black and wanted a typewriter with a blue ribbon.

Shortly before his assassination Abraham Lincoln saw a group of job hunters in the White House anteroom. Pointing to them, Lincoln said: "We have conquered the rebellion, but that is a much greater danger."

President Franklin D. Roosevelt, in a letter to the National League of Women Voters, said, "The Government functions for all, and there can be no question of greater moment or broader effect than the maintenance, strengthening, and extension of the merit system established in the competitive principles of the Civil Service Act."

Governor Fitzgerald, of Michigan, recently broadcast this statement: "Public office became a dumping ground for the inefficient."

"Government was not very close to the people in those days. They were too busy making money to pay much attention to public affairs. Today there is a changed attitude. Men and women everywhere in this country are awake to the realization that the administration of public affairs is a service which touches almost every aspect of life—health, education, the protection of life and property."

Governor Fitzgerald also said that turning down job hunters left little time for his real duties.

Mayor LaGuardia says this:

"American cities can no longer afford the luxury of being administered under the spoils system. City administration has become a science. City departments have highly specialized and technical duties to perform and services to render. The science of government cannot be learned overnight; neither can it be learned entirely out of a book. It requires experience—many years of actual experience and training. \* \* \* The spoils system—and by that I mean political patronage—turning out city employees after election and appointing a new set as a reward for political activity or work in a campaign is not only costly but so inefficient as to ruin a city. The staggering debt of the cities, the bonded indebtedness of almost every city, are the living witnesses of inefficient city governments of the past."

A league of women voters, investigating their home town, discovered that it cost 75 cents a square foot to clean the courthouse and only 25 cents a square foot to clean an adjacent office building, and the courthouse was not nearly as clean as the office building. In San Francisco, under the spoils system, the writing of 75 tax bills was a standard day's work. Two years after the introduction of a merit system 200 a day was standard. Milwaukee, under a merit system, spent 70 cents per registered voter for its elections. Kansas City, under the spoils system, spent \$2.70.

The spoils system stultifies legislation which too often aims only at creating more political jobs. Its untrained personnel defeats desirable legislation. Through its corrupt machines it thwarts the

public will. It hamstring sincere executives. It corrupts voters and ultimately makes a bum out of the pie-counter boy.

Under an independent merit system, elected officials not only would have more time for their duties, but also would find it more difficult to give away public funds and grant large contracts without competitive bids.

I am indebted for much of my data to Mr. Frank Everett and E. O. Griffenhagen, of the firm of Griffenhagen & Associates, with 30 years' experience in public administration. Mr. Griffenhagen offers this interesting statement:

"I doubt that most people realize how small a part of the governing is now done by the executive offices or the members of the legislative body. \* \* \* It is ridiculous to claim that any body of law can do more than indicate the barest outlines of what is to be done, or that any group of executives can do more than suggest in the most general way how it is to be done. The decisions, at the point where the community sees and feels and gets the results, are made by the men and women who make up the civil services of our governments. They do the governing. By their judgment, skill, and faithfulness they determine the kind and quality and appropriateness of the public services rendered."

Perhaps I can summarize all the foregoing with one further illustration. The railroads are in a bad way. Imagine, if you can, what would happen if they suddenly decided to help business by firing all their yardmasters, train dispatchers, conductors, and firemen, and replacing them with shoe clerks, lawyers, dentists, and soda jerkers.

The State of New Mexico is considering rebuilding and enlarging the statehouse to make room for State civilian employees. Let me suggest this substitute measure: A few years ago Congress passed a law adding several hundred employees to the Bureau of Engraving and Printing without a civil-service examination. When these men reported, the Bureau chief found they were not only useless but they got in the way of other employees, and slowed up their work; so he had bunks built in a shed at the rear of the plant and induced these new employees to spend their time sleeping. How about a new bunkhouse instead of a new building? One prominent Albuquerque citizen, a former State official, stated that he found 12 mimeograph machines in the Capitol, but no employees trained to operate one of them.

Senator HATCH's idea has long prevailed in the United States military service. Uncle Sam knows there are no Democratic machine guns or Republican TNT. Every candidate for the Army is subjected to a careful examination. He is then educated and trained to be a private or an officer, and, when graduated, is assigned to the various branches of the military service to perform a specific duty or job, whose requirements have been expertly determined. The military folks are concerned with doing a job, not with who holds the job.

An ideal merit system would do just exactly that. One centralized planning bureau in Washington should expertly determine the requirements of every type of public-service job, from hot-dog inspector and janitor up to the chief of the Public Health Service. It should cooperate with educators in giving every boy an opportunity to enter the civil service with the assurance of a lifetime job if he merits it, and promotion for efficiency. In administration, the bureau should be sufficiently decentralized to recognize the difference between the requirements for a good school teacher at Escabosa and one in New York City. "Is the applicant qualified to fill the particular job?" should be the criterion. It should be quite irrelevant to ascertain whether the applicant is married or single, white, or black. A disabled veteran has no place in the civil service by reason of military services. The Veterans' Administration should see that the disabled veteran is properly cared for, and not shoved into a job for which he is unfitted or untrained. An Albuquerque girl who is a competent stenographer in the city hall should be sure of a lifetime job there if she wants it, or eligible to transfer to New York City without any residential difficulty, or to the Federal service without regard to the State apportionment law.

When the public clearly understands the distinction between policy-making elective officials and administrative employees who carry out those policies, and when the cost to the taxpayer of inefficient administrative employees is realized, plus the citizen's personal loss in dealing with inefficient public servants, we will get rid of the spoils system and get a merit system. There are no obstacles except the public's indifference to the public's duties and obligations as voting citizens of a great democracy.

More specifically, a merit-system league in New Mexico, aided by our present primary law, could readily establish a real merit system for the State and all its political subdivisions. It would soon point to the desirability of an indefinite tenure of office for competent sheriffs, treasurers, and other administrative officials qualified to do a particular job better than anyone else, with policy-making officials such as our county commissioners and city commission performing their appropriate legislative functions. Politicians should deal with policies—legislation—making laws. Just as the architect draws the plans and then turns construction over to the concrete mixer and the bricklayer, so the politician should leave administration to trained technicians.

Let's organize, and use the Hatch bill as our starting point.

## Reciprocal-Trade Agreements

## EXTENSION OF REMARKS

OF

HON. CLARENCE J. BROWN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 4, 1940

Mr. BROWN of Ohio. Mr. Speaker, of late much has been said relative to the administration's reciprocal trade agreements program. In his annual message at the opening of this session of Congress the President came out strongly for legislation to continue the reciprocal-trade program. Glib statements, filled with glittering generalities, claiming that the reciprocal-trade agreements are beneficial to the United States have been made.

Therefore, I believe that it would be well for the American people to look at the record. Let us read the story the official figures of the United States Government itself tells as to the actual effect of these reciprocal agreements on the foreign trade of the United States. Realizing there can be no sound prosperity within our Nation unless we have a sound and prosperous agriculture, and knowing present agricultural conditions and the urgent need of assistance and protection for agriculture, I am calling the attention of the Congress to the effect of the Roosevelt-Hull reciprocal trade program on our foreign trade in agricultural products. The following table, made up from the latest official figures of the United States Department of Commerce, comparing the first 10 months of 1939 with the first 10 months of 1938, will not be encouraging news for American farmers, nor of much comfort to the proponents of the reciprocal trade program:

*Agricultural exports and imports, 10 months ended Oct. 31, 1938 and 1939*

Agricultural products	10 months ended October 31—		Change in 1939 from 1938
	1938	1939	
Total agricultural:			
Exports.....	\$689,615,000	\$514,288,000	-\$175,327,000
Imports.....	794,685,000	897,051,000	+102,366,000
Trade balance against United States.....	105,070,000	382,763,000	277,693,000
Total trade.....	1,484,300,000	1,411,339,000	-72,961,000

These figures, as will be noted, show that our total foreign agricultural trade, both in exports and imports, has declined by \$72,961,000 during the first 10 months of this year; that our exports have decreased by the amazing amount of \$175,327,000, and that our agricultural imports have increased by \$102,366,000. This means that with a decline in the United States agricultural foreign-trade total, the balance of trade in agricultural products has increased against the American farmer by the astounding sum of \$277,693,000. The official records of the United States Government disclose that our agricultural exports were 27.1 percent of our total exports in 1938 and that the percentage of such exports of 1939 has decreased to 20.7 percent. In the first 10 months of 1939 the United States only exported \$514,288,000 of farm products, while during the same period of time the value of agricultural products entering this country amounted to \$897,051,000; making an almost unbelievable trade balance of \$382,763,000 against American tillers of the soil.

These figures go far in explaining why American agriculture is not prosperous.

As time goes on I expect to present to the Congress other official figures showing in more detail changes that have occurred in our foreign trade to the detriment of American interests as a result of the administration's reciprocal trade program.

## The War and Gold

## EXTENSION OF REMARKS

OF

HON. CARL HINSHAW

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 4, 1940

RADIO ADDRESS BY HON. CARL HINSHAW, OF CALIFORNIA, DECEMBER 2, 1939

Mr. HINSHAW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech delivered by me over the Columbia Broadcasting System from their Washington studio on December 2, 1939, concerning Our Country and the War, with particular reference to the effect of purchases of foreign gold by the United States:

I am here in Washington to represent nearly a half million of the finest people in America. They are alert and intelligent. They are industrious and honest. I am very proud of them. Being a Member of Congress from California, and its Eleventh District especially, has some drawbacks. It doesn't seem really quite right to be away from California during the winter and spring. And then, here comes the Pasadena Tournament of Roses on New Year's Day—and right after it comes the Rose Bowl football game, and I have to miss it again. Oh me!

But it all goes to prove that we do have real sportsmanship here in America. We are a Nation of good sports. We get all heated up over a big game—or an election—but after the final score has been hung up, all agree that the best team won—shake hands all around—and go back to work until the next time. That is one reason why Americans have such a revulsion of feeling against the powerful and quite brutal sport of great nations massacring weaker ones such as China and Poland—and apparently Finland is to be next. Such ruthless cruelty and inhuman lust for blood and power is entirely foreign to the true American spirit.

We don't want war in this country, and we certainly have no yearning to go abroad again to fight. Wars have been going on in the world since the beginning of time—and the last one apparently has not been fought yet. What can we do to avoid war—to be at peace? When I think of that—the deep and eternal truth in the advice of the Father of our Country rings out clear and strong. He said, "Observe good faith and justice toward all nations. Cultivate peace and harmony with all." "Why," said George Washington, "Why, by interweaving our destiny with that of any part of Europe, entangle our peace and prosperity in the toils of European ambition, rivalry, interest, humor, or caprice? It is our true policy to steer clear of permanent alliance with any portion of the foreign world." I wish everyone would read Washington's Farewell Address again.

We cannot be the policemen of the world and remain at peace. The only right answer I can see is to strictly mind our own business and be so strong that no nation dare attack us.

When I think of game little Finland, all ready for the 1940 Olympics, a fine new stadium built, athletes in training, all ready for a big show and a lot of fun, it makes me sick, this war business. They probably will have to call off the games on account of darkness over Europe—a rotten stench over civilization.

So many crazy things have happened in this generation, it seems that lunatics must rule the world. But among the craziest things I can think of is the policy we have adopted in this country of buying gold and silver from all over the world, and at a fancy price. Our Government used to pay \$20.67 an ounce for gold. Then a bright professor, whose chief claim to distinction must lie in his discovery that by keeping lights turned on in hen houses they would lay more eggs and die young, a professor by the name of Warren, advanced the idea back in 1933 that if we raised the price of gold that all other prices would rise along with it. He evidently persuaded the President that that would happen, so prices being generally quite low in 1933, it sounded like a good idea, and a law was passed by a rubber-stamp Congress giving the President the power to buy gold at prices up to \$41.34 an ounce, and he proceeded to buy, and he bought and bought, bidding higher and higher, until he had boosted the price up to \$34.88 an ounce, and then he proclaimed on January 31, 1934, that from then on our Government would pay 12 cents more, or an even \$35, an ounce for gold. Believe it or not, we insisted on paying nearly twice as much for gold as we had been paying, just to raise prices. It was a noble experiment. As a matter of fact, prices are still about as low now as they were in January 1934, when the gold-buying spree really got started. They were lower before this war started.

Supposing somebody came up to you when cotton was selling for 10 cents a pound and said, "I'll pay you 17 cents a pound for

all the cotton you can deliver to me." What would you do? Or supposing somebody offered to pay you 35 cents a dozen for all the eggs you could lay hands on when the market price had been 20 cents a dozen. Well, the whole world did just what you would do. The world said to Uncle Sam, "O. K., sucker, get ready; here it comes"; and the whole world started in to sell us gold—and they are still selling it to us—at \$35 an ounce, and we are still taking it at that price. I can see where there might be some sense in paying American gold miners \$35 an ounce for gold, just to boost the business of gold mining. After all, nearly every other business, including farming, has been on relief for several years now, so why not the gold miners? But for the life of me I can't see any very good reason why we should pay these huge profits to foreign banks and foreign gold miners. Somebody said that it aided our foreign trade. Oh, certainly; no question about that; why not? But who gets the best of the trade—the side that trades wheat at \$1 per bushel or the side that trades gold at \$35 an ounce?

The people who used to preach the old commodity dollar—those who wanted to fix the dollar by passing a law declaring that 20 bushels of wheat was worth \$20 and was equal in value to an ounce of gold should take a look at what has happened. Today it takes 35 bushels of wheat to equal in value an ounce of gold. In other words, the foreigner with an ounce of gold can now buy 35 bushels of wheat with it, when it used to be that even at today's price of wheat he could only buy 20 bushels. So what are we doing but making the foreigner a present, giving him a bonus of 15 bushels of wheat for every ounce of gold he sends us for that purpose? The same thing is true of other commodities. That is one way of looking at it; here is another:

Supposing you are a very rich foreigner and we are back in January 1934. You have a big stock of gold. Over in the United States the President has proclaimed that now the American Government will pay \$35 an ounce for gold, when a few months ago they would only pay \$20.67 an ounce. You might take a look at the American stock market and say to yourself, "Ah ha! If I ship my gold to America I can buy American shares of stock, and very cheap. They take my gold at a fancy price, so I can buy 35 shares of stock now where I could only buy 20 before. Even Americans can't do that, because the American Government took in all the gold from the American people before the price was changed. I can even ship my American \$20 gold pieces back to America and get nearly \$35 apiece for them. American's can't do that; it is against the law for them to have American gold coins in their possession."

And so it is—that we let the foreigners buy our shares of stock at a big discount. Now the stock market has gone up a long way. A war is on—and war industries are booming. They can sell back to us these shares of stock at a good profit and buy war supplies from us. The question is—who is the loser? I venture to say that in every such transaction the foreigners are getting away with war supplies at much less than fifty cents on the dollar. In other words, America, by buying foreign gold at a fancy price, is helping to pay for the wars in the world, and our people don't know it.

Take one good example. Take Japan. The Japanese probably didn't go into the American stock market, but the Japanese Government has sold us a lot of gold. Before January 31, 1934, Japan had a supply of gold that was worth \$212,000,000. Then almost overnight, it was worth \$359,000,000 in America. Japan is smart—so she has collected some more gold and sold most of it to us. We have since paid \$539,000,000 for gold from Japan that was worth \$320,000,000 before we boosted the price. The profit to the foreigners in this deal appears to be well over \$200,000,000. That \$200,000,000 has probably paid for a lot of scrap iron and gasoline that has been used in killing Chinese.

Since January 31, 1934, we have bought nine and one-half billion dollars' worth of foreign gold at \$35 an ounce. America's gift to these foreigners, therefore, amounts to nearly \$4,000,000,000. What have they done with it? Have they purchased the products of our farms and factories? Some—yes—but the record shows that we are just holding for them in safe keeping another \$990,000,000 worth and that they own \$7,000,000,000 worth of bank deposits and American stocks and bonds that can be cashed in for war supplies. Think of it—and Finland pays her war debts.

But here is another interesting angle. Over in South Africa there is a great deal of gold and much gold mining. Some is high-grade digging, and some low. But do you know what it costs to recover an ounce of gold in South Africa? It is amazing. The best producers get gold for about \$7.25 an ounce. It runs from there up to \$20 an ounce, and a good guess at the average cost is about \$12 an ounce. Then, we give them \$35 an ounce for it. If you owned a gold mine in South Africa would you run it full blast and sell your gold to London to be shipped to America—or would you—to get from 200 to 400 percent clear profit out of Uncle Sam?

This is so crazy that it is almost funny. Think of it—here we sit—buying gold taken from holes in the ground all over the world and what do we do with it when we get it? We just bury it again in a hole in the ground in America. Let me read to you a news item from the Washington Post of November 10. It is an Associated Press dispatch:

**"TREASURY TO MAIL FIVE BILLIONS IN GOLD"**

"The Treasury is getting ready to mail \$5,000,000,000 or \$6,000,000,000 worth of gold. As soon as Congress authorizes the postage (about \$1,000,000), the Treasury wants to shift part of its huge gold hoards from New York and Philadelphia to the subterranean vaults built for the purpose at Fort Knox, Ky. Fort Knox already

contains \$5,523,000,000 worth of the metal, but none has been added for a couple of years, while the Treasury stocks outside of Fort Knox have grown to exceed \$11,600,000,000. Shifting some of the gold would relieve congestion in outside vaults and at the same time increase its safety. When the Treasury sends gold by registered mail, the extra postage compensates the Post Office for guarding the gold with hundreds of inspectors and soldiers."

Now I ask you, in all sincerity, did you ever hear of such a thing? And they ship \$5,000,000,000 worth to Kentucky by registered mail. Registered mail, mind you. Why? I don't know; do you? Maybe Jim Farley needs a little business for the Post Office Department. It beats me; I can see a lot of reasons for it, but none of them very good reasons.

Gold is queer stuff; you can't eat it, but you can use it to fill teeth. It makes nice jewelry, too—watchcases, wedding rings—I suppose you could make beautiful doorknobs out of it, but it is too soft for hinges. What are we going to do with it anyway? It certainly isn't doing any good buried in a hole in the ground in Kentucky. Why, it takes 2,500 soldiers to guard the place. It is just an expense to guard it. And I'm not so sure that it is very safe there at that—\$16,000,000,000 in gold, a prize greater than any Croesus or King Midas or any gangster ever dreamed of, all to be in one basket soon.

Nobody has given me any very good reason why that gold wouldn't be much safer spread around in the pockets of all the people. But maybe the Government doesn't want the people to find out how small the new \$20 gold pieces would be. They couldn't be much larger than the old \$10 gold pieces were. What a shock that would be.

There is a lot more to talk about. We haven't talked about the hundreds of millions of ounces of foreign silver that have been purchased, to be buried in a hole in the ground at West Point, N. Y.; nor what that has meant to India and China and Mexico. That will have to go over to another time. I hope you are glad you listened and that you have received some food for thought. For my part, I am happy to have had this chance to talk with you, and am grateful to the Columbia Broadcasting System.

Good night.

## Safety for Fish and Men

### EXTENSION OF REMARKS

OF

### HON. WILLIAM E. HESS

OF OHIO

### IN THE HOUSE OF REPRESENTATIVES

Thursday, January 4, 1940

EDITORIAL FROM THE CINCINNATI ENQUIRER OF DECEMBER 26, 1939

Mr. HESS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Cincinnati Enquirer of December 26, 1939:

[From the Cincinnati Enquirer of December 26, 1939]

#### SAFETY FOR FISH AND MEN

Announcement by Commissioner Don Waters that the Department of Conservation of Ohio will redouble its efforts to combat the pollution of streams is to be applauded, not only by sportsmen, but by all those who realize that water dangerous to fish may be even more dangerous to human beings.

One of the methods is to refrain from stocking streams near sources of pollution. This surely will help to arouse sportsmen to bring pressure on municipalities and industries to abate their dumping of poisonous wastes in lakes and streams.

This is in line with the activities of the Conservation Department of Indiana, which for years has worked hand in hand with the State board of health to clear the streams. As a result fishing has become good not only in the many lakes which dot northern Indiana, but on the upper reaches of the Whitewater and the White, which once were foul with the wastes of cities, canning factories, and manufacturing plants.

Indeed an occasional leak of wastes is the signal for Indiana State and local action since nothing shows up the befouling of streams so quickly as the myriads of dead fish.

As an illustration, Dave Roberts told in the Enquirer a few weeks ago of fish rescue work in the East Fork in a pool just below the village of Batavia in Clermont County. Scores of dead bass were floating on the surface as a result of sewage and lack of oxygen in the water. Others by the hundreds were trying to pass over a shallow bar and into a spring-fed pond. The conservation officials saved them by the thousands.

Considering that the Ohio department spent nearly half a million dollars last year in the propagation and management of fish and planted 365,000,000 fish, it is naturally a waste of sportsmen's money to plant fish where they must be rescued or perish.

And if the whole body of sportsmen will press individually and collectively this coming session of Congress for the passage of the Barkley-Spence bill as it passed the Senate, they will really accomplish something practical.

### Taxes and the T. V. A.

#### EXTENSION OF REMARKS OF HON. HERRON PEARSON OF TENNESSEE IN THE HOUSE OF REPRESENTATIVES Wednesday, January 3, 1940

LETTER FROM DR. HARCOURT A. MORGAN

Mr. PEARSON. Mr. Speaker, in view of the fact that the House Committee on Military Affairs is preparing to open hearings on the Norris bill to make provision for taxes to be paid by the Tennessee Valley Authority, I desire to call the attention of the Congress to the following letter written by Dr. Harcourt A. Morgan to the Washington Post, and appearing in that paper on December 31, 1939. This letter explains in very simple and understandable language just what the act proposes to do, and I think will serve to clear up a great deal of misinformation and misunderstanding on the subject. The letter is as follows:

TO THE EDITOR OF THE POST.

SIR: The attention of the Board of the Tennessee Valley Authority has been directed to your editorial of December 16 entitled "Taxes and the T. V. A." We believe that this editorial has missed the real point of the problem presented for solution.

In any consideration of the tax subject, it is essential to begin with an understanding of the relationship between the Tennessee Valley Authority and its wholesale customers. The Authority does not engage in the business of distribution and sale of electricity at retail; its major function is to operate the generating plants and transmit the power to the retail distribution systems owned by municipalities and rural cooperative associations to whom the power is sold under wholesale power contracts. These municipalities and cooperative associations own and operate their own distribution systems and distribute the electricity to the customers.

In the contracts between the Authority and these wholesale customers, the rates at which the power is to be distributed to the consumers are agreed upon. These rates are sufficient and as their income accounts show, they do cover all State, county, and local taxes previously levied upon the distribution properties. Accordingly, the fact is that the consumers are now paying in their rates a sum equivalent to the taxes previously assessed against these systems. The problem arises from the fact that these revenues, previously collected by the State, county, and local taxing authorities are now paid into the general funds of the municipalities. This, therefore, is not a question of "tax loss"; it is merely one of equitable adjustment of the tax collections among the State and its subdivisions.

Clearly, this is neither a Tennessee Valley Authority nor a Federal problem. The question as to whether the States and counties should recapture their portion of these payments is one of State policy that can be solved only by State legislation. The absence of such legislation accounts for a large portion of the so-called tax losses, since the taxes previously levied upon the distribution properties, owned not by the Tennessee Valley Authority but by the municipalities and local cooperatives, account for a large proportion of the total amount.

The remaining adjustment—and the only one with which the Federal Government is directly concerned—arises out of the fact that the generating plants and transmission lines previously subject to State and local taxation are now owned by the Federal Government through the Tennessee Valley Authority and are, therefore, exempt from the taxing power of the State and its subdivisions. Here again it is an error to assume that the rates at which the power produced by Tennessee Valley Authority is sold are not sufficient to cover the taxes previously paid upon these properties.

The fact is that the wholesale rate at which the Authority sells its power to the retail distributors is sufficient to cover all of the costs of producing and transmitting such power, plus a margin of about 15 percent. That margin paid by the consumers in their rates is sufficient to cover taxes upon these properties. The issue is whether it should be utilized for that purpose.

The theory of the Tennessee Valley Authority Act as now written is that the revenues derived from the sale of power over and above the cost of production should be returned to the Federal Treasury for the purpose of liquidating a part of the cost of the navigation and flood-control program. The program authorized by the statute is a multi-purpose one in which power is the paying partner.

The revenues over and above the power costs are available either for reimbursement to the Federal Treasury or for payment of State and local taxes, or for both. The issue the Congress must determine is not whether the rates should include allowance for taxes, because they already do, but is rather what method should be adopted for apportioning these revenues between the Federal Government and the local taxing authorities.

In determining this question it is necessary to weigh the great benefits that have been conferred upon the States and communities in this area by the expenditure of Federal funds against the admitted fact that the transfer of these properties from private to public ownership has resulted in some communities in temporary but serious fiscal problems.

The Tennessee Valley Authority Act already provides for payment of 5 percent of Tennessee Valley Authority revenues to the States in lieu of taxes. (Tennessee Valley Authority revenues are now about \$15,000,000 per year.) This percentage will in the course of a few years produce sufficient funds to replace all the taxes previously paid by the power companies on the facilities taken over by the Authority. However, one of the factors which aggravates the tax problem is that the formula specified in the Tennessee Valley Authority Act for the division among the States of the payments to be made by Tennessee Valley Authority does not work out equitably in the light of the situation as it has actually developed since the act was passed. Were it not for this factor, there would be no tax problem which could not be solved without additional legislation.

For this reason the bill now pending in Congress, which has been recommended by the directors of the Authority, provides in substance that the Authority shall pay to the affected States 10 percent of the gross proceeds derived from the sale of power at wholesale, this percentage being graduated downward until it reaches 5 percent in 8 years, this rate to be paid in each fiscal year thereafter. It is further provided that the minimum annual payment to each State shall not be less than the 2-year average of the State and local ad valorem property taxes levied against transmission and generating property purchased and operated by the Authority in each State plus that portion of reservoir lands allocated or estimated to be allocable to power.

The total payment for each fiscal year is to be apportioned among the several States upon the basis of the amount of power sold in each State and the book value of the power property owned within each State. The bill declares it is the intention of the Congress that each State shall redistribute these payments, or a portion thereof, to the counties and other local taxing districts affected by the program of the Authority. It is to be especially noted that under this bill the payment to be made by the Authority to each State is to be at least equal to the total State and local ad valorem property taxes previously levied against the power property owned by the Authority.

Enactment of these bills will, we believe, solve equitably the only phase of this temporary problem, which is a direct responsibility of the Federal Government.

HARCOURT A. MORGAN,  
Chairman of the Board.

KNOXVILLE, TENN., December 21.

### Stream Pollution

#### EXTENSION OF REMARKS OF HON. WILLIAM E. HESS OF OHIO IN THE HOUSE OF REPRESENTATIVES Thursday, January 4, 1940

EDITORIAL FROM THE CINCINNATI ENQUIRER OF DECEMBER 23, 1939

Mr. HESS. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorial from the Cincinnati Enquirer of December 23, 1939:

[From the Cincinnati Enquirer of December 23, 1939]

#### NEW EVIDENCE

Taking an eminently practical view of stream pollution, the State Conservation Division has decided to discontinue the stocking of streams with fish near sources of pollution. Annually, the division spends nearly half a million dollars in fish propagation and stream improvement. This fall it is estimated that many millions of the 365,000,000 fish used in the lake- and river-stocking program have been killed by polluted water.

The news is of especial interest to sportsmen, but it has overtones of importance to those who look exclusively to the grocery or delicatessen for their sea food, just as did the recent news that boat owners along the Ohio found that acid in the water was eating the painted names off their craft.

Water which even the hardiest of river fish find uninhabitable, and which cuts the paint off a motorboat, is not obviously, the *eau de vie* which a physician would recommend for the best interests of the human system.

Sportsmen by and large have been more active than the general public in seeking relief from stream pollution, though a confusion of objectives has reduced the effectiveness of their support. Theirs and the public's interest is essentially the same—to reduce pollution by the most practical method. The Barkley-Spence bill which will be before Congress at the opening of the new session provides the best avenue of attack upon pollution. In the interests of getting something done about the polluted condition of rivers and streams, the Barkley-Spence bill should command the support of sportsmen and general public alike.

## Supreme Court Protects Farmers

### EXTENSION OF REMARKS

OF

HON. WILLIAM LEMKE

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 4, 1940

Mr. LEMKE. Mr. Speaker, the Supreme Court of the United States in the Bartels case reestablished the Frazier-Lemke moratorium. The provisions of this act some Federal judges, who apparently could not understand English, misconstrued and had in effect deliberately annulled. Annulled—by judicial legislation—by wrongfully permitting the eviction of innocent men, women, and children from their homes. The fact that these evictions were allowed by some Federal judges, in plain violation of their duty under an act of Congress, makes them all the more shameful.

I say some of the Federal judges—not all—because I gladly concede, and you have a right to know, that a majority of them sincerely carried out the mandates of Congress and gave full force and effect to all the provisions of the act.

The Supreme Court in the above case rendered a broad and far-reaching decision which will be of immense benefit to the debt-ridden farmers in every State. It will give to the honest farmer who is about to lose his farm and home by mortgage foreclosure, judgment, or tax sale a breathing spell of 3 years within which to refinance himself.

Chief Justice Hughes, in his opinion in the Bartels case, informs the Federal judges who by their wrongful decisions attempted to annul this law that hereafter they must carry out and enforce the provisions of the Frazier-Lemke moratorium in accordance with the plain English language of the act. He tells them that they must give full force and effect to an act of Congress whether they like it or not.

In his opinion the Chief Justice in unmistakable language informs these erring Federal-, district-, and circuit-court judges that a farmer is never too poor to go through bankruptcy; that they cannot accuse him of bad faith because his liabilities exceed his assets. He informs them that it is not bad faith for a farmer to take advantage of the Frazier-Lemke moratorium—a Federal law.

He informs these judges that a farmer debtor can take advantage of this law when he is in financial distress and that it is none of the judge's concern whether or not such farmer debtor will be able to rehabilitate himself at the end of 3 years. That is the farmer's business and the responsibility of Congress.

We quote from the Chief Justice's opinion:

The subsections of section 75 which regulate the procedure in relation to the effort of a farmer debtor to obtain a composition or extension contain no provision for a dismissal because of the absence of a reasonable probability of the financial rehabilitation of the debtor. Nor is there anything in these subsections which warrants the imputation of lack of good faith to a farmer debtor because of that plight. The plain purpose of section 75 was to afford relief to such debtors who found themselves in economic distress however severe, by giving them the chance to seek an agreement with their creditors (subsections (a) to (r)) and, failing this, to ask for the other relief afforded by subsection (s). The farmer debtor may offer to pay what he can, as Bartels did,

and he is not to be charged with bad faith in taking the course for which the statute expressly provides.

The scheme of the statute is designed to provide an orderly procedure so as to give whatever relief may properly be afforded to the distressed farmer debtor, while protecting the interests of his creditors by assuring the fair application of whatever property the debtor has to the payment of their claims, the priorities and liens of secured creditors being preserved.

We are not here concerned with questions which may arise in the course of the administration under the statute, but merely with the duty to follow the procedure which the statute defines and the district court failed to observe.

\* \* \* the cause is remanded to the district court with direction to proceed in conformity with this opinion.

We wonder how these judges feel in the face of this decision of the Supreme Court of the United States? Can they feel just right when they realize that they permitted the eviction of hundreds and thousands of men, women, and children from their homes? I wonder whether occasionally, in their silent chambers, they can see the stoic anguish on the father's face or the tear-stained face of the mother whose children they have made homeless?

All this because they would not or could not understand the plain English language of the Frazier-Lemke moratorium. Because suave attorneys, in one case paid \$60,000 by the insurance companies to assist a bank to fight a bankrupt farmer, overcame their better judgment. Let us hope that from now on these judges will more fully realize their responsibilities to this Government and Nation, and that they will reinstate, wherever possible, without red tape or quibble, every case that they so wrongfully and so unjustly dismissed.

While the Senate National Economic Committee discovered that the associated presidents of the life-insurance companies paid \$60,000 to an attorney to assist a joint-stock land bank to take the home away from a bankrupt farmer, and while they had paid lobbyists in Washington in an attempt to defeat the enactment of this law, the attorneys in the Bartels case, representing the farmer-debtor, served without compensation. May I warn these companies that, for their own good, they had better get out of the farming and lobbying business and devote all their activities to the insurance business.

The Supreme Court also reversed the erroneous decisions of the District and the Circuit Court of Appeals of Ohio in the Morrison and Gray cases. In its opinion in those cases it directs the district court to reinstate the cases and to proceed in accordance with the provisions of the Frazier-Lemke moratorium and its decision in the Bartels case.

The Supreme Court has now definitely informed the Federal judges that the provisions of section 75 of the Bankruptcy Act are mandatory. This section seems to have been the stumbling block of some judges. Every conceivable attempt has been made to destroy its effectiveness. While this section has saved hundreds and thousands of homes many more would have been saved if all the Federal judges had entered into the spirit of the act. This would have been of lasting benefit, not only to the Nation, but to the creditors as well as to the farmer debtors.

Section 75 gives every farmer who is insolvent or financially embarrassed a legal equity in his own property. That equity is the legal right to continue in possession of his farm—live in his home—for 3 years, provided he pays a reasonable rental. That equity gives him an opportunity to refinance and reestablish himself as a solvent rather than to continue as an insolvent farmer. This right no court may, now, hereafter deny him.

Under the act an appraisal is made of all the farmer's property "at its then fair and reasonable market value." That reasonable market value fixes the debtor's assets and also the limit of his liabilities. That is the rule in all bankruptcy proceedings. It is not what the bankrupt owes but what the property will bring that finally settles the question of assets and liabilities and balances the debit and the credit sides of the ledger. This via a discharge.

During the depression and recession Congress—in legislating in the interest of the Nation—saw fit to pass this section. It did this because it felt it was essential for the

preservation of the Nation. The Supreme Court of the United States in a number of decisions upheld this legislation. It gave it a broad and liberal interpretation so as to effectuate the intent of Congress within constitutional limitations.

The legislation in question is legislation on the subject of bankruptcy. The only farmer who can take advantage of this act is a bankrupt farmer. A bankrupt is a financial wreck. The question is not one of paying up in full but one of salvaging—saving what can be saved out of the wreck.

No other law has been so often and so willfully misconstrued as the Frazier-Lemke moratorium. Is it because this law protects us by protecting the farmers who feed and clothe the Nation? Similar legislation in favor of railroads and corporations has been liberally construed by these same judges, but for some reason they forgot their liberality when this law was involved.

In addition to the decision in the Bartels, Morrison and Gray cases, the Supreme Court has now rendered five far-reaching decisions in connection with the Frazier-Lemke moratorium. In three of these cases Elmer McClain of Lima, Ohio, was associated with me. The first of these is the *Virginia Wright case* (300 U. S. 440). In that case the farmer debtor owed \$6,559.50 and his assets were only \$2,828.52. Yet, in that very case the Supreme Court held the act constitutional. It did not even say that the farmer was too poor to take advantage of the law or that his assets would have to exceed his liabilities.

Next comes the *Beach case* (301 U. S. 435). In that case the debtor had a mortgage of \$100,000 on 196 acres of land. It was held that Mr. Beach was not a farmer in good faith. The Supreme Court reversed that decision and said:

The products of his toil were food for him and his dependents, and the farmhouse was his home. True, the money returns were scanty. . . . The scantiness of the yield may have turned him into a bankrupt, but it did not change his occupation. One does not cease to be a farmer because drouth, wind, or pests may have rendered the farm barren.

Next comes the *Adair case* (303 U. S. 350), in which the Circuit Court of Appeals held that the conciliation commissioner was liable for moneys paid to the bankrupt farmer, necessary in harvesting the crop on which the Bank of America had a mortgage. The mortgage expressly provided that the farmer was to care for and harvest the crop at his own expense. The Supreme Court reversed that decision. It held it was the conciliation commissioner's duty to preserve the crop and that it was proper to allow the farmer debtor the necessary expenses for harvesting the crop. The Court said:

These provisions of section 75 look forward toward the maintenance of the farm as a going concern.

Then came the *Indiana Wright case* (304 U. S. 502). In that case the Supreme Court held that a farmer had a right to file his petition under section 75 at any time before his period of redemption had expired, or before confirmation of sale where there is no redemption, or at any time before he had lost all his equity in the farm and both the legal and equitable title had been completed in the mortgagee.

And finally we have the decision in the two Kalb cases, decided January 2, 1940, not yet reported. In these cases the Supreme Court holds that the sole and exclusive jurisdiction after the farmer files his petition is in the United States district court. It holds that any action taken by any State court after the farmer has filed his petition is null and void, and that the judgment thus obtained is subject to collateral attack. The farmer is under no obligation to take any action in the State court. It must take judicial notice of the Federal court's jurisdiction.

Here let me state that no farmer should file under the Frazier-Lemke moratorium unless he is threatened with or in danger of losing his farm or property by mortgage foreclosure, judgment, or tax sale. He should not file unless he is hopelessly in debt and his creditors refuse to compromise on terms that he can meet.

LXXXVI—App—4

The farmer should remember when he files under this act that all of his property will go under the jurisdiction and control of the court and that he will have to pay a reasonable rental. But he will then have 3 years within which to readjust and refinance himself. He should remember that it is better to adjust his difficulties, if possible, outside of court, but he should remember also that it is his duty to protect his home for himself and family. No farmer should hesitate to take advantage of this act if it becomes necessary to save himself and his property.

Congress and the farmers have a right to expect that the district courts will now in good faith carry out the provisions of the Frazier-Lemke moratorium and obey the mandate of the Supreme Court, the highest court in this Nation. In all cases where the farm has not passed into the hands of an innocent purchaser it is the court's duty to reinstate the petitions that it dismissed. This the court ought to do of its own volition.

The farmer whose petition was unlawfully dismissed and who desires to recover his farm should immediately, if the period of redemption has not expired, or if expired, if the farm is still in the hands of the mortgagee who foreclosed, make a motion for reinstatement. He should call the judge's attention to the decision of the Supreme Court in the Bartels case. Under these conditions, the court should reinstate and reopen the case without hesitation. A court of bankruptcy is a court of equity, and a court of equity has the power to correct its own mistakes.

Again, a farmer who is threatened with mortgage foreclosure or whose farm has been sold under foreclosure, judgment, or tax sale, where the period of redemption has not expired, or the sale has not been confirmed, or where title has not yet been completed in the mortgagee, should immediately file his petition under the Frazier-Lemke moratorium. He will then have 3 years within which to get on his feet and refinance himself.

The farmers in every county who are hopelessly in debt should call a meeting, get together, and cooperate. They should see to it that they get the full benefit of this law. If your farm organizations are not assisting you, find out why not. If you will do this, you will be able to get some able attorney in every county who will be glad to find out all about this law and assist you.

May I suggest that you do not write me and ask me to act as your lawyer. Much as I would like to, that is physically impossible. While I have donated my time and assisted financially in at least 20 test cases before the United States District, Circuit, and Supreme Courts, yet, it is humanly impossible for me to act as attorney for several hundred thousand farmers throughout the United States. Please remember I also have my duties to perform in Congress. Now, with the proper construction of this law by the Supreme Court, you have the remedy at your fingertips.

In connection with the Bartels case I wish to thank Attorneys T. E. Mosheim of Seguin, Tex., and Elmer McClain, of Lima, Ohio, with whom I had the pleasure of being associated in the Bartels case. Both of these donated their time and contributed their expenses. I also wish to thank the farm debt adjustment committee of Guadalupe County, Tex., and its chairman, D. D. Baker. But for their financial assistance Bartels would not have been able to get this case up to the Supreme Court.

The Frazier-Lemke amendment to the Bankruptcy Act does not take any property from the creditors. It gives to the creditors all of the past efforts, earnings, and accumulations of the debtor, his wife and his children, but it does at the same time prevent them from taking the future earnings and accumulations of the debtor, his wife and his children. It deprives the creditors of nothing, but does prevent them from destroying all value by throwing more farm land and farm property upon the market. It conserves the home and property for those who created and accumulated it, subject to existing liens up to the fair value as judicially determined under the provisions of the act.

In dealing with bankruptcy, it is just as much the duty of Congress and the courts to consider the unfortunate debtor as to consider the unfortunate creditor. The agricultural wealth of this Nation can and will now be preserved in the hands of those who created it—the farmers.

### Red Faces

## EXTENSION OF REMARKS

OF

## HON. CARL HINSHAW

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 4, 1940

RADIO ADDRESS BY HON. CARL HINSHAW, OF CALIFORNIA

Mr. HINSHAW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the text of an address made by me over the Red Network of the National Broadcasting Co. on the evening of December 28, 1939, concerning the meaning of socialism to the American people and presenting my views of the liberal democracy, as follows:

A big little boy I know very well likes to have me tell him stories about an Eskimo boy called Nipantuk, who lives way up there near the North Pole. Nipantuk has had many thrilling adventures, but mostly he enjoys the work he does for Santa Claus. You see, Santa Claus works the year round making toys for good little boys, and he has to have someone to try out the toys to see that they work all right. That is where little Nipantuk comes in. He plays a little while with each toy Santa Claus makes—to be sure that the paint is on right, and that the machinery works correctly. This little 5-year-old American boy thinks it would be swell to be up at the North Pole with Nipantuk working for Santa Clause all year round.

I was telling him the last chapter the other night—and while I was talking my mind kept straying to thoughts of other little boys and girls who live in other parts of the world across the seas. What a bitter and fearful night it must have been—the guns and cannon they heard were very real ones that shake the earth and blow horses and cows and kittens and babies to bits, and the airplanes that droned overhead weren't transports. The bombs they drop smash and set fire to homes and hospitals and trains filled with women and children trying desperately to get to some place else—anywhere, but away, away.

I have seen those things myself. Maybe not such hellish ones as they have today, but samples too good for me to want to see any modern ones in action. Aren't we lucky to be Americans in America? But let us not go to sleep in our ringside seats watching these fights. Let us not be complacent about it because there are those in this country who would like to see us join in war or bloody revolution. They are busy all of the time—working both above-board and under cover at their devilish business.

There are those who think we should join in—to save democracy—somewhat as we did in 1917; that is, we joined in, but didn't save it. There are those who would have us join in to preserve the well-known status quo in world power politics—and this would possibly be to our commercial advantage. There are those who have designs for imperialistic expansion and would have us stay out by hook or crook to prevent our aiding the victims of their imperialistic aggression, and there are those who are working hard to foment world revolution so that they may step in afterward to set up a world dictatorship.

There are many aims and desires—bushels of propaganda and continuous pressure upon the minds and heartstrings of the American people from all sides—to get in, to stay out, to give aid, to refuse aid. We can understand these aims and weigh them, but the most insidious, the most diabolical, effort is that to stir up violence and revolution among us. It is about that sort of thing that I want to talk with you tonight because, in my humble judgment, there lies the greatest danger to the American people.

I am not a member of the Dies committee, and I, too, might criticize some of their methods and some of the things they do. But don't forget for one minute that they are dealing with some of the smartest organizations engaged in the most diabolical campaign of stirring up revolution that has ever been launched in the world. These subversive organizations have both money and brains; they are clever and sly. They are truly "wolves in sheep's clothing." You can't dig them out with kid gloves on.

Let us examine the background for their activities. Why do they torment us so? In the first place, the only practical difference between a Socialist and a Communist is that the Communist believes that the only way to bring about world socialism is through violent revolution—and the "liquidation" (a sweet word which means "mur-

der") of all those who do not agree with them. The Socialist, on the other hand, believes that socialism can be brought about by education, and through the ballot box. The Communist Party in America has lately ducked under cover by saying that they no longer preach revolution, but they admit that they are working to create conditions where revolution will be spontaneous. I cannot see any difference between those two positions.

But what is this "socialism" that they are trying to sell us? What does it mean? If it is as good as they say it is, perhaps we should have it. The dictionary says that "socialism is that society which believes in the philosophy of the common ownership of the means of production, and the equitable (or in the case of pure communism, equal) distribution of the products thereof." That is the definition of it. But what does it mean? It simply means that in the Socialist system the government should own all of the farms, factories, stores, warehouses, railroads, power companies—everything that has to do with producing and distributing things—then, of course, everybody must work for the government, as there are no other jobs, and everybody would then be doled out their fair share of the groceries, clothes, and housing, etc. It is what they have in Russia, and to a considerable extent in Germany, and in a somewhat modified form in Italy today.

In true socialism, nobody can own anything—as we consider ownership in America. Everyone works for the government—is paid by the government, and lives about as the government says they must.

But when the government owns all the farms and factories and stores, etc., the government must manage them all. That is a tremendous job. It takes a lot of people to do that. It means plenty of patronage, too—you do not get government official jobs unless you are in with the higher-ups. In Russia, there are usually three bosses on every job, referred to there as the "party triangle." One elected by the workers—he does not count for much—one technical boss and one political boss. I wish there were more time to discuss that. It is very interesting. But the important thing is that the political boss holds the power. He is frequently a member of the secret police—"political spy" would better describe him. Nobody ever seriously disagrees with him, because it isn't healthful. The result is generally fatal—you just disappear—are "liquidated."

Now, why is that necessary to socialism? It is very evident to anyone who will examine into it. In the first place, when government owns everything, it has to manage everything. Otherwise, nobody would have things to eat and wear—nor places to sleep. All would be utter confusion. The Socialist government, as a part of the management job, has to make a plan of production and distribution. It is the so-called planned economy. In Russia, they call these 5-year plans. In Germany, the 4-year plan is now in effect.

But remember that government can't plan production and distribution until it has first decided what is to be consumed. When you stop to think how many thousands of items everyone consumes each year—all the cereals, vegetables, and dairy produce—the wool and cotton and textile materials—buttons, thread, and cleaning fluids—soap ingredients, acids, chemicals, metals and alloys, building materials, and all the machinery to process and handle these things, etc., etc., it is an enormous task for a bunch of technicians and politicians. The only way they can figure it out is to say that each person shall be rationed out so much of this and that. Government has to ration the things the people consume. We do that for our soldiers in the Army. Otherwise, we couldn't figure out how to supply them. It is possible in the Socialist state to give the right of free choice in articles that are in good supply, but for most things, ration cards are necessary.

The Socialist government must also plan where, at what, how long, and for how much each person shall labor. If the workers could go on strike, the plan would be ruined—so in the Socialist states you can't strike. Just a few days ago, our President told a group of people working on our Government pay that they could organize, but they wouldn't be allowed to strike. When the Government is your boss, you do as you are told and like it—or else. But you dare not quit in the Socialist state, because there aren't any other jobs—and, no work—no eats. So what? Well, that amounts to the conscription of labor. And that is why the workers who go into a revolution to set up the Socialist state are so badly fooled. After they have done it, they lose their freedom.

But let us get back to this "planned economy" business. Who is going to make the plan and give the orders to carry it out? Congress? No; Congress couldn't possibly make it. There would be the greatest logrolling contest in history. Every section represented would want to work less and eat more. The plan has to be made by a central government agency with full authority to carry it out. Congress couldn't even have the right to change it—and nobody else could. If they did confusion would be the result. So, the authority has to be centralized in the planned economy. That is the reason why the Socialist countries must have dictators. Somebody must have the power to say "yes" and "no" and mean it. He must have the power to hire and fire and to punish for failure to carry out orders. A few minutes ago I spoke of a technical boss and a political boss, or spy. In the Socialist state of Russia the technical boss works for—say the secretary of agriculture, but the political boss works for the dictator. He is the boy who reports as to whether or not the orders are being carried out—and if anyone on the job doesn't like the way the dictator parts his hair. He is the political spy or stool pigeon

of the dictator. They have one on every job. They have to in order to keep the fear of the dictator right out in front. And that is why the Socialist state, as such, is an idle dream to people accustomed to speaking their minds and quitting if they don't like the work. Sit-down and slow-down strikes are never heard of in Socialist countries. That is called sabotage and is punishable by sudden death. Even failure to carry out orders is sabotage and thousands have been shot for that.

No; these smart Socialists and Communists are trying to fool our people. They organize strikes and riots and slow-downs, and stir up class hatred in this country to cripple our agriculture, industry, and commerce. Why? To foment revolution, so that they can get control of our farms and factories and stores, and so forth, and set up the Socialist government in this country, set up dictatorship, kill off those who don't agree with them, enslave the very people who helped them get control—the workers—and then outlaw the very tools they used to gain their ends and set up, in far more vicious form, the very agencies of oppression that they cried out against.

The frightening thing about all this is that these Socialists and Communists are hiding their true colors under the disguise of being "liberals and progressives." If that is liberalism, you are a Hottentot. Real American liberals like old Ben Franklin, Thomas Jefferson, and Abe Lincoln, and that great progressive, Teddy Roosevelt, must turn over in their graves every time one of these "Communazifists" calls himself "liberal and progressive." If these modern self-styled liberals can get us to spend ourselves into bankruptcy, and can cripple our agriculture, industry, and commerce sufficiently to bring this Nation to the point of widespread starvation and stagnation, then they will shortly achieve socialism in America. Are we going to stand around like a lot of jug-heads and let them do it, or are we going to offer them a one-way ticket to where they can get some first-hand knowledge and experience.

In closing, I want to give you my idea of America. Out of the ages of human struggle and experience we have learned that men can live together best when each performs according to his skill and ability and exchanges the product of his labors for those things he needs that others have produced. His labor is his own, to give or withhold; his life is his own, to be lived in peace, with due regard for the rights and the peace of his neighbor. He joins with others to promote the welfare of and justice in the whole society, and to protect and defend the whole against all enemies.

And so we have evolved the liberal democracy in a republic. It is that society of people who believe in and adhere to the philosophy of the division of labor in an exchange economy, under a common law, granting equal rights and imposing reciprocal obligations upon all the people, with special privileges for none. The division of labor must be fair, and the markets for the exchange of the products of labor must be honest and efficient. The Government shall not be the master of the people, but their servant. It shall not administer the affairs of the people, but it shall administer equal justice among a people who conduct their own affairs.

As the Old World goes to its rendezvous with death and destruction we here must hold on high the torch of human liberty—a beacon light to all oppressed peoples—a light that must at all costs be saved to rekindle and reinspire the faith in God and man that must rise again lest civilization eternally perish.

## Rubber Workers and Shoe Workers Take Their Stand

### EXTENSION OF REMARKS

OF

### HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 3, 1940

RESOLUTION OF LOCAL NO. 44, UNITED RUBBER WORKERS OF AMERICA, AND STATEMENT ISSUED BY LOCAL 122, UNITED SHOE WORKERS OF AMERICA

Mr. VOORHIS of California. Mr. Speaker, as evidence of their fundamental devotion to both democratic principles of government and sound union practice, I am asking to include with my remarks the following resolution, passed on December 31, 1939, by Local 44 of the United Rubber Workers of America, located in my own congressional district, and the following news release issued by the executive board of Local 112 (Los Angeles) of the United Shoe Workers, on December 22, 1939:

#### RESOLUTION OF LOCAL NO. 44 (LOS ANGELES) OF UNITED RUBBER WORKERS OF AMERICA

We, United Rubber Workers of America, Local 44, believe that it has become imperative to redefine the fundamental purposes and objectives of a bona fide union, and the conduct of the business of such an organization, and we hereby state our position as follows:

##### 1. We hold:

(a) That the purpose of a union is primarily to protect and benefit its members with reference to hours, wages, and working conditions;

(b) That, secondarily, the union's interest is the hours, wages, and working conditions generally of members of other unions and of the working class;

(c) That the education of workers can be carried on in unions for the above purposes.

##### 2. We strenuously object to, and disapprove of:

(a) The attempted control, and in some cases the actual control, of unions by the fraction system operating surreptitiously and secretly within the ranks of the unions, and existing for the purpose of seeing to it that the union follows the "party line" laid down by the Communist Party or any other political group;

(b) To attempts and in some cases the accomplished fact of diverting a union from its elemental purposes, to suit the needs or purposes of foreign-controlled political bodies, such as the Communist Party, in carrying out the policy or program laid down primarily to further the interests of a foreign power.

3. Sorry and sympathetic though we may be, for example, for the children of China and the refugees from Loyalist Spain, we object to the diversion of the energies and moneys of trade unions for such causes, or any cause promoted for the purpose of allowing the Communist Party to further its claim of being the champion of the masses.

4. Finally, we believe in truly democratic rank-and-file control of the union, the free and open discussion of union problems at union meetings, and the exposé and termination of semiconspiratorial methods foisted upon unions through the activities of "Communist Party members" and of "innocents," i. e., persons who are unaware of the fact that they are being used for such ulterior purposes.

UNITED RUBBER WORKERS OF AMERICA, LOCAL 44,

By ROBERT E. HARRIS,

Recording Secretary, Los Angeles, Calif.

Date adopted: December 1, 1939.

#### UNITED SHOE WORKERS OF AMERICA (C. I. O.), LOCAL 122, Los Angeles, Calif., December 22, 1939.

The executive board of Local 122, United Shoe Workers of America, C. I. O. affiliate, in regular session Wednesday, December 20, 1939, at 524 South Spring Street, Los Angeles, adopted a statement on the policies and aims of the union to be made public:

In view of the present conditions in the labor movement where so many agencies speak for labor, and in our opinion they create confusion in the ranks of labor and distrust in the eyes of the public at large.

Within the past few years organized labor has had to contend with organized pressure groups working from within which sought to divert unionism from its basic task. Worst of all, infiltration of such groups represented not only a philosophy totally at variance with that of the labor unions, but also was serving as the direct mouthpiece and agency of foreign governments.

The Communist, Nazi, and Fascist elements in the guise of wanting to offer to American labor a more militant program were in actuality helping to sow the seeds of discord and dissension. They were advocating a program of communism, nazism, and fascism which would destroy the rights of free speech, free press, and free assembly. And these rights, as every American unionist should know, are the very foundation stones upon which labor unionism is founded. It is because we know that labor unions can only thrive under a democratic form of government that we openly reject and denounce those who advocate any and every form of dictatorship. Communism, as vicious as Nazi and Fascist dictatorships.

Labor unions of necessity must be open to every worker engaged in the trade or industry which the union has set out to organize. Labor unions of necessity are economic organizations, dedicated to the task of winning job security, better wages, hours, and conditions of work for the men and women they represent. When a union wanders far afield from these basic tasks, its aims become confused; its activities too diffused, resulting in a weakened organization.

American labor in general, and Local 122 of the United Shoe Workers in particular, want none of Communist, Nazi, or Fascist program or procedure. And we warn all within and without our ranks who try to use our union for such purposes that we shall take appropriate actions against them.

LOCAL 122, UNITED SHOE WORKERS OF AMERICA,

ROY FIFER, President.

EMMA VOLL, Recording Secretary.

WILLIAM SELIGMAN, Secretary-Organizer.

MICHAEL W. PADGETT, International Representative.

LAW LIBRARY  
FEDERAL BUREAU OF INVESTIGATION

## A Glance at Our Neutrality Today

## EXTENSION OF REMARKS

OF

HON. JOHN C. KUNKEL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 4, 1940

Mr. KUNKEL. Mr. Speaker, the present neutrality law has been in effect about 2 months. So far it has worked admirably and to the satisfaction of all concerned. Repeal of the arms embargo has caused none of the diplomatic and military disturbances which those of us, who opposed repeal, feared that it might. If the credit provisions are carefully enforced without any attempt to evade the intent of the law, there is no reason why this country should become financially involved. Financial involvement has always been the dangerous step which carried us into war. There is no question that the "carry" provisions, which were part of our neutrality legislation in one form or another since 1935, have been as beneficial as those of us who urged their adoption contended. To date no sinkings of American ships, no loss of American life, no dangerous incidents of that nature, have occurred. The effectiveness of the German submarine and mine naval warfare has been demonstrated most conclusively during this period. Had our ships not been barred from danger zones, it is most likely that some dangerous incidents would have occurred. Such incidents would have surely been reflected in American public opinion. As it is, the average citizen of our United States is beginning to become habituated to the war. This does not mean that he does not abhor it and desire above all things to have it ended in such a way as to secure freedom and liberty for as many as possible. Rather it means that he accepts it as an ugly fact, as other evils are accepted as ugly facts. He tries to cure or mitigate them. Yet he must admit their existence. He accepts the war as an ugly fact but one which is not inconsistent with, or incompatible with, peace in this country during the duration of the war. Less space is given to the war by the daily papers. Only when some startling event, such as the *Graf Spee*, occurs do we see big headlines and a front page crammed with war bulletins. There is every reason to feel hopeful and confident that our citizens, with their customary good sense, will meet the situation and take it in stride.

An important reason for the developments noted is the changed attitude of our executive department. For the past few months Mr. Roosevelt and the members of his Cabinet have abandoned the threatening internationalist attitude which had characterized their statements during the preceding 18 months. Even Mr. Ickes has kept reasonably quiet on these subjects. Now the executive department apparently is confining itself to the business at hand, which is to keep this country out of war. There is little question that this changed attitude has been caused by popular sentiment as evidenced by the large vote cast in the House of Representatives against repeal of the embargo. I feel certain that the votes of the Congressmen who voted against repeal have been of great help in keeping this country out of war.

What has been the effect of our neutrality legislation on the belligerent European nations? All of them are satisfied. England and France wanted this legislation so that they could buy war supplies here. So far they have bought little save airplanes. No doubt the airplanes which they received have been very vital to the war strategy. Germany has made no protest. At the time the bill was under debate, most well informed international lawyers thought she could and would. The reason undoubtedly is that Hitler feels he is receiving at least as much benefit from the law as are the Allies. To date, this is undoubtedly true. Indeed, Germany and Hitler have undoubtedly benefited more from it than have the Allies. Removal of American ships and shipping from the danger zones around France and England have to some

extent curtailed British and French imports. It has put a further strain on Allied shipping. It left Hitler free to start his mine warfare without fear of injuring vessels of the United States with the consequent danger of bringing the United States into the war against him. It has also tended to prevent the Allies from getting credit in this country; and thus also building up a further possible cause for our entry into the war. As time goes on, our munitions will no doubt be taken by the Allies in greater quantity and will be of greater value to them. But since Hitler has not protested up to this time, he has certainly lost any valid claim to protest in the future.

The Finnish situation has not developed extensively in respect to our country. Suffice it to say that everywhere in America there exists an overwhelming sympathy for the Finns. There is little question that our Government will go as far as possible to help them. Until an actual declaration of war is made, this will be very far indeed. The President is under no duty to invoke the neutrality law unless, broadly speaking, he finds that it is to the interest of this country to do so. Neither is Congress. It is very unlikely that either the President or Congress will invoke the law to the detriment of Finland.

The Finnish Government can also borrow from America. In fact it has done so. The Johnson Act, which prohibits loans to foreign nations which are in default on their obligations to this country, does not apply to Finland because Finland has met all its obligations both to American citizens and to the United States.

We must carefully guard against letting either our sympathy for Finland or our natural antagonism toward communism and toward the uncalled-for aggression of Soviet Russia involve us in any active participation in the war between those two nations.

Just what is our present neutrality policy? It is a new departure in the history of American foreign policy. For generations up until 1935 American foreign policy sought to maintain and extend the trade rights of neutrals and the rights of the citizens of a neutral country. Our insistence on these rights was a major influence in shaping the present rules of international law. This policy involved us in wars. It is impossible as a matter of cold hard fact for a great nation to remain a great nation if it asserts rights and then does not enforce them. If a belligerent consistently violates rights which a great nation insists upon over a period of time, that nation is forced either to surrender those rights or go to war. In the past under such circumstances the United States went to war. The knowledge that if such a dilemma confronted us we would in all probability again go to war prompted the neutrality legislation.

The preamble of the present law states that the United States "waives none of its rights or privileges, or those of any of its nationals, under international law" and expressly reserves such rights. The President and Secretary Hull have insisted upon this feature in many of their official statements. The law then proceeds to make it illegal for our citizens to exercise certain of those rights, particularly rights as to trade and trading and travel. Briefly, the gist of the law is that our Government takes steps in advance to guard the country against getting into a situation which would force the country either to retreat with loss of national honor or else go to war. It also takes into account that such incidents, which invariably include loss of life and property, react on public sentiment so as to create a belligerent feeling which may cause us to go to war. "Take no chance of a national dilemma or of an outburst of popular war sentiment" sums up our basic policy as shown by the neutrality law.

In view of the purpose of the neutrality legislation, it is hard to understand the action of the State Department in adhering to the Panama Conference. The delegates to this conference stated that the neutral American republics "are as of inherent right entitled to have those waters adjacent to the American continent \* \* \* free from the commission of any hostile act by any non-American belligerent nation." They then laid out an area of ocean surrounding

the entire North and South American continents south of the Canadian border and extending from 300 to 600 miles out to sea. They then declared that in this entire area—about 55,000,000 square miles, I believe—no hostile act should be committed. They also decided to establish a patrol if that became necessary. The foremost advocate of this united declaration by the conference was Sumner Welles, Assistant Secretary of State, who represented and acted for the United States.

This was a very peculiar step to take. The policy of the neutrality law had in effect yielded up some of our most important rights under international law in order to avoid provocative incidents. Yet here the United States claims a right which does not exist in any neutral or body of neutrals under international law. Furthermore, it was a right which sound judgment indicated belligerents could not and would not accept. It was a right which was bound to cause provocative incidents which we would be forced to resent or else overlook with a consequent loss of national honor and national prestige. It was absolutely at variance with our neutrality law and our neutrality policy. It was absolutely opposed to international law, which the administration had up until then urged as the proper course to follow and as a main reason for repealing the arms embargo. Territorial waters were defined by international law as being 3 miles from shore, in the absence of special agreement. The declaration ignored the fact that British islands (some of which contain British naval bases) were scattered throughout parts of this area. It also ignored the fact that the United States had formally given our adherence to the 3-mile limit under the treaty with Great Britain in which Great Britain had agreed to permit the search of rum runners at a distance of 1 hour's steaming from the coast. While the present administration has never hesitated to violate promises as to domestic policy made to the American people, it does seem unfortunate to have the administration act in violation of a solemn treaty obligation to a friendly nation. This is particularly true when nothing but trouble and argument can result from this treaty violation. Why should Roosevelt adopt the methods of Hitler? He says he doesn't like Hitler or his methods, yet imitation is the sincerest flattery.

On the practical side nearly the entire burden of enforcement must necessarily fall on the United States. None of the other signers—20 American republics—have any navies capable of attempting such a task. Their combined navies would be entirely inadequate. Some of the United States Navy men feel that the United States Navy itself could not adequately perform this duty. In any event such patrol duty would render less efficient, if not useless, our Navy's activities in many of its normal and more important spheres of action. Obviously, action by the United States against belligerent warships would be provocative and dangerous, both as to foreign relations and as to domestic sentiment. It is difficult to see how a battle in this area between belligerent vessels, not involving our Navy, could be either provocative or dangerous in these respects. Indeed, the greatest naval battle to date has been fought in this area with no such effects whatever, except those created by this declaration of Panama itself.

No one doubts the fact that it would be highly desirable for the United States and its sister American republics to have the belligerents observe this new territorial-waters limit. It just is not possible or practical for it to be observed. No serious results would obtain from war actions in those waters if this policy had never been announced. Since it has been made a part of our national policy, we face through our own Executive's action the dilemma which our neutrality legislation and present neutrality policy has sought to avoid: We must either enforce our claim with consequent danger of war, or we must yield it up with consequent loss of national prestige plus the evil of violating our agreement with 20 South American republics, thereby endangering our friendly relations with them and our whole "good neighbor" policy. The danger to Latin-American relations is particularly great in view of the fact that the United States was the original promoter of the policy. Latin America there-

fore naturally looks to the United States to carry out the obligations implied in its undertaking.

Let me close with a short summary. The danger of American involvement in the European war has lessened since the passage of the Neutrality Act and is continuing to grow smaller. Public sentiment is more and more coming to the conclusion that we need not be involved. Our legislative policy is succeeding in eliminating the risk of an aroused sentiment at home and the risk of a critical international situation involving national prestige. However, by its action in setting a 300-600 mile territorial-waters limit and by insisting on this claim, hitherto nonexistent under international law, the executive department has created the very situation, insofar as national prestige is concerned, that our neutrality policy has been designed to prevent. In doing so, it has clearly gone against the wishes of the great majority of American citizens, who wish to take every reasonable precaution to avoid war. Citizens of our Republic have limited their profitable rights to trade, ships, and travel as permitted by international law. Most emphatically, they do not now wish to assert new claims which can bring no profit but only trouble and grief.

### Problems of Congress

#### EXTENSION OF REMARKS

OF

HON. SAMUEL DICKSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 4, 1940

RADIO ADDRESS BY HON. SAMUEL DICKSTEIN, OF NEW YORK

Mr. DICKSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me over the radio on December 20, 1939:

The forthcoming session of Congress will be confronted with many problems, which will require thorough study and constructive work of its Members in order to bring about happiness to the American people and a real improvement of conditions throughout the Nation.

Foremost among all is the legislation which will have to follow the broad lines of activity as indicated by the laws enacted in the last few years, particularly the Social Security Act and the National Labor Relations Board Act, which will require conscientious study and some far-reaching amendments. But this time the Nation is fully aware of the fact that we can no longer ignore social problems and leave them to the States to deal with as they please.

Ever since President Roosevelt became responsible for the first congressional enactments, giving this Nation the basis for old-age pension, unemployment insurance, a regulation of wages and hours, and all that social legislation which is the envy of the whole world, it becomes increasingly important for Congress to devote more and more of its time to the perfection of these laws. Eventually the time will come when the condition of affairs which was described by our President as being a condition where one-third of the Nation is ill housed, ill fed, and ill clothed will have disappeared and our Nation will be on the whole the most prosperous on God's earth.

It was the genius of American institutions which gave this country a fine democratic Constitution and a mode of living, making us the model Nation of the world. We developed democracy, developed the right of the citizen to freely utter his thoughts, and gave every one of our citizens, be he ever so humble, the right of free worship, free speech, and a free press.

But, hand in hand with these constitutional guaranties, it is necessary that the life of the average man become, as the President so beautifully put it, more abundant, and to bring about this more abundant life it is further necessary that from time to time Congress pass legislation which will make it possible for a citizen to be really and truly protected by being allowed to work unhampered and having freedom in his daily vocation as well as security in times of need. I do not believe that we will ever go back to the ways of the United States before 1933, when the Federal Government paid no attention to the social life of our citizens and left all social obligations to the States. State lines have been very much obliterated in the lives of our people, and all problems which affect the welfare of the people of the United States are necessarily dealt with on a national basis and not on a State-wide basis. The tendency is toward more and more Federal legislation affecting the ordinary lives of our citizens. Members of Congress will not be able to close their eyes to their duty in this respect and will have

to devote a great deal of their labors to strengthening and perfecting the existing social legislation.

Hand in hand with Federal legislation comes State legislation, which still requires congressional action, because the Federal Government has embarked on the policy of giving grants to those States which will enact social legislation within their borders. It is, therefore, necessary for Members of Congress to familiarize themselves with the particular requirements of each State, and how each State would within its own borders pass laws relating to the health, safety, and well-being of its workers. This makes the task of the average Member of Congress much more formidable than was the case in years gone by. Today a Member of Congress must be particularly well informed on trends of social legislation throughout the length and breadth of the United States, and it is impossible to thoroughly legislate for the Nation unless we do become familiar with the State legislation as it affects the individual welfare of our citizens.

Nor is legislation relating to unemployment or social security the only measure of social legislation, which will engage the attention of the lawmakers during the forthcoming session. It is necessary to take care of housing and appropriate legislation will have to be enacted to enlarge the field of government aid to lending money for further building construction, doing away with slums in our large cities, and the municipalities will have to cooperate with the Federal Government by way of condemning or acquiring by private purchase areas suitable for development and modern housing. In the city of New York, for instance, it will be necessary to rebuild a very large portion of the city, since the old-time construction in the old sections of this community is absolutely inadequate to the needs of the common people and absolutely unfit for human habitation. A beginning was made in this direction, and I hope that Congress will see its way clear to enlarge the scope of Federal housing so that eventually, every man, woman, and child in this country will be able to live decently at a proper rental in homes erected in accordance with modern ideas and having all modern improvements for the benefit of the people.

In the field of labor relations, it may be necessary to provide proper legislation for the enforcement of the wage and hour law, and I hope Congress will be able to enact proper legislation to have these agencies of Government function for the benefit of the workers in all industries, stabilizing conditions for both employer and employee, and making it possible that all men and women should work only a reasonable number of hours and be paid for it in a decent manner so as to be able to partake in the life of the community as satisfied and contented citizens.

We still have a large amount of unemployment which will have to be wiped out before we can really consider conditions as satisfactory. We cannot allow our men to be idle, and mere employment of these men by Government agencies is not a solution of the unemployment problem. Business will have to proceed and progress, and will have to invest sufficient moneys to enable all those who are able to work, so that all those who wish to find positions for themselves will be able to do so. Capital will find a proper channel for investment and will feel that by starting the wheels of industry going that conditions will improve for the benefit of both the employer and employee.

I fervently pray that Congress will do something constructive for the benefit of the unemployed men and women, for nothing destroys a man's spirit more, nothing is as inimical to human happiness as the inability to be engaged in useful employment.

Hand in hand with the increase of employment and reduction of unemployment must come our national defense. Conditions in Europe and throughout the world make it necessary for us to guard the precious heritage of American liberty by proper military measures. We cannot allow aggressors to find us an easy prey, and we cannot be lulled to a false sense of security simply because we are 3,000 miles away from Europe, or 6,000 miles away from Asia. We must strengthen our military and naval forces; we must make the American Army capable of defending us in the event of invasion, and we want to have our Navy second to none, so that out of our sea power we may prevent any enemy from getting anywhere near our shores to cause us trouble.

I am sure that Congress is aware of its responsibilities in this direction, and will do everything in its power to leave this country in a strong position to face any aggressor who may dare to attack us and to protect our men, women, and children from any foreign foe.

But, along with our foreign enemies, we must not forget to protect ourselves from our enemy from within. We must not allow foreign ideologies to gain a foothold in these United States, and by the artificial use of propaganda to convert our democracy into a totalitarian "paradise." The example of Hitler and Stalin is always before us, and we must not allow any agitator to become so powerful as to drive out our own American constitutional doctrines in favor of a Fascist or Communist world. It was with this view in mind that Congress, some years ago, passed a resolution at my request, creating a committee to investigate un-American activities. And it was with this view in mind that Congress, again at my request, did the same thing when it created the present Committee on Un-American Activities. The present committee has done its work, sometimes to the satisfaction of the public, and often to the dissatisfaction of all who had occasion to examine its work. Undoubtedly at the new session of Congress this committee will come forth with a new request for appropriations and for the continuance of its own life. I think Congress will have to scrutinize very carefully the work of the committee and its accomplishments before it will vote any further funds for its inquiry.

The immigration law will likewise have to be amended with the view of protecting America from the infiltration of foreign "isms." Only persons who have a legitimate interest in coming to this country and making it their own home shall have the right to emigrate to the United States. Any person advocating totalitarianism, whether Fascist or Communist, should be barred from these shores, and every alien who believes in these doctrines should be promptly deported. We shall, however, have to clean house with reference to the illegal entrants who have been in this country for many years, and who now in most cases, cannot even be deported back. All those aliens who are here illegally, but who have demonstrated an attachment to our institutions and their ability to make a living should be allowed to remain here under proper safeguards and all other aliens should be deported. Congress will have to investigate, particularly, the "back door" of our immigration whereby aliens are allowed to enter by way of Canada and Mexico, even though the front door of immigration is tightly shut by way of steamers from Europe by our present immigration laws.

In this way, by cleaning house and ridding America of its undesirable aliens, we shall be able to draw unto us all those who are of our views and who believe in this country, believe in its institutions, and believe in the sacredness of our democracy. All others will have to go.

## Crime: Its Causes and Cures

### EXTENSION OF REMARKS

OF

### HON. ESTES KEFAUVER

OF TENNESSEE

### IN THE HOUSE OF REPRESENTATIVES

Thursday, January 4, 1940

ADDRESS BY PROF. J. POPE DYER

Mr. KEFAUVER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Prof. J. Pope Dyer, Central High School, Chattanooga, Tenn., delivered before the Lions' Club, Chattanooga, Tenn., November 3, 1939:

Mr. President, members of the Lions' Club, and friends, I assure you in the outset that it is a genuine pleasure and a distinct honor to appear before you today and speak briefly on the assigned subject, Crime: Its Causes and Cures. The kind introductory remarks of your chairman about my speaking ability remind me of a story that I recently heard.

A group of people in a community went to an old maid and said, "We understand that you are to be married soon." The old maid replied, "No; there's not a word of truth in it; but thank God for the rumor."

#### INTRODUCTION

Crime is not a new problem that has been suddenly thrown upon society for solution. In fact, the most heinous criminals that ever lived, according to certain historians, were the notorious Harps brothers, of what is now Knox County, Tenn. They killed wherever it was practical every man, woman, and child that they met. There was probably the greatest organized band of cutthroats and ruffians on the Natchez Trace, operating between Nashville, Tenn., and Natchez, Miss., from 1800 to 1830, that any era of our history ever knew. So you can clearly see that crime has been a tremendously significant problem with us since the beginning of our State.

Today the crime problem is with us in what appears to be an increasing degree. There are over 1,500,000 felonies being perpetrated each year, of which about 12,000 are murder, 800,000 are larcenies, and 300,000 are robberies. Crime is costing, according to experts, each one of you about \$120 a year, and, conservatively, it is costing the United States about fifteen billions annually.

A very high percentage of our criminals, about 20, are under voting age. The attitude of many of these youthful offenders was expressed a few years ago by "Two Gun" Crowley, a ruthless young killer of New York. One night he was parked in one of the parks of New York City. A policeman came up and asked to see his license. Crowley pulled his gun and killed the officer. Later his apartment was surrounded by a number of New York policemen and while they were trying to capture him in a gun battle, he wrote "In my bosom there is a heart that would do no man any harm." He was captured, tried, and sent to Sing Sing to be executed. Shortly before his execution he wrote, "This is what I get for defending myself." Frequently the young person does not realize the seriousness of his offense nor does he think of the consequences of a major infraction of the law.

#### CHARACTERISTICS OF CRIMINALS

The average citizen often asks about the characteristics of the ordinary criminal. What are some of them?

In the first place, he is about the same physically as the average person. Years ago I read where a famous writer had said that the most notorious criminals were small physically. He cited as typical examples "Doc" Barker, Clyde Barrow, and others to substantiate his assertion. I personally investigated the physical side of thou-

sands of prisoners and there seems to be no appreciable difference in the physical size of prisoners and citizens outside the walls.

Secondly, the average prisoner is lower educationally than the average citizen. We have never executed a high-school graduate in Tennessee. The average educational status of prisoners is several grades lower than the average citizen outside. There are more illiterates proportionately in prison than outside. In fact, the lack of education may be one of the major contributing causes of crime. The "big shot" criminals were poorly educated. Here are a few examples: John Dillinger, eighth grade; "Pretty Boy" Floyd, eighth grade; Clyde Barrow, sixth grade; Frank Nash, eighth grade; Alvin Karpis, eighth grade; "Doc" Barker, sixth grade; "Two Gun" Crowley, third grade.

Thirdly, the average criminal has had little moral training. A recent Governor of our State interviewed 13 men who were soon to be executed. He found three features characteristic of them all. At the time the crime was committed they were all intoxicated, in bad company, and had had little moral or religious instruction.

#### CAUSES

I regret that I do not have time to develop fully the causes of crime that I shall mention.

I feel that the lack of proper home training is the chief cause of crime. This is a busy age, and parents in their eagerness to participate in a multiplicity of civic, social, educational, and religious activities may overlook the chief function of parenthood, and that is to rear clean, honest, God-fearing children.

This theory of crime prevention has many ardent supporters. Hon. J. Edgar Hoover and Father Flanagan, of Boys' Town, Nebr., are two of the best known.

Another chief cause of crime is the economic side. Frequently, poverty drives the weak in the wrong direction. A noted criminologist recently said that the average criminal is "underfed, underclothed, undereducated, and under-understood by parents, teachers, and society."

A kidnaper, whom I recently interviewed in a prison, told me that he perpetrated the crime because he saw other boys with cars, money, and good clothes, and he felt that was the easiest way to get them for himself.

#### CURES

Such distinguished men as Lewis E. Lawes, Sheldon Glueck, L. F. Chapman, Sanford Bates, and J. Edgar Hoover have been trying to solve the crime problem for many years and have done a grand job of trying to cure this social cancer. However, may I suggest one or two means whereby it can be reduced, not completely cured?

I would like to reiterate that more crime-prevention work must be done in the home. The time to reduce crime is in the high chair, not the "hot" chair.

The Civilian Conservation Corps has done a fine piece of constructive work in keeping the wandering boy off the roads and streets. "The road grants no diploma and gives no degree, but it educates with fatal precision," and, I hasten to add, practically always for bad.

The constructive agencies of each community must pool their efforts rather than work in an independent manner. Cooperation and coordination of effort should characterize every club and agency.

The first offender must be kept out of prison as long as it is possible. Entirely too many persons are being sent to prison for minor offenses. While I do not condone stealing, I do not feel that it is worth wrecking a human life by sending a person to prison because he has stolen some small article. Probation should be used more frequently. The average person who goes to prison is never again adjusted to society. Eighty-five percent return to prison for another sentence.

We do not need more strict punishment. We need swifter punishment. Blackstone listed about 200 offenses for which a person might be executed, and yet the severity of punishment did not eliminate crime.

I realize that the crime problem cannot be solved. It can be reduced. Herein lies our challenge.

### Pollution in Fishing Streams

#### EXTENSION OF REMARKS

OF

HON. WILLIAM E. HESS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 4, 1940

EDITORIAL FROM THE CINCINNATI POST

Mr. HESS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Cincinnati Post of December 25, 1939:

#### THE COOPERATIVE WAY

The Ohio Division of Conservation is proposing to appropriate funds to begin, in conjunction with the State health department, a program designed to end pollution in fishing streams.

In this connection, Dr. R. H. Markwith, health department director, makes the timely suggestion that funds be allotted for study, perhaps at Ohio State University, of the most practicable and economical methods of treating industrial wastes.

"I believe industry is interested in correcting stream pollution," Dr. Markwith says. "But industrialists do not want to spend thousands of dollars on a hit-and-miss type of program. If we can show them a definite means of eliminating pollution, I believe they will be anxious to cooperate."

It is debatable, of course, whether this study of means of eliminating industrial pollution should be made on a State instead of a National basis, but the idea of voluntary cooperative action between governments and industry to end pollution appears to us to be the right way to approach this grave problem.

This is the spirit prompting such legislation as the Barkley-Spence bill. This is the spirit motivating the Ohio Valley States in their virtually completed compact for mutual action, with Federal help, for cleaning up the Ohio River and its tributaries.

The opponents of the Barkley-Spence type of legislation propose drastic mandatory action immediately against cities and industries.

We submit there is time enough for that if and when city governments and industries refuse to do their part voluntarily to end this serious health menace.

William I. Sirovich

#### EXTENSION OF REMARKS

OF

HON. SAMUEL DICKSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 4, 1940

REMARKS BY WALTER D. FISHER AND LETTER AND RESOLUTION BY THE PACIFIC COAST MARINE FIREMEN, OILERS, AND WATER TENDERS AND WIPERS' ASSOCIATION

Mr. DICKSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following brief remarks together with a letter and resolution of the Marine Firemen, Oilers, and Water Tenders and Wipers' Association in connection with the death of Dr. SIROVICH:

Seamen present were J. Follette, Leonard Harrison, John Boyles, Alfred Chavez, members of the Pacific Coast Marine Firemen, Oilers, Water Tenders and Wipers' Association, and Walter D. Fisher, former legislative representative for the West Coast Maritime Union, now a regular seaman, who read the following presentation:

Congressman DICKSTEIN, we are here for one purpose, and that is to honor the memory of the late Congressman WILLIAM I. SIROVICH.

We, as seamen, realize that Congressman SIROVICH was very instrumental in trying to better our conditions, and for some of the special legislation which he sponsored we are very grateful.

I think his most outstanding accomplishment was the legislation relating to unemployment compensation for seamen. We have never had it, and Congressman SIROVICH went so far as to introduce a bill and call it the Sirovich bill. He planned at the next session of Congress to champion this bill and get it through for us. We all know that Congressman SIROVICH had no seamen in his district, and in his loss we mourn the loss of a true friend and champion.

These seamen here with me are the rank-and-file men on the Pacific coast, and we wish to state that Congressman SIROVICH's work has even reached the seamen on the Pacific coast, who have benefited also.

I have here a letter which I would like to read and a resolution which I would ask you to kindly introduce into the CONGRESSIONAL RECORD.

PACIFIC COAST MARINE FIREMEN, OILERS, WATER TENDERS AND WIPERS' ASSOCIATION, San Francisco, Calif., December 19, 1939.

HON. SAMUEL DICKSTEIN, 70 Pine Street, New York, N. Y.

DEAR SIR: Attached herewith you will find copy of resolution memorializing the late Dr. WILLIAM I. SIROVICH, Member of Congress.

We hope that you will find the opportunity to read it into the CONGRESSIONAL RECORD as some expression of appreciation of this union of the lifelong sympathy of Dr. SIROVICH with the aspirations of organized labor.

The undersigned wishes also at the same time to convey to you my personal sense of loss. In my contacts with Dr. SIROVICH I have always found him to be warm, sympathetic, and understanding. He was a devoted public servant.

The attached resolution is brought to you by three rank-and-file members of the union who have been selected as a committee to convey this memorial to you, inasmuch as you have always been so closely associated with him in his work.

Sincerely yours,

WM. L. WELCH,  
Agent, New York Branch.

Whereas the late Honorable Dr. WILLIAM I. SIROVICH met his untimely death on December 17, 1939, it now becomes the sad duty of this organization to give expression to our sorrow and to pay a just tribute to his memory.

Dr. SIROVICH served not only the entire Nation and all of his fellow citizens, regardless of race, class, or creed, but rendered an unusually important service to the cause of organized labor.

The late Dr. SIROVICH has labored devotedly for many years in behalf of the American seamen. His efforts have contributed to an unusually important extent in the amelioration of working conditions and the improvement of the health and social position of our brothers who pursue the sea as a calling.

His training as a physician and his profound insight into public affairs and social problems combined to equip him in outstanding manner to perform his duties in the National Legislature. He was an outstanding figure in Congress.

He was warmly sympathetic and understanding with the problems of labor. He was readily accessible at all times and labored incessantly at tasks of great public importance.

With the greatest of regret we have noted that he passed away in the midst of his labors and that he was prevented by his untimely end from bringing to a successful conclusion cherished plans for further betterment of the lot of the American seamen. The loss of such an able and distinguished friend cannot be easily replaced: Therefore be it

*Resolved*, That we, the members of the Pacific Coast Marine Firemen, Oilers, Water Tenders and Wipers' Association, do declare that by the untimely passing of this eminent physician and legislator the citizens of this Nation have lost a faithful, distinguished, and able servant of outstanding integrity; and be it further

*Resolved*, That the secretary transmit a copy of this resolution to the members of the family of the deceased as an expression of the deep and heartfelt sympathy of the members of this organization; and be it further

*Resolved*, That a copy of this resolution be submitted to the friend and associate of the deceased, the Honorable SAMUEL DICKSTEIN, with a request that the same be spread upon the records of Congress as a tribute of respect of this organization to the memory of Dr. WILLIAM I. SIROVICH.

## A Plea for the Great Plains Forestry

### EXTENSION OF REMARKS

OF

HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 4, 1940

#### REPORT BY THE GREAT PLAINS FORESTRY COMMITTEE

Mr. STEFAN. Mr. Speaker, I have once more returned to Washington after visiting practically all of the 22 counties of the Third Congressional District of Nebraska, the district which I have the honor to represent. During this visit I again had the opportunity to inspect the trees planted by the Forestry Service under the direction of Mr. Paul Roberts. I found that more than 70 percent of the trees planted have shown wonderful growth. I also found that the farmers are enthusiastic over the farm forestry program and everyone with whom I talked regarding this program are anxious that we continue the work. Already the trees which have been planted are doing a great deal of good, and eventually will result in tremendous advantage to the land on which they are planted. I take this early opportunity to urge the membership of this House to give encouragement to this tree-planting program.

On December 19, 1939, the Great Plains Forestry Committee appeared before the Joint Congressional Committee on Forestry at Madison, Wis. This committee included Dr. G. E. Condra, director of conservation and survey division, University of Nebraska; W. H. Brokaw, agricultural extension, University of Nebraska; and M. B. Jenkins, Sr., in charge of forest research and survey conservation and survey division, University of Nebraska. This committee

made a very illuminating report and a sound argument for the continuation of the tree planting in the Great Plains. I include this statement in my remarks in order that my colleagues may be better informed as to what is really being done in the way of successful tree planting in the Great Plains:

Much has been said and written of late years both for and against the attempt to grow trees in the area now known as the Great Plains. No doubt much damage has been done the cause of tree planting on the Plains by extravagant statements of enthusiasts on the one hand, and critical statements displaying gross ignorance or open disregard for fact on the other. But be all this as it may, the fact still remains that some trees have been growing naturally in most parts of the region for centuries, and if heed is given to species adaptability they may be successfully grown in difficult sites by man when care and protection are given them. As an example we need only point to the 15,000 acres of conifer forest which have been planted near Halsey in the sand hills of Nebraska. Generally, trees may be safely planted where cultivated crops are grown if given equal care and protection. These factors were understood and pointed out by such early United States foresters as Dr. B. F. Fernow and N. H. Eggleston, who advocated the planting of crop windbreaks on the Plains as early as 1890. Dr. Fernow gave emphasis to the fact that in a sense "the forest creates the conditions of its own existence," and stressed the point that if crop agriculture is to be made successful in most areas of the region tree belts should be established for field protection against wind damage and rapid soil moisture evaporation.

The Great Plains region, extending from about the ninety-seventh meridian to the foothills of the Rocky Mountains, and 1,200 miles from central Texas to Canada, embraces nearly one-fifth of the area of the United States, exclusive of Alaska. Inhabited by nearly nine million people, the source of almost half of the agricultural food products consumed by the American people, and one of the great markets for manufactured goods, it is an essential economic unit whose fortunes bear strongly on the stability of the Nation's industrial areas.

The predominantly flat surface of the Plains rises gently but steadily from east to west, and inversely precipitation tapers off from amounts well above the minimum needed for tree growth to less than 14 inches a year at various places on the western tablelands. Climate ranges from subtropical with long growing seasons in the south to rigorous with long winters in North Dakota. The great variety of soils, ranging from very tight to sandy, are distributed throughout the region in crazy-quilt fashion. Nature had originally established grasses to trap winter snows, retard run-off, and combat the effects of the high summer temperatures, low humidity, strong winds, and rapid evaporation of soil moisture which is the rule in the region.

High winds and severe storms are the basic causes of the ills that afflict agriculture on the Plains, and which the recent drought period has only accentuated. When the sods were first turned over, the soil was extremely rich in organic matter so that precipitation percolated readily through the upper layer to be stored in the subsoil, and for the first few decades crops, trees, and other vegetation suffered much less severely from droughty periods than they do now. Winds and storms, however, have progressively removed organic matter and as a consequence water run-off and evaporation of soil moisture have increased proportionately; with the result that the soil is drier and more easily affected by wind than formerly, and hot winds fire crops more frequently.

Wind desiccation and destruction of the soil is still progressing, and ominous warnings already have been served that in many areas successful agriculture cannot be continued unless remedial steps are taken. Scattered over the Plains are many areas of sandy soil, once fairly rich in organic matter, whose loose texture enables ready absorption of moisture with little evaporation, and therefore at first there was slight fluctuation in crops from year to year. Such soils, however, suffer severely after only a few years' exposure to the winds, which remove the humus and leave the coarse abrasive particles as material for destruction of nearby fertile fields and sandblasting of young crops. Sandblasting presents a particularly vexing problem on well-watered lands as well as on dry areas. On the western high plains, where soils are generally fine in texture, severe damage has resulted from soil drifting, as in the Dust Bowl, exposure even of bedrock at other places, and general dissipation of the soil humus. All exposed land has suffered, the degree of damage varying somewhat with the texture of the soil. Lands generally have been so universally tilled or overgrazed that natural wildlife cover has about disappeared, causing depletion of insectivorous and game birds almost to extinction in numerous districts, with consequent increasing occurrence of grasshopper and other insect scourges.

Regardless of favorable crop conditions, a barren land is not attractive to man, and it has been learned on the Plains that where winds blow unchecked, homes are less comfortable, feeding of livestock requires greater quantities of grain and roughage, and good gardens, orchards, and small fruits, upon which a live-at-home policy depends, cannot be grown successfully.

During the early settlement of the Plains, tree planting reached the largest proportions ever known anywhere, and under the leadership of eminent early agriculturists, such as Gov. Robert W. Furness

and J. Sterling Morton, of Nebraska, who, visualizing what might happen if the soils remained continuously exposed to the winds, recommended the planting of great shelterbelts across the Plains to conserve soil and soil moisture and reduce damage to crops resulting from direct blasts of the winds. Stimulated by the Timber Claim Act and State bounties, these plantings reached their peak in the 1880's. However, most of them were made for wood lots and farmstead protection rather than to aid agricultural crops. Because of mistakes in selecting species and sites and lack of an understanding by the farmers of the fundamentals of forestry, many of those plantings failed, only a few comparatively persisting down to the present time. It is in the lee of these remaining plantings, where farmers have raised fair crops during our worst drought years, that we find the examples which demonstrate that forestry is an essential agricultural practice on the Plains.

Much of the native timber and many of the planted groves have failed because of excessive grazing which was not understood by farmers to be harmful until it was too late. Recent surveys have shown, also, that tree losses during the late drought have been less than half as heavy where the timberlands were not overgrazed. The theory of unlimited timber resource was formerly prevalent in the Nation, and farmers generally did not understand the principles of sustained yield and selective cutting, with the result that many native woodlands have been seriously depleted by unscrupulous use of the ax. Neither did they comprehend the value of timber as a perpetual farm income resource, and worthy of continuous care and protection. Many of the planted groves, windbreaks, and hedge rows were removed because they were thought harmful to neighboring crops, and it was only after the removal of these fine early plantings that farmers were given blunt demonstrations of wind damage, which brought a new realization of the tree's place in agriculture.

Because of many failures and the passing of such men of influence as Robert W. Furnas, J. Sterling Morton, and Dr. Charles E. Bessey, father of the Nebraska National Forest in the Sandhills, planting interest waned among following generations from the turn of the century until within the past decade. But during the last few years there has been a tremendous surge of interest in tree planting, occasioned no doubt by a staggering loss of trees and a fuller realization by the public that forestry is a necessary part of agriculture. In 1934 because of drought, dust storms, and widespread destruction of farms, there was general alarm throughout the Great Plains, and demands were made on the Federal Government for aid, which culminated in remedial undertakings by the Forestry Service and the Soil Conservation Service in this region.

According to our latest information, the Forest Service since 1935 has assisted farmers in planting 11,000 miles of field shelterbelts on 17,000 farms of the plains. This has required more than 125,000,000 trees and, according to conservative estimates, will eventually furnish wind protection to more than 2,000,000 acres of croplands. Many of these plantings were made where residents were convinced that trees could not be grown, but by correlation of species and soil and the application of sound principles of forestry, the Forest Service has shown that trees are successful in such areas. The faster-growing species of the shelterbelts planted in 1935 range now up to 35 feet tall in the south and to more than 20 feet in the north, this during the severest drought period the Plains have known. Many plantings were made in sandy areas which were being ruined by the winds, but already these have stabilized the soil, eliminated crop sand-blasting, prevented serious crop damage from hot winds, and brought new courage and hope to farmers who were once ready to quit. Shelterbelts on the finer textured soils are showing equal improvement to adjacent croplands and increases of crop yields in their lee are very noticeable. Wildlife, especially game and insectivorous birds, is multiplying with great rapidity under the new cover of these plantings, while the older shelterbelts will soon be a continuing source of firewood, fence posts, and other necessary wood products for the farms. In the fields protected by these plantings the fertility of the soil seems to be returning since the light organic matter is no longer blown away.

During about this same period the Soil Conservation Service has operated in the region and has aided farmers in planting thousands of acres to trees and shrubs in badly eroding gullies and drainage ways. These plantings, besides retarding gully erosion and checking damaging floods, are also forming a habitat for wildlife and will soon become continuous wood lots, as well as bringing shade, comfort, and beauty to the countryside.

Under the provisions of the Clarke-McNary Act several million trees are annually distributed for farmstead and feed-lot windbreak planting, but they supply only a small part of the needs for such plantings on the plains. These are the types of plantings to protect homes, gardens, and orchards, and, when properly located, effect considerable savings for the farmer who feeds livestock. Millions of cattle are still being wintered and fattened in the open, fully exposed to winter winds.

Probably 95 percent of the rural schoolhouses on the Great Plains have little or no tree protection, whereas every rural school needs a generous planting of carefully selected trees and shrubs around the grounds for the protection of children at play, conservation of fuel in heating the building, and to afford an outdoor classroom where youth will be trained in the knowledge of our important trees and woody shrubs and become familiar with their use in relation to our agricultural, economic, and social problems. Similar plantings are needed about churchyards, and extensive groves should

be established for the purposes of recreation. In some areas even small community forests might prove feasible.

Although the tremendous surge of interest in tree planting of the last 5 years has brought gratifying progress, the total amount of planting by all agencies—Federal, State, and private—is still far short of the immediate needs of the plains. There are still many thousands of farms upon which shelterbelts and farmstead windbreaks should be planted if any appreciable progress is to be made toward bringing general relief to agriculture in the region.

It is admitted that not all of this vast amount of work can wait to be done by Federal agencies, but, because of the diversity of conditions and very immensity of the job, the various State extension departments and State foresters need the aid and cooperation which the facilities, trained technique, and experienced men of our Federal agencies can afford. We realize that eventually these several States must take over a large share of this work, but at the present time our respective States lack the organization, equipment, and ready finance to assume responsibility for a task so urgent and so vast. We further feel, however, that since our States contribute support to the forestry program in other parts of the United States, and since we have problems of equal importance, and in many respects more complicated and difficult, we are entitled to some permanent cooperation from the Forest Service, which is the recognized forestry agency in our country. This our people ask only in fairness.

The farmers of the Great Plains now look to the Forest Service to continue its assistance and advice in their forestation problems at this time of great need. The repeated droughts of recent years have necessitated restriction of funds for our agricultural colleges, and therefore it would have been impossible for extension departments and their foresters even to have attempted an undertaking so large as that which is being carried on by the Forest Service. In Nebraska we feel highly grateful for this fine work, and stand ready not only to lend our every facility for its success, but to cooperate in such a manner that there will be no duplication, friction, nor division of purpose.

The conservation and survey division of the University of Nebraska has carried out extensive surveys relating to soils, water, land use, timber and grass lands, and their proper interrelationship in the general structure of the State's economic and social well-being. This information and our facilities are always available to all agencies, Federal, State, municipal, and private. We particularly appreciate the work of the Forest Service in our State as evidenced by the unstinted support we have endeavored to lend in a cooperative effort. We are asking this honorable committee to look with favor on the continuance of the Forest Service program in our State, and if continued pledge our efforts to make this great tree-planting program the ultimate product of the combined efforts of our State institutions and agencies cooperating with the Federal Government to conserve and restore the soils, water, and agricultural resources of our State.

The Nation is already paying the price for the ills of agriculture on the Great Plains through the loss of crops, lower purchasing power of farmers, direct relief, migration of populations, disturbance of economic balance, and other unfortunate conditions. These will continue and grow worse unless agriculture in this area is made more stable. We must have a well-planned, adequately coordinated, scientifically sound forestry program, based on the solution of the problems peculiar to our region.

One pressing need is the establishment of the Great Plains Experiment Station, which was authorized by Congress in 1936. This station has not yet been financed despite repeated appeals. There are 12 forest experiment stations in the United States, their functions primarily being to bring about the greatest economic use of forests for the production of lumber and other wood products, but with relatively little attention being given to afforestation in such regions as the Great Plains where the problems are unique, intricate, and diverse. Great accomplishments have been made in this area by State experiment stations which have been devoted primarily to improvement in grain crops and livestock by means of selection, breeding, and development of strains and species adapted to the area, but in the field of forestry little has been attempted in forest genetics, the search for more dominant strains and development of forest species more suited to this region. Sufficient work has been done elsewhere, however, to indicate that amazing results may be expected through cross-breeding of trees, as one example of the many lines of research which should be explored. Because of the great importance of forestry to plains agriculture, the vastness of the area and the complicated nature of its problems, this great outdoor laboratory is urgently needed as part of the program for shelterbelt, windbreak, range livestock protection, ornamental, recreational, and wildlife plantings. As conceived, such a station would cooperate closely with the State agricultural colleges of the Great Plains in working out the problems peculiar to their respective areas, and would become the central clearinghouse for information relating to the arboreal life of the region.

It is readily apparent from the brief résumé of the facts in the preceding paragraphs that the program of forestry on the Great Plains is of sufficient importance to this region in particular, and the Nation at large, that it must be continued. It must be put on the basis of long-time planning, not possible under the piecemeal procedure of emergency financing which of necessity is predicated on the need for relief employment rather than on the needs of agriculture. The Prairie States forestry project of the Forest Service is unstably financed, operating wholly on W. P. A. funds

as a work-relief project. This project needs stable financial status so that it can make necessary long-range plans in complete co-operation with the extension departments of our agricultural colleges and thus combine its facilities with our State agencies which are tirelessly striving to serve the best interests of agriculture. On behalf of the Great Plains States we are therefore requesting the continuance of the work of the Forest Service in our region and asking that it be given sufficient allotment of funds to permit it to operate under a sound and efficient policy.

### The Republican Valley of Nebraska

#### EXTENSION OF REMARKS

OF

HON. CARL T. CURTIS

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 4, 1940

Mr. CURTIS. Mr. Speaker, I have today introduced a House joint resolution to authorize compacts or agreements between the States of Nebraska, Colorado, and Kansas with respect to the control and distribution of the waters of the Republican River and its tributaries. This resolution, if enacted, would permit those States, or any two of them, to make an agreement for the division of the water of that river for irrigation and other purposes.

The act that I have introduced does not undertake to divide the waters of that river. It merely gives the consent of the Federal Government for the States to make such division of waters as they can agree upon. I sincerely hope that this resolution will receive favorable action at an early date. The problem of the Republican River has been neglected far too long now.

The Republican River Valley, particularly in Nebraska, is the most neglected spot in America. In the spring of 1935 a terrific flood came down that valley. Thousands and thousands of dollars worth of property were utterly destroyed. Homes were washed away and about one hundred and ten known persons were drowned. In addition to that several thousand acres of some of the finest land was damaged and much of it ruined. A deposit of loose sand and other material rendered it unfit for farming. This particular valley was at one time a garden spot. There has followed in the wake of this flood and to this day untold hardships, poverty, and heartache in that once splendid valley.

The flood of 1935 of the Republican River was not an isolated instance of floods upon that stream. In the spring of 1939 there was another flood that did a great deal of damage to farm lands, highways, and bridges. A few more hours of rain in the watershed would have caused a repetition of the 1935 experience.

The Republican Valley needs help from the Federal Government to harness those angry waters. It has been the policy of the Federal Government to assist in this work for a number of years. The fine, splendid, hard-working people of that territory are entitled to it. In addition to some flood control the farmers of that territory need this land, which was ruined by the flood, reclaimed. They need supplemental water in order to rehabilitate the territory. The need for irrigation in the Republican Valley is very great. It is essential for the continuation of that territory as a self-sustaining region. That river, as well as several of its important tributaries, has excellent possibilities for irrigation.

Irrigation projects on the Republican River and its tributaries would not be projects to reclaim a desert, it would not bring new land into cultivation to compete with other farm land. That territory has been settled for a long time. For many years some of the finest, sturdiest people in all America have made homes there and contributed to this great Nation of ours.

I maintain that my people of the Republican Valley are entitled to consideration. All America becomes alarmed if a few dozen people perish in some far corner of the globe. If a

disaster occurs and takes the lives of 100 people in a foreign land, it is blazoned on the front pages of our papers, and the agencies of this Government may advance them credit and other aids to rehabilitate themselves. But it is a sad thing when such a disaster occurs right here in America, almost 5 years ago, and to this day not one bit of construction or other aid has been had from the Federal Government. Again I say the Republican River Valley, particularly in Nebraska, is the most neglected spot in America.

It is true that the Army engineers are now making a survey and have been working on it for a long time. And it is also true that the Bureau of Reclamation agreed to conduct studies and make some recommendations some time in the future. I have faith and confidence in those departments of our Government and in the men at the head of them, and I believe that they will, so far as possible, render justice to the people of my district interested in this project.

The failure of the temporary spending agencies of our Government such as the Public Works Administration to do something for this territory while millions and millions were wasted on fantastic and needless projects in other parts of the United States is a black spot on their record. Throughout the years 1935, 1936, 1937, and 1938 hope was held out to these people that projects along the Republican River would be granted. They were never granted by the P. W. A., and were finally rejected in December of 1938. Politics has been played with human misery, and all thoughtful citizens resent it.

I believe that the majority of the citizens of all our States, as well as the majority of those in charge of all the departments of our Government, want such needed and useful flood-control and irrigation works as this is to be built. I therefore have faith that justice will ultimately be done to this territory. I hope that it will be soon, and I shall continue to tell this Congress the story of the Republican Valley and its problems until some relief is obtained.

### Should the Dies Committee Be Continued and an Additional Appropriation Made for Its Investigations?

#### EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 4, 1940

Mr. MASON. Mr. Speaker, several weeks ago the question of the week of the United States News was, Should the Dies committee be continued and an additional appropriation made for its investigations? My answer to that question as it appeared in the December 11 issue of the United States News, is, as follows:

The answer to your question is "Yes," with the following explanation and justification:

(a) With a very limited appropriation for the first year, \$25,000; with nothing but ridicule and lack of cooperation from Government officials; and in the face of much unfavorable publicity that came as a result of committee mistakes (mistakes made quite largely because of inadequate and inexperienced committee help, such as legal counsel and investigators) the committee succeeded during its first year in convincing a great majority of the American people that subversive and un-American groups were at work in our midst; that they constituted a real menace to our Nation's well-being; and that they should be thoroughly investigated and held up to public view.

(b) The committee started its second year with an adequate appropriation, \$100,000, and with a year's experience and mistakes behind it. A well-trained, experienced staff to assist the committee with its work was set up, and careful, painstaking field work was ordered on the part of its investigators as a foundation or basis for all public hearings. Results were soon evident. The spotlight of publicity that came as a result of facts brought out at the public hearings concerning the various subversive groups, their leaders, their foreign connections, their racketeering in money affairs, and their flagrant violation of laws, resulted not only in the prose-

cution and conviction of some of the leaders of these groups but also in the unmasking and discrediting of the organizations themselves.

(c) The investigation phase of the work of the committee has only been partially completed. No diagnosis of the causes of these un-American activities has been made. Neither has a preventive program or cure been offered, other than a few restrictive laws. The committee should be continued, therefore, to complete its work of investigation; to make a diagnosis of the causes of subversive activities; and to work out and recommend a constructive program for the cure or prevention of such activities in the future.

### Reciprocal-Trade Agreements

#### EXTENSION OF REMARKS

OF

HON. ROBERT G. ALLEN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 4, 1940

EDITORIAL FROM THE WASHINGTON POST OF JANUARY 4, 1940

Mr. ALLEN of Pennsylvania. Mr. Speaker, there has been much misunderstanding throughout the country regarding the Trade Agreements Act. Many persons are prone to consider the reciprocal trade program from a restricted viewpoint, or from its immediate effect on their personal fortunes. Obviously such criticism is as fallacious as its premise is narrow.

A thoughtful survey of the whole reciprocal trade program will lead to the weighty conclusion that its effect on our national economy has been highly beneficial. It is a long-range program and must be considered as such. It is designed to benefit our people as a whole and has accomplished this purpose. It is the strongest agent for enduring peace that we could possibly develop at this time.

With these thoughts in mind I include in my remarks an editorial from the Washington Post, January 4, 1940:

[From the Washington Post of January 4, 1940]

#### IN WHICH DIRECTION?

The movement to destroy or emasculate the trade-agreements program, a movement which has enlisted powerful support in and out of Congress, has begun to produce the inevitable reaction. All over the Nation individuals, groups, and organizations are rallying to the support of Secretary Hull's policy.

The support is motivated by practical as well as idealistic considerations. Since the trade agreements have undoubtedly brought practical benefits, particularly to those whose welfare depends on foreign trade, it is not surprising to find important business organizations coming out strongly in favor of the continuation of the program.

In addition to such business groups, however, endorsement is being given by many organizations that are not interested in the specific effect of any individual agreement on personal fortunes. These supporters are much more concerned with Mr. Hull's trade efforts in their relation to the whole question of American foreign policy.

This explains why so much of the enlightened peace movement of the United States and why such nonpartisan bodies as the General Federation of Women's Clubs and the National League of Women Voters are prepared to do battle for the trade-agreements program.

This is no quixotic gesture on their part. For no other development which may occur during the present session of Congress will have a greater bearing on the direction of American foreign policy than the renewal or nonrenewal of the Trade Agreements Act.

If the act is renewed, it will be an indication that the United States is prepared to follow through on a cooperative policy in world economic affairs. Those nations and statesmen of the Old World whose eventual task will be to build a new and sounder foundation for peace would thus be encouraged in their endeavors by America's weighty example. On the other hand, if the trade-agreements program is scrapped, the trend toward autarchy, a trend which helped produce the present war, will unquestionably be encouraged.

The forthcoming debate on the Hull program thus involves tremendous issues. The outcome will, to a greater or lesser degree, affect every man, woman, and child in the Nation. Indeed, it would be no exaggeration to say that what the United States does with reference to the trade agreements will affect the lives and fortunes of peoples and nations throughout the world and of generations yet unborn.

### The Reciprocal-Trade Treaties Find New American Market for British Woollens

#### EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 4, 1940

ARTICLE BY F. EUGENE ACKERMAN

Mr. ANGELL. Mr. Speaker, that the reciprocal-trade treaties in many respects are working havoc in American industries and subjecting the American market to foreign products is particularly evident by the importation of British woollens under the operation of the act. As shown by the Department of Commerce records, imports of wool products from Great Britain since the reciprocity treaty went into effect at the beginning of 1939 have increased from 168 to 1,000 percent.

The woolen industry in America has been an outstanding development throughout our history. One of the problems confronting the Congress is the protection of this industry and the placing of it on a profitable basis. However, if we are to permit, through the reciprocity treaty, the importation of woollens from the British Empire to displace the American product, we will undo everything that Congress has attempted to do for the upbuilding of this industry.

As a part of my remarks I ask to have included a study of the operations of the reciprocity trade treaty with respect to the American market for British woollens, made by F. Eugene Ackerman. Mr. Ackerman's analysis is as follows:

THE RECIPROCAL-TRADE TREATY FINDS A NEW AMERICAN MARKET FOR BRITISH WOOLENS

[From the Daily News Record of October 13, 1939]

BRITAIN NOT TO CURB APPAREL, TEXTILE EXPORTS—LICENSES WILL NOT BE REQUIRED, EXCEPT FOR OILSKINS, SAYS BOARD OF TRADE—IMPORT RESTRICTIONS COVER MANY ITEMS

LONDON (via Clipper).—Export licenses are not going to be required on the shipment out of Britain of textile piece goods, or for that matter of any apparel (except oilskins), according to board of trade statements to your correspondent.

So far as the American market is concerned, there is no doubt the British Government is keen to have exports of cloth and associated lines maintained at as high a level as possible, the point being that every shipment of British merchandise to American ports means an addition to dollar balances which can be utilized for war-supply purchases.

[From the New York Herald Tribune of October 18, 1939]

BRITISH TRADE PACT SEEN PERIL TO UNITED STATES WOOLENS—168 TO 1,000 PERCENT INCREASE IN IMPORTS DUE TO TREATY IS CITED BY ACKERMAN

The present war-time boom in wool textiles is obscuring the grave threat to the future permanent economic stability of the wool industry resulting from the operations of the reciprocal-trade agreement with the United Kingdom, according to F. Eugene Ackerman, merchandising consultant, and until recently vice president of the Julius Forstmann Corporation.

Mr. Ackerman made public comparative statistics of wool imports for the first 8 months of 1938 and 1939, compiled from figures of the Department of Commerce, showing that imports of wool products from Great Britain since the reciprocity treaty went into effect at the beginning of this year have increased from 168 to 1,000 percent.

Reciprocity treaty increases British wool imports up to 1,000 percent

The present wartime boom in wool textiles is obscuring the grave threat to the future permanent economic stability of the wool industry, resulting from the operations of the reciprocal trade agreement with the United Kingdom. Comparative statistics of wool imports for the first 8 months of 1938 and 1939, compiled from figures of the Department of Commerce, show that imports of wool products from Great Britain, since the reciprocity treaty went into effect at the beginning of this year, have increased from 168 to 1,000 percent.

Despite the war Great Britain is making every effort to maintain these increased imports of wool products at the highest possible level because the expanding textile market which she is cultivating in this country under tariff concessions enabling her to land woolen goods here below the American cost of production, provides her with vitally essential dollar exchange to be used in the purchase of military necessities. The British Government requires no export

licenses for textile piece goods or for manufactured apparel, and textile workers have been, to a very large extent, exempted from military service so that textile production will suffer as little interruption as possible.

#### *Increases in imports reach 1,000 percent*

Figures to September 1, the latest which are available, show that the importation of noils, wastes, and rags used in the manufacture of woolen goods, has increased variously from more than 168 percent to 1,000 percent, the largest increase being in rags. Imports of noils for the first 8 months of 1939 amounted to 4,266,225 pounds, as against 1,586,998 pounds for the same period of 1938. Wool wastes imports increased from 483,532 pounds in 1938 to 2,375,533 pounds in 1939, while rags had a phenomenal increase of from 492,123 pounds in 1938 to 5,461,000 pounds in 1939.

Imports of manufactured woolen goods also showed alarmingly large increases. Total imports of all classes of woven materials for 8 months of 1938 amounted to some 4,188,605 square yards. Imports for the same period this year were 8,749,587 square yards, or more than double the quantity. The greatest increase occurred in worsteds of over 4 ounces, which leaped from 656,645 square yards in 1938 to 2,307,348 square yards in 1939. Woolens over 4 ounces increased from 3,303,000 square yards in 1938 to 5,942,976 square yards in 1939.

The difference between the increase in quantity of imports and increase in dollar value shows interesting differences that accentuate the importance of an adequate tariff protection against low-cost foreign goods. The quantity increase in rags exceeded 1,000 percent; the increased value in dollars was 767 percent. The quantity increase in noils was 168.82 percent; the dollar increase was 99 percent. Manufactured worsted and woolen goods increased in quantity 175 percent; in dollar value 107 percent. Total dollar value of all wool products for 8 months in 1939 was approximately \$12,000,000, an increase of \$7,000,000 over the same period of 1938.

#### *Provides clothes for 2,500,000*

Translated into terms of American production as they affect agriculture, labor, and industry, the imports of noils, wastes, and rags, all of which provide raw materials for yarns, amounted in 8 months this year to 12,003,050 pounds, which is equal approximately to between 25,000,000 and 30,000,000 pounds of raw wool or approximately 5 percent of the average annual total domestic raw-wool consumption for apparel purposes. Importations of woven woolen and worsted goods amounted to 8,749,587 square yards, or sufficient materials to supply more than 2,500,000 persons with one garment apiece containing 3 yards each.

The raw wool contained in these finished goods amounts to approximately 10,000,000 pounds representing in importation of raw materials and finished products a total of 35,000,000 pounds of raw wool. This is more than 7 percent of the total wool production of the United States for the year 1936. Stated in other terms it amounts to approximately twice the average annual wool clip of such great wool-growing States as Ohio, Oregon, Idaho, New Mexico, and South Dakota, and to more than half the total average annual raw-wool production of the State of Texas, the greatest wool-producing State in the Union.

It is difficult to compute the number of persons affected by these imports of finished goods in terms of employment and loss of wages. They comprise a yardage far in excess of the annual

production of any but a few of the largest mills in the country. In terms of employment it is conservative to state that they represent, at a minimum estimate, annual employment for between 4,000 and 5,000 persons. Based on even a subnormal average annual individual wage of \$1,000 this means a wage loss of between \$4,000,000 and \$5,000,000 for 8 months of 1939 in the wool textile industry alone. The public does not benefit in the exchange of foreign-made woolens for the domestic product, because these imported woolens compete with American woolens in garments which in practically all instances sell to the consumer in the same fixed price ranges, whichever material—domestic or foreign—is used. The major difference to the public is in the selling appeal which glorifies the supposedly superior qualities and advantages of "imported" materials over the domestic product.

#### *British making strong market drive*

In studying the figures of wool-products imports for the past 8 months it must be remembered that textile wages in Great Britain are normally one-third those paid in the United States. Wages paid in Italy, France, and Belgium, all of which share in the concessions granted Great Britain, are below the British rate, and the State Department is now considering the granting of added advantages to Belgium in the reciprocal treaty under advisement. The wage differential, however, is but one part of the picture. An equal advantage over American industry is enjoyed by European manufacturers of textiles in cost of plant, equipment, fuel, repairs, renewals, and all other overhead factors which are part of the continuing cost of doing business.

Another important factor in considering the present rate of increase in imports of wool products is that it represents gains achieved during the organization period in the establishment of new markets by British textile producers. British woolen manufacturers are developing new American outlets, establishing agencies in New York and throughout the country. American buyers have made connections in London and the textile centers of England and Scotland to purchase woolen products at lower prices than they have been paying for like American goods. Representatives of British textile interests are engaging in perfectly legitimate promotion and advertising campaigns to enhance the prestige of British woolens in the United States.

What is being witnessed, in fact, is the intensive cultivation of a great new market opened to Great Britain by American tariff concessions at a time when those new markets were desperately necessary to her. Her wool textile manufacturing industry is at a low ebb, due to expansion and subnormal domestic and world demand. Her dominions of Australia, New Zealand, and South Africa face increasing difficulties in selling their great wool crops in the world markets, due to the tremendous increase in the use of synthetic fibers in fabrics once made of wool. Australia, in particular, must maintain her world markets for wool or be reduced to poverty. The richest and most fertile market is the United States. The opportunity to share in this market is provided by the terms of the reciprocal-trade treaty. Its effect on the American wool-growing and wool-manufacturing industries is apparent to date. Its future effect can only be reviewed with grave alarm by an industry which, due to adverse domestic conditions alone, has lost \$100,000,000 in the past 10 years.

A comparison of imports of wool products, first 8 months of 1938 and 1939, follows:

	1939	1938	Increase	Percent increase
Noils.....	4,266,225 pounds..... (\$1,731,427)	1,586,998 pounds..... \$870,061	2,679,227 pounds..... \$861,366	168.82 99.00
Wastes.....	2,375,533 pounds..... (\$757,410)	483,532 pounds..... \$205,806	1,892,001 pounds..... \$551,604	391.29 263.02
Rags.....	5,461,292 pounds..... (\$1,466,729)	492,123 pounds..... \$109,066	4,969,167 pounds..... \$1,267,663	1,004.74 767.55
Mohair yarn.....	6,249 pounds..... \$7,299	1,065 pounds..... \$1,783	5,184 pounds..... \$5,476	486.76 307.12
Worsteds under 4 ounces.....	498,863 square yards..... \$182,058	228,381 square yards..... 44,919 pounds.....	270,482 square yards..... 56,396 pounds.....	118.43 125.55

### **In Defense of Democracy**

### **EXTENSION OF REMARKS**

OF

**HON. SHERMAN MINTON**

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Thursday, January 4, 1940

ADDRESS BY HON. FRANK MURPHY

Mr. MINTON. Mr. President, the Attorney General of the United States, Mr. Frank Murphy, in a recent address,

has brilliantly set forth a defense of democracy. In order that his worthy remarks may be broadly disseminated I ask that his address, and a preface to it by Mr. Charles Beard, be printed in the Appendix of the RECORD.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

#### **INTRODUCTION**

(By Charles A. Beard)

In the following pages Attorney General Murphy sets forth primary doctrines of American democracy and liberty and makes a noble plea for the preservation of the best features of our national heritage. Appropriately, he reminds us of our trespasses in the last great war—of the ways in which citizens, mobs, and public officials resorted to unwarranted spying, persecution, and prosecution in defiance of law and right. He states clearly and cogently the principles of the Constitution in respect to civil liberties and cites the

interpretations of our best authorities. Briefly, but plainly, he lays down rules for our guidance in these perilous times and in years to come. It is fortunate for America that he has seen fit to do this.

All that Mr. Murphy says has a double force, for he is no mere preacher of doctrines. In his private and public life, he has exemplified them in practice at great cost of time and energy, amid much vexation of spirit. Not that he is perfect. To mortals perfection is not vouchsafed. But he has patiently observed the precepts which he expounds. He has suffered abuse without resorting to recrimination. He knows that it takes forbearance to maintain the restraints on passion incorporated in the Constitution and yet stand firm on the line of the law against immediate public danger. It is fortunate that he now heads the Department of Justice.

Nothing that I can say will strengthen or add to what Mr. Murphy has so well said. I shall not attempt this impossibility. I should as soon think of attempting to gild Lincoln's Gettysburg Address or to retouch an impressive painting by a supreme artist. Nor will any commendation from me fortify his appeal to the country. So I shall content myself by expressing a hope—that his manifesto will be read by editors throughout the land, taught in the schools and colleges, proclaimed from the pulpits, and posted in market places and forums. Lest we forget, lest we forget.

IN DEFENSE OF DEMOCRACY  
(By Hon. Frank Murphy)

In my settled conviction the finest contribution which America has made to civilization is our loyalty to the idea of civil liberty. Now, when much of the western world is torn by a fierce and bloody war, I want very heartily to emphasize that conviction.

It is true that in certain parts of the world, might for the moment appears to be triumphant over right. It is true that in many countries the traditional civil and religious rights of the individual are no longer recognized. These are realistic facts that we must realistically face.

Common sense dictates that with virility and courage we must prepare ourselves to guard all the magnificent physical and spiritual resources that make up our national heritage. To let our defenses weaken, to be soft or infirm in our attitude toward national security, would be a faithless and unworthy thing. But while we must be strong to protect our democratic heritage, we can and must still recognize that the heart and soul of our heritage is the civil liberty of the individual, and that in protecting our physical wealth we must not destroy our spiritual wealth of freedom. For civil liberty is still the finest possession of the American people. It is still that priceless thing without which life loses its dignity and becomes only a hopeless form of spiritual slavery. And by the same measure that civil liberty is precious to us, we must be willing and determined to defend it against the forces that threaten to destroy it.

In a world filled with many uncertainties, there are some things that are certain. We know that in the hearts of the American people there is a great, steadfast desire to keep out of war. It is a desire for peace that no public servant or political leader in this land can afford to underestimate. But we also know that in a world where force has been unleashed, the mere desire for peace is not a guaranty that a peace-loving nation can remain at peace.

It is not enough for us merely to say that we want peace and that we abhor war—that we will have no part of war. When the world is aflame with war, or gravely threatened by war, it is the duty of a responsible government to do something more than talk peace. First, it must take active steps to prevent unnecessary involvement. Second, it should make itself ready to resist attack—not only attack from without, but attack from within as well—attack by sabotage and subversive activities.

I am especially concerned with our defense from internal aggression. For we cannot be unmindful of the fact that the present attack on peace and liberty in Europe originated in the internal aggression of powerful groups against the democratic authority of their own lawfully established governments. But in our zeal to protect ourselves from internal aggression, we must be on guard that we ourselves are not guilty of aggression against the civil liberties of our own citizens. We must not fall victim to the infection of despotism that in recent years has been sweeping the world. For if we suppress civil liberty, we suppress democracy itself. In our own land, this generation has seen a little of what happens when a crisis develops and the Government is not prepared to protect its people against internal attack. I have in mind the period of the World War and some of the wrongs against liberty that were done in the name of patriotism. Let me make it plain that I am not assuming the role of the second guesser who always knows afterwards what should have been done in a particular situation. I am speaking only as a citizen and public servant who earnestly hopes and confidently believes that we, the American people, will profit by our own wartime mistakes and, even more, by the mistakes of other democracies that no longer live to tell the story.

I believe we all should recognize that however tragic the wrongs that were done, they sprang from misdirected zeal rather than evil intent. We should remember that in the feverish, wartime atmosphere (an atmosphere which inevitably is dangerous to liberty) average citizens, normally calm and reasonable, became so imbued with the rightness of their cause that opposition or criticism was intolerable to them. Not only could they brook no open disagreement with national policy, but the failure of others to share their own attitude became in their eyes evidence of lack of patriotism.

From suspicion and distrust it was for some people an easy step to violence and vigilante activities. In some communities, irresponsible extra-legal organizations assumed functions that belonged properly to the civil authorities. And in some cases the civil authorities themselves were carried away by a hysteria of fear. Defenseless men and women were mistreated by such groups on mere suspicion. On many occasions the constitutional right of peaceful assembly was violated and homes were invaded and searched in the dark of night for evidence of disaffection and disloyalty. In their zeal to help defend their country, well-meaning people resorted to methods which in the calm of peacetime would not be considered.

Even if we recognize—as we must—that this condition was not general, it is a picture that friends of democracy have every reason to regret. But I want to emphasize how much I believe that instead of viewing it with rancor toward anyone, we should keep two things carefully in mind. First, we should remember that much of this was done sincerely in the name of patriotism and national defense. Second, we should keep in our minds and hearts a firm resolution that while making the security of the country our first and greatest concern in this troubled hour, we will injure not one of the qualities that have made this Nation the strongest haven of democracy and freedom on earth.

I know there are sincere individuals who earnestly believe that in a period like the present, when the country is seeking ways to avoid war, but yet must prepare its defenses, it is not possible to maintain both civil liberty and a strong defense against internal attack at one and the same time. They are convinced that we must choose between the temporary suppression of civil rights and a weak and ineffective internal defense. I do not believe that we face any such choice. I do not believe that a democracy must necessarily become something other than a democracy in order to protect its national interests. I am convinced that if the job is done right—if the defense against internal aggression is carefully prepared—our people need not suffer the tragic things that have happened elsewhere in the world and that we have seen, in less degree, even in this land of freedom. We can prevent and punish the abuse of liberty by sabotage, disorder, and violence without destroying liberty itself.

At the time of the World War, the country's defense against internal attack was not fully prepared, and events took their natural course. The civil authorities were not trained for their new responsibilities. The door was wide open for irresponsible organizations to set themselves up as agencies of law enforcement. That is precisely what happened. Today the picture is quite different. The delicate business of combating espionage has been coordinated under the Department of Justice. Under responsible direction, it will be carried on, as it is today, not by overzealous, inexperienced laymen, but by men who have been equipped for the work by careful training—training that includes instruction in the rights of the citizen as well as in methods of crime suppression. And we have every reason to expect them to be worthy of their training and instruction.

This work should be done and will be done by responsible employees of the Federal Government, acting in cooperation with the duly constituted law-enforcing agencies of State and local governments. There will be no alignment with agents of vigilante groups or private industrial organizations which are concerned primarily with industrial disputes and labor problems. Enforcement officials will themselves obey the law of the land.

I believe that in this way we can eliminate at least the occasion for many of the wrongs that were done under the stress and strain of the World War. But at the same time, I recognize that preparedness on the part of the Federal Government is not by itself a guaranty that these things will not happen again. To meet the double responsibility of self-defense and preservation of civil liberty, we need from every State and local government and, preeminently, from every citizen, an equal determination that this responsibility shall be met.

We need, and we earnestly ask, from every citizen and every government an unswerving resolve that for as long as this crisis endures, we will keep our heads—that we will not abandon our Bill of Rights—that whatever measures we may adopt for our defense against subversive activities, we will use them just as calmly and judiciously as we do firmly and resolutely.

But given a thoroughly prepared internal defense, given the proper mental attitude of calmness and cool reasoning, we need something more. We need a sound sense of direction—a clear understanding of our own policy and our own position.

First, we need to remember that in an emergency it is right and just for our democracy to be on guard not only against internal attack by foreign agents but obstructive activities by people in our own ranks as well. We have a right to expect that once a policy has been formulated and adopted by constitutional, democratic procedure, it will be accepted and observed by all as an expression of the sovereign will of the people, until such time as the policy is changed by constitutional methods. Even those who disagree with it should do their part to make it effective. This is the democratic way in peacetime; it is the democratic way in time of war.

Finally, we have a right to expect that attempts to prevent the fulfillment of a policy by sabotage, violence, or subversive activities can and will be dealt with vigorously and according to law. And here we can take our lesson from those democracies abroad that failed to deal vigorously with illegal activities against the democratic process and that now are only memories in the minds of men.

The second thing we need to remember is that an emergency does not abrogate the Constitution or dissolve the Federal Bill of Rights. That is not only good sense; it is good constitutional law.

Seventy-three years ago, 1 year after the Civil War, the Supreme Court declared in the famous *Milligan* case that "The Constitution of the United States is a law for rulers and people, equally in war and in peace, and covers with the shield of its protection all classes of men, at all times, and under all circumstances." I want to give emphatic assurance that in this emergency, as well as in time of peace, the Department of Justice embraces that policy without reservation. And because we are convinced that it represents the wishes of the overwhelming majority of the American people, we are determined to apply it and to practice it as thoroughly and intelligently as men are capable of doing.

We are aware, and the people should also be aware, that this will be no simple task. It is a problem of steering an even course that will invade neither of the two boundaries that I have mentioned. In brief, it is a problem of finding a sound basis for maintaining public safety without encroaching on the Bill of Rights.

In enforcing some laws, we must not violate other laws. In upholding the Constitution, we must not infringe on the priceless heritage of civil liberty which the Constitution guarantees. To do that—to suppress or suspend the Bill of Rights—would be to destroy the very democratic principles that we are seeking to preserve. It would be to yield to the same autocratic psychology that we want to keep out of this country. We must not let that come to pass. We must have it understood that while we will oppose firmly and vigorously any illegal activities, we will do so in a responsible manner and within the orbit of the Constitution. That is the American way.

The immortal Justice Holmes laid down a formula which I believe will help us to keep a true course. In a celebrated wartime case involving the very things discussed here, he wrote these lines:

"When men have realized that time has upset many fighting faiths, they may come to believe even more than they believe the very foundations of their own conduct that the ultimate good desired is better reached by free trade in ideas. . . . While that experiment is part of our system, I think that we should be eternally vigilant against attempts to check the expression of opinions that we loathe—unless they so imminently threaten immediate interference with the lawful and pressing purposes of the law that an immediate check is required to save the country."

The willingness, the determination, the ability to follow that democratic principle, so ably stated by a great friend and interpreter of democracy, will be, in my estimation, a real test of patriotism in this or any future crisis.

The true citizen of America will remember that loyalty to our tradition of civil liberty is as much a part of patriotism, as defense of our shores and a hatred for treason. He will never forget that civil liberty under the American system is a legal right in time of war as well as time of peace—that, whatever the time, it is liberty for all, irrespective of the accident of birth. The true American will remember that whether it be peacetime or wartime, there could be nothing more unpatriotic in this land of many peoples and many creeds than the persecution of minorities and the fomenting of hatred and strife on the basis of race or religion. He will realize that if, in the atmosphere of war, we allow civil liberty to slip away from us, it may not be long before our recent great gains in social and economic justice will also have vanished. For a nation that is calloused in its attitude toward civil rights is not likely to be sensitive toward the many grave problems that affect the dignity and security of its citizens. We must not let this crisis destroy what we have so dearly won.

Many years ago, in the midst of another great emergency, Abraham Lincoln put this question to the Congress of the United States: "Must a government of necessity be too strong for the liberties of its own people, or too weak to maintain its own existence?" Let us, in this troubled hour, answer that question as befits a great and enlightened democracy. Let us prove for all time that ours is a twofold strength—the physical strength of self-defense and the moral strength of unflinching devotion to our own ideals.

### . The Faith That Is America

#### EXTENSION OF REMARKS

OF

HON. EDWARD R. BURKE

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Thursday, January 4, 1940

ARTICLE BY WENDELL L. WILLKIE

Mr. BURKE. Mr. President, every American should read and take new hope from the inspiring article entitled "The

Faith That Is America," written by Wendell L. Willkie, and published originally in the *North American Review*. I ask unanimous consent to have inserted in the *RECORD* the article as it appears condensed in the *Reader's Digest* for December 1939.

There being no objection, the article was ordered to be printed in the *RECORD*, as follows:

[From The *Reader's Digest* of December 1939]

#### THE FAITH THAT IS AMERICA

(Condensed from the *North American Review*—By Wendell L. Willkie, President of Commonwealth & Southern Corporation)

For centuries my ancestors lived in Central Europe. Some of them were peasants, some were artisans, others were landed proprietors; but all of them through those centuries had been restricted in their opportunities to the group in which they were born, and no one of them had ever known the true meaning of liberty. Those who did not observe the restrictions under which they were forced to live got into trouble: one had to flee his native land because he adopted the religion of his choice; another was ostracized because he believed in the principles of the French Revolution; and still another was jailed for expressing his own opinions. In 1848, my father and my grandparents came to America to escape this repression of individual liberties.

They were led to these shores, as were millions before and after them, by a special reputation that the United States has had among nations. This reputation is founded upon one simple fact: in the United States the plain man has always had a chance.

My father and mother were the first generation in their families to grow up in America. My mother became a lawyer. My father was also a lawyer. Of course, in Europe my mother would have found it impossible to practice a profession; and my father would have found it difficult to get out of the groove worn by his ancestors. Furthermore, it would have been utterly impossible for them to have given their six children the education which we received in America. We went to high school and college.

And with schooling finished, there were no doors closed to their children just because they came from a plain family in a small town. No class distinction, no law interfered with their effort to earn a living in the occupation of their choice, or to express their opinions as they pleased.

In all the long history of their family, these six children were the first to know, from the time they were born, the blessings of freedom. I don't want them to be the last.

This family record is the record of any number of American families. For us the value of freedom has had a practical demonstration. Freedom means for us not only a theoretical ideal, but definite practical rights. Freedom means, for example, that if you run a store, you can sell your products to anybody without a government official telling you what the prices must be; if you are a professor in a university, you don't have to alter science or delete history as a bureaucrat prescribes. If you own a newspaper you don't limit your editorial opinions to what an official censor approves. If you are a laborer, you can leave your job when you feel like it for any other job you prefer; you and your fellow workers can bargain collectively concerning the conditions of your work. If you think taxes are too high, you can vote against those officials you think responsible. And there is no limitation upon your inherent American right to criticize anybody, anywhere, at any time.

These are practical applications of this thing called freedom. In this country we take them for granted—perhaps too much for granted. But in more than half the world freedom does not exist. The present conflict in Europe is perilous to this freedom because in a modern war people destroy the very things they say they are fighting for. It is because we wish to preserve our free democratic system that we must remain at peace. But we cannot remain carelessly at peace. If the price of democracy in ordinary times is eternal vigilance, in a war period that vigilance must be doubled.

We must be careful that, under the guise of "emergency," the powers of government are not so extended as to impair the vitality of free enterprise and choke off free expression of thought. Already we hear of the need for the Government to control prices, to license American business, to regiment American employees and employers, to censor the radio. In a critical time there is always a temptation to surrender the responsibilities of a free citizen, to say to the Government: "During this emergency, you take charge. You tell us what to do, what to think."

If we should yield to this temptation, the end of our free democratic system might come as readily in peace as in war. Once these responsibilities of citizenship are given up, they are not readily returned. Government, in its practical working, consists only of aggregations of men; and men, having tasted power, do not easily surrender power. We must not be misled because suggested restrictions are for humanitarian purposes, for, as ex-Justice Louis D. Brandeis recently said:

"Experience should teach us to be more on our guard to protect our liberties when the Government's purposes are beneficent. . . . The greatest dangers to liberty lurk in insidious encroachment by men of zeal, well-meaning but without understanding."

The war has not changed the grave domestic questions confronting America; it has just temporarily diverted our minds from them. For 10 years we have been haunted by our unemployment

problem. Yet its solution has been in our hands for some time. During the depression decade, American industry accumulated an enormous deficiency in plants and modern machinery. To remedy this, industry will need even more than the present number of unemployed. Industry will also need a great deal of additional capital, and there should be no difficulty in getting this, as soon as the millions of American investors are reassured as to the future of free private enterprise.

The lack of confidence within industry is partly a result of industry's own defects in the period of overexpansion which ended in 1929. But since then we have had several years of reform; and some of these reforms have gone so far as to impair the efficiency and morale of business. In promoting recovery the chief emphasis has been placed upon what the Government should do; we have had colossal expenditures for "priming the pump," and a colossal tax program to pay for these expenditures. Here is just the point where our free democracy is threatened. We are not in immediate danger of losing our freedom of speech, or of press, or of worship. The greatest threat to the American system today comes from the effort to restrict free competitive enterprise. And such enterprise alone can make economic recovery possible.

We have been told that the frontiers are gone, that our established industries are slowing down, and that there is little to be expected in the way of new inventions. We have even been informed that the very basis of the American dream is no longer true; that the plain man no longer has much of a chance. But such a philosophy is as false as it is cowardly. True, we no longer have new geographical frontiers; but other frontiers remain for searching and adventurous minds. Our people, comprising only 7 percent of the world's population, still control more than 45 percent of the world's wealth. And we enjoy the highest real wages, the shortest working hours, and the greatest percentage of home ownership on earth.

The great days of America are by no means done. We have only touched the border of our achievement. If I did not believe this, I would not believe in America. Because that faith is America.

So my creed, if I were asked to define it, would run something like this:

I believe in America because in it we are free—free to choose our government, to speak our minds, to observe our different religions;

Because we are generous with our freedom—we share our rights with those who disagree with us;

Because we hate no people and covet no people's land;

Because we are blessed with a natural and varied abundance;

Because we set no limit to a man's achievement; in mine, factory, field, or service in business or the arts, an able man, regardless of class or creed, can realize his ambition;

Because we have great dreams—and because we have the opportunity to make those dreams come true.

## Diplomatic Relations With the Holy See

### EXTENSION OF REMARKS

OF

HON. MICHAEL J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 4, 1940

EDITORIAL FROM THE NEW YORK ENQUIRER OF JANUARY 1, 1940

Mr. MICHAEL J. KENNEDY. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include therein an editorial which appeared in the New York Enquirer of January 1, 1940, relative to our President's recent appointment of Mr. Myron C. Taylor, of New York City, as diplomatic representative to the Holy See. In my opinion, the resumption of diplomatic representation between our Government and the Vatican State provides an auspicious beginning for the new year and the new decade. I, therefore, commend the following editorial to the Members of the House because of its timely interest:

[From the New York Enquirer of January 1, 1940]

#### DIPLOMATIC RELATIONS WITH THE HOLY SEE

The Pope gladly accorded recognition of the independence of the United States. Indeed the papal envoy at Paris was a most intimate friend of Benjamin Franklin. American Minister to France in the days of the War of Independence.

It is anything but consonant with true Americanism that the action of President Roosevelt in appointing Myron C. Taylor as his personal ambassador to the Holy See should have provoked the angry opposition it has brought forth in some quarters.

The Taylor appointment, as the White House has been careful to point out, does not mean that our Government has accorded diplomatic recognition to the Holy See.

But had the administration actually entered into full diplomatic intercourse with the Vatican State, it would have done nothing novel insofar as the United States is concerned. Until a few years after the Civil War this Republic and the Holy See had maintained complete diplomatic relations for a considerable period.

Protestant England, pagan Japan, Nazi Germany, democratic France, and many other nations have their permanent envoys at the Vatican.

The steadfast policy of aloofness pursued by Washington toward the Pope is anything but creditable to our country, representing as it does submission to a spirit of bigotry which our Government should ever have vigorously opposed.

What can be thought of Americans who work themselves into a passion at the first sight of intercourse between our Government and the Pope, the greatest moral and spiritual force in a world so much in need of morality and spirituality, and never utter a word of displeasure with our Government's maintaining full diplomatic relations with Soviet Russia, the supreme enemy of religion, morality, and civilization?

In 1933 Washington was in a tremendous hurry to accord full diplomatic recognition to anti-God Moscow.

Time has shown the grave evils that were bound to arise from the establishment of diplomatic relations between this Republic and the despotic domain of Josef Stalin. Our Government should now admit its mistake and promptly sever diplomatic dealings with the Kremlin.

At the same time it should deal a merited and smashing blow to bigotry and to the anti-God and anticivilization forces everywhere by boldly resuming complete diplomatic relations with the Holy See.

## Congressional Outlook in 1940

### EXTENSION OF REMARKS

OF

HON. ALBERT L. VREELAND

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 4, 1940

RADIO ADDRESS BY HON. ALBERT L. VREELAND, OF NEW JERSEY, DECEMBER 8, 1939

Mr. VREELAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to include the following radio address, delivered by me over Station WNEW on December 8, 1939:

First and foremost in the hearts of every Member of Congress entering the Capitol on the opening day of the third session of the Seventy-sixth Congress, will be the sincere desire to keep this country out of war and to prevent us from becoming involved in the unfortunate conflict now raging among the countries of Europe. Since 1918 there has never been more serious thought and consideration given to any question than was given to the neutrality bill during the entire time of its pendency in the special session which closed the first part of last month.

It is true there were two distinct schools of thought on the question at issue but each Member regardless of which school he belonged had the same heartfelt desire and was sincere in his belief that his theory was the proper one. Every Member of the House and Senate without exception agreed on one point and that was this country should not become involved in a conflict which at the present time is none of our affair.

In all probability, considerable legislation will be introduced in the first few weeks of the new session. Foremost among this will be the question of national defense. I doubt if there is any true, red-blooded, patriotic American citizen who does not believe in the fundamental theory of an adequate and proper Army and Navy to protect our land, our homes, and our loved ones from invasion by foreign nations. The only question upon which a difference of opinion might arise will be what is adequate and necessary for defense and how far we may increase our forces without going beyond the scope of defense and entering into the realm of offense.

At the present time, by Presidential proclamation our Regular Army was increased from 165,000 men to 227,000 with a proportionate increase in the National Guard and the Navy. It is true with an increase in personnel it requires an increase in matériel, housing, ships, and other appurtenant and necessary facilities for the efficient operation of the increased complement of men, which in itself, is an additional burden on the much-burdened taxpayer. However, we must be practical and forget idealistic viewpoints.

We must bear in mind that while the American public has proven they are patriotic and willing to serve their country

when the occasion arises and their bravery is beyond a doubt, nevertheless, with modern methods of warfare it takes time to train troops before they can become efficient against the highly mechanized and trained troops of the other nations of the world.

It also takes time, effort, and money to build and manufacture the necessary war materials to equip the men. In 1917 we learned the bitter lesson that emergency rush orders cost many times that of goods produced at leisure in peacetimes, with the accompanying rise in wages and prices of raw materials.

It is so easy to visualize the influx of American citizens to defend their beloved country but so hard for the average person to realize what a tremendous amount of preparation is necessitated by the augmented personnel. It must be remembered that each man must be supplied with clothing, underwear, shoes, guns, and other equipment. A place must be made to house him, beds to sleep on, mess halls to eat in, not taking into consideration food, the kitchen equipment, or the preparation of meals, training centers, communication units, rolling stock, trucks, and other transportation facilities, which is in a small degree only some of the many appurtenant and required equipment.

Willingness alone in this modern day and age does not make armies. We have seen by experience it is not as in the days of yore when countries went through the formality of declaring war. Today a state of war exists when your citizens and homes are bombed and your ships sunk. It gives no time for preparation.

Might I just dwell for a moment, and I hope my listeners will pardon the personal reference, on the condition of our present armed forces. I want it clearly understood that I am in no way by my remarks criticizing the conscientiousness, the willingness, the patriotism, nor the efforts expended by any of the officers or personnel of our Army, National Guard, or Reserve. Each and every one is to be commended most highly on the splendid progress he has made with the limited facilities, training, and time.

As a reserve officer of the United States Army, I had the privilege of actively serving in the maneuvers at Plattsburg last summer, where, as you will remember, there was the largest concentration of troops since the World War. If nothing else, the experiment proved most valuable and worth every dollar expended in showing, first, the courage, willingness, and desire to serve on the part of every officer and man participating, and secondly, the lack of training, experience, and equipment.

The experiences at Plattsburg further demonstrate conclusively the advantage of the mechanized and mobile forces over the foot-soldier. It is no fault of the officers or the men who are patriotic enough to give of their time and services, and with the limited facilities provided, to try to prepare themselves for the defense of our country when the need or occasion might arise. Those men are sacrificing time they might use for a more pleasant benefit to themselves, so that they might efficiently protect you and me, our homes, and our loved ones.

Let us for a moment consider some of the countries of the world which are in a sense the only countries with the ability and resources to be a possible enemy. Prior to the present mobilization of the countries of Europe, England, France, Germany, and Japan had more than 14 percent of the population engaged in some branch of the military, while the United States, as large and if not larger in area than any of them, had only 0.38 percent. Germany spent in 1938 over \$4,000,000,000, and Russia over \$5,000,000,000 for armed forces. Whereas, the United States spent less than \$5,000,000.

Many of the people of this great country of ours are firmly of the belief that a large Army and Navy is a demonstration of aggression. That, of course, has been true with some of the nations of the world, but we must remember the average American is peaceful and peace loving, and this being a government of the people and by the people, the great body of the population would not allow their government to make any aggressive move without their hearty approval, so different from the dictatorships of the other side where it is the will of one man whether a state of war or peace exists.

Of course, it would be a fallacy to consider that this country, in peacetime, would ever attempt to have the standing Army of the nations abroad, and it would indeed be an unnecessary burden on the American public to support an armed force comparable to the armies of the world. With our Navy it is different. That should be second to none, and adequate to protect this country on both oceans.

How then might we have the training necessary to the potential army without the staggering cost of a million men under arms? The American is an apt and willing pupil but he must have trained and expert teachers. There is, in my opinion, the solution. At the present time, we have a very fine National Guard to train the civilian soldier. A little more training and equipment would, in a short time, make it an excellent and efficient fighting force, and a cadre for the training of others in the case of emergency. We must not forget, however, that the Regular Army and National Guard are the first line of land defense, which will be only a hindering force to the enemy until the citizen army can be mobilized and trained. That training will be the lot of the Reserve officer.

Over 100,000 patriotic, self-sacrificing men have accepted commissions as Reserve officers, and serving without pay, striving through the limited facilities allowed by the appropriations to train themselves for service to their country. To them, who for years have given up vacations for training, nights for school, and many evenings for correspondence courses, should go a vote of thanks of the American people. Because of a limited appropria-

tion only 30,000 of these officers could go to camp last year. They are willing and anxious to learn and serve. They are the ones who will have to help officer the Army in an emergency, and yet with the limited training available, how can they properly prepare themselves for that task? Would it not be money well invested to give these men proper training and equipment to make the teachers, so badly needed, and which cannot be developed overnight? Poorly trained officers and men are costly in lives and money, and to say the least, a comfort to the enemy. A dollar well invested now will save manyfold in the future.

Economy is most desirous, but false economy is foolish. A proper and well-thought-out program of expenditures for national defense over a period of time now will save many millions in a lump sum in the future should an emergency arise, and God forbid that it does.

In dealing with foreign nations, especially when they are in the throes of a major conflict, with their tempers and nerves on edge, it is advisable to use the policy expressed in the words of the immortal Theodore Roosevelt, "We should speak with a soft voice but hold a big stick in our hand."

## Abuse of the Bill of Rights

### EXTENSION OF REMARKS

OF

HON. J. THORKELSON

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 4, 1940

Mr. THORKELSON. Mr. Speaker, a few days ago my attention was attracted to a rather interesting and odd article which appeared in one of our local papers. It was interesting in its failure to properly estimate the danger of communism, and odd in that it advises all citizens to read the first 10 amendments of the Constitution, or the Bill of Rights.

My reflection was: What a blessing it would be if the other side of the family would recognize the evil of communism and the inherent value of the Bill of Rights by "taking care that the law be faithfully obeyed," and the Bill of Rights respected. This would serve justice and "provide for the common defense, and promote the general welfare of the United States."

Enforcing the law would protect our people against the Communists and the anti-Americans. Enforcing and respecting the Bill of Rights would protect the people against the Federal Government's snooping, meddling, and persecution. History clearly shows that it is not the people that destroy the government, but it is instead certain individuals in the government itself that bring about corruption and destruction of governments.

It is well to remember and the people should constantly keep in mind that the Constitution was drawn by the people, to protect themselves against Government usurpation, as a measure to provide for greater protection. The people wisely reserved the right to themselves to retire and to direct Congress to impeach all Government officials betraying public trust.

The article to which I refer appears under this heading:

MY DAY—FIRST LADY URGES READING OF THE BILL OF RIGHTS—THE CRIMINAL SHALL HAVE CERTAIN RIGHTS

December 15 will mark the one hundred and forty-eighth anniversary of the ratification of the Bill of Rights.

I hope that every citizen in this country will read over those first 10 amendments to the Constitution and keep them constantly in mind, particularly articles IV, V, and VI.

In article VI it mentions the fact that in criminal prosecutions the criminal shall have certain rights. I am wondering if in the present day these rights should not be observed for all people, whether accused in a criminal case or whether merely accused through the public press.

I shall not discuss the rights of criminals, for they are well cared for even in time of war, when our Nation's law-abiding youth sacrifice their lives on battlefields to protect the rights of all.

I am in accord with Mrs. Roosevelt and sympathetic in her feeling toward the press. In clippings from the Daily Worker, as well as other communistic and anti-American

publications, I find the First Lady frequently featured. In the *Daily Worker*, June 9, 1939, page 4, appears a picture of the First Lady in company with David Lasser and Lee Morgan, the Workers Alliance secretary. In the July 7th issue is a notice: "Mrs. Eleanor Roosevelt is to be the principal speaker at the Monday meeting. She is to speak on New Frontiers of Youth." The First Lady spoke praisingly of the efforts of the Youth Congress, which is, of course, her business. It is, however, generally accepted, and those who know believe, that the Youth Congress is communistic and, therefore, anti-American. To substantiate the point I have made, I quote from the *Daily Worker*, Saturday, July 8:

#### THE CONGRESS OF YOUTH

As was pointed out by the spokesman for the Young Communist League, communism stands for the greatest democracy. And let no one be misled by reactionary misuse of the phrase "proletarian dictatorship." This phrase signifies the rule of the working class in alliance with the farmers and all the toilers. It signifies socialism, a state which extends the democratic liberties of the people and is a higher form of democracy, paving the way to a classless society, communism.

Every true democrat, every supporter of the Youth Congress can prove this for himself by his own experiences. Is it an accident that the Young Communist League has been in accord with every major decision of the Youth Congress and has supported its actions in behalf of American democracy?

The First Lady should not feel hurt or resentful for the publicity she has enjoyed in the communistic press. It is only natural for the sponsors of these papers to give favorable publicity to those who are favorable to them, and, vice versa, defame and heap ridicule upon those who oppose them. It was the candor and patriotism of witnesses before the Dies committee that brought about unjust criticism and ridicule by the communistic and anti-American press.

It is not my desire to enter into extensive discussion on the Bill of Rights, but I believe this quotation from the *Brooklyn Tablet* will be interesting:

The United Christian Minute Men, New Ridgewood Hall, 1880 Menahan Street, Ridgewood, N. Y., started forth to Washington. We arrived in the city at 8:30 a. m. Sunday, September 23. Ten minutes after we arrived we were locked up in the city jail, the charges being "advertising without a license and desecrating the American flag."

In regard to the first charge, we were informed that we would have to be put under \$10 bail. The basis of this charge being that we had signs on our car such as the following: "Keep U. S. out of war," "Keep strict neutrality," etc. On the second charge, we were accused of sitting on the American flag. We had the American flag draped over the back of the seat of the car for the purpose of drying it out after driving through the fogs and dampness of Pennsylvania and Maryland. We were put under \$400 bail for this charge.

We stayed in the jail for a period of 30 hours, and during that time we were treated like the most common criminals. But the most astounding thing of all was that we were investigated by the F. B. I., and we were told that our stand on the Neutrality Act was the wrong stand and we were accused of being Nazis because we dared to oppose the powers that be.

Our trial came up before a Federal judge the next day (Monday). We had to wire all the way to New York City for counsel to represent us, and it was only through his efforts that we are free today.

We were informed that the police had orders to arrest anyone who came into Washington to protest against the Roosevelt neutrality. The orders came from President Roosevelt himself, according to information received from a Congressman from Kings County.

THOMAS MALONEY.

September 28, 1939.

About 70 of these young men and women came to my office, and they were respectable and intelligent American citizens. They informed me that they came to Washington to express their opposition to lifting of the embargo, so that this country could stay out of war. There was nothing vicious about them. As a matter of fact, they were quiet and appreciative at having gained entrance to the House Office Building. I have often wondered what provision in the Bill of Rights directed Washington officials in sending these people to jail, particularly when the Communists meet openly in Federal buildings and other public places. It appears to me that Washington and New York are the headquarters for communism, an opinion which is now substantiated in

LXXXVI—App—5

the exposé of the League for Peace and Democracy, which is another communistic organization. Official Washington has the cart before the horse, for I firmly believe these bright officials assume the Bill of Rights was written to protect the Communists, when in reality, if they care to look into it, it was written to protect the loyal patriotic American citizens, not only from the Communists and anti-American citizens, but also from un-American Government officials.

I cannot leave this issue without throwing a bouquet at the New York courts that placed a \$50,000 bail on the misguided Mr. Kuhn and sent him to the penitentiary for questionable misappropriation of funds, which is mere pin money as compared to the misappropriation of funds that we hear discussed in the Congress of the United States. The Non-Sectarian Anti-Nazi Boycott League no doubt stuck its nose in there, as it has in the business of foreign nations friendly to the United States. I can now hear the Communist roar, and the linotype machine dealing out infamy, but I say go to it, anti-Americans, and wave your red flag. It makes little difference to me whether upon its background is displayed the hammer and sickle or three balls, for both are on the way out.

I shall now take the liberty of quoting another short paragraph from Mrs. Roosevelt's article:

If you are not accused of being a Communist these days, you may be a Communist front and now you may be a Communist transmission belt, and these names apply both to individuals and organizations. I don't question that all three kinds of people exist, but I begin to wonder whether some perfectly innocent people may not be suffering because of the fears which are being aroused. Shortly, timid people will not dare to stand for the things in which they believe, because some may imagine that they are any one of these three dreadful things, or that they are countenancing them in somebody else.

I can only say to this, without entering upon extensive discussion, that timid people should stand shoulder to shoulder for the principles of this Republic, and in such position they will be strong, because they will be shoulder to shoulder with at least 90 percent of the American people.

I can well understand that Mrs. Roosevelt, in her busy public life and the present planned confusion, is not certain whether we have Communists, stupid gentile fronts, and communistic transmission belts; as a matter of fact, I suppose the so-called "transmission belts" refer to fellow travelers. The fact, however, is to be had particularly by anyone in the position that Mrs. Roosevelt occupies in this Government.

Mrs. Roosevelt may prove to herself that bolshevism and communism are stark realities and that the sponsors of these philosophies are the most inhumane and vicious destroyers of morals and civilization. If Mrs. Roosevelt will investigate Government intelligence reports, she will find that it was the Bolsheviks that sabotaged the Russian Army during the Russian-Japanese War. It would also be found that it was the Communists that sabotaged the Russian industries during the World War, and that the Communists are actively engaged in sabotaging the Government and our industries today. Evidence may also be had of those who financed the Bolshevik revolution in Russia, through the Rhein-Westphalian Syndicate and other European banks, including the names of their associates in New York City, and their connection with the Imperial Military Government of Germany.

Further investigation will reveal that it was the Communists who sabotaged the Spanish Government, causing misery, poverty, suffering, and death to many Christians in Spain.

I shall now quote from the *Hidden Hand*, published in Britain:

#### SPAIN

The international arms traffic to Spain is run by the following \* \* \*, whose headquarters are in Barcelona: Vladimir Bischitzki, Lurge, Fuchs. Bischitzki is the head, and has established a network of agencies all over Europe:

In Paris, the agents are the \* \* \*, Fratkan, Rosenfield, Schapiro.

In Rotterdam: Cohen, Frunfeld, Kirsch, Simon.

In Denmark: Moses Israel Diamant.

In Prague: Kinler, Kahn, Abter, Hithner.

In Austria, Bischitzki worked with Mandl, now under arrest in Austria.

After reading this book it is quite evident that the English people are well informed as to those who own and control armament and ammunition, for I quote *ibidem*:

The \* \* \* in the world of armament manufacture is a sinister example of this exploitation. I shall have something to say about a man known in his day as Zaharoff, although he was really Zachariah. He was the embodiment of the \* \* \* in armaments—selling to all and sundry, encouraging nations to embark on costly adventures, and not caring whether friend or foe were involved so long as the particular war material in which he might be interested at the moment was selling well. There you have a true \* \* \* method of causing the gentile world's downfall—the piling up of individual profits from munition making, coupled with incitement to antagonism and to antiracial activities.

I believe everyone should familiarize himself with the causes that lead to war and the life and habits of those who make war a profitable business to themselves. I am sure if the French and British soldiers could read books published on these subjects, they would pack up and go home. This would leave Germany free to settle with Russia, so as to save Finland. I do not believe it would require much urging on the part of England and France to bring this about, for Germany is no more friendly with Russia today than she was when the Communists were deported from Germany.

There is a little book published by the editors of *Fortune* called *Arms and the Men*, which I advise everyone to read.

Let us now refresh our memories by looking back and connecting odds and ends of the past in order to complete the picture that confronts us today.

In 1904, the Russian Social Democratic Party split into two factions, (a) the Bolsheviks and (b) the Mensheviks. The split was due to certain differences between the leaders of the Russian Social Democrats on the main problems of their attitude toward the Russian-Japanese War. The Mensheviks expressed their opinion that the nation involved in the war should not be disturbed in its military proceedings by internal revolutions—the Bolsheviks stated that they did not care about the fact that thousands and thousands of Russian people were giving their lives for their country in the Far East, and that they considered the war a very convenient moment for a decisive attack against the Russian autocracy and that they would start immediately a revolt in Russia and a strong pacifist propaganda among the armies which were under the fire of Japanese guns. The Bolsheviks also declared at that time that the nation as such meant nothing and that the international proletariat meant everything and therefore they simply ignored the fact that the military defeat of Russia would not only affect the Russian Government, but would also inflict heavy wounds upon the Russian people as a whole and upon Russia which anyhow was their native country.

My object in calling attention to bolshevism in 1904 is to connect it with communism today. Bolshevism has been reported by our Intelligence Service from 1904 to and during the World War, and by the United Mine Workers of America to the Sixty-eighth Congress, in Senate Document No. 14, "Attempt by Communists to Seize the American Labor Movement." Intelligence departments have been well informed about this movement for 40 years. Why has not something been done about it? Is it in fear of identifying those who are financing and sponsoring communism? I quote from the *New Yorker Staatszeitung*, November 22, 1918:

#### BOLSHEVIKI AGITATION WATCHED OVER

The spreading of the doctrine of bolshevism in the United States is being carefully watched over by the agents of the Department of Justice. Interference will take place as soon as the agitation oversteps the boundaries of the law and develops into seditious activity, so official circles say.

This propaganda is not yet regarded as dangerous, although an increase is expected among the foreign-speaking population. It is more pronounced in New York and San Francisco than in other cities.

The movement is carried on mostly by a group of former syndicalists and I. W. W., but a new element of discontented citizens with pronounced Bolshevik tendencies has joined them of late.

The Government has no interest in preventing the spreading of such ideas, but will, so the officials say, interfere as soon as the agitators make an attempt to change their theories to deeds.

Up to a certain degree, the Bolshevik movement is forwarded by enemy aliens. This is one of the reasons why the Department of Justice is still interned alien enemies.

This report is substantiated by the report, *Communism in the American Labor Movement*, published in Senate Document No. 14, which the United Mine Workers released 20 years ago. At that time they realized that communism was destroying the morale of labor, and to protect themselves they complained to Congress, asking for help, but Congress paid no attention to their complaint.

It is well to bear in mind those who were in control of the German military and civil government until 1930, for it was these people and the military government of Germany that sponsored the Kerensky, Lenin, and Trotsky revolution in Russia, and, to make it more interesting, I quote this letter:

STOCKHOLM, September 21, 1917.

TO MR. RAFAEL SCHOLAN,

Haparanda.

DEAR COMRADE: The banking house of M. Warburg opened an account for the enterprise of Comrade Trotsky, upon receipt of a telegram from the chairman of the Rhein-Westphalian Syndicate. A lawyer, probably Mr. Kestroff, obtained ammunition and organized the transportation of same, together with that of the money, to Lulea and Vardo. In form the firm of Essen & Son, Lulea, as to the consignees and the confidential persons to whom the sum demanded by Comrade Trotsky is to be handed.

Fraternal greetings,

FURSTENBERG.

This is another interesting report, which in itself is sufficient evidence that bolshevism or communism should have been cared for a long time ago.

#### PRO JUSTITIA

In the year 1918, August 10, Jules Lenche, inspector of the military secret service, duly sworn in before the president of the military court, received the following declaration from the man named Edmond Birenweig: Born at Tomachof (Russian Poland) on December 23, 1885, son of Ladislav and of Salome Rotbam (Russians), soldier in the armored machine-gun automobiles (Russian corps) of the Belgian Army, at the present time at Eu, soldier in question being on leave in Paris at 45 Rue de Sevre, made the following declaration in French:

"At the time of my passage through New York, when coming back from Russia, in June 1918, I met Furstenberg, so-called Genetsky, a Russian subject, who founded in Copenhagen, Oestergade, a concern of exportation and importation from Germany to Russia, which concern was founded toward the end of 1918. In reality this concern was nothing more than a bureau of German espionage.

"In March 1917 Furstenberg took a very active part in defeatist propaganda in Russia. He sent important sums of money to the future Bolshevik ministers, these sums ran into millions. I had the opportunity of seeing at Petrograd, facsimile of letters accrediting Furstenberg to banks in Copenhagen, Stockholm, and Christiania, but I cannot recall the text of these letters which were signed by German diplomats and military men.

"The same Furstenberg, with his friend Radek, alias, very well-known Austrian, whose real name is Sobelson, a newspaper man, took a very active part in the treaty of peace at Brest-Litovsk.

"My statements are made mostly to place the authorities of the Entente on their guard against the man named Furstenberg, whom it is certain never went to New York just for pleasure, but very likely to continue the work begun by him in Copenhagen.

"I obtained that impression from what follows:

"At the time of my mission in Siberia, I learned from an absolutely reliable source that in certain Bolshevik circles, they had taken a resolution to send secret missions to the countries of the Entente to impair or blow up the factories working for the national defense, and to use any other means possible to shake this defense.

"I must add that the Bolsheviks dispose of a lot of money as well as passports, Swedish and other neutral passports, to be used in the above-mentioned missions.

"As you know, I was part of the detachment of armored automobiles which was sent to Russia; knowing the latter country perfectly, I was sent there out of preference, and was able to obtain first-hand information. I may add that by order of the commander in chief of the Eleventh Army (Russian), and with the consent of my commandant, Maj. E. M. Semet, I was appointed as part of the committee of the army, upon the recommendation of Savinkof and other friends of General Korniloff, for the purpose of fighting defeatism.

"The orders authorizing me to be part of this committee were No. 608, of the general staff of the Eleventh Russian Army, and No. 2544 of the general staff of the First Corps De La Gards.

"At the time war was declared, Furstenberg was located at Cracovie (Austria). All the Russians who happened to be there,

and who refused to serve in the Russian legions, I ought to say Polish, in order to fight against Russia, were arrested. Furstenberg was left at liberty and could go about freely and even go to other countries, when no one else had the right to move, even in the interior of the country.

"The man whom Furstenberg works under is no other than Parvus, a notorious German agent.

"BIRENWEIG, E. C.  
"LONCKE."

The noncommissioned officer Edmond Birenweig states that he made the same declarations in New York at the time of his passage through the latter-named town to Mr. Finck, of the Department of Justice of New York, as well as to Lt. Count d'Aspramont, attached to General de Selliers de Moranville.

I can very well understand why Mrs. Eleanor Roosevelt and other staunch Americans go astray in this planned confusion; however, for a better understanding of the insidious evil in communism, I shall now quote from Foundations of Leninism:

This is what Lenin, paraphrasing the well-known theses of Marx and Engels on insurrection, says about this condition of the strategic utilization of the forces of the revolution:

"Never play at uprising, but once it is begun, remember firmly that you have to go to the very end. \* \* \* It is necessary to gather a great preponderance of forces in a decisive place at a decisive moment, else the enemy, being in a position of better preparation and organization, will annihilate the insurgents. \* \* \* Once the uprising has begun, one must act with the greatest decisiveness, one must take the offensive, absolutely, and under all circumstances. 'Defense is the death of an armed uprising.' One must strive to take the enemy by surprise, to take advantage of a moment when his troops are scattered. \* \* \* One must try daily for at least small successes—one may even say hourly, when it is a question of one city—thus maintaining under all circumstances a 'moral superiority.'" Collected Works, vol. XXI, book II, pages 97-98.

Second. The selection of the moment for striking the decisive blow, the moment for initiating the insurrection so timed as to coincide with the moment when the crisis has attained its highest pitch, when the preparedness of the vanguard to fight it out to the end, the preparedness of the reserves to support the vanguard and when the maximum consternation in the ranks of the enemy are evident.

"The decisive battle," says Lenin, "may be deemed to be fully matured when 'all the class forces hostile to us have become sufficiently confused, are sufficiently at loggerheads with each other, have sufficiently weakened themselves in a struggle beyond their capacities'; when 'all the vacillating, wavering, unstable, intermediate elements—the petty bourgeoisie—have sufficiently exposed themselves before the people and have sufficiently disgraced themselves through their practical bankruptcy'; when 'among the proletariat a mass mood in favor of supporting the most determined, unreservedly bold, revolutionary action against the bourgeoisie has arisen and begins to grow powerfully. Then, indeed, revolution is ripe; then, indeed, if we have correctly gaged all the conditions outlined above and if we have correctly chosen the moment, our victory is assured.'" (Left-Wing Communist, p. 74.)

I have up to this point attempted to show that communism is not new but is instead old and well-developed in Russia, where the first revolution took place, that cost the lives of seven in the royal family and thousands of the so-called intelligentsia. We know, of course, those who were active in this revolution, but the real criminals are those who furnished the money to promote the Russian revolution and the spread of communism throughout the world.

I quote again from the article by Mrs. Roosevelt:

Let's fight realities with all we have. Let's fight for our democracy and our Bill of Rights; and wherever we find things in which we do not believe, let's be free to express ourselves; but let us pray not to be dominated by fears or disturbed by nightmares.

I can only say in reply to this that when we are fighting communism we are engaged with stark realities which are more destructive than war. I do believe in freedom of expression, but certainly not when it is in defense of communism and other anti-American philosophies.

The Bill of Rights was never drafted to allow free expression to those who are directly engaged in the destruction of our Government, and to tolerate a communistic political ticket is an insult to the founders of this Republic. It is all right for the Russians to fight for their own democracy; and I say let them have it. Let us fight so that these United States may survive and so that we and our posterity may enjoy the blessings of liberty.

## Dedication of Building at Suomi College, Hancock, Mich.

### EXTENSION OF REMARKS

OF

HON. FRANK E. HOOK

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 4, 1940

ADDRESS BY HON. FRANK E. HOOK, OF MICHIGAN, DECEMBER 17, 1939

Mr. HOOK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me at the dedication of a new building at Suomi College, Hancock, Mich., on December 17, 1939:

I take pleasure in sharing the celebration of Suomi College at the dedication of its new building. Education in this State, and in America generally, owes an untold debt to the groups of men and women who have established schools and colleges dedicated to the teaching of youth, to raising the standards of culture and to maintaining the traditions of their forefathers in the development of their ideals. Suomi College is itself a notable product of the passionate devotion which Americans, often of foreign ancestry and background, have shown toward the new country in which they have made their homes and to which they have contributed so much.

It is particularly fitting that we here take note of the fact that Suomi College owed its impetus as it owed its name to one of the most valiant race groups of the world—the Finnish people. In good times and in bad, Finland has provided the world with a living example of what can be done by steadfast courage inspired by patriotic devotion. It has always been true; and never more so than today, when Finland appears as the champion of the civilization of the world against ruthless and barbaric oppression.

I take pleasure in remembering that the United States has consistently espoused the cause of Finland. At the close of the World War in 1919, under the administration of a Democratic President, Mr. Wilson, the United States was the moving force in requesting and obtaining the recognition of the independence of Finland, which had, after a heroic struggle, reestablished its government. Finland had suffered a temporary period of invasion and eclipse, and fighting against stupendous odds, had re-emerged. I am glad to think that American assistance aided the new government; and that American initiative brought it again into the family of nations, where it has every right to remain.

During the 12 years which followed, the United States Government, in my judgment, paid far too little attention to the achievements of this resolute country. Though it had been devastated by the Russian Revolution, the Finnish Government undertook the task of rebuilding and in a few short years had created a nation whose achievements were the admiration of Europe. She rebuilt her capital; provided her country with roads; set up schools; developed her resources. She gave to the world its greatest living musician, Sibelius. Still more, she gave to the world an outstanding example of honor and honesty, and alone among the European nations, recognized the aid which she had received from the Wilson administration in the form of loans, and undertook payment of her debts.

I am glad that I was among the first to have recognized the importance of American relations with Finland. During my first term in Congress, I discovered that the American legation in Finland was so little regarded that it was given quarters over a local store in Helsinki. I introduced and secured the passage of the law which provided the present legation of the United States in Finland, so that our contacts with the Finnish Government should be worthily, decently represented.

Now Finland is once more invaded. There are those who say that we ought not to interest ourselves in European affairs. Only 6 weeks ago these men were arguing that the invasion of Poland, like the present attempt to crush Finland, should be no part of the concern of the United States. I cannot see it that way. When honor and courage are crushed, American life suffers. It is properly a matter for our concern when these things happen.

In my judgment, empty words of sympathy are not enough. Active measures for the assistance of Finland can be taken, and I believe should be taken. My friendship toward the country of Finland, the Finnish people, and the principles for which they stand are well known not only in my district but throughout the United States. I made that plain many times and especially in 1935 when I brought before the people of this Nation the part played by the Finnish people and their ancestors in the development of the United States and democratic principles for the world. My feeling against communism and communistic Russia and in

favor of Finland and democratic principles was such that I addressed a letter to the President of the United States and the Secretary of State asking that all diplomatic relations with Russia be abandoned at this time. I have discussed this situation with men of high authority in the United States Government and the question arises whether or not we would be in a better position to do what is needed for more effective action by retaining our Ambassador rather than to withdraw him from Russia. It is the contention that he is needed there so that he may express to the Russians what we really think about the action of their Government in the barbaric invasion of Finland. It has been further argued that if we allow our Ambassador to remain in Russia we would be in a better position to speak in behalf of Finland in case of a peace offer. There are others also who felt upon the invasion of Finland that the best thing to do would be to withdraw our Ambassador from Moscow, and thereby indicate our displeasure to Russia. I confess that this is a very debatable question. It is being given very serious and thoughtful consideration by the Government officials and I am sure that because of the friendliness of President Roosevelt and the administration toward Finland, after cool and deliberate consideration they will decide on a course of action which will be in the best interest of all concerned.

The first aid we can give is financial. President Roosevelt has already outlined a measure which will make it unnecessary for Finland to continue paying installments on her debt. We honor her and her probity; we will not ask sacrifices of her on our debts when both common sense and generosity indicate that she should use her resources in preserving her national independence. She has honorably paid us an installment of her debt on the 15th of December; and arrangements are already being made to return that payment to her as soon as the Congress meets. I propose to support that arrangement and introduce legislation concerning past payments of the debt and interest on the debt.

In like manner I have urged, and we have been able to work out, a credit of \$10,000,000 to Finland, with which food and supplies for her population may be purchased in this country and shipped to Finland, so that her people may not be in want while her soldiers are holding off invaders. I am glad to say that as the situation now stands, there is every reason to believe that these supplies will be able to reach Finland.

In addition to that, there is every need for relief work of all kinds to alleviate and, if possible, repair the misery that is caused by the invading armies. Already a Finnish relief group has been founded, and the Government in Washington has lent full assistance to the Finnish authorities in assisting that work. The generosity of Americans may properly be called upon in this endeavor; and Americans are recognizing the obligation.

If practicable, we should make available to Finland supplies of arms, ammunition, and war material. I do not agree with those who would place an embargo on such shipments from the United States, and so put every peaceful and peace-loving nation at a disadvantage when it is attacked by a warlike and imperialistic nation.

This is a practicable, solid, and intelligent program which we have worked out in Washington for the aid of Finland. Some of it is already done; the rest will be done. I believe that I can count on the support of all of you in advocating these measures.

While we are doing this it is important that we shall not lose sight of the effects of communistic imperialism which this conflict necessarily has on our own thought and our own lives. It is freely said in some quarters that the United States ought to go into some violent measures of repression; that it ought to try to control thought, to limit freedom of speech, and to circumscribe the free instruction in our schools. Frequently this is advocated as a means of combating communism in schools and colleges. I should like here, and at this time, to say a word about that.

We shall never beat Russian Communism by surrendering to its worst qualities. We shall not drive oppression out of the world by becoming oppressors. Our social and economic system needs continuous improvement; and the need for that improvement was recognized by the Finnish group which founded the College whose guests we are today. If we are going to make those continuous advances which are necessary to prevent Communist or Fascist, or other adventurers from endeavoring to make capital out of misery; we must freely study and freely examine all ideas and methods of social progress. Colleges are the very places where that examination ought to take place. Theories which are studied in academic circles are modified, tested, or discarded by that study; and those results, when they are made available to practical life, are still further winnowed and threshed over by the practical men who must guide the course of events. I have so great a faith in American youth that I do not take seriously loose charges that American institutions of learning are likely to teach anti-American doctrine. Prudence is required in academic life, as in any other; but the spirit of our institutions and the history of our country have shown that we do not need to resort to secret police measures, to violation of civil liberties, or to repressive and oppressive measures, fearing lest some idea will break up the American system. All we need ask of teachers and students is loyalty to the American ideal of free men, freely deciding their free lives.

No better illustration of the wisdom of that course exists in the world today than that of Finland. Maintaining free government and free institutions, keeping itself clear of suppression, it has produced a state within whose borders the quality of loyalty and

courage is unexcelled; it has become a beacon light in a dark world crisis.

This, in my view, is the inspiration we may draw from this college, and the hope we may take at the dedication of a new unit of this school. This is a symbol of America with its ideal of free education and free thought; with its sympathy and admiration for a gallantry in peace and in defense; with its rejection of selfish isolationism or narrow nationalism; with its constant search for the truth that over the centuries has made men free.

## Security and Democracy

### EXTENSION OF REMARKS

OF

HON. ALBERT L. VREELAND

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 4, 1940

ADDRESS BY GOV. RALPH L. CARR, OF COLORADO

Mr. VREELAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by Gov. Ralph L. Carr, of Colorado, at the Newark Advertising Club dinner on October 19, 1939:

On behalf of the people of the State of Colorado, to whom I feel that this bronze impression of the great seal of the State of New Jersey is really given, I thank you.

With feelings of deepest gratitude, I acknowledge this as a symbol of the many good things which have already flown into our great mountain country from New Jersey through the efforts of one of America's most illustrious sons, the late Thomas Alva Edison.

May I say to you, Mr. Stringfellow, as a member of the organization which Mr. Edison founded and which is continuing to carry on his work in bringing light and happiness to the world, that I am honored in being permitted to participate in the movement to commemorate his birthday by national observance.

To Governor Moore, may I acknowledge my gratitude for this gift and say that it has already become dear to me and to my people because of the manifold agencies and activities which have brought it about. It stands first as a recognition of the greatness of Thomas Alva Edison. It symbolizes the accomplishments of today in your State, in his name, and in his memory. It bespeaks all the activities of New Jersey and her citizens which have placed her among the greatest in the sisterhood of States. It is the immediate handiwork of the Disabled War Veterans in their arts and crafts shop under the direction of Maj. George Geiger. And finally, it betokens the leadership and generosity of a great chief executive of New Jersey.

You have said that as the result of Mr. Edison's activities, most of the minerals dug from the mountains of Colorado have found a market. All too well do we realize this. But the sale of our products and the development of our mining resources is as nothing compared to the benefits which our people have enjoyed from his inventions and aids to living.

The world joins me tonight in acknowledging our debt to your beloved citizen. Through his efforts the lives of millions of people have been brightened. As Christopher Columbus discovered just one world of material blessings and possibilities, so did Thomas Alva Edison discover and make available to mankind a whole series of new and brighter and better worlds. As the poet who gives us new views of life's beautiful things through combinations of expressive words, as the musician brings pleasure and entertainment by the composition of old notes into new themes, as the original thinker in every line discloses new ideas for the enlightenment of his fellows, even so did Thomas Alva Edison, with a soul which included those of the poet, the musician, the dreamer, and the discoverer, navigate the uncharted ocean of physical science and his discoveries and disclosures become perhaps the world's greatest single benefactor.

To receive this seal, under these conditions and in this place, is an honor which I shall ever cherish. I shall carry back to the western mountains, which I call home, the sweet memory of this wonderful night and of its meaning to Colorado.

This reference to Mr. Edison and his glorious story of accomplishments furnishes me with the theme for my statement tonight.

A committee of university men and women came into my office one day last spring to protest against a rumored decrease in the amount of money to be allocated from State funds for the support of their school. In the fear that certain officials charged with the distribution of public revenues were planning to curtail the activities of institutions of higher learning in Colorado to the disadvantage of the respective student bodies, my visitors had been delegated to present the case of their kind and to prevent the anticipated injury.

Their spokesman, a keen, clear-eyed, straight-shooting lad of about 22, opened his statement with the suggestion that the university men and women of this generation are facing a world filled with unpleasant problems which are not of their making. He then made out a good case for his clients with an array of facts that could not be denied.

When he reached this point in his presentation, I interrupted to ask to be permitted to finish his complaint. I then told him and his colleagues that he was about to say that the youth of today cannot be expected to revere the institutions which their elders have developed and that the young men and women who are going to be called upon to shoulder the responsibilities which preceding generations have incurred, are not being given a fair start.

Briefly, I told them that their leader was about to announce that the thinking men and women who will be graduated from the colleges and universities of America in the next few years, will be justified in following new theories of government and social conduct since they are being asked to assume an unfair share of life's burdens. I was obliged to admit that things are in a somewhat discouraging state. I was forced to concede that the doers of yesteryear and today had not been altogether successful in solving all the problems of business, of society, and of life. It is true that their fathers and grandfathers have left many great questions unanswered.

When the picture was painted, it was far from rosy. But the interview did not close then. They were asked to hear another side of the story. Briefly, the answer given to those thinking youngsters is the one which I would like to present here to the members of this great organization with our country facing a crisis.

It is true that the world is in the throes of social, economic, and political unrest. As the result of a series of factors, civilization is torn by confusion and strife. In many places the blood of human beings is reddening the soil of their homelands. In our own country, which was dedicated to peace and brotherhood, and the betterment of mankind by its founders, economic and social questions have arisen which threaten temporarily to retard the march of America toward the heights. Millions of jobless, hungry men, women, and children are looking to governmental cupboards for the barest essentials of life. Factory wheels are not turning, and money is fearfully seeking security in the usual hiding places where this timidiest of man-made creations stagnates in time of anxiety. There is a lot of blue paint on the canvas.

But this is not the true or permanent picture. Those things which point to poverty, and defeat, and failure, and discouragement are false guides—they are merely the shadows which furnish the background; they are the challenges which are presented to the courageous and the intelligent. They are merely the unpleasant factors which spur the ambitious and the stout-hearted to action. They are the necessities which mother inventions.

The obstacles in the path of economic progress at the present time seem to be many and great. To the faint-hearted they are insurmountable. But to the man with confidence in the lessons of history, with faith in the American theory of government, and who is inspired by ever-present proofs of the goodness of the Creator of the universe, this is not the time for hand-wringing or tears.

The good things which the world enjoys today were won only because poverty, and need, and danger, and ambition, and a series of other stimulating factors aroused men and women of brains and energy and courage to rise above their problems and to blaze the way for posterity.

Man's growth is measured by the problems which he meets and overcomes. If the next generation is confronted by issues which are greater and more complicated than those which their forefathers met, then youth should count itself fortunate. It is doubly blessed—first, by the very necessity for rising to greater heights than its predecessors, and second, by the heritage of experience and equipment which the past has placed in its hands.

The man who can reach the Rocky Mountains by plane over the same route which once required 6 months by ox train, should do a faster job than the covered-wagon owner. The man who gets his facts the hour they happen by wire or wireless from the far corners of the world, should arrive at quicker, more intelligent conclusions than the businessman and the official who used to operate on advices which traveled on clipper ships. The man who has all the facilities for living, working, and thinking more efficiently and clearly, by reason of the things which have been wrought through the ages by scientists, inventors, thinkers, and writers, should be an abler man than his father. If he isn't, then in some measure at least, he is a failure.

Civilization can evolve no question which man is unable to answer. The method of solution parallels the presentation of the problem.

In this country with the examples furnished by the errors and mistakes of Europe to save us from disaster, we look for a solution, and we find it in the fact that there is a method of human conduct which has come to be known as the American way.

Out of the lessons gleaned from centuries of toil and conflict and progress in the Old World, there was framed at Philadelphia in the summer months of 1787 a written enunciation of human rights which has weathered every storm which has gathered in more than a hundred and fifty years of development, both domestic and from without.

The American system is based upon the theory of equality of opportunity. While there are those who in the past few years have cheered for the passing of the rugged individualist, we must, ultimately, after trying out every other new-fangled theory, return to the conviction that our Government has been built upon the doctrine that the individual, and not the State, is supreme. This Nation has achieved greatness upon the idea that each man may do as he pleases, attain any goal toward which he sets his eyes, and enjoy the results of his own efforts, provided only that he does not injure his fellows.

The certainty that effort will be rewarded is the lure which has induced individuals to go forward in the struggle to become better and bigger. And that, in turn, is the thing which has developed this Nation. An Edison would have developed only in such an atmosphere of freedom. An ordered process which permits of competition while it fosters and protects the interests and rights of all alike, accounts for our present position in the sun. In the past few years, competition has come to be confused with the theory of the survival of the fittest. In the American sense, it means really the paralleling of cooperative effort with rewards going to the diligent and persistent. It involves the right to attain and to enjoy the fruits of one's labors.

While all men are born equal politically, the world has long since discarded such a yardstick in measuring the abilities and capacities of humankind. It rates as outstanding the man with the brains to convert a few strands of wire, a glassed-in vacuum, and an electric spark into an agency which turns night into day. The utilization of the combustion engine in an awkward bird-like house which leaps clear across the American continent with a score of persons in less than a day is an accomplishment.

There are workers and drones, brainy men and dullards. There are those who originate and others who merely absorb. The American system recognizes the doer, but places upon him the limitation that he may use his works only for the benefit of himself and his neighbor, and never to the disadvantage of another. It is only when this law is transgressed that suffering and strife are born. Our major problem is to minimize the violations and to attempt to erase inequalities.

The future holds for the youth of America the opportunity to meet the greatest problems that have ever confronted any generation. The idle muscle does not develop, and the unused talent decays. Men and women do not develop character when all their needs are supplied. No military leader ever attained greatness on the parade ground; no champion was ever crowned who did not first meet and overcome competition.

The chance to face the issues of business and political life today is a privilege which we should welcome. To be permitted to participate in the struggle to return this Nation to the place where poverty, unemployment, and need will lose their importance, and plenty and industry and happiness will attain the ascendancy is an opportunity for which we should be grateful.

When a friend told me a few years ago in a fit of despondency over what he considered the loss of our national perspective, that he was sorry that he lived to see the day, I told him that I considered myself one of the most favored of human beings; that I prayed that I might be fortunate enough to live through the next 25 or 35 years in order that I might view the approaching panorama of world events. History is in the making during every passing hour.

And finally, let us remember these things are not of man's invention. The humble Carpenter who went about among the hills and villages of Galilee 19 centuries ago gave us the key to the riddle of the universe. The lessons which He taught those simple folk in His walks and talks are the basis and the structure of the American system. The Constitution of the United States is the practical application of the Golden Rule to the business of life. The Sermon on the Mount contains the answer to every man-made problem. It is the inspiration and the guide to nations and to man. It is the hope of democracy.

## Annual Meeting of National Association of Manufacturers

### EXTENSION OF REMARKS

OF

HON. DAVID I. WALSH

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Monday, January 8, 1940

ADDRESS BY HON. BURTON K. WHEELER, OF MONTANA,  
DECEMBER 8, 1939

Mr. WALSH. Mr. President, on December 8, 1939, the Senator from Montana [Mr. WHEELER] delivered an address in New York City at the annual meeting of the National Association of Manufacturers. I ask that the address may

be printed in the Appendix of the RECORD as part of my remarks.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Coonly, ladies, and gentlemen, I thank you and return to all of you a most cordial greeting. There is sincerity in your president's introduction, matched only by the warmth of your reception. I am fully mindful of the national interest in what is said at this important annual dinner of the leaders of American industry.

Your invitation to speak here tonight was accepted because I could not shirk a responsibility. The attendant circumstances are quite obvious. You men control the tremendous part of this Nation's economic structure that we call American industry. I come from the great agricultural and mining State of Montana, and its people, of very moderate means, have sent me as their Representative to the United States Senate. You are charged, among other things, with being ultraconservative on public questions. I am known as a liberal and often charged with being a radical—or something worse. So we start evenly.

This Nation of ours faces a grave crisis, perhaps the most threatening in our history. The country that gives us all an opportunity, the country that gave you your chance to become a leader in industry, the country that gave me the privilege to sit in the greatest deliberative body in the world, needs our best. There is a common call, a sacred summons, and you and your associates, and I and my friends, regardless of our label or views, must respond. We must answer not as industrialists, not as legislators representing one State or any group, not as Democrats or Republicans, not as liberals or conservatives, but as American citizens interested in the welfare of 130,000,000 of our fellow men.

You take pride in being practical businessmen. And I in my way, with my liberal viewpoint, want to be practical. We have a definite and realistic task before us. Let the dreamers and the publicized intellectuals enjoy any and all flights of fancy. But let us, with our feet on the ground, examine that which faces us. Let us analyze it as you would a production or sales problem, and as I would an issue before the Senate Committee on Interstate Commerce.

Foremost in our minds today is the war situation. The United States must keep out of war. Regardless of so-called scientific polls, I refuse to believe that even a small percentage of the American people think we should become involved in any foreign conflict. I am convinced it is the current determination of President Roosevelt, the Congress, and the American people to avoid war. I voted against repeal of the arms embargo, but I believe those who voted for repeal are equally determined that the United States remain at peace.

We must insure this same sentiment in the executive branch of our Government, in the Congress, and everywhere in the Nation—not only now but it must follow the elections of 1940, 1942, 1944, and all those to come. No one need tell me that business leaders do not want war. I have respect for your good common sense. We must maintain our present sense of balance and our intelligence, regardless of any incident or series of incidents which might arouse our emotions, as in 1915 and 1916.

Recognizing our unity of purpose in avoiding war and accepting your declarations against it, let us turn to the domestic picture. Far more threatening to democracy and to this republic than any mad European dictator are the unsolved economic problems of the United States.

From the dawn of civilization and from the time that man has recorded events the No. 1 economic problem facing industry and the world has been one of production—man wanted and needed more goods and more services than were generally available. You have spent millions in research laboratories. You have devoted endless hours to study and thought. You have experimented at heavy cost. You have concentrated your energies on production, and to your everlasting credit you found its answer. You developed an industrial system of production which has made the luxuries of 50 years ago the virtual necessities of life today. Low unit cost has made it possible for 30,000,000 Americans to have pleasure cars, for 10,000,000 of us to spend \$3,000,000 a day to see motion pictures; and in over 80 percent of the 27,000,000 homes in the United States we find radios that bring to us the latest national and world events, music, drama, and entertainment. Refrigeration is obtained by pressing a button and at less expense than the old ice box. You have produced in this country a higher per capita income than any other national economy enjoys.

All of these benefits for mankind because of your industrial genius—all of this because you planned intelligently and risked wisely. It could have happened only in a democracy.

With mass production and abundance there came problems—economic and social difficulties of an almost Frankenstein character. Some have denounced this undeniable progress—this machine age—but retrogression is no solution. Who would today trade incandescent light for the candle and open hearth? These evolutionary problems must be met with the same sanity, with the same reason, and with the same energy which solved the problem of food, clothing, and shelter.

Why do granaries bulge when people are hungry? Why are bales of cotton piled higher and higher when people lack clothing? Why do workers walk the street when we need more adequate housing facilities? What has created the paradox of want amid

plenty? What is it that leads man to destroy wealth—to create wealth? These economic riddles came with mass production—and they will go with mass consumption.

The problem of consumption has become the No. 1 problem of the twentieth century, and its solution lies basically with two great underprivileged segments of American society—the farmer and the unemployed.

It is my deliberate opinion that the unemployment and farm problems must be solved before this Nation can prosper—before we will know economic normalcy. Agriculture, with its 30,000,000, and the nearly 10,000,000 who lack real jobs must be given an opportunity to consume not only the necessities but also some of the luxuries of life.

Too many of us have for too long regarded the farm problem as some nebulous affair—one that did not directly affect industry. Such is not the case—and enlightened industrialists recognize this more and more clearly. The farm problem is at once an economic, a political, and a social problem of the first magnitude. Its continued presence constitutes an indictment of the intelligence of the American people, when administration after administration—Republican and Democratic—have failed in its solution.

The farmers cannot solve the farm problem. They are too individualistic to cooperate as have great business organizations. The politicians have not and cannot solve it.

Coldly and analytically the farm problem is industry's greatest sales problem.

Intelligent selfishness makes it necessary for you to devote yourself to it—to attack agricultural underconsumption with the same vigor, with the same energy, and with the same application of your resources that you did production. Treat it as it should be treated—as a sales problem.

The Government of the United States has recently appropriated money for the establishment of agricultural laboratories to study new uses for surplus farm products. Industry already has great laboratories manned by the best technicians; why shouldn't their work supplement Government research; or, better, why don't you as individuals or as an organization let the Government supplement a great constructive service by you? Here is a great field for industry, one in which neither the farmer nor the politician can act effectively, but one in which you could render a great public service. Solve it and the wheels of industry will hum the tune of national prosperity.

You make the mistake of overemphasizing your sales and merchandising activities on the assumption that shrinking patronage can be bolstered through redoubled sales effort. As a matter of fact, I believe you have the cart before the horse.

You do not need to high pressure John Jones into buying a new automobile; he would like to have a 1940 model. You don't have to high pressure him into buying new clothes or more food or even a new home; he wants them all. His wife wants a new refrigerator for her kitchen.

John Jones and his wife and 40,000,000 others lack the means to buy goods with which our markets bulge. Industry has created the demand, but neither government nor business has provided the necessary purchasing power.

This country is neither exhausted economically nor inefficient industrially. On the contrary, we are rich in men, money, and machines. You have created a potential market. But until you have also helped provide the means whereby this potential market becomes an actual market, the job is only half done. Your energies must be devoted to finding ways to give the farmers and the worker—a great consuming public—the purchasing power that will keep your factories running, not at 50 percent or 58 percent but at 100 percent all the time.

The unemployed, like the farmer, represent a sales problem for you. Any industrial center will have abnormal unemployment when the farmer lacks purchasing power. There are other factors that create unemployment, but certainly when over a fourth of our population cannot buy the products of labor, unemployment is accentuated.

It is to our best interest that those who want work can find gainful employment. Either private industry must employ them or the Government will. The taxes to do this will be imposed upon business. This will be true regardless of the administration in power. No democracy can long endure when large numbers of its people are in want. To keep them on a Government dole will destroy the moral fiber of any race. Starving, denial, and depression have accentuated the quest of the individual for a better country in which to live. The people are demanding this. I would not charge private enterprise with the sole responsibility for economic and social stability. But there are those who do—and people lacking the necessities of life are not given to wisdom and moderation. They become extremists. They turn against government as well as business. If the conflict continues over a long period of time, both sides forget their stake in democracy and turn to dictators of one kind or another.

Business has a real investment in democracy, a heavy investment, and one that must be protected. Protected because only under a democratic form of government does the competitive system exist, and, conversely, if you destroy competition you destroy democracy. Do not be misled. From Switzerland, not many days past, came the story of a twice disillusioned businessman, one who did not have the strength to live as a democrat. There are many like him. They heard the promises of the dictator. He would smash all labor unions. He would protect them from the labor leader. He would control all markets, fix all prices, and reduce

business costs. A dictator does all that. Organized labor is destroyed; markets are controlled; prices are fixed; costs are reduced; and profits are greater. But the profits are not for business; they are pocketed by the dictator.

But this industrialist, first disillusioned by democracy, then disillusioned by the system which with his aid replaced democracy, is a wiser refugee. His story is an old one—individual and free enterprise can exist only in a democracy.

The emphasis which I have placed upon the investment of business in democracy might lead some to believe that government does not share that responsibility. Such a thought should be dispelled. Our Government is a part of our country's social and economic life. It cannot and will not withdraw.

A democracy that fails to provide the essentials of human dignity for its people is not worthy of the name. The social reforms that have been inaugurated by this administration have my hearty approval. I believe in old-age pensions, unemployment compensation, aid to children, and assistance for the blind. I likewise feel that programs designed to furnish educational or other opportunities for the youth of the Nation are highly meritorious.

Statistics indicate that well over 3,000,000 young men and women under the age of 24 lack employment. Such a condition is a challenge to industry—but it is more of a challenge to democracy. With industry facing either a potential or actual shortage of skilled workers it would seem practical for you to inaugurate a system of training or apprenticeship for this American youth. If industry does not, again government must, and you will pay the bill. You could do it more efficiently, with less politics and with better results for the youth. Why not undertake it?

Industry in retrospect will recognize the benefits that have accrued even to them in some of the programs of economic reform. Long-delayed and sorely needed action has been taken by Government during the past 7 or 8 years. The regulation of our security markets, the stabilization of our banking system, the use of Government credit when private credit was unavailable—all of these have my support.

Progressive legislation, carefully drafted, openly debated, and competently administered but strengthens democracy. Some recent legislation has been subjected to the most bitter denunciation. Divergent labor groups and industry have sharply criticized the National Labor Relations Act and its administration. Congress is now studying this, and I have no doubt but that corrective steps will be taken. Public opinion in a democracy, sooner or later, furnishes protection from bad laws and inefficient executives.

The hour has come when we must stop, look, and listen. We must reinforce our much advanced position in the battle of economic and social reform. The effects of existing legislation and its operation is being carefully studied by the public much more carefully than the zealot contemplates. Every intelligent businessman realizes we must have reforms to meet changing conditions—but reforms must be constructive and not destructive. They should always be within the framework of free government.

In national affairs the functions of government and the functions of business can never be irrevocably separated. An unswerving line cannot be drawn where the legitimate activities of government end and those of business begin. A growing economy is productive of new problems—and new problems require new solutions. A dynamic economy makes impossible the complete stability of the relationship between government and business.

But business seeks the greatest possible degree of stability. Business plans for tomorrow must be projected today. Shifting economic philosophies reflected in legislative enactments makes difficult, if not impossible, such planning by business. Statutes construed and manipulated by overzealous administrators creates an uncertainty more feared by business than drastic, though specific legislation.

As you fear uncertainty so do you fear new taxes. I do not believe that you businessmen will protest taxation necessary to produce revenue for the legitimate activities of government or for the alleviation of human misery. The American people and the American businessmen do object, and with great justification, to waste and extravagance of public funds by Government officials. I am not an expert on taxation. Able Under Secretary of the Treasury John W. Hanes is devoting himself to the tax problem. The results of his study and his recommendations are awaited by everyone in and out of government. I have not served on a committee charged with consideration of tax bills. But it is a well-recognized principle of economics that taxation can reach a point beyond which it produces less for government and is destructive to industry. No government can spend more than its income over a considerable length of time without coming face to face with bankruptcy. And it should never be forgotten that financial bankruptcy is the first and most direct step to political bankruptcy—to dictatorship. A dictator is but the receiver of a bankrupt nation. Let us, of course, realize the periods of national emergency, such as we have been experiencing, puts the possibility of a balanced Budget beyond the power of either a liberal or a conservative administration. We all want lower taxes—we would all like to pay less for government. Every thinking person realizes that every effort should be made to balance our National Budget. The present Congress of the United States is aiming in that direction.

Democracy is an enterprise in which government and business are partners. Of course there are other large stockholders—labor, agriculture, and the public—partners all possessed of a vital interest in making democracy work. But no partnership can be successful, no such venture can long endure unless there is cooperation between

the interested parties. It is the patriotic duty of business to cooperate with government. And it is likewise the duty of government to cooperate with business. There is no disposition on the part of Congress to strangle or thwart business. Members of Congress are sincere and determined to aid honest business. If prosperity results from cooperation by business, government, and labor, there would be more revenue from taxes for government, more profits for business, more work and better wages for labor, more markets and better prices for the farmer, and more security for the public.

In the spirit of constructive cooperation we must face the future of America with confidence. Our problems are many but our opportunities are great. We have the richest, freest country in the world. We are not engaged in a bloody conflict to preserve these riches and this freedom. Together we can solve our problems. United we can face the world with a nation so strong and so free that no nation or group of nations would harbor even a thought of interference with us. Our destiny would be obvious. We would ever remain a sanctuary for democracy, peace, and civilization.

## One Hundredth Anniversary of Virginia Military Institute

### EXTENSION OF REMARKS

OF

HON. CARTER GLASS

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, January 8, 1940

ADDRESS BY THE PRESIDENT

Mr. GLASS. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD the address of the President of the United States on the occasion of the one hundredth anniversary of the founding of Virginia Military Institute.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

General Kilbourne, friends of Virginia Military Institute, it gives me peculiar pleasure to participate in this observance of the one hundredth anniversary of the founding of Virginia Military Institute. I very deeply regret that I cannot carry out my hope and expectation of being with you in person, but I know you will understand my difficulty of being away from Washington at this trying time and also my desire to attend the already historic simple ceremony at the Tomb of the Unknown Soldier at Arlington.

We, as a nation, like Virginia Military Institute, are determined to pursue our way within the Scriptural command not to "remove the ancient landmarks which thy fathers have set"; and, like our ancestors, we work for peace, we pray for peace, and we arm for peace.

The whole history of Virginia Military Institute is a triumphant chronicle of the part which the citizen soldier can play in a democracy. Virginia Military Institute bears eloquent witness to the necessity for institutions of learning which, while adhering to the primary purpose of preparing men for work in the arts and sciences, have also a byproduct in their military-training system. We need today, as we have always needed, and always shall need, citizens trained in the art of military defense. By no other means can we hope to maintain and perpetuate the democratic form of constitutional representative government.

On this account I greet Virginia Military Institute as it celebrates the one hundredth anniversary of its beginning, and what associations come to mind as we commemorate this anniversary. We remember among countless others that the immortal name of "Stonewall" Jackson is part of the imperishable heritage of Virginia Military Institute, and we honor not less the town of Lexington as the resting place of that superb soldier and his dauntless chief, that knightly figure without reproach and without fear, another of the great commanders of history, Robert E. Lee.

There is nothing inconsistent in saying a word about peace at this anniversary of a great school of arms. In our history the two have always had a connection. We have never had the illusion that peace and freedom could be based on weakness.

Jackson and Lee, famous for their military courage, never lost sight of the fact that the only legitimate aim of armed force was to restore civil peace, in which armed force would no longer be needed.

The only object of arms is to bring about a condition in which quiet peace under liberty can endure. It is fitting to remember this today. In this season we have been used to celebrating the anniversary of the armistice of the World War. Now we need a new and better peace—a peace which shall cause men at length to lay down weapons of hatred which have been used to divide them and to forego purposeless ambitions which have created fear, ambitions which in the long run serve no useful end. We seek a

language in which neighbor can talk to neighbor, in which men can talk to men, and by which the common and homely and human instincts which are found everywhere may reach expression through the elimination of fear.

I have sought—I still seek—in all simplicity to try to find the road toward this peace. It must be the goal not only of men trained to arms but of all of us everywhere whose dearest desire is a quiet peace under liberty.

To all of you—faculty, students, and graduates of the Virginia Military Institute—I send my warm greetings on your centennial. Live up to your great heritage, your noble record, and your simple faith throughout the second century that lies before you.

### Tribute to Senator Glass on His Birthday Anniversary

#### EXTENSION OF REMARKS

OF

HON. PAT HARRISON

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Monday, January 8, 1940

ADDRESS BY HON. HARRY FLOOD BYRD, OF VIRGINIA, AND OTHER TRIBUTES

Mr. HARRISON. Mr. President, following the distinguished and illustrious senior Senator from Virginia [Mr. GLASS], I ask unanimous consent that the speeches delivered by the junior Senator from Virginia [Mr. BYRD] and others at the recent celebration in Virginia of the birthday anniversary of the senior Senator from Virginia, together with certain other tributes, be printed in the CONGRESSIONAL RECORD.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

ADDRESS BY HON. HARRY FLOOD BYRD, OF VIRGINIA, DELIVERED AT THE CEREMONIES OBSERVING THE EIGHTY-SECOND BIRTHDAY OF SENATOR CARTER GLASS AT SWEET BRIAR COLLEGE, LYNCHBURG, VA., JANUARY 4, 1940

Mr. Chairman, Senator GLASS, distinguished guests, ladies, and gentlemen, to establish here at beautiful and enlightened Sweet Briar a Carter Glass professorship of government means perpetuation of CARTER GLASS' philosophy, his ideals, and his aspirations for America's welfare.

It will succeed, because in the hearts of millions of Americans Senator GLASS stands today as a symbol of American patriotism and American achievements; a statesman whose every day work symbolizes those things that have made our country great; whose character, appearing to have been carved out of the unblemished granite of truth and loyalty and sincerity, hates deceit and detests a lie; a private life and a public career which we may proudly hold up for emulation and tribute by our children and generations to come, seeking the ideal of the highest American citizenship.

He is the most beloved Member of the Senate of the United States and the most respected. He is beloved because of his tender sympathy, his tolerant understanding, and his loyalty. He is respected for his fearless honesty and straight thinking.

A Senator is either brave or lacking in discretion when he invites a controversy with the senior Senator from Virginia, and few do. It does not take new Members long to learn why the late Senator Ollie James, from Kentucky, called him the "snapping turtle," nor does it take them long to learn to love him.

A distinguished Washington columnist said of Mr. GLASS recently: "A voice that for many years remained silent, and even now is raised but rarely, has today a power to command attention throughout the Nation as great as that of the President and greater potency than any other in bringing Members of the Senate into the Chamber and holding them there in quiet, respectful attention."

This businessman who accepted public office after he was 40, who served for years in the House before he made a major speech, and then spoke on the Federal banking system without interruption for more than 5 hours, with the closest attention of his colleagues, is one of the outstanding orators of America. Always speaking extemporaneously, he never corrects his remarks for the CONGRESSIONAL RECORD and speaks with a conciseness of expression rarely equaled and not excelled in contemporary literature.

A great educator, in awarding Mr. GLASS the highest honor of an ancient college not long ago, said:

"You have reached a position of distinction and eminence which has placed you above the powers of others either to add to your honor or to detract from your fame."

I imagine that of all the honors that come to him, the confidence and love of his own people in Virginia please him most.

Beginning his public career in the position as clerk of the City Council of Lynchburg, he was drafted to represent his district in

the State senate, was a leader and a very notable figure in the State constitutional convention of 1901, elected and reelected to the National House of Representatives, twice endorsed for the Presidency of the United States by the Virginia Democracy, elected and reelected to the Senate of the United States, where, pray God, he may stay for many more years to serve his country in straight thinking and high action and to give the joy and delight that come to his friends through association with him.

His long career in the representation of Virginia has been interrupted only when once he resigned from Congress to serve with great distinction as Secretary of the Treasury and intimate adviser of his close friend, Woodrow Wilson.

He has known the hardships of youth in a war-torn home. He has seen his beloved Virginia recover from the ravages of a Civil War when Virginia was the battleground of those brave men who fought on both sides in this mighty struggle; and no man has contributed more to Virginia's restoration or has more reason to be proud that Virginia stands today foremost among the States of the Union in sound progress and worth-while development.

We know of the South's ordeal in the days of reconstruction. In some respects it was more terrible than war itself. That school of experience formed the foundation for the clear thinking and the progressive and fearless leadership which Mr. GLASS spreads so indelibly across the public records of State and Nation. By his career he is known in every quarter of our Republic. Whether they agree or disagree with his clear-cut and boldly expressed policies, it is certain that people everywhere universally admire him for upholding his own convictions on the most controversial subjects, completely indifferent alike to criticism and praise.

He is always for the things that are good in life, for the things that have made America great, and for the things that will continue to make his country better. His ambition is to make his country and his people better because he has lived. A more noble purpose can motivate no man.

Mr. GLASS applies his rugged individual experiences to the benefit of all his fellow men. The leaders of his time pay high tribute to him. The leaders of time yet unfolded will look upon his achievements and contributions as even greater than described by his contemporaries. Honor has come to him from his city, his State, and his Nation—from public and private institutions in the four corners of the Nation. He dislikes the accompanying pomp, and loves to mingle among unpretentious friends, where no man is better company, and his wit, humor, and sympathy make him a joy to all who know him.

He asks no quarter with justice. He speaks only when there is something to be said. He acts when there is something to be done. His forthrightness not infrequently brings criticism down upon him. But I have never known him to go long without vindication.

Just as adversity tests a man, praise and laudation test even more his character and his poise.

From the day he held his first public office as clerk of the City Council of Lynchburg, at a salary of \$300 per year, until now, Mr. GLASS has been a shining example of that rare product of our political life—a statesman without fear and above reproach. Universities and colleges throughout the land have conferred degrees and paid high tribute to this man, who never matriculated at a college. Recently no less than 11 great institutions of learning have paid him signal honor, and among the medals awarded him was the Roosevelt medal—Theodore Roosevelt. And throughout it all, with high praise coming from such sources that could be inspired by only genuine appreciation of his merit, we see Senator GLASS here tonight with us, the sincere, modest, and straightforward man he has always been.

In every household in America his name stands for the highest type of public official—a gentleman unafraid, a statesman whose life and character are an inspiration to those who still believe a man can be elected and reelected to public office and at the same time be true to his character, true to his convictions, and true to his patriotic impulses of high public duty.

Today we hear many modern definitions of liberals and conservatives, some of these definitions coming from very high station. Senator GLASS' definition of a liberal is:

"A liberal is an individual who doesn't have to consult the shades of his ancestors, no matter how proud of them he may be, before reaching a conclusion regarding any given set of facts."

Senator GLASS is revealed in voluminous public records covering a period of nearly a half century as personifying the distinction between a liberal and an opportunist.

He was fighting reaction and reactionaries with his progressive liberalism before some of his present critics saw the light of day.

As a matter of fact, it is almost impossible for one born to reconstruction in the South to have succeeded without a soul of liberalism and progressiveness.

I will not attempt to mention here all of his achievements.

There is no greater evidence of true liberalism or of greater political courage in contemporary history than GLASS' tenacious work and fight for the Federal Reserve Act now universally recognized as one of the most progressive pieces of legislation of the twentieth century, but at the time of its enactment branded in many quarters as the most radical.

Of this legislation Woodrow Wilson, as he signed the bill, said:

"There have been currents and counter currents, but the stream has moved forward. Men are no longer resisting the conclusion which the Nation has arrived at as to the necessity of the readjustment of its business. Men who have fought for this measure

have fought nobody. They have simply fought for those accommodations which are going to secure us in prosperity and in peace."

Mr. GLASS fought and worked for every single measure of Wilson's new-freedom program.

As Secretary of the Treasury he advocated stock control, the predecessor of the Securities and Exchange Act, for which he later voted.

He would have taxed every share of stock not held longer than 60 days in an effort forever to rid the country of stock-market gambling. Had the Congress then adopted his farsighted advice, the disasters of the 1929 panic in which stock gambling was a large factor would have been greatly tempered.

There is no clearer insight into his effort to protect the less fortunate from the unscrupulous than his advocacy of separating security affiliates from banks to prevent big banks from unloading upon the unsuspecting small savers securities, foreign and otherwise, that would never pay off.

I have said you may differ with Senator GLASS, but he has not gone long without vindication.

An instance: In 1933 the bitter controversy between Charles E. Mitchell, then head of the powerful National City Bank of New York, and GLASS, over the divorcement of deposit banking and underwriting business was one of the highlights of that time.

Mr. Mitchell, testifying only a few days ago before a congressional committee, said that while he regarded the Glass Act a "disaster" when enacted, he now looks up to it as "one of the great steps in the path of the Nation's progress."

Had this legislation, long advocated by Senator GLASS, been adopted earlier, innocent investors would have been saved billions in the purchase of worthless securities. In this GLASS was vindicated by the testimony of his bitterest adversary.

Yes; he rebels against all things he believes to be to the detriment of his country. Some of our most costly mistakes would have been averted had we followed in at least some of his rebellions. Nevertheless, insofar as he is concerned, we may be sure that this trait of his will never yield to reconstruction.

Senator GLASS proves the paradox that one can be a great liberal and a great conservative at the same time. He is a liberal who realizes the importance of conservatism in its true sense. He is a conservative who realizes and practices the humanity of liberalism. The manner in which he combines and coordinates the best of these philosophies makes Senator GLASS the great individual that he is.

He is a liberal who favors continued improvement in the Nation's economic and political life. He is a conservative who is unwilling to advocate unworkable measures having political expediency as their primary objective and waste and extravagance as their inherent characteristics.

He is a liberal who is opposed to concentration of power; he is a conservative who fights to conserve for the States and the individuals those powers and rights which are properly theirs.

He is a liberal who demands freedom of speech, freedom of press, and freedom of religion for all regardless of their political or religious views; he is a conservative who does not hesitate to defend for our citizens their fundamental rights when they are endangered by packed courts or to denounce every effort to reduce the legislative body to dependency.

Some of his contemporary critics may call him a reactionary, but in the calm perspective of the future historian the place of CARTER GLASS in the public life of America in constructive achievements for the good of our Republic is secure, founded upon the true liberalism of equal opportunity for every citizen and the curbing of all abuses of power whether by the plutocracy of wealth, by high political office, or any other powerful class of organized minority.

In predepression days before 1929 GLASS stood almost alone in the wilderness of fast, furious, but synthetic business practices in warning those who most needed to listen that they would crack into the panic which later came.

Those days of warning came to a climax on the floor of the Senate in 1929 when Senator GLASS, referring to "that New York crowd," said: "Those people have run away with the market. They have been permitted to use the trust credits of the Federal Reserve System for stock-gambling purposes, which they should not have been permitted to do. And now they want the commerce and industry of the country to be paralyzed to correct the situation which they, themselves, have precipitated. The only way to correct this inconceivable and wicked riot in gambling is to put a tax on gamblers, and that, I suggest, be done at this session of Congress."

GLASS is always a dangerous foe to the kind of ruthless public utilities, and any big business so conducted as to abuse their power. He will always be a bitter foe of excessive tariffs.

If one were called upon to sum up his liberal philosophy, a passage from one of his most recent speeches might well be used—when he said—

"There are certain things necessary to be done, of course, which the people in their private capacities lack the power to do, and in such case the public must operate through the government. Privileges which are entrenched and greedy must be curbed, and it is the proper function of government to prevent the erection of any unnatural barriers to the equality of opportunity. But when equality of opportunity is assured government should interfere as little as possible with the normal activities of the people and the normal processes of trade and industry."

If Senator GLASS' liberalism is to be judged by the test, illogically applied by many today, as to how liberal he is willing to be with

other people's money, he will not qualify under such a definition, yet he would spend the last dollar in the Treasury to prevent any American citizen from starving or suffering for the necessities of existence, but he would not spend a penny for political expediency or for waste and extravagance of the people's money.

As chairman of the Senate Appropriations Committee, he has been making heroic efforts in recent years to protect the solvency of the Nation, the act of a true liberal, because financial solvency will always be the foundation stone of any organized government, and large and increasing debts for future generations to pay are ever to be avoided except in times of a great national emergency. That his efforts for economy have been largely unsuccessful is no fault of his, but, again, I predict he will not go long without vindication.

He knows from his vast experience that farsighted, long-enduring, true liberalism worthy of the name must be based upon farsighted, long-enduring, truly conservative fiscal policies. But Senator GLASS cares not what definition is applied to his statesmanship. His only concern is acting in accordance with his conscientious convictions and his own good judgment.

A privilege for which I shall be eternally grateful is that of being his colleague in the representation of Virginia in the Senate of the United States. Virginia in her history has contributed some great men to the Senate of the United States, but Senator GLASS is Virginia's outstanding Senator and will remain so, I predict, for many generations to come. My admiration for him is exceeded only by my love and devotion to him.

Of my close and intimate association with him I can only speak with deep emotion. I have never spent even a short time with Senator GLASS without feeling an inspiration to try to do my duty better. Only yesterday I inquired of a Senator what has been Senator GLASS' most noteworthy achievement. He replied that his greatest contribution to our Republic has been his example to youth; that high ideals, devotion to duty, and fine character still give the best rewards.

May I be permitted to pay my tribute tonight to two of the Glass family who have given a lifetime of service to education—Dr. Meta Glass, his sister, whose work at Sweet Briar gives to her a place in the very front rank of American educators, and Dr. Edward Christian Glass, his brother, who held the unique distinction of being the head of the public-school system of Lynchburg for 53 years, longer than any other who has held a similar position in Virginia, and whose patriotic and unselfish work will ever stand as a monument to his memory.

Today, on Senator GLASS' birthday, it is fitting that his friends and admirers everywhere should signify their appreciation for his nearly half century of noteworthy public service; we express our gratitude for the privilege of knowing him and for the inspiration to seek and champion those things worth while. Moreover, it is very appropriate that it should be observed here in the halls of Sweet Briar College in the presence of his family, his friends, and the surroundings he loves so dearly.

I voice Virginia's hope and the Nation's hope in saying to Senator GLASS:

May the Lord bless you and keep you another 82 years, and give you the grace and happiness you so richly deserve in this life and ultimately the peace eternal for which all of us pray in the life to come.

JANUARY 4, 1940.

HON. META GLASS,

*President, Sweet Briar College, Sweet Briar, Va.*

DEAR PRESIDENT GLASS: I am greatly honored to have been invited to speak at the ceremonies creating the Carter Glass professorship of government at Sweet Briar College January 4, the Senator's eighty-second birthday, but unfortunately a severe and stubborn cold will deny me the pleasure which I would so much enjoy.

Others will no doubt speak about CARTER GLASS' long service to Virginia and the Nation as your Representative in Congress, as Secretary of the Treasury, and in late years as the senior Senator from the Old Dominion. In all of these high posts he served with distinction and great honor both to himself and to Virginia.

I should like to repeat here what I have said on other occasions—that history will record in the first decade, the teens, the twenties, the thirties, and the forties of the new century, that CARTER GLASS carried on the great tradition of Virginia, a tradition which goes back to the colonial days.

CARTER GLASS brought to Washington a balanced mind, good judgment, and a capacity for hard work. Soon his colleagues in Congress recognized his great force. The Nation acclaimed his statesmanship, and Woodrow Wilson leaned heavily upon him. Year by year his horizon has widened. His political creed is a broad liberalism framed within the basic American tradition. CARTER GLASS never in his life played to the gallery. He has always seemed unaware that a gallery existed.

It has been my privilege to know CARTER GLASS for a good many years. I know him in many roles. I have seen him in fiery debate with his caustic tongue routing sham and hypocrisy and leaving pretense in wreckage, for surely no man of our times has been able to put so much velocity in just plain speech.

I have seen him in counsel around committee tables, the role in which he has played such a great part in shaping the Nation's fiscal system.

I have seen him at baseball games and football games, enjoying those sports with all the enthusiasm of the greatest fan. I have seen him at the races, wrestling matches, and prize fights with his lifelong friend, the late Admiral Cary T. Grayson, another great Virginian. And they do say he indulged in chicken fighting in his younger days.

Finally, my own life has been greatly enriched by many hours of his charming companionship. His support and confidence have been of great benefit to me as a Government administrator charged with unusual responsibilities during the past 8 years. I value CARTER GLASS. I value his confidence and his friendship.

I have thrilled at his fighting qualities, admired his sure and deep convictions, esteemed his straight thinking, and loved him for himself.

Sweet Briar is bringing honor to itself in establishing a Carter Glass chair, and I could wish no happier communication for Sweet Briar, for Virginia and the Nation, than that the establishment of this chair would contribute to the development of just one patriot and statesman of the approximate dimensions of CARTER GLASS.

Sincerely yours,

JESSE H. JONES.

ADDRESS BY ROBERT V. FLEMING

I consider it a high honor to be able to participate in this occasion, not only on account of my interest in and affection for Senator GLASS but because of my interest in the State of Virginia.

My father was a Virginian, having been born just outside Richmond, and served throughout the Civil War in the Richmond-Fayette Artillery. Following the war and after resigning as assistant city engineer of Richmond, he entered the profession of architect and builder in Washington and was one of the principal members of a group responsible for the creation of the Home for Confederate Veterans at Richmond. Therefore it will be seen that, while I have lived all of my life in Washington, I have quite a sentimental interest in the progress of the great State of Virginia, its institutions, and its citizens.

In recent years—particularly during the last year—I believe all thinking people have been shocked at what has occurred in other parts of the world. Because of economic stress, the peoples of some nations have given up their liberty—that most precious of all human possessions—in the hope of obtaining economic security. To accomplish that end they have allowed their governments to take the form of dictatorships, whose methods of achieving economic betterments have been the application of brute force of arms rather than the evolution of peaceful conferences and the development of commerce and trade on a friendly basis. The terrible result is that the world today stands on the brink of what may develop into one of the darkest periods in the history of mankind.

In the light of these conditions, therefore, encouragement is to be found in the establishment of schools of government by our great universities and colleges in America. One of the best ways of safeguarding the continuation of democratic processes of government in this country is by educating young men and women in our form of government so that those who, in a short space of time, will have on their shoulders the responsibility of guiding the course of this land, may have an understanding of the sound basis on which our Government is founded.

Without question, Sweet Briar College is peculiarly adapted to undertake such a great work as this. Through a combination of fortunate circumstances it has on its board of overseers that great son of Virginia, Hon. CARTER GLASS, and for its president the sister of this distinguished statesman and herself an outstanding educator, Dr. Meta Glass.

In the establishment of the Carter Glass chair of government here at Sweet Briar, the career of Senator GLASS brings to this great educational institution a splendid background and tradition for this particular phase of its work. From the time he first entered public life, Senator GLASS has stood for sound government, for the democratic processes of government. He has always been one of the forward-looking statesmen of our Nation. He has ever maintained the belief that progress should be made soundly and upon firm foundations. His contributions to all types of legislation have been constructive and outstanding. Having spent all of my life in the business of banking, naturally I am most familiar with the efforts he has made on behalf of our people in the creation of legislation designed to place the financial structure of this Nation on the soundest possible basis.

Senator GLASS was not only the architect who framed the Federal Reserve System, but, in addition, since its creation has been ever ready to lead in such legislative action as might be necessary to adapt the system to changing economic conditions. Furthermore, he has been the system's staunchest defender.

In his work as chairman of the House Banking and Currency Committee, where his brain and leadership conceived and brought about the passage of the Federal Reserve Act, and afterward as the distinguished post-war Secretary of the Treasury, he won not only the high praise and confidence of our great war President, Woodrow Wilson, during whose administration this legislation was enacted, but the commendation of all the people. As a tribute to him, and so that all who enter this magnificent symbol of the financial

stability of this country might visualize the creator of the system, there hangs on the wall in the entrance hall of the Federal Reserve Building, opposite the plaque honoring Woodrow Wilson, a bronze likeness of Senator GLASS. Beneath it is this quotation from the Senator's book, *An Adventure in Constructive Finance*.

"In the Federal Reserve Act we instituted a great and vital banking system, not merely to correct and cure periodical financial debauches, not simply indeed, to aid the banking community alone, but to give vision and scope and security to commerce and amplify the opportunities as well as to increase the capabilities of our industrial life at home and among foreign nations."

Having served as chairman of the committee on Federal legislation of the American Bankers Association, and having been honored by my associate bankers in this Nation to serve as president of that organization for the term 1935-36, I have had many opportunities for close observation of and contact with this great son of Virginia.

I know intimately of the great part he has played in the trying period of the past 10 years. I know also what a vital force he has been in shaping and revising legislation which brought our financial structure so quickly out of the collapse which occurred in 1933. Every piece of legislation with which he has been identified carries his lofty purposes and high concept of economic security for our people. There have been times in the past when banking and business interests have differed with Senator GLASS, but these have been differences of opinion. Never has there been any question as to the lofty purposes and the high concept of the public interest which have motivated Senator GLASS throughout his career. Today there is no man who is more revered, more highly honored for his unswerving integrity, and for whom the banking and business interests of this Nation hold a greater admiration than for the gentleman in whose honor the professorship in government is being established here at Sweet Briar tonight.

Senator GLASS has been the recipient of many notable recognitions from the great universities of this Nation for his magnificent contributions to sound government. I happen to be familiar with the honorary degree of doctor of laws conferred upon him by the distinguished president of William and Mary College and outstanding son of Virginia, Dr. James Stewart Bryan. The citation accompanying this honorary degree so epitomizes the career of Senator GLASS I should like to quote from it, as follows:

"In time of crumbling standards he has stood like a rock in a wasted land. An eternal foe to ignoble compromise, undeterred by demagoguery, unblinded by fallacy, unswerving by speciousness, with the courage of a soldier, and the devotion of a patriot he has brought to his high responsibilities the statesmanship that became a Secretary of the Treasury, a Senator of the United States, and a son of Virginia."

And so, may I say again what a privilege and honor it is for me to have the opportunity of taking part in the creation of this chair of government honoring Senator GLASS. I should like to add that I am glad also of the opportunity this occasion affords me to publicly express to Senator GLASS my appreciation for the great contribution he has made to the financial structure of our Nation, for his many courteous and considerate acts, for his fine understanding and cooperation. I want to assure him and his fellow Virginians present here tonight of my high admiration and deep affection for him, and that I consider it has been a rare privilege to have been favored with an intimate contact with one of America's greatest statesmen.

Russell C. Leffingwell, of New York, Assistant Secretary of the Treasury when Mr. GLASS was Secretary, presented to the Senator the book containing the signatures of those who contributed to the endowment.

In lauding his former chief, Mr. Leffingwell referred to Senator GLASS' part in establishing the Federal Reserve System:

"In a democracy no great measure is the sole achievement of a single man; but of all the many people, politicians, bankers, and businessmen who contributed to the creation of this Federal Reserve System, CARTER GLASS plainly stands out as the man who devised and piloted through the legislature and enacted this great measure."

In making the presentation of the endowment for the donors, Mr. Leffingwell declared the study of government is important for women.

"Evidently it is essential that woman's instinct for good house-keeping, and her experience in it, should be applied to the affairs of the National Government, and that every educated woman in particular should have an opportunity to know and understand the business of government, how it is conducted, and how it ought to be," he said.

Continuing his remarks on Senator GLASS, Mr. Leffingwell said: "A free and fearless and untrammelled press he stands for and exemplifies; a free and fearless life in politics he stands for and exemplifies. There is something else that CARTER GLASS has that few have. He is uncontrollable in his devotion to truth. He is possessed of command of the English language unrivaled in his day, and has the power of indignation and the gift of enthusiasm. CARTER GLASS is the true example of the leader of a free people."

## Balancing the Budget

## EXTENSION OF REMARKS

OF

HON. CHARLES L. McNARY

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, January 8, 1940

ADDRESS BY HON. ROBERT A. TAFT, OF OHIO

Mr. McNARY. Mr. President, I ask unanimous consent to have printed in the RECORD an impressive and revealing address delivered by the Senator from Ohio [Mr. TAFT] before the Chicago Bar Association, and broadcast by the National and Mutual Broadcasting Co.'s on Friday evening, January 5, 1940, on the subject Mr. President, Here's How To Balance the Budget.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Ladies and gentlemen of the Chicago Bar Association, it is a pleasure to discuss public questions before a body with the long record of public service which your bar association has, particularly when my old friend and classmate, Tap Gregory, is your president. I appreciate particularly your kindness in inviting me to speak on a political subject to an association whose membership includes many Democrats, among them your president.

This is a time of year when members of the bar are advising men and women and businesses on their financial position and their tax liabilities. It is a time when every father is preparing his own budget for the coming year and trying to find out whether he can pay rent and taxes and still buy enough food for the family and clothes and shoes for the baby, or whether he is on the road to bankruptcy and the relief rolls.

Last month I made the statement that the Budget of the Federal Government must be balanced if we are to avoid national bankruptcy, and that it can be balanced in 2 years. The President of the United States deigned to offer me a handsome prize if I could show him how it could be done. While his statement was no doubt made in a jocular vein, it has extraordinary implications. In effect, he says that the Federal Government cannot possibly balance its Budget and get on an even keel by the 1st of January 1942; or else he must be asserting that he does not want to bring about that condition by January 1, 1942. In either event, he admits that if he should continue to be President at that time the Budget would not be balanced 2 years from now.

He also admits that he does not know how to do it himself. Since I prepared this speech, apparently, he has decided to compete for the handsome prize himself, and the Budget message presented to Congress moves very gingerly in the right direction. But a good deal more will have to be done before the President can claim his own prize. I question the genuineness of the President's new-found desire to reduce spending, and I think he still needs the advice for which he has asked.

FIRST: THE PRESIDENT MUST WISH AND BE DETERMINED TO BALANCE THE BUDGET

The first prescription for balancing the Federal Budget is that the President of the United States shall wish to balance it, and must be determined to balance it now. I have been in the Senate for a year, and I have seen no evidence of a desire on the part of anyone in the present administration to abandon the deficit borrowing policy. No Government planner suggests or even asks where the money is coming from to pay his increased expenses. Project after project is presented without its sponsors feeling the slightest responsibility to raise funds to pay for it, except by more borrowing.

The administration has been guided by a deliberate philosophy of using Government borrowing in an effort to produce prosperity. Mr. Eccles has said that deficits are a blessing in disguise. As late as November 1939, at St. Louis, he opposed proposals that the Government, in an effort to balance the Budget, reduce expenses in any line involving payments to consumers because it would reduce purchasing power. In short, he is still a strong advocate of the pump-priming theory, as are many other members of the Government. Only this week was published the annual report of Harry Hopkins, Secretary of Commerce, one of the President's most intimate advisers, in which he devotes pages to a defense of the discredited theory that the Government can spend itself into prosperity. A theory so convenient to the politician as one involving more spending and lower taxes is not easy to abandon.

The President himself has at times wholeheartedly embraced this theory. On January 6, 1936, he said: "Secure in the knowledge that

\*\*\* it is the deficit of today which is making possible the surplus of tomorrow, let us pursue the course that we have mapped." It is 4 years since that statement was made, and tomorrow has never dawned.

In November 1937, Secretary Morgenthau declared that the Budget must be balanced, but his words were hardly uttered before he had to yield to the spending group in the administration. The President in his message to Congress on January 4, 1939, only 1 year ago, declared that an effort by the Government to balance its Budget by cutting expenses would invite disaster, and that only by liberal Government spending, which he lightheartedly referred to as investment, could prosperity be restored in the United States. He then presented a plan for the year ending July 1, 1940, which would add \$3,300,000,000 to the public debt. As a matter of fact, the deficit this year will be closer to \$4,000,000,000.

Think of it, citizens and taxpayers! We are used to astronomical figures, but \$10,000,000 is still a lot of money. Every day, every 24 hours, the Government is borrowing and spending, over and above all the taxes it collects, the huge sum of \$10,000,000. Every 3 days the Government is borrowing more than the value of all the farms in an average rural American county. What the Government borrows the citizens owe and some day are going to have to pay.

If a man promises to reform and fails to do it, we may still feel that he has sincerely tried; but when he goes on promising and never takes a step toward carrying out his promises, we may well doubt his real desire to reform. So with the promises of the President. In the campaign of 1932, the President repeatedly promised a Federal Budget annually balanced, as pledged by the Democratic platform. In 1933 he told Congress that there was a reasonable prospect that within a year the income of the Government would be sufficient to cover the expenditures of the Government. In 1934 he promised a balance for the fiscal year 1936, and he made the same promise in 1935. The year 1936 added \$4,000,000,000 to the public debt. In 1936 the Budget was to be balanced in 1938. In 1937 he said: "We expect, moreover, if improvement in economic conditions continues at the present rate, to be able to obtain in 1939 a completely balanced Budget with full provision for meeting the statutory requirements for debt reduction." The deficit for 1939 was \$3,600,000,000. The 1939 Budget message did not even express any hope that the Budget would ever be balanced, and about the same time the new dealers acclaimed a book published by seven young professorial economists, which advanced the theory that the Budget should never be balanced.

Furthermore, only 6 months ago the President presented and tried to force through Congress the notorious spend-lend bill, authorizing expenditures close to \$5,000,000,000 by Government departments without securing any appropriation by Congress, a new spending trick developed by the New Deal spenders. The bill was so framed that expenditures would not have appeared among the regular expenditures of the Government, but the departments would have been authorized to borrow money on the Government's guarantee and thus increase the Government debt. On Wednesday, Ernest K. Lindley, columnist closer to the New Deal than any other columnist, and the President's biographer, said of the Budget just presented: "As drawn by the President, the Budget is a heavy concession to political expediency." Not to sound Government, or political morality, or common sense, my friends, but to political expediency. If that doesn't mean that the expenses are being reduced in an election year to be increased again when there is no longer any political expediency, I don't know the English language.

There is no evidence that the President wants to stop spending. He has complained from time to time that Congress has exceeded his recommendations. It did so last year with relation to farm benefits and flood control, but over the whole period Congress has appropriated within 2 percent of the official Budget estimates. Furthermore, if the President had been sincere in his desire for economy, he could have vetoed the farm and flood-control appropriations. But he said not a word and signed the bills. He has not vetoed a single spending bill since the bonus bill in 1935. Is it any wonder that most Congressmen do not believe that the administration objects to more spending, particularly when it provides liberally for all its own pet projects?

There is a good deal of ghoulish glee on the part of the new dealers today because the President is now cutting projects supposed to be dear to the hearts of Congressmen. This is said to put them on the horns of a dilemma, and the President evidently expects them to restore the cuts so that he will not have to stop spending. If he will stop playing a game with Congress, and show that he sincerely means business, he will get plenty of support for his vetoes.

A President who really wants to balance the Budget is going to have to use his veto power fully to support his position, as every other President, Republican or Democratic, has done in the past. As a matter of fact, under present conditions the President's influence in Congress is so great that if he exercised the same pressure for economy which he exercised last summer for more spending in the spend-lend bill, he would have no difficulty in holding Congress without a veto to the appropriations he recommends. I do not maintain that balancing the Budget is an easy feat, but it can be done if there is a conviction and determination that it must be done on the part of the President of the United States.

**SECOND: ELIMINATE BUREAUS; REDUCE NUMBER OF EMPLOYEES; REORGANIZE**

When that requirement is met, he can turn to the Budget itself. I have here last year's Budget, a book 2 inches thick, with about 1,000 pages and 50,000 items. It takes the departments and the Director of the Budget a full year to prepare it. I don't suppose the President expects me to present a detailed Budget, but I intend to state definitely the principles which must guide its preparation with specific examples of each principle.

A small committee of men with practical experience in business and in Government should be appointed to plan the Government's housekeeping in detail for several years to come in the light of what the people are willing to pay their housekeeper. That committee will have a broader task than the Budget Director, for they will have to determine which activities of Government are essential, and which are less important and can be dispensed with, however desirable, if there is no income to support them. They will have to state what limits of expense have to be imposed on a farm policy, a relief policy, a preparedness policy, if the Budget is to be balanced on the present tax system; and state what additional taxes are necessary if those limits are exceeded. They will have to recommend the cutting of appropriations in every department, and affirmative legislation to change or abolish bureaus which are now required by law.

There are certain obvious principles to guide such a committee. President Roosevelt himself said on October 19, 1932: "You cannot go very far with any real Federal economy without a complete change of concept of what are the proper functions and limits of the Federal Government itself . . . . You can never expect any important economy from an administration committed to the idea that we ought to center control of everything in Washington as rapidly as possible." President Roosevelt pointed out that the growth of innumerable boards and commissions, which have grown up as excrescences on the regular system, were the case of the increase in expense. In short, my second definite recommendation is that Bureaus which are performing less important functions, however desirable, be eliminated, and that the number of employees be reduced in all others.

I cannot say finally, without such a detailed study as I have proposed, which bureaus are the less important, and should be abolished or their functions transferred to others. Of what substantial value today to the people of the United States are the Electric Home and Farm Authority, Central Statistical Board, National Resources Planning Board, National Power Policy Committee, Disaster Loan Corporation, the Codification Board, the Office of Government Reports (formerly the National Emergency Council), Maritime Labor Board, United States Employees' Compensation Commission, National Advisory Committee for Aeronautics, Division of Cultural Relations and various International Boundary Commissions in the State Department, Puerto Rico Reconstruction Administration and Bituminous Coal Division in the Interior Department, various consumers' councils, various information services of the different departments which are really propaganda agencies, and many others. I suppose few of my listeners ever heard of any of these organizations, but they are all in Washington with secretaries of their own, and members and employees, and sometimes legal counsel, and drawing money from the Federal Government. If any of them have essential functions to perform, is there any reason why they should not be transferred to a regular department without increasing its personnel?

The divisions which formerly made up the National Emergency Council spend a million dollars a year with a Division of Press Intelligence and Information Service under the Executive Office of the President, and a Film Service and Radio Division under the Federal Security Agency. What emergency they are dealing with no one knows. What they do or are supposed to do, except conduct New Deal propaganda and provide jobs for deserving new dealers, no one has ever been able to discover. The New Deal, in spite of the criticism which Mr. Roosevelt made, has increased the number of Federal employees from 563,000 in 1933 to 932,000 today. The additional pay roll alone totals \$1,200,000,000.

As an example of what can be done with a regular department, let us look at the Department of Agriculture. In June 1933 that Department had 26,540 employees. On June 30, 1939, it had 107,712 employees, or 4 times the number employed by Hoover. They are scattered all over the United States, wasting the substance of the farmer like a plague of grasshoppers. The farm program must be changed so that there is no detailed regulation of the individual farm, which not only limits the farmer's freedom but quadruples the Federal pay roll in 6 years. Why should there be a dozen bureaus regulating and loaning money to the farmer, with 3 or 4 different set-ups occupying offices in every rural county seat?

The same general condition exists with regard to business regulatory agencies like the National Labor Relations Board, the Wage-Hour Division, the Walsh-Healey Division, the Social Security Board, the Internal Revenue Bureau, and the Department of Justice. The businessman is subjected to constant and repeated visits and orders from all kinds of overlapping Government agents. The regulation of business and agriculture must be cut to a minimum and operated with not more than 2 field forces instead of 10. That course is necessary, anyway, if private enterprise is to be restored and men put back to work. Why should there be 5 different independent agencies dealing with housing? But reorganization will not save money unless it is undertaken sincerely for that purpose.

Reorganization and consolidation of bureaus can reduce expenses if undertaken by someone who wants to effect economy. Last year

the President was given power to reorganize, and he did so frankly without any interest in securing economy, but with the statement that the combination would save the Government pay roll fifteen to twenty million dollars a year. Yet the total Government pay roll increased between April 1939, when this order was issued, and August 1939 at the rate of \$100,000,000 a year.

**THIRD: CHANGE METHOD OF HANDLING RELIEF, HOUSING, AGRICULTURE, GOVERNMENT LOANS**

Thirdly, to secure real economy you cannot stop merely with the cutting of appropriations. Positive changes in policy must be made, as I have suggested, in the field of helping the farmer. There is not time to detail all the duplication and overlapping and confusion in the vast bureaucratic set-up in Washington as I did specifically in my speech to the Union League Club of Chicago at noon today. There is not time to detail all the changes in New Deal policy necessary to reduce expense and also necessary if any of the more desirable objectives which we all approve are ever going to be attained. In housing, in agriculture, in business regulation, in loaning money, legislation can save money while improving administration.

I am going to discuss relief, not because any greater proportion to savings can be made, or should be made, there than anywhere else, but because it is a large item and supposed to be a "hot potato." When economy is suggested, we are still met by the question intended to be so devastating—whether we would economize at the cost of starving the unemployed. The answer is "No." But the name of relief has been misused to justify expenditures for every kind of bureaucratic activity. The Federal expenditures for relief this current year will amount to one billion and a half dollars out of total expenditures approximating \$10,000,000,000, or less than one-sixth. The way to save money in relief is not to throw men off W. P. A. back to States and localities which have no money to increase their own overburdened relief rolls. Relief can only be effectively handled, without gaps between Federal and State relief, if direct relief and work relief are administered by a single local agency, handling both employables and so-called unemployables, with Federal assistance equal to about two-thirds of the entire cost.

W. P. A. today is a Federal work program, with little relation to relief needs of the different counties or to the amount advanced by localities. Some years ago the President announced that the Federal Government would care for the employables, but would not assist the States in taking care of unemployables. No such distinction is reasonable. The Federal Government has never taken care even of those it admits to be employable because the expense of a Federal work program is too great even for a spendthrift administration. The people whose relief was cut in Cleveland were mostly employables for whom the Federal Government had undertaken to provide.

The reduction in W. P. A. rolls has thrown back on the States and local communities a burden which they are often unable to bear because their taxing power is necessarily limited. This has been the basic cause of the crisis existing in Cleveland, where unemployment is especially severe. The W. P. A. in Cleveland has been reduced in a year from 75,000 to 30,000, and yet the W. P. A. spent about \$36,000,000 in Cleveland in 1939, whereas the whole relief crisis was caused by the fact that Cleveland and its surrounding communities were able to raise about \$17,000,000, but were unable to find \$2,000,000 additional to care fully for 32,000 cases the W. P. A. would not touch. There are few cities in the country which could not handle their entire relief problem if they had paid to them one-half of the money spent by W. P. A. in their territory in the calendar year 1939, combined with the money they are themselves spending on relief today. In Cincinnati the W. P. A. today is spending at the rate of \$7,000,000 a year, and the city at the rate of \$2,700,000, plus \$2,000,000 of sponsors' contribution. The city manager tells me that if the city had \$4,000,000 a year from the Federal Government, it could do a bang-up job and provide both direct and work relief; four million instead of the seven the Federal Government is spending now.

Federal assistance, of course, should be conditioned on the adoption of a plan in each State adequate to meet the relief situation, with civil-service personnel, and a contribution of at least one-third from the States and local communities to insure economy in local administration. In cases of extreme local poverty or unemployment, provision should be made for the Federal Government to carry a larger share of the expense. On the other hand, the cut which the President is proposing in Works Progress Administration will produce tremendous hardship in the United States unless the whole Works Progress Administration policy is changed, because it is so expensive that it will reach only a fraction of those needing relief. That change has been urged on the President by the associated Community Chest organizations for several years. If the change is made, the cost of relief to the Federal Government can be reduced to about \$750,000,000 in 1941, and relief itself administered in a more equal and effective manner.

**FOURTH: END GRANTS FOR LOCAL PUBLIC WORKS; REDUCE FEDERAL PUBLIC WORKS; REDUCE SUBSIDIES**

In the fourth place, all grants to localities for local public works must end, the public works program for projects which are Federal in character should be reduced to a normal amount each year, and payments in the nature of subsidies, whether to agriculture or housing or industry, will have to be reduced substantially below the 1940 figure.

It is said that pressure groups have been taught to lean on the Government, and have attained such power that public opinion

will not support a reduction in private benefits and local public works. In my belief, public opinion will support such a reduction if it is made at the same time in all characters of activity and in all localities in the United States. How often have you heard your neighbors or your public officials say that they disapprove of the payments they are receiving, but that since everybody else is getting them, they are going to do their best to get their share? How often have you heard them say that they are paying their share of the taxes, and that if they don't accept the Government projects or payments, someone else will get their money? It is my own belief that there is not a community or a group in the United States so shortsighted or so selfish that they will not join in a general movement to avoid national bankruptcy if they can be assured that every other group is required to go along. But it requires leadership toward individual self-reliance and common sense in Government, instead of leadership toward bigger and more liberal spending and subsidies.

**FIFTH: PLAY NO FAVORITES; SUBJECT ARMY AND NAVY ESTIMATES TO CRITICAL ANALYSIS**

There is no department which can be excepted from a critical analysis of its expenditures. Certainly the Army and Navy should not be. We are spending \$1,775,000,000 a year today on the Army and Navy—more than we have ever spent before in peacetime. They have been rapidly increased; yet the President today is proposing to increase the Navy by 25 percent, and the Army by about the same percentage. Certainly we are all in favor of completely adequate defense, and there are no doubt deficiencies in some branches which should be strengthened. On the other hand, perhaps some branches of the services are obsolete and could be cut down. But we were told in 1938 and 1939 that the increased Army and Navy then provided were adequate for defense, and I see nothing which has changed the situation since then. Foreign navies are likely to be smaller rather than larger at the end of the present war. Developments of naval and aviation technique in the present war may make obsolete many of our present plans. What the President proposes is no temporary measure; it is a permanent increase of Army and Navy expense to two and a quarter billion dollars for many years to come.

We are in favor of adequate defense, but we would like to be certain what we are defending. Do we wish a navy large enough to defend all of South America? Is the increase being proposed in order to carry out the ridiculous and dangerous policy recently adopted by the Government of trying to exclude the warships of all belligerent nations from a zone 300 miles off our coasts?

Certainly every tradition of this country is against the idea of a standing army of 600,000 men.

The record of the administration is such that I cannot help suspecting that a good deal of the new spending is proposed, not for the sake of defense but for the sake of spending.

**A BALANCE AT ABOUT SEVEN BILLION**

If these 5 points are complied with, I have stated that I believe the Budget can be balanced at a figure of approximately \$7,000,000,000, without abandoning a reasonable allowance for relief, old-age pensions, housing, and soil conservation. If prosperity returns, our present tax system should provide that amount of money. Of course, the best way to restore prosperity is to restore some confidence to business by reducing the regulation which constantly discourages today the growth of private enterprise. We can only put to work the 9,000,000 unemployed in private industry. We can increase the revenue from profitable commerce and manufacture at the same time we reduce the amount which has to be spent on relief and agricultural assistance.

Seven billion dollars is certainly not an unreasonably low figure. It is approximately twice the cost of the Government under President Hoover. Candidate Roosevelt severely criticized Hoover because Government expenses rose to \$4,000,000,000 during his administration, although a considerable part of that expenditure was for emergency relief projects. It was only 2 years ago, January 3, 1938, that President Roosevelt in his message to Congress said: "In my judgment the expenditures of the National Government cannot be cut much below \$7,000,000,000 a year without destroying essential functions or letting people starve. That sum can be raised, and will be cheerfully provided by the American people if we can increase the Nation's income to a point well beyond the present level."

If the present tax system does not raise \$7,000,000,000, we will have to increase taxes, undesirable as that is, for the alternative is worse. As long as we do not admit the necessity of raising the cash which we pay out, the whole Nation believes it can get something for nothing. While that belief exists, expenses are bound to increase because most of the projects proposed are nice things if you can afford them. The policy of borrowing is an immoral policy, because the longer it goes on, like a habit-forming drug, the more impossible it is to return to self-reliance and self-respect.

The Budget can be balanced: The authority for my whole position that it must be balanced, and the figure at which it can be balanced, is, no, was, Franklin D. Roosevelt himself.

**THE ALTERNATIVE IS NATIONAL RUIN**

There is no conceivable alternative to balancing the Budget. If it cannot be balanced by January 1942, when can it ever be balanced? Does an emergency still exist after 7 years of New Deal rule? What other excuse is there for not paying our way as we go? Is an emergency still going to exist on January 1, 1942? The President must think so. If he does, he admits that the New Deal, after 7 years of more power than any government in the United States has ever enjoyed, has utterly failed to restore this country even to normal prosperity, and cannot do so in 2 years more. His very challenge

to me to show him how to balance the Budget admits that he is unable to get the Government or the country back to normal. If the present administration asserts, as apparently it does, that the Budget cannot be balanced, then it cannot appeal for a vote of confidence to the people of the United States, for the only alternative to balancing the Budget promptly is national bankruptcy.

Of course, a government does not go into the bankruptcy court, and does not frankly repudiate its debt, but it can accomplish the same thing by inflation of the currency. No one can say what the largest safe debt limit is. It is not a question of figures but a question of public opinion. Every country which has continuously maintained an unbalanced budget has come sooner or later to inflation. The debt becomes heavier and heavier, the interest charge greater and greater, the whole deficit larger and larger. Sooner or later the people refuse to tax themselves for the sins of the past, and start to pay the debt and the deficit in paper money. When that time comes, prices begin to rise until a pair of shoes costs \$1,000, or as in Germany at one time, \$100,000. A man with money in the savings bank still has the money, but he can't buy anything with it. Millions of men have spent their lives building up life insurance for their widows and families. Those widows will find that they get a check for dollars, but dollars that won't even pay the water bill.

Inflation is national bankruptcy, and it means the destruction of the whole basis on which private enterprise has been built up in the United States. It means utter poverty for the man on a salary and for the average workman, even more than for those who own property; and it means a depression which would make the depression of 1932 look like Coolidge prosperity. In order to prevent starvation itself, the Government would have to take over practically all business, which is just what some of our parlor socialists in Washington would like.

No one has pointed out more graphically than Franklin D. Roosevelt the dangers of the alternative which he seems to regard as inevitable. In his Pittsburgh speech in 1932, he said: "If the Nation is living within its income, its credit is good. If in some crisis it lives beyond its income for a year or two, it can usually borrow temporarily on reasonable terms. But if, like a spendthrift, it throws discretion to the winds, is willing to make no sacrifice at all in spending, extends its taxing to the limit of the people's power to pay, and continues to pile up deficits, it is on the road to bankruptcy." He said again: "Our Federal extravagance and improvidence bear a double evil: First, our people and our business cannot carry its excessive burdens of taxation; second, our credit structure is impaired by the unorthodox Federal financing made necessary by the unprecedented magnitude of these deficits." He was talking of deficits considerably less than one-half the deficits of today, which had come about only in the extraordinary emergency and downhill slide of the 1931 depression, largely through a falling off in tax receipts. As a matter of fact, the increase in public debt in 4 years of the Hoover administration, after allowing for the repayment of loans made at that time to preserve industry, was less than \$1,600,000,000, whereas in 7 years the Roosevelt administration has added over \$20,000,000,000 to the public debt, of which not more than two billion is recoverable.

**CONCLUSION**

No American President, Republican or Democrat, has ever asserted before, when the country was at peace, that the Government under his charge could not balance its Budget in 2 years. Only our actual experience with the present administration for 7 years can make me believe that the President really thinks he cannot do so. He has chosen to debate and defend that New Deal policy which is the most utterly indefensible of all New Deal policies; a policy which will destroy all the good that may come of some of the reforms he has initiated. Let no one say that a sound fiscal policy is too hard-bolled toward the more unfortunate among our people. It is the poor who will be cared for by a solvent government. It is the poor who will suffer most when the Government goes into bankruptcy. "Too often in recent history liberal governments have been wrecked on rocks of loose fiscal policy. We must avoid this danger."

**One Hundred and Seventy-fifth Anniversary of the German Society of Pennsylvania**

**EXTENSION OF REMARKS**

OF

**HON. JOSEPH F. GUFFEY**

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, January 8, 1940

ADDRESS BY HON. ELBERT D. THOMAS, OF UTAH

Mr. GUFFEY. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD the address delivered by the junior Senator from Utah [Mr. THOMAS] before the German Society of Pennsylvania in Philadelphia on

January 7, 1940. The German Society of Pennsylvania was founded in 1764 and the meeting on January 7 was its one hundred and seventy-fifth anniversary meeting.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

If my history serves me right, the Greeks under the leadership of Aristotle invented logic at a time when civilization began to crumble and chaos became the order of the day. About the same time after things had been bad among the warring states of China for many hundred years and then took a turn for the worse, Hsun Tsu invented logic there. Query: Does intelligent and logical thinking require chaotic background? If it does, I tonight should be able to deliver a masterpiece of pure reason.

Conditions in Europe could not have been so good 250 years ago when the first Germans came to this land. Conditions in Europe have never been so good during any of the great periods that have brought to America many of her adopted sons and daughters who have contributed so greatly in the building of the American Nation. Yet while it is true that many outstanding Old World personalities who found an opportunity to express and make articulate their genius on American soil left under protest, or, to be thoroughly honest, left because they had to, it was not the Europe of their backward dreams that made them what they became, but it was the promise of American life that touched their souls and caused them to become partakers of America's spirit.

In a governmental sense the American Constitution stands today as the mother of all constitutions. That is, America's Constitution is the oldest of the constitutions of the world. Yet it is in America that we look for the land of promise, and in spite of her Constitution's age, she stands in spirit youthful because never once has she turned back. Thus we have the key in our national life to what may become Ponce de Leon's dream of the Fountain of Youth—a nation which builds onward and upward and does not turn back.

These are not mere words; they are facts of history. The techniques to which those nations have turned, which today are the children of the waste of the World War, which today are the children of internal strife, which today are the children of privation and reduced standards of living—these techniques to which these nations have resorted are those of a law of force, of dictatorial action, or of a single will. We find each of these states attempting to make the whole a unit and thereby making unimportant the individuals in that whole, each attempting to destroy the differences in individual characteristics in men and women, each attempting to make fewer the individual's loyalties to many ideals, each attempting to cause the individual, the subject, to lose more and more his entity in fusion in the whole. The technique of the dictatorial, single-willed state is the technique which the ancient Greek democrat felt was so offensive when he drove off the Persian horde. The technique of the single-willed, dictator-controlled state today is the technique used by Tsin Shi Huangti when he burned the books of the scholars in ancient China, when he built the Great Wall to hold the foreigner out, when he attempted to bring about a forced unity by crushing all thinking inconsistent with his centralizing ideas.

American governmental and political theory, comparatively old as it is when we view living states today, is in very deed the only one of youthful promise; and it is here that I am sure the thoughtful German in America sees in a sense a fulfillment of the dreams of his immigrating fathers, but sees also the promise of a greater and fuller life for his children.

I trust that I may not be misunderstood. America is not perfect, and life in the dictatorial, single-willed states has not become completely stifled. That is not my point. Comparatively speaking, man for man, there may be greater happiness, there may be higher standards of living; but can man, who has within him in very deed the gift of gods—not only the ability to remember the past and to observe and judge the present, but also the ability to project himself into the future—can man in his fullest ever be completely full if his thinking must be bounded, if his aspirations must be limited, if he must submit his thought and action to the will of another? Can man honestly worship if he is not free to worship as he wills? Can a man honestly discover if he is not free to search where he will? What constituted the glorious research period, the years of Germany's leadership in education? It was the freedom of thought in the academies and in the laboratories. What has contributed to leadership in culture anywhere in the world but freedom of action and the right to soar?

Now, some persons present might think that I am going to condemn that which we do not like in other places, but far be it from me to do that. Without condemning, I should rather explain how the backward steps which certain nations have taken are doomed to failure; but my thought is not on Europe and Asia. My thought is here. Can America avoid those backward steps? If the revolution in Russia, if the revolution in Germany, if the revolution in Italy, and if the turn to the strictly military government in Japan, and the various revolutions of the Tu Chan in China, all have their origin in poverty, privation, waste, and a reduced standard of living, should we not be thoughtful about ourselves? Can a land which today shows actually a per capita reduced income and therefore less wealth per person than it did 10 years ago maintain its standards and its political ideals without creating that misery and that privation which makes the advantage-taking leader resort to the ways of the demagogue and build the army of his marching

men on some hate? Social institutions built upon hate destroy in the individual his ability to have many loyalties. Without his many loyalties, the individual's freedoms are soon lost.

Now, I must be concrete in giving an example of what I mean here or else I shall be misunderstood. You represent a German-American society that has been in existence for over a century and three-quarters. Men who do not sympathize with the real characteristics of free men may object on a given occasion even to your hyphenated name; but to deny the contributions of German thought, of German blood, of German heritage, German cultures, to American life would be the equivalent of destroying something very fine in American life. But the interesting thing about these contributions, when we analyze them, is that they were really not German at all. What do I mean by that? It is only when German—or any other—culture hits the high plane of a great universal that it influences the outside world. It is only when the individual culture contributes to the onward and upward development of all men that it is worth while.

The Rocky Mountains are American, the Alps are European, but the grandeur of a painting of our glorious mountains or your majestic peaks appeals quite as much to the Asiatic artist as it does to the native of those mountains who feels a longing of homesickness rather than an appreciation of art. Can you call Wagnerian music German? In a sense, yes; but had it remained German only it would have died with its creator. What we want to find and what we want to get is that social and political technique in life which will make it possible for us to enjoy in the present the great universals, rather than having to seek them in the past. To hate Jesus because he was a Jew is to curb the soul; to refuse to read Socrates because he was a Greek would belittle any man. It has been a law of history that whenever the bounds of a people have been set in a given groove, that people has never contributed to the development of world culture and has always ultimately stifled its own.

### Our Crippled Children

#### EXTENSION OF REMARKS

OF

#### HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, January 8, 1940

ADDRESS BY HON. ARTHUR CAPPER, OF KANSAS

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered on January 4, 1940, before the Kiwanis club of this city, by the senior Senator from Kansas [Mr. CAPPER] on the subject *Our Crippled Children*.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I have addressed many luncheon clubs and district organizations in my 21 years in the National Capital, but no subject assigned to me has appealed to me quite as much, none has been closer to my heart, than the subject which you have given me today: *Crippled Children and What Can Be Done for Them*.

I am glad that you are honored by the presence of my colleague, Senator ALEXANDER WILEY, of Wisconsin, one of your Kiwanis brothers and a friend of crippled children. Wisconsin had not been represented by a Republican in the Senate for many years until Senator WILEY arrived a year ago. I am pleased to tell you Senator WILEY has already made a great many friends in the Senate. They like him.

I have had many interests in the course of my busy life, but let me tell you I have never known a heart appeal quite equal to that which comes from helping crippled children. I know of no heart-warming tonic to equal a sight of the happiness of a crippled child made whole. They are often too young to comprehend the full extent of the blessing that has come to them. They only know they are free to run and play like other children. They have yet to realize that instead of dragging through life, a burden to themselves and to others, they may grow to be useful and active men and women, with as fair a chance for happiness and independence as the best of us have.

It is my belief that no human being is quite as deserving of help as the crippled child. Robbed first of the ability to enjoy the pleasures of childhood, he sees himself held back and handicapped in the effort to attain development along lines which mean success or failure in later life. Certainly, my friends, there is no movement more worthy of wholehearted support. Helping a little child to health and happiness is an act which returns to the giver a lasting blessing in full measure.

All of you probably have pictures in your minds, as I have, of crippled children with twisted legs, bent backs, and other deformi-

ties; but strictly, according to the White House Conference on Child Health and Protection, a crippled child is "one whose future capacity for self-support is threatened by disease or defect of the bones, joints, or muscles."

This same White House conference, incidentally, recommended that county, State, and Nation provide by means of constructive and coordinated planning a program of child care relating to prevention and cure of crippled children. When such a program is carried out in each community as it should be, the number of crippled children will be reduced to the lowest possible figure and a large percent of those crippled will be helped greatly, if not entirely cured. Thus the number of crippled adults who now have such a terrible time getting along in grown-up life would be drastically reduced.

Today in the United States it is estimated there are between 300,000 and 400,000 crippled children, ranging up to 16 years of age. Their number was considerably increased a few years ago by a wave of infantile paralysis that swept across the country. According to these estimates, these 400,000 children are so deformed as to be of no use to themselves. They are charges upon those near to them. In thousands of cases, they are financial charges upon the communities in which they live. Ninety percent of these cases come from the homes of poor families. Yet this movement to make deformed or crippled children normal is almost new. Little or no thought was given this problem 25 years ago. Today the crippled children's movement, I am glad to say, is spreading with marvelous rapidity. There is so much satisfaction to be gained in realizing the difference in the condition of the crippled child before and after its little body is repaired that many persons are gripped by the thrill of having had something to do with such blessed work.

I wish I had the power to show you what it means to have this great army of deformed boys and girls in the United States. It would reach from horizon to horizon and far beyond. Some would be crawling, some upright on crutches, some unable to lift themselves in any posture above the ground. You would see little boys 5 and 6 years old who could not stand, much less walk. You would see tiny babes clasped close in the arms of despairing mothers who love their children not the less, but more, because of the limbs twisted at birth and feet bent so that they may never be able to walk. I know of nothing more pathetic in this world than a child of poverty, deformed, uncared for, unwanted by society.

You must remember that most of these children are crippled only physically. Mentally they are normal. Hence it is vitally important that care be provided for them which as nearly as possible will enable them to achieve the fullest development.

We find that special education for crippled children is confined mainly to cities. An amazing difference exists among the different cities in the methods and cost of education, which ranges per child from about \$187 a year to almost \$600 a year. The special education of crippled children is designed to prepare them to live harmoniously with those who are not handicapped. It is important that citizens should be taught that this education is not charity but is sound public policy. Lack of understanding of this fact on the part of the average man and woman is a terrible hindrance in inaugurating better community programs for the care of the child.

As is the case in public relief, the care and education of crippled children is slowly being shifted from private agencies and institutions to those maintained by public funds.

Important as education is for crippled children, equally important is proper treatment. I am sure you will not mind if I tell you a little about the Foundation for Crippled Children, at Topeka, which a few of us helped to organize at Christmas time in 1920, and which is still doing good work. More than a thousand children, with the assistance of this foundation, have been given intensive orthopedic services by the best surgeons and in the best hospitals to be found in all the world.

The work of the foundation is limited by no boundary line and discriminates in favor of no race or creed. Crippled children from 15 different States have profited through our foundation, and letters of information, encouragement, and advice have been sent on application to parents of unfortunate children in every State in the Union and other parts of the world. I have never been interested in any work which gave me quite as much satisfaction.

Our job for the crippled child will never be done until we are able to control diseases and accidents to such an extent that no child will be crippled; until we have such knowledge of the situation that we can provide proper treatment for every crippled child; and until the Nation is providing proper education for every crippled child.

It is unfortunate that comparatively few crippled children have the advantage of early discovery, treatment, and training. In small towns and rural communities children are at a much greater disadvantage than in cities. This is due to lack of facilities for their care. It is a striking fact that the less seriously crippled children are far more neglected than those in a serious condition.

As I see it, there are at this time three great needs for crippled children in the United States which ought to be supplied.

The first is a Nation-wide survey of crippled children. We should know exactly how many there are, how they became crippled, what their needs for treatment or prevention are, and how we may organize to handle these needs.

The second need throughout the country is for more adequate facilities for treatment and training of crippled children.

The third need—and we find it right here in the District of Columbia—is for more adequate appropriation for the conduct of our schools for crippled children. I am exceedingly interested in that problem, and I know you are. You have been of very great assistance in solving this problem for something like 17 years.

You know, of course, that crippled children require more care than normal children. But as far as possible they should be treated as if they were normal, and not as a care or a liability to the family or the community. With the right kind of care and a helpful attitude of mind on the part of those who are caring for them, crippled children can be made social assets to the community, instead of liabilities.

There is an economic side to this work, too. Most State hospitals, where a good deal of the food needed by the inmates is produced on the place, estimate the cost of food and care of the young patient at \$200 a year. Of course, that doesn't include interest on the investment in buildings, the cost of the buildings, or any such items. But on this basis it would cost \$60,000,000 annually to maintain the 300,000 deformed children for 1 year. That would give them a bare existence. Supposing the average life of such a child is 40 years; that would mean their subsistence for that length of time would total \$2,400,000,000—if they were allowed to remain in their deformed State throughout life.

But suppose these 300,000 crippled children were restored, were able to make their own way, and to help support others; what would be the result?

The average earning capacity of a human being in the class of the average deformed child is estimated at approximately \$1,000 a year. That would mean that these 300,000 crippled children in their average life of 40 years would earn exactly \$12,000,000,000.

By restoring these children to some measure of usefulness, instead of having to spend \$2,400,000,000 to take care of them until they reach the age of 40, they would add \$12,000,000,000 to the Nation's earning power, a stupendous sum.

Here, then, is further proof that there is no investment in the world whose returns can compare to what you invest in restoring a deformed child to a condition of happy usefulness.

I am reminded of an occasion a few years ago, on which I invited the crippled children of your Washington schools to be my guests in the Senate gallery during one of the interesting sessions. It was something of a task to get them there, but I had the capable assistance of the school officials and the officials and employees of the Senate. It proved to be a wonderfully thrilling event for the children and almost as much of an event for the Senators.

You know, of course, that the District of Columbia, which is doing such fine work for these little folks, has an association for crippled children of the District and I am proud to say has made me a member of its board of directors from the beginning of the organization. I am glad to say also this association, headed by Mrs. Cary Grayson, has done some really worth-while work.

Washington, too, is the center of another movement for the benefit of crippled children; I mean that sponsored by President and Mrs. Roosevelt. The Warm Springs Foundation, established by our President in Georgia for the aid of these handicapped children, I regard as one of America's greatest humanitarian achievements. It means so much that the proceeds from the hundreds of birthday balls throughout the country, amounting to large sums, goes to the crippled children in every State in the Union and the District of Columbia. I am glad that already plans are well under way for the event on January 30, with indications of a record-breaking success. I know you Kiwanians will do your part.

Special gymnasium facilities in the schools have been a great blessing to crippled children, as well as have special opportunities from swimming. You remember what a great help it was to President Roosevelt in his recovery from infantile paralysis to swim down in Georgia, and how important a part in his present well-being it seems to be to have a swimming pool installed in the White House. You know, of course, that many children are crippled from infantile paralysis exactly as our President was. These children have had marvelous benefits from the Warm Springs establishment, as well as from the numerous hospitals throughout the country.

I have talked of education and, to some extent, treatment of crippled children, but I have said little of the prevention of crippling. There are definite ways of preventing crippling. For example, health laws and automobile traffic laws properly enforced, and other safeguards, such as clinics and stations for diagnosis, have greatly lessened the number of accidents and the number of serious causes of disease which result in crippled children. This matter of prevention has not yet been given the attention it should receive. It happens that much more funds are available for the care of crippled children than for preventive measures. I think we should provide more funds for treatment. I also think we have great need for funds and more resources for prevention.

It is most encouraging that crippled children have received the attention of more volunteer and professional organizations than have any other group of the handicapped. During recent years this attention has been shown in many States by clinics provided by law and by better facilities for diagnosis and treatment. There is, however, a great need for comprehensive research work to investigate every angle of the problem of these children. Constructive experiments for the purpose of learning how these children can best be adjusted to normal living conditions are very necessary.

I say to you, the problem of the crippled child presents a challenge to the people of the United States, to Congress, and to the administrative agencies of the United States, and a challenge to

the legislatures and cities of our country. Certainly every child of our Nation is entitled, so far as is possible, to the ancient prescription of a sound mind in a sound body.

Right here in Washington the challenge has been made, and I am glad that you men of Kiwanis are accepting it. Your clinic and hospitalization for crippled children is indeed deserving of praise, as is your annual Christmas party and other work.

And now another challenge has been thrown before you, that of setting up a school for the crippled children only of the District of Columbia. As I understand the problem, at least \$2,000 must be raised to remodel another building and make it suitable for the needs of the crippled children.

The crippled children's school, as it now exists, was established by Congress in 1929, and has since been accommodated by assignment as a separate unit in a regular school—first at the Weightman and now at the Langdon School.

I have also been told that the school authorities of this city consider it most desirable that the education of crippled children be in a separate school building, rather than a unit of a regular school. And I understand that this policy is approved by the Federal Bureau of Education, citing in support thereof that practically every city in the United States which has a population comparable with that of Washington has such a separate building for the education of its crippled children. The Washington School Board, I am further told, in pursuance thereof has for the last 4 or 5 years included in its budget an item for appropriation to start such a building, but this item has been stricken in every case, I believe, before it reached Congress.

Now, I understand, the building at Allison and Thirteenth Streets NW., which has been used as a health school for children threatened with tuberculosis, is to be vacated, and that it can be readily adapted to the needs of the crippled children. I have been informed that by making minor, but sufficient, changes in the building, the cost probably would be only \$2,000, and that your club possibly is willing to volunteer its services and contribute sufficient cash to absorb most of, if not all of, this expense.

Your offer, your attitude in regard to this move, is a wonderful thing. I know that is the spirit of Kiwanis, and I compliment you on such action. And I assure you that I shall give my utmost support to that program.

I say there is no greater call to which men can rally than around the standard of helpless children. We must get them out of the wheel chairs. We must make them walk. We must give them courage and, so far as possible, give them an even chance with other boys and girls in the race of life.

Again, I say, the work for crippled children is the finest expression of modern civilization. It is the finest because it is based on the most beautiful human attributes which prompt us to help those who cannot help themselves, and it is fine because it fits in with the highest ideals of our Christian civilization. That is why Kiwanis is so keenly interested in crippled children.

Before I close, my friends, I want to say thank you for allowing me these few moments, and again I want to compliment you on your fine work, and wish you success.

My last word is a touching poem, written by a physically handicapped woman—Ann Shulman, of Chicago. She heads it "Challenge":

"Give them opportunity;  
Make the youngsters straight and strong;  
Pity is not what they want;  
Let them know that they 'belong.'  
  
"Help them with your understanding;  
Give the pennies you can spare;  
Rid them of all backward feeling;  
Teach that you can 'do and dare.'  
  
"Know their capabilities;  
Give each one an equal start;  
Open wide the door for them;  
Open wide your heart."

### American Rights on the Sea

#### EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, January 8, 1940

ARTICLE BY GENERAL JOHNSON

Mr. REYNOLDS. Mr. President, in view of the fact that some interesting and important notes have recently passed from the hands of our very able Secretary of State, the Hon-

orable Cordell Hull, to officials of the British Empire in regard to the stoppage of our ships and the seizure and censoring of our mail, I ask unanimous consent to have published in the columns of the Appendix of the CONGRESSIONAL RECORD an article by Gen. Hugh S. Johnson which appeared in the Miami Daily Herald, of Miami, Fla., under date of December 29, 1939.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Miami (Fla.) Daily Herald of December 29, 1939]

#### BRITISH RACKET

(By Hugh S. Johnson)

WASHINGTON, D. C., November 28.—No nation ever made as great a sacrifice of international rights as have we. We got off the ocean to avoid having to vindicate our rights at sea.

Did we do that altogether because we didn't want the Germans raising a cause of war by sinking our ships in submarine warfare? Partly, but it must be repeated that, up to our severance of diplomatic relations with Germany in the World War, only one American ship had been attacked by submarines—and she was traveling with a British convoy. She wasn't, as this column once stated in error, sunk. She was the tanker *Gulflight* and she is still in service.

A principal reason for recent American abandonment of rights was to avoid arguments with England. It was a handsome gesture. The lifting of the arms embargo is proving to be even more handsome. It is going eventually to give the Allies supremacy in the air as our science, production, and ingenuity begin to provide more and better war planes than the Germans can produce.

But all this was apparently not enough to satisfy our British cousins. They have an undoubted right to stop one of our ships anywhere on the seven seas, to visit and search her and, if she carries contraband, to seize her. But they have no right to seize American ships, convoy them to her ports, rifle and censor the United States mails and delay voyages until they become unprofitable.

#### AMOUNTS TO RACKET

Neither has she any right to demand an alternative to this abuse of our rights, that American ships submit to her agents schedules of their sailings and manifestos of their cargoes. What that amounts to is an indirect blockade of our ports under threat of grossly unlawful action if we do not accede. In plainer words, what it amounts to is a racket—with every aspect of an Al Capone "protective" society.

A new question that requires our attention is the British threat by "orders in council" to seize on the high seas goods of German origin, regardless of ownership, as an act of "reprisal" against German sinkings by submarines or mines.

These British "orders in council" regulating the commerce of the world and riding roughshod over neutral rights are acts of supremely arbitrary audacity. We fought England in protest of them once. There is no precedent in international law for seizing enemy exports, possibly of neutral ownership. That isn't reprisal against an enemy. That is reprisal against neutrals—or such fake neutrals as we have been—"friends" to the very limit of the letter of the law—with little regard for its spirit. It is a kind of disguised piracy to which other presumable neutrals have objected, but which we have swallowed without a word. Can it be supposed that England would ever have dared that kind of gross affront without assurance that we would not protest? Have we a new Walter Hines Page at the Court of St. James, and a new Lansing in Washington? Isn't this the road to war?

There is no question here of how many of our goods are involved. It is solely a question of how many of our rights are involved. We are strangely silent here—but we are strangely vociferous in the Orient where many British dollars are involved and few of ours. We seem to be about to sacrifice \$400,000,000 of our annual Japanese trade to protect \$100,000,000 of big business fixed investment in China at the very moment when we are inert to British confiscation of our rights at sea and Communist confiscation of our property rights in Mexico.

Every time I write a piece like this I am accused of being pro-Hitler. I am no more pro-Hitler than Rabbi Wise, but it is time for somebody to be pro-American.

#### Farm Imports

#### EXTENSION OF REMARKS

OF

HON. CLARENCE J. BROWN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, January 8, 1940

Mr. BROWN of Ohio. Mr. Speaker, last week I called the attention of the Congress to the fact that our balance of foreign trade in agricultural products is heavily against the

American farmer, and gave official Government figures to prove that our export trade in agricultural items has been declining and that our imports of such items in direct competition with American agriculture has been rapidly increasing.

Today I wish to call the attention of the Congress to the United States Department of Commerce figures on farm imports for the first 10 months of 1939, as compared to the first 10 months of 1938. These figures undeniably prove that the present administration program of reciprocal-trade agreements certainly has been of injury rather than of benefit to American agriculture. They are:

*Farm imports—United States imports of agricultural products, 10 months, 1938 and 1939*

[U. S. Department of Commerce figures]

Import items	Unit	10 months ending October—	
		1938	1939
Cattle	Head	330,653	664,339
Meat products (total)	Pounds	123,732,000	136,552,000
Canned beef	Pounds	65,833,000	78,073,000
Cheese	Pounds	44,423,000	49,249,000
Eggs (in shell)	Dozen	182,844	267,326
Hides and skins (total)	Pounds	131,896,000	258,889,000
Cattle hides	Pounds	39,338,000	104,217,000
Sheep and lamb skins	Pounds	25,496,000	50,085,000
Silver fox fur skins	Number	13,749	75,067
Casein	Pounds	317,000	6,876,000
Barley	Bushel	126,000	745,000
Oats	Bushel	5,258	2,612,000
Wheat (all)	Bushel	2,433,000	9,310,000
Wheat flour	Pounds	12,237,000	16,929,000
Barley malt	Pounds	84,752,000	90,626,000
Hay	Tons	13,505	35,550
Wheat byproduct feeds	Tons	27,173	372,951
Chickpeas, dried	Pounds	6,390,000	7,507,000
Potatoes, white or Irish	Pounds	36,315,000	48,072,000
Sago	Pounds	8,695,000	21,252,000
Tapioca	Pounds	183,322,000	295,088,000
Arrowroot	Pounds	4,799,000	7,681,000
Peas, canned	Pounds	325,000	1,070,000
Tomatoes, canned	Pounds	45,096,000	47,773,000
Pineapples, prepared or preserved	Pounds	28,918,000	67,632,000
Apples	Bushels	8,004	24,661
Wool, unmanufactured	Pounds	69,810,000	197,026,000
Cotton, unmanufactured	Pounds	93,107,000	84,443,000
Tobacco, unmanufactured	Pounds	60,968,000	64,544,000
Flaxseed	Bushel	12,324,000	14,724,000
Castor beans	Pounds	90,570,000	116,555,000
Potato starch	Pounds	4,939,000	7,316,000
Maple sugar and sirup	Pounds	3,798,000	12,136,000
Wool noils, wastes, and rags	Pounds	3,275,000	15,200,000

Note increase over 1938.

After studying the above figures the farmers of America can judge for themselves as to whether or not the present Democratic administration under the New Deal has been properly protecting the American market for the benefit of American agriculture. A continuation of such heavy increases in agricultural imports will mean the ruination of those who till the soil of America. We must call a halt to the New Deal program of entering reciprocal-trade agreements that work to the injury of our farmers through the flooding of American markets with farm products imported from foreign lands.

Within a few days I expect to give some interesting information as to the astounding decreases in our agricultural export trade during recent months.

### The Challenge of Intolerance

#### EXTENSION OF REMARKS

OF

HON. MICHAEL J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 8, 1940

ADDRESS BY HON. FRANK MURPHY

Mr. MICHAEL J. KENNEDY. Mr. Speaker, under leave to extend my remarks, I am very glad to include therein a most impressive and humanitarian address entitled "The

LXXXVI—App—6

Challenge of Intolerance," delivered by the Attorney General, the Honorable Frank Murphy, newly appointed Justice of the Supreme Court of the United States, at the National Conference for Palestine, on January 7, 1940, at the Mayflower Hotel, Washington, D. C.

I commend this very able analysis of the abuses of tolerance that have descended upon so many countries abroad today, to the Members of the House and the people of my State because of its cosmopolitan and timely interest. Thousands upon thousands of the good people of the State of New York, or their ancestors, fled the Old World, driven by the scourge of similar abuses in other days of tyranny and oppression to experience and ultimately to cherish the freedom and the joy of our democracy. And so, in these perilous days when the tentacles of foreign isms are attempting to stretch like a malignant growth from the land of dictatorships to the land of the free, it behooves us to heed the analogy drawn by the Attorney General. Tolerance is the bulwark of the heritage of every American, life, liberty, and the pursuit of happiness; and it should be treasured and nurtured beyond the realm of theory and into the realm of practice as one of the proudest possessions of our country today. The address follows:

For many of the human family the period we live in is one of heartbreak and tragedy. Helplessly, the humble, unknown thousands whose only wants are bread and peace see their homelands overrun by invading armies, their homes and fields ravaged by the lightning strokes of war. Life for them is a nightmare of destruction and hate, too horrible to be believed, if it were not that the harsh facts lie before their eyes.

In such an era, earnest efforts on the other side of the ledger—endeavors to find and to build homes for the homeless and oppressed—must come to all men of good will as a source of cheer and encouragement. I am grateful for the opportunity to visit with you who are engaged in such a movement.

To one like myself who was brought up from early childhood to read and revere the Bible as the book of books, Palestine is not simply a distant country, nor are the people who first made it the Holy Land simply another race. The land of the book and the people of the book are peculiarly part of the religious heritage of civilized men.

And so it is that your efforts to help build a sanctuary for the harried and homeless of the Jewish people have a mighty appeal to those of us of other faiths and races who still find refuge, when the world about us seems the darkest, in the spiritual teachings of the humble prophets who dwelt in Zion and in Galilee many centuries ago.

We recall that America itself came into being at the hands of harried and homeless people searching for the blessings of peace and freedom. Remembering their great struggle, we sympathize the more with this effort of yours to create in Palestine a haven of refuge and a center of culture where your kith and kin, free from oppression and persecution, can find life and peace in the land of their forefathers.

The particular tasks which you have set for yourselves are necessitated, and at the same time complicated, by external events. We are living through a dark and emergent period in the world's history. Unquestionably it is a period of transition and change, although the exact nature of the transition and change is something that few of us know enough to understand or are wise enough to foretell.

Men and women everywhere are haunted by a feeling of insecurity, of helplessness to protect the things they cherish most. And yet, while their present state is so unhappy, they also have a fear of change, and of the unforeseeable and unknowable consequences of change. They fear that change instead of bringing them greater security will take away the things they want most to keep.

We live, therefore, amid the clash of social and economic forces which at times become motivated more by passion and fear than by reason and knowledge. The forces of discontent, mistaking change for progress, attack what is good as well as what is bad in the established order of things. To achieve change for the sake of change and the aggrandizement of their own power they would trample over other men's religion and other men's freedom to think and say what they believe. On the other hand, forces, fearing change or having a vested interest against change, blindly defend what is bad as well as what is good in the established order of things. To prevent change and to stop the stars in their courses they would deny other men political liberty and economic opportunity, and would crush all efforts to appeal to reason or even to God.

The forces of enlightenment today are not those which resist all change or the forces which favor any change. They are, instead, the forces which seek to achieve, in time, such improvements in the established order of things as may be necessary to protect in a moving world the gains which civilized men through centuries of struggle have acquired.

That, essentially, is the aim of the forces of enlightenment, the forces of religion and true conservatism, without regard to political

partisanship, in this country and other countries where the lamps of reason have not been extinguished.

But in large sections of the world where the lamps of reason have gone out or have flickered low, the enlightened effort to improve the lot of all men has given way to a resurgence of bigotry and intolerance as cruel and as barbarous as history has ever recorded. And today, as in the olden time, it is the Jewish people—homeless and so the least able to defend themselves—who have suffered first and suffered the hardest. Once again, they have served as the most readily available scapegoats for those who accept force as their gospel and find virtue in refusing to be guided by the laws of reason or the laws of God.

But the world will make a grave mistake if from these facts it concludes that the revival of intolerance is primarily or peculiarly a Jewish problem. For already it is apparent that the Jews are serving not merely as a scapegoat but as a smoke screen to conceal more aggressive designs of power-mad men. Already those who started out and who continue to bait the Jews are baiting Protestants and Catholics whenever they find that they have the force to succeed and that the loot makes their effort worth while. The worship of force is not only anti-Jewish, it is anti-Christian, it is a revolt against reason and God.

This is not a lesson for Europe alone, or simply for lands other than our own. It is a lesson that Americans, also, need to learn and to carry with them through life as an inseparable part of their citizenship, for the virus of antisemitism has made itself felt here as well as abroad.

The purveyors of hatred, the provokers of division and strife, the swaggering apostles of force and violence are methodically and with premeditation laboring to bring to the United States the same conditions of group hatred and civil war that have destroyed the peace of Europe. Treacherously they camouflage their true nature by representing themselves to the unwary as defenders of God, America, and the Constitution. Unscrupulously they stir up riots in the city streets, they intimidate peaceful citizens, they invade meetings, and they peddle as truth the malicious lies which people of their ilk have invented to blacken those whom they hate.

Some of this professional hate mongering government can and will combat through the laws of the land. But in the main American democracy must look for its defense to the wisdom of the people and their determination not to be led on the paths that have taken other peoples to communism and fascism.

Not guns nor battleships will ultimately preserve democracy, but the devotion of a people who have the good sense to realize that intolerance is no respecter of persons—that once unleashed it has no regard for religion or race or economic status; or, least of all, for that dignity of the individual which lies at the basis of our civilization. Democracy in America will be saved if as a people we are wise enough to know that if we do not respect other's faiths the day may come when other men will not respect our faiths.

The refugee problem is not a problem of or for any one race or religion; it is a challenge to civilized man the world over. In helping to give your people or any people a chance to live a free life in a free country we are helping to do our part to preserve justice and liberty in a civilized world. We are not merely relieving suffering and distress; we are helping to preserve for ourselves and our posterity those ideas and spiritual values without which life would be a barren and brutish thing.

There are some things in this era of transition on which we all cannot agree—some matters of national policy about which there are bound to be honest differences of opinion.

But there is one question of policy that should not and must not divide us. Should it eventually do so, the end of American democracy will not be far behind.

That policy is the creed of tolerance which for a century and a half has sustained civil liberty and representative government in this land.

There is no hope for us in turning away from that policy. And those who preach that we will prosper by doing so preach a black and destructive doctrine. They preach a doctrine that is the betrayal of everything that the fathers of the Republic hoped and planned for. They preach a philosophy that can bring nothing but hate and misery and ruin to this Nation, which has become great only through harmony and mutual faith among those who built it.

America was not built by anti-Semitism, or anti-Protestantism, or hatred for the Catholics, or by the fantastic doctrines of racial superiority that are practiced elsewhere. America was built to greatness by a partnership of men and women who represent every race and nationality that inhabits the globe. The good things of life that you and I enjoy we owe not to Catholics alone or Jews alone or Englishmen or Irish alone—we do not owe them to Aryans or non-Aryans alone or to white or black alone—we owe them to all God's children of every color and nation and creed—to all God's children whom He loves each alike with that same love which "passeth all understanding."

What folly, what awful tragedy, what disloyalty, to talk of dissolving that God-inspired partnership now when democracy needs it most.

America's mission is not the propagation of hate. Our mission is that of helping to prove that only in peace and brotherhood will men find happiness on this earth. Our mission is to show that by reasonable and peaceful means, men of different natures can build a common security in which justice and liberty are denied to none.

To those who ask if we are worthy of such an errand, let us give the answer of a Nation united in its friendship for those who are oppressed, disdainful of any who would take away from us the matchless blessing of our friendship for each other.

## Recreation—the American Way

### EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 8, 1940

ADDRESS BY HON. JOHN W. McCORMACK, OF MASSACHUSETTS

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me at the second annual dinner of the Associated Community Planning Committee of Boston, held in Boston the evening of December 13, 1939:

Every group of people throughout time immemorial has developed its own pattern of behavior, its own way of thinking. A pattern which permeates all phases of their thought and behavior.

Today we find ourselves in a bewildered and confused world, a world torn by two sharply contrasting ideologies. On the one hand we have in Germany, Italy, and Russia, a form of government which we know by that accurate descriptive term—totalitarianism. On the other hand, we have what has come to be known as the American way—democracy. Each of these is striving to inculcate their ideals and standards in the minds of their peoples. In Germany, Russia, and Italy, the way of life is totalitarianism, and the manner in which these people are oriented to their philosophy is dictatorial, by orders from above, by orders to do certain things, by orders not to do certain things. These countries, as modern tyrannies, are controlled and regulated by a small group of self-constituted superior men. These dictators, believing in nazi-ism and communism, seek to perpetuate these forms of government by forcing their people to accept their policies. Quite accurately they realize that if communism and fascism are to be accepted they must seep through all aspects of the individual's life. Therefore, they seek through orders, cruelty, and relentless punishment to force people to accept principles of dictatorship.

Our situation in this country is quite the reverse. We have a democratic form of government because that is the form of government which the American people want. The people of this country decide what they want and then issue orders through elections and referenda to their elected officials. These officials, under orders from their voters, then put into practice those plans and programs which the people decide they will have for their own benefit.

Totalitarianism, which in objectives and methods, consists of authority at the top and responsibility from below; democracy, which in objectives and methods, consists of responsibility from above and authority from below.

Our contemporaries divide life into four important constituent parts: Worship, work, health, and play. Man must satisfy the strivings of his inner soul through worship and reverence of God and those religious teachings which humanity has accepted. Man must satisfy his creative and productive desires by working and contributing to the material and nonmaterial wealth of civilization. Man must maintain his physical well-being in order to accomplish the other objectives. And, you will note, along with these other important components of behavior, play has been included. Essential to a well-ordered social existence is the opportunity for clean, healthy recreation and play.

The Fascist and communistic countries well know the importance of recreation in the lives of their peoples. The Italian Government early developed its government-subsidized program of recreation. The German and Russian Governments, too, have stressed the importance of recreational programs. These programs have been imposed from above, however. The government has decided what types of recreation are most desirable, which will aid their totalitarian plans, which will contribute to the strength of their military might, and which are wasteful in what they do no more than please the people. Thus, the totalitarianism is reflected in their recreation and play.

What reflection of the American way do we find in the recreational program of our own country?

In an active, growing country, abundant in natural resources and wealth, there is a tendency to ignore the necessity for play and recreation. Abundant money enables people to become dependent upon professional entertainment and recreation, rather than rely on themselves. With the tightening of our economic belts in 1929, with the disastrous aftereffects of the uncontrolled orgy in financial speculation by people who cared little for the plight of the forgotten man, with the great increase in wealth of the few at the expense of the many, the opportunities for healthy, natural recreational activities lessened. The average person no longer had the money with which to pay for his recreation, he no longer could afford the equipment needed to indulge in his choice avocation, he shunned his former social companions because of fear of being disgraced through his lack of employment, and he no longer had entree to those clubs and associations where he had

once partook of his recreational fare, a place where he could indulge in his recreation.

According to a Nation-wide survey we find, for example, that over 18 percent of our youth at this time had no other leisure-time activity than loafing, that over 21 percent indicated attending movies for their leisure-time activity, and that 24 percent indicated dating and dancing as their principal leisure-time activity. That loafing included idling, talking on street corners, such inactivity accounted for our high rates of juvenile delinquency and for the fact that almost 50 percent of our first offenders are under the age of 24.

Older people, hard-hit by the depression, fearing through false pride to associate with their former friends while unemployed, lose interests, and resort to activities which are disastrous to our religious beliefs and economic structure, to the inviolability of the family and ultimately, as a result, to the very existence of democracy itself.

A new administration, a farsighted administration, an administration under the leadership of one who valued democracy as a living, vital entity, set itself to the task of aiding unemployed people through the establishment of the Works Progress Administration; to the development of our most valuable asset—our youth, through the establishment of the National Youth Administration and the Civilian Conservation Corps; to the creation of a Social Security Administration which would give succor to the aged, aid to the dependent mothers, security to the unemployed wage earners, help to the blind and crippled.

While devoting himself to the control of those instruments of finance which had led our country into a period of depression, which had nearly shattered the pillars of democracy, and in bringing back new life, new vitality, new strength, to the democratic way of life, President Roosevelt was farsighted in realizing that recreational opportunities must be provided to those who have been plunged into despair and want. Thus it was that the Works Progress Administration and the National Youth Administration were authorized by the President of the United States to develop a recreational program. Unlike Russia, unlike Germany, unlike Italy, where such a decision would have resulted in a small group of self-authorized government officials imposing upon the people a plan for recreation, the administration of our country authorized the development of adequate recreational programs in the American way, the democratic way.

The program which has been developed here in Boston is typical of the Nation-wide program and in fact, the Boston program has been copied by many other cities and States. With the assistance of the Community Service, Inc., of Boston, the Works Progress Administration and the National Youth Administration first established associate recreational planning committees in the natural divisions of the city. These twenty-odd planning committees, composed of business, civic, educational, and social leaders of each district, met and sought to express the desire of the residents of each community as to the recreational needs. Each committee, independent of the other, then made recommendations as to the development of a supervised recreational program. Racial background, economic composition, social environment, and other necessary factors were taken into consideration by each committee because each committee was representative of its community. Thus, instead of regimentation such as Russia, Germany, and Italy, have known, Boston developed its own recreational program, designed to meet the needs of the residents of each. In certain parts of the city, musical projects were developed, in others, theatrical projects, discussion groups, forums, playroom activities, dancing, contests, clubs, whatever the community itself decided that it might need.

Here is no regimentation, here is no coercion, here is no dictatorship, here is the essence of democracy: The Government of the United States under inspired leadership of President Roosevelt, providing leadership and assistance to the local communities so that the local community may develop its own program which it itself has selected in the recreational projects of Boston. Through the Associated Communities planning committees we find the development of the democratic philosophy in recreation in the democratic way, the American way.

## Free Enterprise Versus Feudalism

### EXTENSION OF REMARKS

OF

HON. ROBERT A. GRANT

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 8, 1940

ADDRESS BY PAUL G. HOFFMAN

Mr. GRANT of Indiana. Mr. Speaker, under leave to extend my remarks in the Record, I include the following

address by Paul G. Hoffman, president of the Studebaker Corporation, before the American Petroleum Institute's twentieth annual meeting at Chicago, Ill., on November 15, 1939:

On February 5 of this year, Dr. Bruning, the last Chancellor of free Germany, told me that if there were war, Germany and Russia would be allies, because, as he said, their ideologies are similar—both are feudalistic in concept. By his use of the word "feudalistic," he implied that there was nothing new about the modernisms, that they were merely a streamlining of the old idea that the individual is a servant of the state. He might have used the adjective "tribal," because in ancient times the same belief prevailed almost universally. As a matter of fact, of the thirty-eight to forty billion people who have lived since the beginning of the Christian era, less than one billion have ever known the meaning of personal liberty and economic freedom. No, there is nothing new about the idea that rulers should completely control the lives of the people.

The new idea—the dynamically new idea in human history—is that individuals, if given a reasonable opportunity for a free expression of their abilities, can bring about a higher standard of living and a better social order for themselves. Speaking broadly, that concept is only about 200 years old. It has had application in only a few countries—in modern England, France, Holland, Sweden, Norway, the United States, and some smaller countries, and for a comparatively brief time in Central Europe. It is worth noting that only the billion who have enjoyed freedom have ever experienced an improved standard of living. The common man in all totalitarian countries, from the days of the tribal chiefs to present-day dictators, has lived either at a subsistence or starvation level. The burning issue at the present time is whether the concept of individual liberty and economic freedom shall live or perish from the earth.

I do not propose taking time for any impassioned appeal for the preservation of individual liberty. I assume that you are as determined as I am that there shall be no turning to feudalism as far as America is concerned. I have no fear of the enslavement of free Americans by any sudden military coup, or by any legislative action by which we will vote ourselves into bondage. There is no prospect of a black-out of freedom in America. I do believe that there is danger of a fade-out as a result of certain pressures which threaten free enterprise. I do not need to remind you gentlemen that personal liberty and religious freedom cannot survive if free enterprise is supplanted by regimentation. Speaking historically, civil and religious liberties have always followed and not preceded the breaking of governmental controls over the market. In England, France, and Holland, people gained civil and religious liberty after they had fought for and won the right to conduct free business enterprise—not before. In Germany and Italy, on the other hand, as we have seen in our own day, the people lost their civil and religious freedom after they lost free enterprise. We must either maintain free enterprise or accept feudalism.

The outward and visible manifestation of the hazard to free enterprise is the excessive and constantly mounting burden of Federal, State, and local taxation. Some years ago I heard a most challenging address in which the speaker analyzed the fall of civilizations. It was his theory that either anarchy or regimentation was inevitable once taxation reached a point where it was absorbing in excess of from 35 to 45 percent of national income. He first recited the case of ancient Egypt, where the mounting expense of the priesthood eventually absorbed more than half the earnings of the producers, with the result that there was revolution and chaos. He then laid before us the history of Greece, where the expense attendant upon the conquests of Alexander finally brought about a similar disaster. Then he showed how in more modern times in France the nobility took such a toll from the workers that revolution became inevitable.

Let us see what is happening in America. In the year 1913 our national income was \$31,450,000,000. Federal, State, and local taxes were approximately \$2,194,000,000, or 7 percent of the national income. Twenty-five years later, or in 1938, national income was \$62,450,000,000—approximately double that of 1913. Ordinary governmental expenditures were \$17,100,000,000, which was 27 percent of national income. Of this amount, \$13,700,000,000 was raised by taxes and the balance by borrowing. In addition to the ordinary expenditures, our Government incurred additional contingent and credit liabilities of \$3,700,000,000, bringing the total to \$20,800,000,000, or 33 percent of national income. Governmental expenditures were almost 10 times what they were 25 years ago, whereas national income was just double. We are approaching the danger point.

There are those who contend that the best method to reduce this dangerously high percentage of national income being taken by taxes is through a drastic reduction in governmental expenditures; others, with equal vehemence, argue that the only answer is a sharp increase in national income. It is my opinion that we must move in both directions. However, neither howling about expenditures nor shouting for prosperity will suffice. Before we can proceed intelligently we must find out why governmental costs are high and, secondly, why national income is low. An adequate answer to either of these questions would take hours which are not available and a profound knowledge which I do not possess. I shall limit myself to making certain observations, with the full realization that they do not constitute either complete or authoritative answers to either question.

Let us first consider this problem of reducing governmental expenditures. Obviously the first attack should be on the wasteful

use of tax money. Everyone recognizes that it is difficult to get full value for a tax dollar. When we think of governmental expenditures we think of the Federal Government, forgetting that there are 175,000 governmental spending units in the United States. It seems to me that the most sensible approach to this problem of eliminating the wasteful use of tax money is contained in the recommendations of the Tax Foundation, of which Mr. Lewis H. Brown is chairman and Mr. Fred A. Eldean, formerly of the American Petroleum Institute, is executive director. They suggest that the tax battle will be won in the county, just as national elections are won in the precinct. They urge that the county taxpayers organize and subject county expenditures to an intelligent audit and analysis. State organization proceeds naturally from county organization. The State of Nebraska has more or less provided the pattern where during 1938 the Nebraska Federation of County Taxpayers Leagues, working with public officials, brought about tax savings of \$139,000,000 and a reduction in debt for local governmental units totaling \$39,000,000. It would seem evident that this technique is sound. Our need is for its application in a wider area.

In addition to curtailing the wasteful use of tax dollars we face the equally important problem of how taxes should be raised. This is particularly true insofar as it applies to the Federal Government. At best, taxes are a retardant to business, but a given amount of taxes raised in one way may leave our economy functioning and in another seriously cripple it. Let us, for example, consider the effect of present Federal taxes on venture capital, which has been virtually driven from the market.

Merle Thorpe, editor of *Nation's Business*, in an address delivered nearly a year ago, told a story in one succinct paragraph which I want to quote. Mr. Thorpe said:

"It is a fact that from 1900 to 1930 three billions each year of new capital, or savings, went into the development of new things and another three billions into the expansion of industries already established. Eighteen of these new things, such as automobiles, radio, rayon, today furnish employment to nearly 10,000,000 wage earners, one-fourth of the total number of those employed in gainful occupations. Since 1930 less than one-tenth of \$3,000,000,000 each year has ventured in this way."

Along with other businessmen, I have ideas as to what might be done to free up venture capital. For example, I concur with Mr. H. S. Vance, who is chairman of our board and who was a member of the Fortune round table on taxation, that great benefit would come from a further revision of our method of taxing capital gains as distinct from ordinary income. The low rates on capital gains established by the 1938 Tax Act were calculated to attract venture capital. Failure to produce the desired result is due solely to the retention of the time restriction that securities must be held at least 18 months before gains can be segregated. When one considers the obvious uncertainties which hang over all business transactions today, 18 months is a long time. In Mr. Vance's opinion, the time restriction should either be eliminated entirely or reduced to an extremely short period. The only objection which has been raised to this is that it might encourage speculation—particularly by people of moderate means. Apparently due consideration has not been given to the fact that up to the \$18,000 level the rate of income tax under our present laws is less than 15 percent. If a flat rate were applied without option, it would be a deterrent rather than an incentive to speculation so far as the vast majority of taxpayers is concerned. As it is, the time restriction has mitigated against the usefulness of the revision from a standpoint of encouraging venture capital, much of which must come from those in the higher income brackets.

Of far more importance than any specific change was the recommendation of the Fortune round-table conference, to which I have already referred, of the immediate appointment of an impartial competent tax commission empowered to make a scientific study of our whole problem of Federal taxation. We have among our Congressmen some very able experts on taxation, but, insofar as possible, taxation must be moved out of the political arena if we are to have a sound system. So long as taxes are considered from the standpoint of producing the greatest revenue and losing the fewest votes, it is wishful thinking to expect anything other than continuing shocks to our economy. It may be wishful thinking to believe that even a plan recommended by nonpartisan experts could run the political gamut, but I am encouraged to believe that it might because in 1924 the Socialist Labor Government in England appointed a commission headed by Lord Colwyn, and their program was accepted by Parliament.

The possibilities of such a study are limitless. The report issuing from it might well become our magna carta of taxation for years to come. The commission might well prepare schedules of tax sources and rates to meet budgets of varying sizes. It could formulate the ideal tax plan to meet the needs of a \$6,000,000,000 budget, a \$7,000,000,000 budget, and so on to a \$10,000,000,000 budget, pointing out the difficulties and the dangers of each progressive upward step in the total. Such a report would make visual to all the people their tax burden at various governmental cost levels. It would serve to protect this generation and the next against any further experimentation with tax devices intended primarily to promote social reform, to punish certain individuals or groups, or to achieve political advantage.

Perhaps the principal advantage that would come out of the local and State tax audits and analyses suggested by the Tax Foundation, and the tax commission proposed by the Fortune round table, are the questions that would be raised as to whether certain governmental services are worth while in view of the burden that

they impose. I am of the opinion that, even though taxes were raised in the most scientific manner and our tax dollars spent wisely, we would still be faced with a burdensome cost of government because we, the people, have demanded too much of government. During the last few years we have witnessed the sorry spectacle of organized groups from business, agriculture, and labor fighting for their share of the loot in the form of subsidies or services. If free enterprise is to be saved, we have got to stop fighting separately for our share of the swag and unite in a battle to eliminate needless services. Any government will topple over if its citizens lean too heavily upon it. Only a self-reliant people can successfully carry on a government of the people, by the people, and for the people.

Now let us indulge in the brash assumption that governmental expenditures are cut by as much as one-third and that the tax program is sound. Will that insure real recovery in these United States? I don't think so. It will be merely a preface to recovery. Our big job is to substantially increase the national income. At the moment we are experiencing a kind of prosperity influenced, in part at least, by the war in Europe. Over the long pull we would be far, far better off without this stimulant.

The big question is, What can be done to speed up our domestic economy so that, under normal conditions, we can look forward to a satisfactory and mounting level of national income? I don't pretend to know how far we can go in raising national income, but I do believe that within the next 25 years we can go far beyond the most optimistic figure that has yet been mentioned. Certainly anything less than \$100,000,000,000 in the decade ahead would be an unsatisfactory goal. I have nothing new to propose as a basic solution, but, rather, a return to the old concept that the best way to expand markets, profits, and income is by maintaining or improving the quality of our products and selling them at a lower price. Business, labor, and agriculture have all largely departed from this concept during this decade of depression. A return to it calls for a drastic change in both attitudes and actions.

In the field of agriculture an attempt has been made during the last 10 years to solve its manifold problems by creating artificial scarcity and thus raising prices. I admit to a fundamental antipathy to such a procedure, but, at the same time, I recognize the natural resentment of our farmers against being compelled to sell on a free market when, according to their beliefs, both industry and labor benefit by monopolistic controls. Within the last year in talking to farmers, I have sensed a growing skepticism as to whether the elaborate agricultural controls now in vogue will work to their advantage over the long pull, and a conviction that perhaps they can be made to work only by a complete regimentation of agriculture. An overwhelming majority of farmers are opposed to any such eventuality.

Labor has contributed to higher costs by undue emphasis on high hourly rates and by supporting legislation unduly restricting hours of work. Along with an overwhelming majority of industrialists, I firmly believe in high wages. We cannot have mass production without mass consumption. At the same time we cannot have mass consumption if the unit cost of our products is pushed up beyond the level where there can be mass purchasing. The building industry furnishes a notable example of the adverse effects on the worker of abnormally high hourly rates. The net result is such a scarcity of work that an increasing number of skilled artisans have had to go on relief. It is my hope that as labor leaders become more experienced, their viewpoint will be broadened and they will make common cause with employers, who are willing to broaden markets by lower prices and thus expand the volume of available work. Of one thing I am certain—we have got to work and not loaf our way back to prosperity.

Now I want to pay my respects to that section of the *Wages and Hours Act* which restricts hours of work. The operation of that law will inevitably bring one of two results. It will either decrease the annual earnings of workers or raise the cost of goods if there is an adjustment in wages to make up for the lost hours of work. Even more important, it introduces the principle of controlling hours of work through legislation rather than through collective bargaining. I wholeheartedly believe in collective bargaining and feel that it is a necessary element in the functioning of a competitive economy. I am equally antagonistic to the idea of legislative control of hours of work, which, as I see it, belongs only in a regimented economy. I am certain that through collective bargaining management and men can work out a far better solution to this problem of hours of work than can legislators who have little knowledge of the manifold problems in the varied industries. The present law exempts workers in certain seasonal occupations, but practically all of industry is seasonal in character. As an example of how the law works I should like to cite our own experience. Ever since early last spring we have had more orders than we could fill. That situation has been aggravated this fall and yet we had to shut our plant down on Saturdays when the 42-hour provision became effective because we can neither afford to open the plant for 2 hours nor can we pay overtime because our gross margins are too small. Our men would have been glad to work 48 hours in the peak season in the spring and in the peak season this fall, but they have been required by law to loaf and not work. Thus is free enterprise sabotaged because to function successfully it must not be subjected to needless rigidities but, rather, it must have flexibility. It is my hope that labor, protected as it is by collective bargaining, will some day join with us in a fight to repeal this restrictive legislation.

Most businessmen are, of course, in complete agreement as to the desirability of having both agriculture and labor recognize the importance of expanding the volume of business through lower unit costs. As a rule they feel pretty smug about business and hold the view that we are the chosen defenders of free competitive enterprise, or the American way of life as it is sometimes put. I agree that most businessmen not only give lip service to free enterprise but are willing to take their chances in competing under the system. Unfortunately, business has been badly positioned by a highly articulate minority. That minority is likely to torpedo free enterprise unless it is stopped.

Let us first of all clearly define the relationship which should exist between government and business. Our Government represents all the people and has not only the privilege but the duty of protecting their interests. In that area of our economy where monopoly is natural and most efficient, the Government must assume a large measure of control. In that larger area where competition is the natural control from the standpoint of the consumer, then government has the obvious duty of maintaining competition and of protecting businessmen themselves against underhanded and unfair competitive attacks. The interests of the customer come first—as a matter of good business and as a matter of good government. Those of us in the competitive area should recognize the need for Government policing, but resist efforts at governmental control. We should fight for those governmental activities designed to protect the customer. We should fight against any effort of the Government to help us make profits—that's our job. We should fight to the death against legislation which has as its objective taking competition out of the competitive system, for in free competition lies the force which will operate inexorably to bring down costs and thus expand markets.

Where has articulate business stood on the maintenance of open competition? Business has had several clear-cut chances to express itself on this issue. One of the first was when N. R. A.'s Blue Eagle went on the hunt.

The N. R. A. was an experiment in Fascist control of business. It was deliberately designed to control competition—not to promote it. If there ever was a time when every believer in the free competitive system should have shouted to high heaven, it was when that law was proposed. Actually the businessmen who did oppose it were conspicuous. Henry Ford stood out to the last. The Automobile Manufacturers' Association, which includes all manufacturers except Ford, accepted a code for labor standards, but refused, in spite of all kinds of pressure, to adopt a trade-practice code. Here and there throughout industry arose other last-ditch fighters for free enterprise, protesting because they knew that free markets and free thought were inseparable; that political liberty could not survive alongside economic regimentation.

Today the N. R. A. is a dead issue. But its spirit lives and stirs and rises again in Hydra-headed persistence. Since its demise the Miller-Tydings Act has legalized price maintenance and price fixing. State fair-trade practice acts have been passed in 44 States. Laws to license business leap from the floor of every State legislative session. This year in the State of Michigan alone 26 licensing bills were proposed by 26 business groups, all aimed at throttling free and open competition, all designed to put some competitor out of business.

More than 200 bills were introduced into 44 State legislatures this year with the objective of raising additional trade barriers between our various States. Already in existence are more than 300 such barriers to commercial intercourse between our States, most of them attempts on the part of some business group to get "protection" from competition—to dodge the hazard of letting the customer be his own judge and jury, as he must be in the court of true, free enterprise.

Have businessmen condemned and fought against these attacks on our American system of free competitive enterprise? The answer must be a reluctant "No." The fact is that the State capitals and Washington, D. C., have been infested with businessmen seeking licensing laws or some other form of special privilege all aimed, as they put it, "to civilize competition."

Need these businessmen be reminded that the American Indians were civilized by the United States Government and that they are now wards of the Government?

Granted, that these business seekers after special privilege are in the minority, the great majority of businessmen have given tacit consent to such activities by their silence. They have not even been articulate in their recognition of the Federal Trade Commission as public friend No. 1 of free competitive enterprise. Charged with partial responsibility for maintaining open competition and with full responsibility for protecting business against unfair competitive attacks, this great agency has not always had the vigorous support of business. Minority groups have attacked it unfairly; there has been resentment of its so-called interference with business. These attacks have missed the main point. The Federal Trade Commission makes no attempt to control or manage business, but merely to police business to its own advantage. The theory of its operation is sound from the standpoint of preserving free competitive enterprise.

What I have been saying in effect is that business has a whale of a job of housecleaning before we can assert our right to leadership in this battle to save free enterprise. Those of us who believe in free competition must not only practice it but, in addition, must train our guns against those who seek a short cut to profit by inviting legislative restrictions on competition. We must intensify our efforts to expand volume by doing the best job we have ever

done in history for our lord and master—the American customer. If we so dedicate ourselves, we can, with justification, hope that agriculture will abandon its doctrine of scarcity, and labor its philosophy of high hourly rates and less work, and join with us in a determined effort to provide that more abundant life.

This is the appointed hour for action. Our country is not involved in war and we are still free to fight against regimentation. If war should come—which God forbid—regimentation is inevitable, but by swinging into action now we can so fortify free enterprise that it could recover even from the shock of war. If, however, we are lulled into any false sense of security by the ephemeral war prosperity we are now experiencing, and continue to trade our liberty and freedom of action for special privilege or fancied security, free competitive enterprise might not survive, even if peace continued. Involvement in war would at best leave us with a shadow and not the substance. It is going to take courage of a high order to resist the allurements that may be offered in the form of governmental regulations as a quick way to profits, to turn our backs on any and all forms of price fixing, but our goal is the preservation of the American way of life, of civil and religious liberty, and of economic freedom. What could be more worth while? May I remind you, as a final word, that "security" has been the fashionable objective in this decade of depression and decadence. This country was not built up by seekers of security but by self-reliant adventurers, and we must recapture their gallant fighting spirit. If we do, nothing can stop the resurgence of that old singing, dynamic America we once knew.

## Origin of Jackson Day Dinners

### EXTENSION OF REMARKS

OF

HON. JAMES J. DAVIS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, January 8, 1940

EDITORIAL FROM THE SATURDAY EVENING POST OF  
JANUARY 6, 1940

Mr. DAVIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Saturday Evening Post of January 6, 1940, entitled "A Toast," which indicates the true origin of Jackson Day dinners 105 years ago.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Saturday Evening Post of January 6, 1940]

#### A TOAST

Word comes from Washington that the Jackson Day dinners of January 8 may be used by the White House inner circle—whether with or without the President's sanction, no one knows—for a sort of submarine launching of the third-term movement.

The Jackson Day dinners are customarily the occasion for hundreds of orations extolling the greatness of the Democratic Party and offering up thanksgiving for the traditions handed down by Andrew Jackson—by "St. Andrew," as he is still called in many parts of the country. In recent years, these dinners have become \$100, \$50, \$25 and \$10 a plate affairs, at which attendance by office-holders is advisable. Still more recently, they were the occasion for the delivery, by 11 party chieftains at various places, of 11 speeches, all written by the same inner administration circle member—or so, at least, he claimed. Now, it appears, Jackson Day may mark the beginning of a draft-Roosevelt campaign.

Of all days of the year for such a political maneuver, Jackson Day is perhaps the most incongruous. That its choice could even be thought of by the draft-Roosevelt Democrats speaks volumes for their sense of the political proprieties. For there could be no greater affront to either middle-of-the-road and conservative Democrats who venerate the Jackson tradition or to the memory of Jackson himself.

Everywhere, at these dinners on January 8, 1940, there will be Democrats choking back thoughts utterly unlike those expressed in the canned speeches of that night. Perhaps one of them, more courageous than the others, will rise in his place to remind the draft-Roosevelt Democrats of what Jackson Day really means. Perhaps he will say something like this:

One hundred and five years ago, on the night of January 8, 1835, the greatest of these great traditional dinners took place at Brown's Hotel in Washington, D. C. Held on the twentieth anniversary of Jackson's victory of the Battle of New Orleans, the dinner was called to celebrate a greater victory still, a victory for which Jackson had striven 6 years. It was held—so read the announcement in the Globe, the semiofficial organ of Jackson's

Administration—"in honor of the extinguishment of the national debt."

So Democrats meet on January 8, 1940, ironically, to celebrate the anniversary of the party's dedication to two great principles—the principle of economy in government and the principle of national independence from European entanglement or interference.

Democrats—the same Democrats whose administration has seen the national debt increase by more than \$20,000,000,000—meet to pay tribute to the memory of the President whose first inaugural address expressed his burning determination to wipe out the national debt because it was "incompatible with real independence," and because its extinguishment would "counteract that tendency to public and private profligacy which a profuse expenditure of money by the Government is but too apt to engender."

This man whom the Democrats of 1940 delight to honor is the same who, 110 years ago, vetoed a spending measure with these words:

"\* \* \* many of the taxes collected from our citizens through the medium of imposts have for a considerable period been onerous. In many particulars these taxes have borne severely upon the laboring and less-prosperous classes of the community, being imposed on the necessities of life. They have been cheerfully borne because they were thought to be necessary to the support of Government and the payment of the debts unavoidably incurred in acquisition and maintenance of our national rights and liberties. But have we a right to calculate on the same cheerful acquiescence when it is known that the necessity for their continuance would cease were it not for irregular, improvident, and unequal appropriations of the public funds? \* \* \* How gratifying the effect of presenting to the world the sublime spectacle of a Republic \* \* \* In the fifty-fourth year of her existence, after having passed through two protracted wars—the one for the acquisition and the other for the maintenance of liberty—free from debt and with all her immense resources unfettered! What a salutary influence would not such an exhibition exercise upon the cause of liberal principles and free government throughout the world!"

Here was the watchword of Andrew Jackson's administration. It was his battle cry in the valiant 6-year fight he carried on against those who proposed to dissipate the public revenue. The Tories of his day were against him. They sought ever greater contributions from the public treasury. His answer was veto after veto. Finally, on the 8th of January 1835, he achieved his purpose, and he summoned his party to a thanksgiving.

The chivalry of the Democratic Party gathered at Brown's Hotel that night—that night whose anniversary the Democrats of 1940 celebrate. Members of the Cabinet, Senators, Congressmen, envoys from foreign countries, friends of the party from everywhere were gathered. Senator Benton, of Missouri, presided as toastmaster. Woodbury, of New Hampshire, the canny Yankee who helped Jackson achieve his dream, was there. Vice President Van Buren, who long ago had been assured the right to the succession, was an honored guest.

But Jackson himself was not there. He sat at home, smoking his reed pipe, planning the message that he was to send to the dinner. When he knew that the dinner had reached a conclusion and the speeches were to begin, he sent his message—short, clear, triumphant. Senator Benton stood up and read the scribbled note:

"The payment of the public debt: Let us commemorate it as an event which gives us increased power as a Nation, and reflects luster on our Union, of whose justice, fidelity, and wisdom it is a glorious illustration."

This is the man in whose memory the Democrats of 1940 meet.

Andrew Jackson believed not only in economy but, after a lifetime of experience, in sound money. A week before his death, he said: "\* \* \* it is from them [the laboring classes] that the country derives all its prosperity and greatness, and to them we must ever look to defend our soil when invaded. They have never refused—no, sir, and never will. Give them an honest government, freedom from monopolies and privileged classes, and hard money, not paper currency, for their hard labor, and all will be well."

This is the man in whose memory the Democrats of 1940 meet.

Andrew Jackson, by his victory at New Orleans, dashed the last hope of a European nation to gain ascendancy in the United States. Jackson was no chauvinist in his dealings with Europe. His cardinal principles in international affairs were the essential independence of this country, its disinterestedness in the rivalries of Europe, its dedication to the building up of the Western Hemisphere and its inflexible determination to defend America under any and all circumstances. But he believed that the place to defend the United States was at home. He distrusted the seductive voices that suggested then, as they suggest now, that we could best defend the future of America by participation in the everlasting and eternal power politics of Europe.

It is to honor him that Democrats have met each January 8.

Andrew Jackson lived down the long years that stretched from the war for independence through the anarchy that compelled the making of the Constitution, through the writing of the Constitution and its adoption, through the creation of the new government in 1789, through the building of that constitutional system into a great body of basic law and tradition. He knew the value of tradition. He knew that there are things unspoken in the Constitution which nevertheless bind Americans just as strongly as the written word. He saw Washington, Jefferson, Madison, and Monroe each retire from office at the end of 8 years. Perhaps beyond all men of his time he knew the uses of personal power and the dangers to free institutions that lay therein. He saw

that government—constitutional government—required those salutary limitations that maintain the ascendancy of popular government over personal rule.

It was Andrew Jackson who said: "There are, perhaps, few men who can for any great length of time enjoy office and power without being more or less under the influence of feelings unfavorable to the faithful discharge of their public duties. Their integrity may be proof against improper considerations immediately addressed to themselves, but they are apt to acquire a habit of looking with indifference upon the public interests and of tolerating conduct from which an unpracticed man would revolt. Office is considered as a species of property and government rather as a means of promoting individual interests than as an instrument created solely for the service of the people. Corruption in some and in others a perversion of correct feelings and principles divert government from its legitimate ends and make it an engine for the support of the few at the expense of the many. \* \* \* I cannot but believe that more is lost by the long continuance of men in office than is generally to be gained by their experience."

And in 1837, still the triumphant leader of his party, with vast popularity among all classes of people and with a deep sense of public obligation exceeded by no one in all our history, Andrew Jackson retired. He retired after 8 years in the Presidency.

This is the man to whose memory the celebrations of January 8 are dedicated each year.

Ladies and gentlemen, we give you Andrew Jackson and these principles for which he stood.

### EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 8, 1940

ADDRESS BY HON. CLARE E. HOFFMAN, OF MICHIGAN

Mr. HOFFMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I insert herein the following talk given by me at a meeting of conservationists held at St. Joseph, Berrien County, Mich., on December 13, 1939:

Fellow Americans, conservation means the preservation of natural resources; the preservation of our forests, our rivers, our creeks, our lakes, great and small; our valuable, useful birds, animals, fish, that dwell therein.

Conservation includes the moderate, economical use, as distinguished from the wasteful destruction, of our game and fish; of our natural resources, that is, the gas and oil beneath the surface of the earth; the coal, the iron, the copper, the silver, and the gold and all the other of Nature's treasures hidden deep in Mother Earth.

Conservation means, too, the advantageous and the moderate use, not only of the timber in the forests, but of the grasses, the shrubs, the vines, and the products of the soil, and of the soil itself.

True conservation goes one step further and includes and means, or should include and mean, in addition to the preservation of what we have, the betterment, the improvement, of all those natural resources, such as forests, rivers, lakes and harbors, land and the fertility thereof, to which use and value can be added by man's efforts, and an increase in the number and variety of the fish, birds, fowl, and animals.

In short, conservation on its physical side means the preservation and the adding to of all the good things of Nature, which the Lord has so generously bestowed upon us.

Because our ancestors found Nature so lavish with her gifts; because our lakes and streams abounded with fish of all kinds easily taken; because the forests were filled with game and clouds of passenger pigeons, flocks of ducks and geese, sometimes obscuring the sky, and across our plains roamed countless herds of elk and of buffalo, some men, ever selfish, ever living in the present, ever wasteful, unrestrained, so abused their privileges, so misused their opportunities, that a plenty became a scarcity and some forms of fish, as the grayling, of birds, as the carrier pigeons, vanished from the earth.

So it is that organizations similar to the one which meets here tonight, composed of men who see the dangers, of men who unselfishly have their eyes fixed on the future; of men who are willing to give of their time and their money, were formed and are earnestly, progressively, and intelligently endeavoring to repair some of the damage done in the past and to reestablish some of the conditions, replace some of the flocks of birds, some of the herds of wild animals and schools of fish, so that future generations may profit, not only materially and physically, but mentally and morally, through spending more of their time in the great outdoors.

It is there from Nature herself we learn of the laws which are eternal and which govern and control man in his short existence here on earth. It is well that man should live more of his life out in the open, where the rising sun of the morning assures him of another day; its setting at night brings home to him the realization that all that live, including himself, will some day cease to be in their present form. Where wind and storm, rain and sunshine on mountain, valley, marsh, or plain bring home to him who thinks the knowledge that time is endless, the laws of Nature inescapable; that each and every one can do something by true conservation to better his own and the condition of his fellow man; add a little something to his own enjoyment and the pleasure of his children.

There is no more worthy cause than that of conservation. There is no more useful, unselfish, productive work in which man can engage than that of promoting the cause of true conservation.

There is no wider field open to mankind than that of conserving what we have, for to everyone at some time comes the opportunity of protecting the things which swim or fly or run upon four feet.

Whether the act be withholding the finger from the trigger of the gun, the throwing of spear or the casting of bait, the preservation of natural cover in woodland or in water, the feeding of birds or of deer, the rescuing of quail or grouse deprived of their food by winter's icy covering, or the simple turning aside in its onward rush upon the highway of the automobile which would destroy wildlife, there is opportunity for everyone to practice conservation.

Nor is conservation difficult or its results uncertain.

It is no difficult task to aid in preserving wildlife and in increasing its productivity. When far afield with rod or gun, a slight restraint applied to greed or pleasure, a little consideration for the welfare of future generations, marks the difference, makes the distinction, between a game hog and a sportsman.

A full game bag, a bursting creel, may be the trade-mark of the all-too-successful huntsman or fisherman, affording him the opportunity for boasting; but the true sportsman is not made downhearted when fish or fowl escape his skill.

The satisfaction and contentment of the true conservationist is not lessened, as he sits before campfire or fireplace, by the knowledge that the deer's alertness, its speed, and sagacity, sent him home without trophy. He recalls, as he smokes his pipe and swaps yarns with his fellows, that, after all, he has been out in the open where the wind has roughened his cheek, where the sun has added to his strength, where his tramp has created a desire for, and given him the ability to enjoy, his food and drink, and that there is, after all, another day and that the game which escaped him today is waiting to test his skill tomorrow.

Crumbs of bread, pieces of suet, a little grain, scattered for the birds which have delayed too long their southward journey and been caught by winter's storm is conservation.

Bundles of hay and fodder left in deer yards or on runways may mean the difference between starvation and next year's opportunity for many an additional hunter to proudly wend his way homeward with antlered trophy.

Wild rice, wild celery, duck potatoes, or any one of many foods easily planted, which attract the waterfowl, may sustain life and give an increased game bag the following fall.

In many places, in many ways, each and all may practice conservation in one form or another.

Always our efforts to make friends with wildlife meet with a quick and ready response. More than 40 years ago the deer disappeared from this and surrounding counties. Within the last 10 years a few have been brought back and today not only the waste places but some of the cultivated lands in my home county are overrun by wild deer; and it is no uncommon thing in an afternoon or evening to see a lordly buck, a doe or two, accompanied by fawns, in fields or oak groves adjoining the highway.

This past fall in the corn and wheat fields of the Todd farm just south of Fennville, Allegan County, Mich., thousands of wild geese and wild ducks found safety in the sanctuary there maintained. A like situation existed at the Kellogg Sanctuary in Calhoun County, Mich., and the whole surrounding territory profited enormously by the small effort made, the safety zone maintained, for these feathered friends.

No one who has driven past any of our lakes and streams after the closed season, has failed to note how devoid of fear are the winter ducks which follow southward the mallards, the teal, the wood duck, in their flight.

Because of practiced conservation, of sanctuaries, of laws which permit a period of safety for the waterfowl, the elders as well as the children, city folk as well as those who reside in the country, become familiar with the sight and habits of many wild fowl which formerly were strangers.

To Michigan each year from cities and adjoining States, from far to the south, come hundreds of thousands of tourists who pay well for their pleasure, attracted and satisfied as they are because of the fish in our streams, the wild fowl upon our lakes, the deer and bear in our forests.

Statistics show that during 1932—the last year for which figures are available—more nonresidents bought fishing licenses in Michigan than in any other State in the Union.

So it is that to the man who wishes to observe, to read, and to learn comes the knowledge that conservation pays materially, pays in a business way, and certainly it pays in cobwebs swept from tired

brain, in restored clear thinking, in health-giving, health-maintaining recreation.

True conservationists will not confine their activities to the things that can be seen with the eye or grasped with the hand. Conservation means more than the preservation of physical things, of land and buildings, of fields and streams, of harbors, of natural resources.

Conservation means the act of keeping, of protecting from loss or injury, one's health, one's strength, of the social order under which we live and under which, be it good or bad, we prosper or we fail.

To conserve their right to worship the God of their choice in the manner they desired, to preserve the right to work at the tasks they chose, to spend or not to spend the rewards of their toil, to keep their freedom our forefathers left home and fireside, friends and relatives, the graves of their ancestors, embarked upon an unknown sea, and here in this land, confronted by hardships to which we are strangers, conceived and gave birth to a form of government under which their descendants have more greatly prospered than any other people known to history, modern or ancient.

Atoms, as it were, on what might be termed the narrow beach of an inhospitable continent, a shipless ocean at their backs, a trackless forest confronting them, committing themselves to, and seeking the help of, the Almighty, with grim determination, uncomplaining, they wrested from earth, from forest and from sea, their livelihood, and at times a little more. This little surplus, through conservation, provided for the morrow, and the rainy day. It became the foundation of our Nation.

Practicing always self-denial, thrift, by unremitting toil; enduring cold and hunger; existing in rude huts which housed only the bare necessities of life, they slowly won their way until, in our time, the humblest citizen, if he cares to practice conservation may live far better than the princes and kings of old.

From the tallow candle and the pine knot to the brilliancy of the electric globe there is a long, long trail; but under conservation, with the spirit of a true American, the goal was certain.

From the trudging pioneer up by way of the oxcart, through the steam engine, the steamboat, the locomotive, by way of conservation, came transportation. Today, the expert skims by speedboat across the water 131 miles an hour; by locomotive, he roars along the steel rails at 125 miles; by motorcar, on air-filled cushions, he flashes along the beach or over the desert, at 369 miles; in airplane, far above the clouds, beyond the sight of man, swifter than the eagle, he wings his way across a continent, across the sea, at 469 miles an hour, the birds themselves his defeated rivals.

And farm and factory worker has placed at his command the commercial service of these agencies which, at little cost, carry him, in a little more than no time, a distance the Pilgrim fathers never hoped to go in a lifetime.

For the luxuries which we, the common people, enjoy, and which were unavailable to the wealthiest man in bygone days; for the things which are to us but necessities—a thousand and one which save us time and labor—let us thank the powers above and the practice of conservation.

For the blessing of free speech, a free press, the right to worship the God of our choice; for our intellectual freedom, our material prosperity; for a brighter future with a greater opportunity for the man who is willing to work and practice conservation, let us thank our God and our fathers.

For the preservation of all these and of our individual liberty let us ask Divine help; but let us by all means realize now and hereafter that upon our own shoulders rests the responsibility for the preservation of this land of ours, of our form of government, of our liberty and the liberty of our children.

Mean and selfish indeed must be the man who accepts as his birthright all these blessings won through toil and hardship almost unbearable, through suffering and through death, and who fails, through indolence, indifference, or inaction, to conserve, to preserve, them for his children and his children's children.

From the "red" menace with its brains in Russia, its agents and its organizations in a hitherto free America, where they brazenly and wickedly tell us that religion is a fraud, Protestant minister and Catholic priest a hypocrite, and deny the existence of a Divine Being, may we rise and with strong arm deliver ourselves.

Let us here tonight again renew our pledge to conserve not only our natural resources, but with mind and heart and soul carry on the unceasing battle for the preservation of our civilization.

## The Status of Ordnance Procurement

### EXTENSION OF REMARKS

OF

HON. ALBERT J. ENGEL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 8, 1940

Mr. ENGEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address before the Chicago post, Army Ordnance Association, by

Maj. Gen. C. M. Wesson, Chief of Ordnance, United States Army, Chicago, Ill., November 6, 1939:

Mr. Russell, Mr. Preston, distinguished guests, gentlemen, I am truly delighted to be here in Chicago tonight to meet with the industrialists and engineers of your great city. I am particularly happy to foregather with my fellow countrymen, who are giving of their time and effort in the perfection of industrial preparedness for this great commercial district. In an emergency the industrial load here in Chicago, and in the adjacent areas comprising the Chicago ordnance district, will be great. We are counting upon you to carry the load.

Your presence here tonight connotes a recognition of your responsibilities to the Nation in the matter of national defense. It is also evidence that you subscribe to the fundamental principle that national safety can be assured only by national preparedness.

Defense preparedness is today a question constantly in the mind of every responsible citizen. Any steps toward that end, it seems to me, must be considered in their relation to our national policy. What is that policy? Certainly I profess no qualifications to speak with authority on the Nation's policy, but there are certain facts which are of common knowledge. Let us consider these briefly.

We may safely say that the Monroe Doctrine on the one hand and the iron resolve of the people of this country to avoid European entanglements on the other hand form the basis of our national policy.

A national policy of any kind is utterly fatuous unless the Nation is prepared to enforce it against all comers if and when an attempt should be made on the part of others to violate it. Hence, a policy of necessity should generate enforcement plans. These plans, to be effective, must be accepted by the Nation, not only as to personnel but also as to matériel.

In furtherance of these concepts of national policy, our country demands for itself a navy not only second to none but one that can reckon with any probable combination of aggressors in the waters that wash our shores.

As for the Army, the national policy is expressed in the National Defense Act of 1920. This act provides for a small Regular Army and National Guard for continental defense and for certain troops for our insular possessions. It contemplates that this force will be augmented in time of necessity through the medium of our Organized Reserves. The personnel provisions of the National Defense Act are comprehensive. But, as regards the matériel, that is, the arms, ammunition, and other forms of munitions, the National Defense Act is mostly negative.

By far the most important provision of the National Defense Act is that which authorizes plans for putting industry to work on the production of war matériel if and when the emergency arises. This phase of industrial preparedness I will refer to more in detail later, because it is here in Chicago and other industrial districts that in cooperation with industry we are attempting to carry out this provision of the National Defense Act.

Let us consider the actual matériel now available for the armed forces such as I have referred to. Our matériel is all important, not only as to quantity but also as to quality. Permit me to emphasize that our military armament is noncommercial in character. It is highly technical. It requires special facilities. It takes a long time to produce. To have it available at a given time, provision for its manufacture must be initiated from 1 to 2½ years in advance. If it is not available in quantity and quality, our splendid Army of our fellow citizens rush to the defense of our country beaten before they start. They may be forced to fight an enemy equipped with weapons and implements of war immeasurably superior to their own. We must not regard such a possibility with complacency.

Recall our recent armament history. At the end of the World War 21 years ago we had large stocks of matériel—equal in quality to that possessed by any nation and sufficient in quantity to meet any possible situation. There came a general lethargy throughout the world in the matter of reequipping armies with new and improved types of equipment. These were years of war weariness—the years of pacts and treaties. War in our time was out of the question. The lethargy to which I have referred quite embraced this Nation. Ordnance engineering and production facilities in private industry were dismantled and dispersed. Appropriations for new equipment were practically nil. Our arsenals were reduced to almost a caretaking basis. The small sum applicable for ordnance research and development was all but grudgingly granted.

What a comfortable period it was. A period of self-sufficiency and contentment. Our fighting equipment was growing obsolescent, but let it grow. There was no apparent need to be concerned about providing ourselves with the newer and improved implements of defense which engineering and scientific processes were able to produce. The war to end war had been fought—so we were told, and far too many of us believed.

A few years ago a radical change took place. We were startled suddenly to find ourselves in a world where others were either completely rearmament with the latest types of equipment or feverishly attempting to attain this goal. Billions were being spent annually on military land armaments by others in contrast to very few millions for ourselves.

At last, perforce, we began to take some notice.

In 1938, \$25,000,000 was appropriated for armament. This represented a definite increase. But the comatose armament program was really bestirred from its stupor, however, in the fiscal year ending July 1939 by an activating dose of \$50,000,000, which sum

was several times that devoted to this purpose for many preceding years.

What was the cause of this sudden increase? It was not the result of War Department recommendations, for War Department recommendations had not changed. As a matter of fact, the recommendations of those in the War Department responsible for obtaining funds were pared and trimmed by the various agencies through which the estimates must pass.

When finally laid before the Congress, the estimates were only a fraction of the amount originally requested. But during the winter of 1937-38 the increased amounts were added by the Congress. Why were these increases made? Various answers might be given to this question. My opinion is that the bombing of Chinese and Spanish cities and the pictorial publicity of the effects of these bombings were the motivating reasons. I base this opinion on the fact that the increases were made largely for antiaircraft guns and airplane bombs.

I suppose it was concluded that if that sort of warfare was to be in vogue in the future, we ought to be getting for ourselves some guns to shoot at airplanes that might come to strafe us, and that also we should acquire a few retaliating bombs to drop on the other fellow if need be.

Last winter a more serious attempt was made to correct our immediate armament deficiencies. Congress was presented with two definite programs:

(1) To increase the number of Army airplanes.

(2) To furnish essential new and modernized equipment and ammunition reserves for the Regular Army and National Guard and to provide for strengthening our seacoast and insular defenses.

Funds were provided for both of these programs, the armament features of which aggregate approximately \$120,000,000.

This progressive increase in appropriations during the past 3 years has enabled the Ordnance Department gradually to build up procurement and inspection organizations to meet the situation and has afforded the Department valuable experience in handling an enlarged program. The result is that the present \$120,000,000 program is being handled in an orderly way and with the same effectiveness as the much smaller programs of previous years.

Some very interesting orders have been placed with industry in connection with these programs. Over one and one-half million dollars were placed with the York Safe & Lock Co. for 3-inch antiaircraft carriages; over two and one-half million dollars with the Bethlehem Steel Corporation for bomb bodies; over six millions with the American Car & Foundry Co. for light tanks; and over eight and one-half millions with the Winchester Repeating Arms Co. for caliber .30 semiautomatic rifles, known as the Garand, as well as hundreds of other orders of lesser size.

In connection with the order with the York Safe & Lock Co. it is interesting to note that they placed suborders with other producers, to the number of 70, to supply their needs. These suborders were placed all the way from Chicago to Boston, and I am very happy to say that the York Safe & Lock Co. has done an excellent job in producing a new item with which they were not familiar.

Another very interesting case is an order placed with the Eclipse Division of the Bendix Aviation Co. for mechanical time fuzes. This order was for something like \$1,000,000. After 1 year of preparation, the Bendix Co. are now turning out fuzes of excellent quality and in good quantity.

These cases are cited to show that our confidence in American industry is not misplaced. Each one of the items cited is a very special noncommercial item of ordnance, difficult to produce, and in each case we are assured that we will receive material of excellent quality within the time specified and at a reasonable cost.

Under the current programs, contracts with industry amount to \$70,000,000. For most of the items placed with industry, it takes approximately 2 years from the time money becomes available until delivery is completed.

Why, you may very properly ask, does it take so long to get guns, ammunition, and equipment after money has been appropriated for it? The answer is simple—you cannot buy ordnance off the shelf. Commercial plants which receive orders generally have to obtain new machine tools; all of them have to make production layouts. Jigs, tools, and fixtures have to be designed and built and then proved in practice. Frequently changes and corrections have to be made in these accessories before the all-clear signal can be given. Finally, the organization has to go through a certain period in acquiring the necessary production technique.

But all this is to be expected. Was it not more than a year from the time Mr. Ford stopped producing the Model T car before he could get into production on the Model A? Is it not a less difficult problem to produce a new design of motorcar by a well-trained and equipped automotive company than, for example, a company building bank safes to undertake the manufacture of antiaircraft-gun mounts? Or for an organization making automobile accessories to plunge into the fabrication of artillery fuzes? Or for the makers of freight cars to convert their organization and plant to the manufacture of light tanks? All these things American industry can do and has done. But time—time is the priceless ingredient.

Consider further demands on time. Peacetime procurement—which is based on law—is inherently slow. Proposals to purchase must be drawn with consummate care. Bidders often demand an extension of the dates selected for opening bids. This has happened even in cases where 60 days has been the allotted time. When we consider that some of the items involved necessitate over 1,000

detail drawings, the contractor's viewpoint may be appreciated. Before he can bind himself in the form of a proposal, he must analyze the item in question from a production standpoint. He must secure options on raw material and new equipment. He has to negotiate with his subcontractors. He cannot jump from making bank vaults to making gun carriages all in the day's work.

Now, when the bids are opened, departures from specifications have to be considered and weighed. The responsibility and the ability of certain bidders successfully to complete a contract sometimes have to be investigated. Finally a decision is reached as to the lowest responsible bidder. The announcement of this frequently elicits protests by other bidders. These protests then have to be considered and in some cases the involvements are so great that the entire matter has to be referred to the Comptroller General for his opinion, which is final.

Enough has been said to explain why the procurement of ordnance takes time, and enough, it seems to me to convince anyone that our requirements for the necessary implements of defense must be anticipated. Today we might paraphrase the adage: A gun in time saves nine.

My remarks on the peacetime procedure of placing Government contracts are not made in a spirit of criticism. The methods employed are based on law. They are designed for the protection of the Government and to guarantee open and free competition.

In connection with contract making, conditions are now developing which have a strong influence on industrial enterprise. These are rising material prices, shortage in skilled labor, long-time machine-tool deliveries, possible wage increases, profit limitation on certain types of armament, which provision requires that the basis of amortization of special equipment required by such orders has to be established before a contractor is on sound ground to tender a bid. Government financing of certain orders is being suggested. These factors are tending further to complicate the procurement problem. Prospective contractors are evidencing distrust of long-term commitments, in the absence of protective guarantees against these uncertainties. This protection, which may be afforded under contracts made under emergency conditions, cannot be legally provided under our peacetime methods. If these conditions become more acute and we become committed to a larger rearmament program, some cognizance must be taken of them; otherwise, we may encounter almost insurmountable difficulties in placing contracts for certain items.

My comments on current procurement problems are somewhat in the nature of a digression from my main theme. But I do feel they are well to ponder.

I have discussed some of the mechanics; now let us get to principles. The combined strength of the Regular Army and the National Guard is known as the initial protective force. This force, we are now undertaking to provide with essential items of equipment and with sufficient reserves to maintain it in action until industry can produce matériel for consumption and wastage factors.

When this has been done, this force will be ready to take the field without delay.

What could we do in a major emergency when this force of 400,000 men is obviously inadequate?

We could no doubt quickly recruit a larger force. These newly raised units, when amalgamated with the trained units of the Regular Army and National Guard, could be brought to a fair degree of efficiency in comparatively few months. But these units would be of little avail without the implements and supplies necessary to equip them and sustain them as a fighting force. Men can be recruited and trained far more quickly than their weapons can be produced, and without the weapons of defense men are truly cannon fodder.

Will our country be content with this situation when it knows the facts? The next logical step in armament preparedness would be to provide the equipment and reserves for that larger force, which is called the protective mobilization force. This force consists of the Regular Army, the National Guard brought to war strength, with the addition of certain specialized units. This force would consist of 700,000 men in the organized units and 300,000 in the reserves. For a nation as great as ours, with so much at stake, the contemplation of producing equipment for such a modest force would, I believe, meet with general approval. Remember that it will take 2 years to provide the additional equipment for such a force, should its services ever be required. A few hundred million dollars necessary is a small premium for a very large amount of insurance.

In addition to the program for new equipment and supplies, other measures are being taken in the interests of armament preparedness:

(1) Special machinery: We have a modest program for procuring and holding in stand-by certain very special machinery which is difficult to produce and which takes a long time to make, such as powder-making machinery, equipment for centrifugally cast guns, and machines for small arms and small-arms ammunition manufacture.

(2) Rehabilitation of arsenals: We have a program for rehabilitation of arsenals under which we are replacing obsolete machines now in our factories. Some \$6,000,000 is being devoted to this purpose during the current year. The arsenals are now working to capacity employing some 16,000 people.

(3) Educational orders: Some \$16,000,000 has been appropriated for this purpose, of which the ordnance department's share is approximately \$10,000,000.

There has been much discussion about educational orders. Their purpose is to acquaint selected firms with the manufacture of critical noncommercial items of armament through experience to be gained by the production of a comparatively small number of the items. In connection with this training it is proposed to acquire the minimum number of machines, special jigs, tools, and fixtures necessary to fabricate the matériel in the most approved manner. Finally, with the knowledge and experience gained, the educational order includes a production plan for the production of the article in quantity at a given rate.

Last year the ordnance department placed four educational orders. From current funds 46 critical items have been selected for orders with 90 or 100 firms, depending upon prices bid.

The law governing educational orders permits awards to be made to other than the low bidder. Bidders are selected from among those firms which, as a result of comprehensive surveys, have been allocated to wartime production for the item in question.

The Government is being educated by these orders as well as industry. For example, last year we placed an educational order for shell forgings here in Chicago with one of your very best firms. Difficulties arose in arriving at the desired rate of production and at the same time complying with the rather rigid specifications. The specifications were designed to minimize the amount of machining on the rough forging. It now seems that it will be in the interest of the Government to ease the tolerances on forgings, even though some extra machining may be required. So education is good for teacher as well as pupil. However that may be, if we do not have guns and ammunition in reserve we must at least strive to have private plants in reserve to make them.

(4) Now, the fourth and last measure is all important—procurement planning. To appreciate the importance of this work we must examine the underlying doctrine of supply. The requirements for an army in the field are the cumulative sum of three items—initial equipment, predicted wastage, and consumption factors. From this sum we may deduct any equipment we have on hand. The difference for any item is the quantity and rate of delivery that must be obtained from industry. If munitions were ordinarily produced commercially and were available at the corner store in the amounts desired, there would be no occasion for procurement planning. Unfortunately, this is not the case. We must therefore list our deficiencies in war matériel, place them before industry, determine which plants are best fitted to produce them, develop a system by which plants are allocated to the production of a specific item, have these plants work out production schedules, go just as far as possible short of making a definite contract so that in the event of an emergency a minimum time will be consumed in getting under way. Remember that armament stocks on hand plus our wartime production schedules are our true war reserve. If we reckon on a definite production of a given item which is not met, we may find ourselves in a difficult situation. These production schedules are therefore of paramount importance in our scheme of national defense. Many of them have been prepared under conditions which have undergone a change. They need now to be revised in the light of present conditions.

This brings me to the Chicago ordnance scene. The medium through which industrial planning is being organized is the ordnance procurement district. Our country is divided into 14 such districts, and the Chicago ordnance district is among the most important of them.

The chiefs and assistant chiefs of these districts are prominent industrialists. Here in Chicago we have Mr. Fred A. Preston as chief, and Mr. C. Raymond Messinger, of Milwaukee, as assistant chief. May I take this opportunity publicly to thank them for their unselfish and untiring efforts in planning for wartime ordnance production? In this work we have had, I am pleased to say, the hearty cooperation of industry and our engineering societies.

I acknowledge also our indebtedness to the Reserve officers of the ordnance department. They have been of great assistance to us in our work, and I commend them for their interest and efficient aid.

Here also are the representatives of another group—that is, the Army Ordnance Association. This association has stood for reasonable armament and adequate industrial preparedness since its birth 20 years ago. During all that time it has never wavered from its course. I wish to congratulate Mr. Edmund A. Russell on the representative membership of the association here in Chicago. Mr. Russell is an old friend and a great worker for national defense. He organized and operated the Chicago Ordnance District during the stress of the World War 20 years ago; he was its chief in the following period of peace until Mr. Preston took over a few years ago. Mr. Russell is a tower of strength to the industrial preparedness of the United States. I tender him a salute.

The job of preparedness is never finished. The work that has been done must be continued with intensive vigor. Much yet remains to be done. Reasonable preparedness must be our goal. This must be obtained as soon as possible, and we must keep it.

It has been a great pleasure to be your guest here this evening. This large and representative gathering and the cordial reception accorded me here is stimulating to a marked degree. As a representative of the War Department, please accept my grateful acknowledgments. Those of us who are charged with supplying our troops with munitions of war have a great responsibility. We have definite objectives to gain. Working together in the future, as we have in the past, we shall render a good account of ourselves.

All of us here, I am sure, pray that our country never again will be subjected to the trials and sorrows of war. Real preparedness, I believe, is the best means to the end that the noble ship of state may avoid the rocks, round the point, and steer for the open sea.

## Removal of Civil Service Employees

### EXTENSION OF REMARKS

OF

HON. ROBERT RAMSPECK

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 8, 1940

STATEMENTS BY HON. ROBERT RAMSPECK, OF GEORGIA; BY THE CIVIL SERVICE COMMISSIONERS; AND BY MR. BURLEW, FIRST ASSISTANT SECRETARY OF THE INTERIOR

Mr. RAMSPECK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statements:

STATEMENT ISSUED BY UNITED STATES CIVIL SERVICE COMMISSIONERS MITCHELL, M'ILLIN, AND FLEMMING, JANUARY 6, 1940

The Secretary of the Interior, Harold L. Ickes, in his statement dealing with certain administrative situations in the Bureau of Mines, is quoted in the press as stating that a "bureaucratic clique" was protected by civil-service regulations and that any attempts to "can them" would necessarily result in trials.

This statement has no basis in fact.

In another newspaper account of the same interview with the press the Secretary states that the formation of such cliques "happens all the time when people have a life tenure under civil service."

The allegation that persons under civil service have a life tenure also has no basis in fact.

Such statements by high-ranking administrative officials can have no other effect than to unjustifiably discredit the Federal merit system.

The actual facts are as follows:

An administrator who desires to remove an employee in his department who is inefficient and who seeks to obstruct the established policies of the department has all the leeway anyone can ask for. He is both the judge and the jury.

All the administrator needs to do is to set forth in writing his reasons for desiring to remove an employee, give the employee a copy of these reasons, and allow the employee a reasonable time for personally answering the charges in writing. Once the administrator has received the employee's reply he can terminate the employee's services immediately.

Civil-service rules specifically provide that no examination of witnesses nor any trial or hearing shall be required, except in the discretion of the officer making the removal.

Furthermore, if the required procedure is followed, the employee has no appeal to the United States Civil Service Commission unless it is alleged with offer of proof that the removal was for political or religious reasons.

Any administrator who alleges that it is impossible for him to deal with an administrative situation in his own agency because of civil-service rules or regulations is attempting to explain his own unwillingness to act by providing the public with misinformation.

In the Eleventh Annual Report of the United States Civil Service Commission, a report which was written when Theodore Roosevelt was a member of the Commission, the Commission stated that it was "one of the favorite untruths of the spoilsmen" to allege that the examination questions asked by the Commission were irrelevant or unpractical.

In recent years one of the "favorite untruths of the spoilsmen" is to allege that a person who receives a classified civil-service status remains on the pay roll for life. As indicated above, the inefficient employee can be removed by any administrator who has the courage to take such action. In addition, if Congress fails to appropriate money for particular positions the employees concerned go off the pay roll whether they have civil-service status or whether they do not have civil-service status.

Secretary Ickes also stated in his interview that he was in favor of "more civil service instead of less" because he considered it the lesser of two evils in selecting Government employees.

In other words, Secretary Ickes, instead of being an advocate of a strong and vigorous merit system in the Federal Government, is one who "damns it with faint praise." The American people have not and are not being asked to choose the lesser of two evils. They are being asked to determine whether the spoilsman is to discharge the tremendous responsibilities which have been placed on government today, or whether persons are to discharge those responsibilities who have been selected by fair, open, practical, competitive tests.

STATEMENT BY REPRESENTATIVE ROBERT RAMSPECK, CHAIRMAN, HOUSE COMMITTEE ON THE CIVIL SERVICE

If the newspapers correctly quote Secretary of the Interior Ickes, I am astonished at his apparent lack of knowledge of civil-service law and regulations.

If any civil-service employee is guilty of sabotage in regard to the policies of a Cabinet officer, there is nothing in the civil-service law or regulations to prevent the discharge of such an employee. The only thing required by the civil-service law and regulations is that such an employee be served with written charges and be given an opportunity to reply in writing.

If an employee is found guilty of the charges he can be dismissed or otherwise dealt with by the Cabinet officer, and there is no place where the employee can appeal. The Cabinet officer is the judge and the jury.

The only protection an employee has in such a case is public opinion.

I realize that an erroneous opinion exists in the minds of many people regarding civil-service employees. They believe that civil-service employees cannot be discharged. The fact is that it is often less difficult to discharge a civil service employee for just cause than it is to remove a political or patronage employee who has strong political backing.

I am surprised that any Cabinet officer should labor under such a misconception.

STATEMENT BY FIRST ASSISTANT SECRETARY OF THE INTERIOR E. K. BURLEW, JANUARY 6, 1940

Because of the absence from Washington of the Secretary of the Interior, who cannot be reached immediately, I wish to correct any public misapprehension concerning the attitude, record, and practice of the Department of the Interior on the question of the civil-service merit system.

From the published comments, those who do not know the whole record might incorrectly be led to believe that the Department of the Interior under Secretary Ickes does not subscribe to the merit system, while as a matter of fact the record is directly to the contrary.

Having been associated with Secretary Ickes for more than six years and engaged actively on personnel work, I can testify as to his belief in the civil-service principle and equitable handling of personnel problems himself.

It happened that for a number of years the Secretary had authority to appoint thousands of employees to exempted positions as well as to those under civil service. There was considerable political pressure naturally to fill exempted positions without competition. Secretary Ickes, however, set up under my general supervision a miniature "civil-service commission" in the Public Works Administration, where position requirements were established and eligibles were given, in effect, a nonassembled examination and rated according to their training and experience. The Civil Service Commission itself cooperated in this by loaning several of its technically trained examiners to get it started. The Secretary went further and applied the civil-service procedure in making separations of employees for cause, which it was not necessary for him to do under the law. Actually, disciplinary actions in connection with the more than 40,000 employees in the Department of the Interior and the 10,000 in the Public Works Administration were handled identically so far as the merit principle was concerned.

If Secretary Ickes could be reached, I am sure that he would agree with the views of the Civil Service Commission and Congressman RAMSPECK as to the principles of civil service, as he did in effect in his interview when he stated, "I ardently believe in civil service."

Secretary Ickes in 1937 made an address in defense of the civil service in which he said executive officers "are helpless so long as the statutes continue to except large numbers of Government jobs from competition. \* \* \* Too many of the higher-grade positions are filled through political preferment which forecloses advancement from the ranks so that a Government career has not had attached to it the prestige that it should have. \* \* \* Increasing emphasis should be placed on public service as a career and the National Civil Service Reform League is doing immeasurable good along this line. The civil-service agency should be given an opportunity to conduct an aggressive program of improvement. It has been handicapped for many years by insufficient funds. I know of no more useful purpose for which the public's money can be spent than in the improvement of the public's own service. \* \* \* Whether under a competitive or a spoils system, however, the effectiveness of personnel administration will always depend on the stamina of supervisory officers."

Even in the absence of Secretary Ickes, fortunately his considered views on civil service are of record for anybody who may be interested today. They are set forth by himself in a broadcast speech of January 14, 1937, in full as follows:

"One of the urges that finally landed me in active politics was my interest in the administration of public affairs. Many a good fight, if many a losing one, have I helped to wage for economy and efficiency in government. It has always seemed to me to be axiomatic that we cannot hope for that degree of economy and efficiency to which the taxpayers are entitled unless we have a carefully worked out and a genuinely administered system of civil service. I am here tonight to attest to my belief in civil service, and the occasion is one that gives me especial pleasure because at the same time I can pay tribute to the National Civil Service Reform League which was so largely responsible in the beginning for the abolition of the 'spoils' system, and which throughout the years has vigilantly stood guard to prevent any breach in the wall and has abated many abuses. Even more outstanding results are to be expected from an organization that is under the leadership of Mr. Robert L. Johnson.

"The Government is entitled to demand superior qualifications in its civil employees. The business of government is the most important business of the people as a whole, and they should not sanction mediocrity of service in their public any more than in their private business. Inferior qualifications in personnel mean added cost of government, inefficiency in performance, and even failure of the objective sought.

"It has happened often in history that a man symbolizes a social, economic, or political condition. It has been the lot of Mr. James A. Farley to have had to take the responsibility for a system of patronage over the development of which he personally has had as little control as the average citizen. I am speaking of the so-called Farleyism in Government employment, and the Mr. Farley whose name was misused in the late campaign to signify a political Goliath dripping with the blood of spoils. And I would like to testify at this time that in all my dealings with Mr. Farley he has never made a demand on me for the appointment of a single person.

"After all, Congress, representing the will of the people, rightly or wrongly established many great emergency agencies in the Government with the recruitment excepted from civil-service requirements. In my opinion, there was justification for this action by Congress in order to staff the new agencies quickly in the emergency, but this policy should not be perpetuated nor applied to a permanent force.

"The country may congratulate itself that President Roosevelt is in sympathy with the movement that is gathering force in Congress to place the newly created agencies within the competitive classified civil service. In his administrative reorganization plan for the Government which he announced only 2 days ago, the President took an advanced stand for a most fearless, comprehensive, and practical system of Federal administration. The President is determined to press for a more efficient administration of the peoples' business through a long-needed reorganization of the Federal agencies. It is significant that a comprehensive and widely extended merit system occupies an important place in the plan that he has asked the Congress to authorize.

"Mr. Farley and other executive officers, and even the President, to say nothing of Members of Congress themselves, are helpless so long as the statutes continue to except large numbers of Government jobs from competition. Representatives and Senators, being elected by the vote of their constituents, are rarely able to stem the pressure of solicitation for jobs. Do not get the impression that I am criticizing Members of Congress; I sympathize with them. They, as well as we in the executive branch, are victims of a system.

"There is no justification for the assumption that because the personnel of the emergency agencies were exempted from civil service they therefore were necessarily unqualified. I have appointed over 35,000 non-civil-service employees in the past three and a half years. To say that I have made no political appointments would be untrue. I have made appointments on the recommendations of Representatives, Senators, and Governors. I have also made appointments on the recommendations of lawyers and ministers and college presidents, and even of civil-service reformers. If recommendations had not been made to me, I do not know where I could have found the men necessary to staff the emergency agencies of which I was in charge. However, I have always insisted upon character and ability as a *sine qua non* to appointment. I have always exercised the right of separating promptly from the service, regardless of political or other influence, any employee who did not come up to specifications. In short, I have operated on a merit basis so far as was possible. At the beginning I established in my own office a miniature civil-service commission for the rating of applications, certification of names, and other necessary procedures. The Civil Service Commission was good enough to lend some of its technically trained examiners to help me get started.

"Based on my experience as the administrative head of two emergency organizations, I want to say that, in character, ability, and in devotion to the public service, these employees could have stood the most rigid test. No one could have shown more devotion to their work than these same non-civil-service employees.

"George Washington, speaking with the vision of a prophet in the swaddling-clothes period of the Republic, said: 'Influence is not government'; nor, may I say, in the words of Defoe, is the purpose of government 'to get some men put out and some put in.' When I came into the Government I heard much of the 'handicap' caused by the permanent staff to newly appointed ambitious executives; in fact, I myself had a feeling of apprehension on this score. But I have since come to realize that an experienced permanent organization on its mettle honestly to serve good government through whatever political party is in control is the strong right arm of a wise executive of limited tenure. However, every principal executive should have the right to appoint, without regard to the civil service, a few men in whose fidelity, capacity, and loyalty he has complete confidence and trust.

"While I favor a competitive civil service, I admit that the growths which have become attached to it throughout the more than half a century of its operation have made it lacking in flexibility. Too many of the higher grade positions are filled through political preferment, which forecloses advancement from the ranks so that a Government career has not had attached to it the prestige that it should have. Even now the compensation paid, especially in the higher bracket jobs, is inadequate. This defect also the President is seeking to remedy. Promotions have been slow and no satisfactory method of making them automatically or on merit has been developed. In many instances qualification requirements have not

been rigorously observed. No effective effort has been made to recruit young executive material for training, although some progress has been accomplished within the last few years by the Civil Service Commission in persuading a number of the colleges and universities to include courses in Government administration in their curricula.

"In order to secure a real civil-service system it must have the support of the legislative and executive branches of the Government and the public alike. Increasing emphasis should be placed on public service as a career, and the National Civil Service Reform League is doing immeasurable good along this line. The civil-service agency should be given the opportunity to conduct an aggressive program of improvement. It has been handicapped for many years by insufficient funds. I know of no more useful purpose for which the public's money can be spent than in the improvement of the public's own service.

"The first step is to recruit the best material. In times of depression and when private business lags the Government is able to obtain the services of persons of outstanding ability, but at the first flush of prosperity many of the more highly qualified employees return to private fields. Such circumstances served the New Deal in 1933 and 1934 but handicap it now through the loss to it of some of its finest personnel.

"Contrary to the belief in some quarters that employees should be penalized for leaving the Government service for private industry, I believe that a certain number of such transfers should be encouraged. But it is a serious condemnation of our present system that the Government can be used as a stopgap or as a school to train experts to turn their knowledge against the Government. Unfortunately, for many years the Government has not had its share of the best talent and has not been in a position to compete successfully with industry.

"Even an adequate competitive recruiting system is not sufficient, however, if the appointing officer is not free to exercise his best judgment in selecting eligibles and in demoting, shifting, or separating the incompetents. The executive should also have discretion, with the consent of the civil-service agency, to appoint, without competitive examination, to positions requiring special and unusual qualifications. I am not in favor of a political-nepotism-amical merit system. Political influence and favoritism toward relatives and friends should be stopped. It would be a protection to Senators, Congressmen, and executive officers alike, who are often victims rather than aggressors. Who knows but that in the future any improper interference or manipulation of appointments will be made a penal offense. This is not as revolutionary as it may sound. There is a statute at present prohibiting Members of Congress and other Government officers from prosecuting claims against the Government. Why not a law preventing taking advantage of the Government through appointments?

"Nor does competition in itself, however, insure against the drones, the inefficient, and the misfits. The term 'civil service' does not of itself guarantee faithful performance of duty in the public interest. There should be no sit-down life tenure of office merely because the Government is the employer and the shirker has managed to pass a competitive examination. The first test should not be the final one. There should be periodical appraisals of the services as well as in-service training of employees. This would assist the ambitious to advance and would make possible the proper placement of the inefficient or the slothful either within the service or outside of it. Whether under a competitive or a 'spoils' system, however, the effectiveness of personnel administration will always depend on the stamina of supervisory officers.

"If I were to embark upon a sea voyage my sense of security and comfort would not be enhanced by the knowledge that the particular qualifications of the crew were that they were the friends and constituents of Congressman Blank who was largely responsible for their selection. With a personnel selected and maintained in the way that I have indicated, the crew can manage the ship competently no matter what direction may be charted by the captain."

## Reforestation of Forest and Waste Lands

### EXTENSION OF REMARKS

OF

HON. EUGENE B. CROWE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 8, 1940

STATEMENT BY HON. EUGENE B. CROWE, OF INDIANA

Mr. CROWE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by me this morning before the Committee on Appropriations:

Mr. Chairman and gentlemen on the subcommittee on appropriations, I am again appearing before your committee and appealing to you in the interest of the purchase of forest lands and waste lands which need reforestation for the national forests of

the United States. I have in the past pointed out numerous reasons and sound reasons for this expenditure by the Federal Government. Some good reasons may be briefly stated, and I will state them briefly enough that I hope they will challenge attention and be read.

First, Flood control: Definite evidence has been submitted in the past by me that on land covered by timber the foliage, the body of the tree itself, the leaves and decayed vegetable matter on the ground, together with the loose soil under the trees absorb a tremendous amount of water and hold it, distributing it over a long period of time instead of immediate run-off.

Second, Erosion: In the Ohio Valley alone only 23 percent of the land remains intact without any erosion whatsoever. Much of this land is hilly and vast areas of it are unsuitable for farming, yet it is farmed and is constantly eroding more and more, flowing down with the water into the channels to clog the channels with silt, sand, gravel, and dirt, which ultimately is carried down into the Mississippi River itself. The results in the Mississippi are too obvious to have more than passing notice. Great levees have had to be constructed and in places the bottom of the channel of the river is as high or higher than the land outside.

Third, Streams, rivers: Particularly at the sources and the smaller streams this cleared waste land and where the timber is scanty and pastured, the water speedily finds its way to the streams when there are rainfalls causing floods and great damage. In the year 1937 there was more than \$400,000,000 of damage in the Ohio Valley alone by the great floods. Even though the valley had been timbered, there would no doubt have been some floods anyway, but not so great, not so devastating, and the crest would not have been nearly so high as it was. On the other hand, the water having flowed off quickly causing the floods has gone ultimately to the ocean, and the small streams dry up, destroying the fish which in the past were a source of food to many people. Furthermore, the lack of forests in many of these areas also is the cause of the destruction of fowl and game, which, too, have fed many people in times past.

Fourth, Labor for Civilian Conservation Corps camps and other unemployed: Since today and perhaps ever after, or at least for many years to come, with our present set-up and economic structure, there will be hundreds of thousands of unemployed both among the young just emerging from school and college and by the older people who have passed the machine age of usefulness, I know of no better source of employment than in the preservation of our natural resources, making fire trails, roadways, and proper utilization of forest lands. Planting millions of forest trees on denuded lands would be good occupation for a million or so people in the United States. It would ultimately build up tremendous forest lands and valuable forest trees would be the result.

Fifth, Utility: In the past thousands of woodworking plants furnished employment for many thousands of people throughout the country, particularly in forest sections. They not only furnished employment for people in the factory itself but there was employment in cutting the timber, sawing it into logs, hauling it to the sawmill, shipping it from the sawmill to the factory, unloading it, stacking it, making it into various and many kinds of wood products, including furniture. In many sections local supplies have become exhausted and many factories have closed down or have moved to other parts. Those that have not are compelled to ship some great distances, which in many cases put them out of business. Rebuilding our national forests would, after a few years, again furnish employment for many thousands of people in areas in which they are now unable to maintain themselves.

I am better acquainted in Indiana than elsewhere, as a matter of fact, because I live there and I live in the hardwood timber section of the State. I find in one little city of 4,800 population that several furniture factories are operating or have been, employing a total of 1,350 people with an annual consumption of 21,000,000 board feet. Some of these factories have already reached the end of their local material. Others are nearing that today, and all of them will ultimately reach it unless something drastic is done in southern Indiana to protect them. Other small towns in Indiana that have had factories find them now entirely closed down and moved away or the factory building rotting down. We have many acres in southern Indiana in the Hoosier Forest area, in fact some 700,000 acres in the area which should be bought and carefully and selectively reforested. It would only be a matter of some 10 to 20 to 30 years until all of the land so purchased would again begin furnishing saw timber if properly and selectively taken out.

I have introduced a bill, H. R. 7641, a copy of which I am leaving with you. I am asking for an appropriation of \$15,000,000 for the fiscal year ending June 30, 1941. This, I realize, is far beyond the amount appropriated for the current year which is \$3,000,000. You realize, however, that \$15,000,000 is far less than the sums appropriated several years ago. Those appropriations caused a great expansion by the Federal Government in the forest areas and they were increased from 47 to 88 units.

Take for instance in Indiana, the Federal Government several years ago selected areas in 9 southern Indian counties containing more than 700,000 purchasable acres. Not knowing that only a small bit would be purchased, agents were sent out to option land and, following that, to buy land. Approximately 100,000 acres were optioned, of which nearly 35,000 acres were purchased. Not knowing that this program would be so drastically curtailed no special attempt was made to buy this land in blocks and inte-

grated but it was bought when and where the options would come in and the purchases readily completed. These 35,000 acres have been purchased over a rather wide area. The expense to the Government of handling must of necessity be very great. It cannot possibly be otherwise. Furthermore, proper protection by trails, roads, and fire lanes cannot be had because of the land of other people between these various sections which the Government owns. By all means, at least a reasonable amount of purchases should be made to consolidate what has already been purchased. I submit that if it was a good thing in 1934 and 1935 to purchase large forest areas, it is a good thing in 1940 and 1941. If it is not a good thing to do in 1940 and 1941, it was not a good thing to do in those previous years and it has not been a good thing to do for the last 40 or more years that the Forest Service has been in existence.

We spend vast sums for the immediate. I know of nothing that can be done which is more forward looking to the future than work such as this. When you plant a waste piece of ground to timber, it grows while you sleep. It grows year after year with the least bit of attention. The ultimate result will be untold millions of dollars in value and will be distributed among the five points that I have listed above, as well as many other points which I am listing. I realize the great complaint about spending by the Federal Government and that much effort is being made to curtail expenditures for the coming year. I agree with that policy in the main. I do not, however, agree with the policy if it is going to result in great loss to some department of our Government. You cannot point to anything about our Federal Government which in the long run and over the long haul is going to bring more dollars of return ultimately to the dollar expended than will this service. Therefore, I hope there will be no saving at the spigot in this connection and that this honorable committee will accept the resolution which I have offered to the House as a basis for the appropriation by your subcommittee.

### A Civil-Service Opportunity

### EXTENSION OF REMARKS

OF

HON. ROBERT RAMSPECK

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 8, 1940

EDITORIAL FROM THE CHRISTIAN SCIENCE MONITOR OF  
JANUARY 5, 1940

Mr. RAMSPECK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Christian Science Monitor of January 5, 1940:

[From the Christian Science Monitor of January 5, 1940]

#### A CIVIL SERVICE OPPORTUNITY

Reports that congressional leaders have agreed to place the Ramspeck bill for extension of the merit system in the Federal civil service high on the calendar of the present session of Congress constitute good news, indeed.

It is true that this measure would blanket into the classified service many thousands of politically appointed employees, with the requirement of only a qualifying examination. But this is the only way it has been found possible to make civil-service extensions, and to restaff agencies now which have been functioning for several years would make tremendous confusion.

Some of the agencies which the Ramspeck bill would authorize President Roosevelt to transfer to civil-service status are the H. O. L. C., F. H. A., R. F. C., T. V. A., and several branches of the Department of Agriculture operating on emergency funds, such as the Farm Security Administration. Altogether it is estimated that 250,000 employees might be affected.

Representative ROBERT RAMSPECK, of Georgia, sponsor of the bill and chairman of the Civil Service Committee of the House, has good reason to expect the support of the President since Mr. Roosevelt has put complete inclusion of all Federal employees in the merit system under his reorganization plans. It is certainly undesirable that so many positions should be at the disposal of political spoils-men.

No one recognizes this better than Government employees themselves. The Federal Employees National Federation has consistently backed the measure and is in the field again this year in its support. The National Civil Service Reform League, under the new presidency of Samuel H. Ordway, Jr., former Civil Service Commissioner, will campaign for it. Congress could put no brighter star on its escutcheon for 1940 than the passage of the Ramspeck bill for merit-system extension.

## America at the Crossroads

## EXTENSION OF REMARKS

OF

HON. VINCENT F. HARRINGTON

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 3, 1940

EDITORIAL FROM THE SIOUX CITY (IOWA) TRIBUNE

Mr. HARRINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial by O. L. Brownlee from the Sioux City Tribune, Sioux City, Iowa, entitled "America at the Crossroads":

[From the Sioux City (Iowa) Tribune]

## AMERICA AT THE CROSSROADS

This Nation has come to a point in its development where some important decisions must be made by the American people. These decisions are inexorably bound up in the politics of the country. The political decisions which will be made in 1940 are therefore of transcendent interest because they will inevitably shape the course of things to come and their effect will be reflected throughout the future history of the United States.

In a broad manner of speaking the issues resolve themselves into 10 or a dozen topics or subjects which involve such matters as the underlying philosophy of our economic life, production policies, pricing legislation, the relationship of industry to labor and raw materials producers, money and credit policies, foreign trade and political policies, spending and lending, the threat of alien "isms" to our republican democracy and the effort to enthrone rationalism in our collective lives.

America stands at the crossroads! Shall this Nation progress along democratic lines or shall it retrogress through the spread of mass poverty and the establishment of totalitarianism?

Both major parties are trying, sincerely and earnestly, we believe, to understand the aspirations of the American people and translate them into terms of law and social and economic order. Subversive elements are sniping all constructive effort from the sidelines.

It is important that we, the people, know the facts because the final determination, under a democracy, rests with us.

This series of editorial discussions has been prepared for the purpose of supplying background material and information which, it is hoped, will be helpful in enabling Tribune readers to form sound opinions and conclusions concerning these matters as they develop in the forthcoming campaign. We hold no brief for either political party—all we will ask is performance.

It can be said in all truth that there is no serious division of opinion among the people generally nor between the majority elements of both major parties concerning objectives. There are crackpots and subversive groups and futile elements in both parties but they are not dominant.

The most potent enemy of the United States today is ignorance concerning the fundamental things.

Too many of our political leaders lack understanding, are confused, and their confusion is reflected in the minds of the masses. There is plenty of the will to do but a woeful lack of knowledge about what to do.

This confusion does not concern so much the underlying philosophy of our plan of life or our form of government but what government can do, how much government should be permitted to do, to improve the economic security of the individual, and to promote the mass welfare of the people.

Our major differences of opinions concern means and methods, but since means and methods are essential in translating theory into practice, our differences of opinion concerning them are vital.

Almost without exception the American people aspire to a higher order of culture, greater security for the individual, and perpetuation of political democracy and capital economy.

Our problem has not yet become a matter of choice between a government by law and a government by men, but—

Unless we can solve our economic problems by reason expressed through laws enacted by popularly chosen parties and representatives, the alternative of a government by men will tend to force itself upon our considerations.

Therein lies the danger. Democracy must be made to work. Democracy, if it shall survive, must solve the problems with which the people are confronted, the spread of poverty, the spread of unemployment, the loss of homes and property, and means of livelihood, and become an instrument for the preservation of peace at home and the restoration of peace in a distraught world.

It is not difficult to determine where and concerning what the American people are in disagreement, nor to follow the guiding philosophy of the disputants.

We are in disagreement concerning policies of production, one faction favoring more production of the products of the earth, another favoring less production.

There is disagreement concerning the pricing of what we produce, one faction favoring a higher price base, the other adhering to the belief that reduced prices will generate wider diffusion of goods.

We have fallen violently apart among ourselves concerning tariff policies, one element favoring a gradual approach to free trade, the other favoring use of the tariff to promote a greater degree of economic nationalism.

There are two sharply defined schools of thought on the matter of Government economy and Government spending, one group contending for a balanced Budget, the other for free use of public funds for investment in permanent improvement, for relief, loans, and other departures from orthodox practices.

There is a sharp disagreement over the tendency toward centralization of government as against greater sovereignty of the States and the people.

There is seemingly an unending dispute concerning gold, silver, and other monetary and credit policies.

One powerful element holds out for social reform ahead of economic curatives; an opposing element seeks economic reform ahead of social undertakings.

There are violent conflicts among our people concerning the mutual relationships and responsibilities of labor and capital, with public interests beginning to assert itself as a third element in that dispute.

And so forth, and so forth, and so forth.

But there is nothing in any of these matters which cannot be dissolved in the light of reason and common sense if the spirit of fair play and compromise can be brought to bear upon consideration of them.

The danger lies in one group becoming all-powerful and continuing hard-headedly in the practice and pursuit of policies the fallacy of which has been demonstrated by experience.

As matters are shaping themselves in the formative stages of the forthcoming Presidential campaign, we believe that the pros and cons of these matters will be fairly well represented in the principles that will be set forth in the platforms of the respective major parties.

The Democrats, unless they completely reverse themselves, will follow closely the pattern of Rooseveltian principles even if they refute some of the details and measures of Rooseveltian policy.

The Democrats are pretty definitely committed to a program of social reform; but if returned to power next year, their social program likely would receive less attention than would be given to economic problems. True national economics is the best social legislation.

In all probability the Republican campaign next year will stress economic measures, tariffs, farm legislation, labor measures, etc., and the party will advance policies that will be in sharp contrast with those of the present administration.

If the Republicans are smart, they will not advocate wholesale repeal of social legislation nor renounce policies of obvious economic value.

We may anticipate a more intelligent campaign than that of 1936, one in which there will be less abstract discussion of the broad principles of government and more attention to details, less hokum about democracy and liberty and more consideration of concrete proposals, less fulmination about glorious traditions and more talk about how to provide bread and beans for the future.

Conditions which it now develops the leadership of neither party fully understood have had the United States stymied for 10 years.

When the stock market collapsed in 1929 we had come to the end of a period without realizing it.

We had overrun and exploited the last of the open frontiers. We had cut off immigration. We had superimposed a new industrial civilization upon a foundation of agrarian culture and economy.

Internationalism even then was nearing the end of its course. By internationalism we mean control of money and credit by banker groups, control of raw-materials supplies, control of prices through speculation and wirepulling and manipulation.

The period had ended when favored groups might continue the ruthless exploitation of the producing masses, when market riggers could bilk earners out of their savings through the sale of worthless securities.

For more than a century we had produced wealth more rapidly than even the most rapacious of the freebooters could take it away from us. But their system finally caught up with itself in 1929.

Readjustments were inevitable. The country had to find a new set of standards. It might even be said that the country had to find its soul.

The national leaders of both parties, the people themselves, were poorly prepared to meet the situation that had come about. It was contrary to their traditions. Their education had not been directed toward the new lines that must be followed. They were bound by orthodox patterns of thought and practice.

Ten years have elapsed since that fatal black Friday on Wall Street, 10 years of painful trial and error, 10 years of disillusioning heartbreak, 10 years of groping, 10 years of battling the strong currents of adversity.

But out of their experience the American people, both commoners and leaders, have learned many valuable lessons. We at

least know now some of the things not to do. Many new ideas have been developed and are taking form.

The campaign of 1940 will be marked by the unfoldment of new plans if not new ideals, new methods if not new objectives. It will bring new names and new faces into the national picture. It will have a cleansing and clarifying effect upon the collective mind. By means of it and the election in November the American people will express themselves concerning policies and measures.

Because of the experience they have had and the dangers which they now clearly foresee, we believe that the American people next year will express themselves more intelligently and with less passion than they have in any election in recent years.

We must forget the past, cut loose from the hokum in our traditions, and march forward into a glorious future hand in hand with God.

### Western Comment on Murphy's Appointment to Supreme Court

#### EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 8, 1940

EDITORIAL FROM LOS ANGELES TIMES OF JANUARY 5, 1940

Mr. HOFFMAN. Mr. Speaker, the President seems determined to have a packed Court. Unlike other Presidents, he has not made his selections for appointments on a non-partisan basis. Other great Presidents, fair-minded Presidents, have endeavored at all times to keep the Court non-partisan. The President evidently believes quite strongly in his appeal for national unity made in his message to Congress. But the unity which he desires seems to be a unity of decision which he hopes to get by a packed partisan Court—a rubber-stamp court similar to his rubber-stamp Congress. He wants unity with himself as the unit. As a further illustration of this we are now advised through the press that Madden, who is by many considered unfit to sit on the National Labor Relations Board, is to be appointed a circuit court of appeals judge.

The President's theory seems to be that if we can find a man who has demonstrated his unfitness kick him upstairs; reward him with a higher position.

That the public the country over is aware of the unfitness of some of the President's appointments is evidenced by the following article from the Los Angeles Times of January 5, 1940:

#### MURPHY TO THE COURT

Concerning the nomination of Attorney General Frank Murphy to the vacancy on the Supreme Court, the nominee furnished his own comment several days ago. He said he thought others were much better qualified than he, an opinion which is widely shared. The Murphy nomination is by no means as bad as that of Mr. Justice (Ku Klux) Black. If Murphy is seated by the Senate he will take a chair far behind that of Mr. Justice Frankfurter, but one from which Black will not even be visible. He is not as good a man for the job as Mr. Justice Reed, but may prove better than Mr. Justice Douglas.

Candid judgment of his year's work as Attorney General must be that he has improved the work of that office considerably. This, however, was not hard to do; Attorney General Cummings did not set much of a mark to shoot at. Murphy has done a good deal of grandstanding during the past year, but he did initiate, or permit, one very worth-while inquiry—that into racketeering in building construction. His announcement that he intended to make a number of cities, including Los Angeles, wholly virtuous was somewhat silly, but his office is aiding a clean-up at New Orleans with good results. His campaign against the race-betting racket is also a good piece of work.

This year's record is in such contrast, however, to his previous record, when as mayor of Detroit he did nothing to restrain the notorious "purple gang," one of the worst aggregations of thugs and hoodlums ever to disgrace an American city, and when as Governor of Michigan he permitted the C. I. O. mobsters to terrorize the automobile industry, as to raise grave questions. The "purple gang" may come back to haunt him if the Senate makes a really thorough inquiry.

The nomination of Solicitor General R. H. Jackson to be Attorney General and of Justice Francis Biddle to be Solicitor General are

run-of-the-mine New Deal appointments. Jackson has furry ears and Biddle showed in no very favorable light when he was counsel to the Tennessee Valley Authority and helped to hush up the scandal there.

However, the country ought to be grateful the appointments are no worse. The President could have named Senator MINTON to the high court.

### Remarks on the Occasion of the Jackson Day Dinners, January 8, 1940

#### EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, January 8, 1940

Mr. BENDER. Mr. Speaker, if Andrew Jackson could come back to life on the 8th of January, 1940, he would probably wish himself back among the shades immediately. No man in American history was more indifferent to the lavish pomp and ostentation with which the Democratic Party remembers his name. The very thought of "Old Hickory" attending a banquet costing \$100, \$50, or even the extravagant \$10 per plate would have driven him frantic.

For, in the many things that Andrew Jackson disliked, banquets were high on the list. His biographers tell us that on the 26th day of June 1833 President Jackson was scheduled for no less than five separate dinners. He lasted through three of them, and became dangerously ill. I am sure that he would not be able to last through even one of the fancy dinners scheduled for this evening.

In fact, General Jackson would be the first to protest against any effort to honor him with a dinner. I do not know if he was the first politician on record who ever refused a testimonial dinner in his honor, but he is the only one I have ever heard of. The only time he willingly attended one was on January 8, 1840. Just 100 years ago, in spite of the fact that he was sick, racked with pain, Andrew Jackson did lend himself to a series of receptions, speeches, and dinners. But his purpose was the payment of his adopted son's debts. He was trying frantically to save the credit of his beloved child. Year after year he spent New Year's Day paying off every one of his bills. He started the year 1838 by ridding himself of debt, even though he had to sell his lands in west Tennessee to do it. He wrote these words:

I have no opinion of holding property when I need the money, and I will not borrow.

How ironic Andrew Jackson's words would sound in the mouths of those who are rising to address a score of audiences this evening. His classic toast, "The payment of the public debt. Let us commemorate it as an event which gives us increased power as a Nation, and reflects luster on our Union, of whose justice, fidelity, and wisdom it is a glorious illustration," should haunt every speaker who rises to praise the Democratic Party today.

His determination that a free people must be a people "free from debt," that a free nation must be one with "all her immense resources unfettered" rings hollow these days.

What would Andrew Jackson have said if he could have foreseen the \$20,000,000,000 increase in our national debt which his followers have created? We have the record of a celebrated conversation to give us an answer. Congress was preparing to pass an appropriation measure, and Andrew Jackson was preparing to veto it. Representative Johnson, of Kentucky, came rushing into the White House to demand the President's approval. Andrew Jackson jumped to his feet. "Sir," he shouted, "have you looked at the condition of the Treasury—at the amount of money it contains—at the appropriations already made by Congress—at the amount of other claims upon it?" Johnson admitted that he had not. "Well," said President Jackson, "I have. There is no money to be expended as my friends desire. I stand committed before the

country to pay off the national debt. This pledge I am determined to redeem."

I trust that the men and women who revere the memory of Andrew Jackson tonight will remember their history.

### The Democratic Process

#### EXTENSION OF REMARKS

OF

HON. JOHN Z. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 8, 1940

EDITORIAL FROM THE NEW YORK TIMES OF JANUARY 7, 1940

Mr. ANDERSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert the following editorial from the New York Times of January 7, 1940. As one of the new Members in the House last year I was unfavorably impressed by the time wasted before we were able to function as an efficient legislative body.

In some cases many months were lost before the House committees were ready to consider the many bills referred to them. Pressing national problems were sidetracked while minor affairs were receiving attention. This led to a terrific rush in the closing weeks of the first session, and when bills are jammed through the House or Senate, without due consideration, the country suffers the consequences.

The editorial to which I refer is particularly pertinent and apropos at this time and I call it to the attention of my colleagues with the hope that some of the suggestions be followed.

[From the New York Times of January 7, 1940]

#### THE DEMOCRATIC PROCESS

We Americans nowadays are not making as much fun of Congress as we used to. We know that it is slow, clumsy, and inefficient; we know that too few of its Members are deep students of the great problems with which they have to deal, that some of them are fond of empty oratory, that too many are timorous in the presence of pressure groups, and that the great majority will be playing politics in an election year. But developments abroad in the last few years have made us increasingly conscious of how immensely fortunate we are that such an institution as Congress still exists among us. For Congress and the various State legislatures that also met last week symbolize the settlement of social issues by peaceful compromise of conflicting views, by full discussion, by consultation of the interests of the groups concerned, by constant reference to public opinion.

They symbolize also the great lesson that the centuries have taught, but that mankind through bitter misery is having to learn all over again—that political power, even at the cost of inefficiency, must be dispersed. It is always dangerous, and often disastrous, to permit it to be concentrated in the hands of a small group. It is true that the small group can "get things done." But the things that it gets done turn out, in the long run, to be almost invariably the wrong things. They are the things that aggrandize and consolidate the power of the ruling clique itself, that stamp out one by one the liberties of the people, and that usually lead in the end to war and misery and death.

All this does not mean that Congress can afford to be smug about its own shortcomings. On the contrary, it is precisely because impatience with the real or supposed defects of the parliamentary system has led one country after another to abandon it in recent years that the remaining democratic legislative bodies should take every possible step to improve their machinery and to cure any defect that is not inseparable from their virtues.

One of the main reasons why the parliamentary system has been abandoned in some countries in recent years is that it has attempted to do too much. That system was not designed for minute regulation of the economic life of a country or for all-pervasive control over the individual. When it attempts this, it is forced increasingly to delegate power. The inconsistencies of policy and duplications of functions that develop soon create a demand for coordination of control under a single individual. Parliamentary government should protect itself by a wise limitation of the tasks which it undertakes.

Our own Congress in recent years, in addition to trying to regulate too much, has failed to improve its own machinery. One clear way in which it could do this would be by the appointment of an interim committee, or council, to study leading problems between sessions and present the whole Congress with a definite legislative

program when it met. If this had been done at the end of the last session, Congress today would have something already formulated to deal with. The country would have before it—on national defense, the Wagner Act, relief and agricultural programs, and the like—definite proposals to discuss, and the prospects for business-like and well-considered legislation would be much greater than they are.

Last year, a month after Congress had met, Majority Leader BARKLEY was urging the various committees to speed their work "so that the Senate may not be required to adjourn from time to time for 3 days because there is nothing to do." Two weeks after his urging, Washington dispatches to this newspaper still reported that "neither the House nor the Senate has before it any pressing business. The Senate has literally no business of a national scope ready for debate." Yet by June Congress was working desperately in day and night sessions to pass new monetary and relief legislation before "deadlines" that were perfectly well known in January. This dawdling, followed by feverish haste, could be almost entirely avoided by the device of an interim committee consisting of a few congressional leaders chosen by Congress itself to formulate a legislative program to be presented in an orderly fashion when the full body met. Such a reform would make our democracy far more efficient without sacrificing any of our liberties or constitutional safeguards.

### A National Transportation Policy

#### EXTENSION OF REMARKS

OF

HON. CLYDE M. REED

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Monday, January 8, 1940

ADDRESS BY HON. CLYDE M. REED, OF KANSAS

Mr. REED. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me before the National Industrial Traffic League at Chicago, Ill., on November 21, 1939. The subject of the address is, A National Transportation Policy.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I dictated the prepared address which I shall shortly make, last Thursday. Two days after that I attended a meeting called at my request at Fredonia, Kans. Let me tell you the story of that meeting:

The rivers and harbors bill this year contained a "pork barrel" item of \$31,000,000 for "flood control" in the Verdigris Valley in Kansas. That was the first I knew of it.

The Army engineer's report recommended, not too strongly, the construction of four reservoirs on the river and its tributaries, that would run into \$31,000,000. In the same report they said: "The permanent carrying charges of the project would be \$1,266,100 a year." The average flood damage on the flood plain was \$426,400. The project, therefore, stated in simple terms, was that we would spend \$31,000,000 to protect land and improvements valued at \$8,805,600, and a permanent carrying charge of \$1,266,100 to protect wholly or in part an average flood loss of \$426,400. The land inundated would be about 40,000 acres. The land below the dams, which would be wholly or partly protected from flood damage, would be between 70,000 and 80,000 acres. The objection of the people who came to see me was that the scheme, if carried out, would destroy the best land in their community and, by taking it off the tax rolls, increase the burden of taxation upon other land. Some counties said it would bankrupt them.

Finally, to get everybody's views, I called a general meeting at the most central point, which was Fredonia. So I wrote letters to every mayor, every chamber of commerce, every newspaper in the valley asking for a meeting at Fredonia at which everybody would be heard, both pro and con. About 700 people came. About 80 percent of them were farmers.

The national debt as of Tuesday, November 14, was \$41,206,401.939.58, and the estimated deficit this year was \$3,426,343,200. I told the people frankly that under the circumstances there was but one of two things that Congress could do if it passed this bill and other bills of this kind. We must either increase taxation or increase the statutory limit of debt so as to enable the Treasury to borrow more money. \* \* \* I laid the facts before them—facts with which they could not be familiar, but with which I as their representative must be familiar, because it was a part of my business to be familiar with these things. \* \* \* I asked them what they wanted me as their representative to do. Would they want me to vote to increase taxes? I asked for an expression of the audience—there were no affirmative votes. I said, "All right; if we don't impose more taxes we must increase the statutory limit of the national debt. How many of you want me, as your Senator, to vote

to increase that limitation?" Nobody voted in the affirmative.

A few of the farmers who would be directly benefited by protection to their lands spoke in favor of the appropriation. All the newspapermen present—and there were quite a number there—estimated that somewhere from 80 to 90 percent of the farmers agreed with me and opposed the appropriation.

I am speaking now to a select group of men whom I regard as the most expert body in the United States on traffic and transportation matters. I wonder if I were calling for a similar expression from this body of men would I get a response that contained as much patriotism and unselfishness and devotion to the public interest as the farmers down at Fredonia, Kans. I fear I would not. The body I am addressing contains many able traffic men, who represent cities on the inland rivers, who are devoted to the interest of their company, or their city, or their chamber of commerce, and don't care how much money the Federal Government spends so long as it is spent for their benefit; they are as a whole opposed to the extravagance and waste of the present administration so long as this extravagance and waste is for the other fellow, but when it comes to extravagance and waste for their particular community, that was all right.

Now I am going to deliver the address that I dictated 2 days before the Fredonia meeting:

The United States of America has a surplus of commercial transportation facilities of all classes; because of that fact not only have railroad operating statements shown a deficit but the highway and waterway transporters are also in the red. None of them is prosperous. There is more transportation being offered than there is traffic to move. In the last two decades the United States has more than doubled its investment in transportation facilities, including the building of highways and money reasonably expended on economical water transportation and improvidently wasted on uneconomical water transportation for which there is no demand, and which never can be economically justified. It is because of this situation that I am today talking about a sound national transportation policy. We are 20 years late in adopting such a policy. Our delay has cost the country as a whole a wasteful expenditure running into billions of dollars. There is now pending in the Congress a bill which is the beginning of a national transportation policy. It does not go far enough, but it is a beginning.

The Wheeler-Lea bill has passed both Houses of Congress. Conference committees from both Houses will meet about December 10 to reconcile any differences in detail. There are no irreconcilable differences in principle. The finished product of the conference committees will be available for consideration early in January and doubtless will be adopted. The country will then have made a start toward a national policy in dealing with transportation.

I am addressing the most expert body of transportation and traffic opinion in the country. The only reason for the invitation to me to do so comes from the fact that through a long and busy life I have dealt constantly with transportation matters, always from the public standpoint. What I say today is out of that experience. I have no preference for any one form of transportation, and no prejudice against any other form. What I want and what I am trying to do as a United States Senator is to help the country straighten out its tangled transportation situation so that the most efficient and economical service may be given to the public at the lowest cost. When I say cost, I mean cost. In our national history there have been periods when it might have been advisable to use the Public Treasury to subsidize some form of transportation. That period has passed. We have come to a time when every character of transportation should stand on its own feet without burdening the taxpayer by wasting his money, whether by unwise governmental expenditure or wasteful competition between private capital investing in unneeded transportation facilities.

That is the philosophy and the purpose of the Wheeler-Lea bill. It is only a beginning. I ask the intelligent consideration of the National Industrial Traffic League, and its support, for a correct, sound, and economic policy. I hope this league is big enough, broad enough, and brave enough to tackle the problem in its fundamental aspect and disregard special interests, special pleaders, subsidy seekers, and those who have made a "racket" out of transportation fallacies. Let me say here that I share the general satisfaction over the improvement in general business which has lessened the tension in transportation agencies. But the increase in traffic resulting from this improvement in business has not solved the problem. It can never be solved until the country adopts a sane and sensible and logical national policy. I am appealing to the membership of this league for their help to that end. You in your way have a responsibility fully as great as I have in my capacity as a public servant. All of us should take advantage of the temporary breathing spell to seek and find and adopt sound principles.

The first vital need of the human race is to produce food and shelter and clothing. After that comes a production of the things which we call comforts and luxuries which makes life easier. Next to production itself the transportation is the most important thing. Without transportation any surplus above its own needs that any community might produce would be wasted effort. Only through transportation are the surpluses of myriads of communities moved to myriads of other communities which have need of them and can make use of them. Transportation is the great civilizer and the great leveling influence of the world.

More times than I can easily remember I have been bored by long and able discussions of the development of transportation in its various forms. Doubtless you have had the same experience and the same feeling. I shall try to compress any necessary reference to that phase to a single paragraph. I want to use this occasion for discussion of practical and pressing matters.

In the beginning, of course, humanity moved from one place to another by walking. It carried its movable property on its back. Then came the domestic animal. Then came the use of water. Then came the building of highways. The old Roman roads still stand as the one enduring thing of the first approach to modern civilization. We still use water transportation out of necessity in moving goods between continents and because of economy, in instances like the Great Lakes and some rivers. Water transportation, under some circumstances, is the most economical known—I shall not here deal with air transportation. Its development is so recent as to cause difficulty in evaluating its possibilities, except in the saving of time.

Our own country, so far as the white man was concerned, began settlement along the ocean's edge. It moved inland along the rivers. The land was a trackless wilderness. The laying out even of dirt roads and clearing a right-of-way for them through the wilderness was a slow process. When our population spilled over the Appalachian Mountains into the Mississippi Valley, we still used the rivers where we could. They were better than the dirt roads, or no roads at all. We had an era of building canals, because they were better than dirt roads. The Mississippi River and its tributaries were so important that the new West once considered splitting off from the Original Thirteen States because the bottleneck of its commerce at New Orleans was in the hands of France or Spain; sometimes one; sometimes the other. Jefferson's extra-constitutional Louisiana Purchase was partly, perhaps mainly, to remove that barrier to the commerce of the rapidly growing West.

Then came the railroad. It was a form of transportation so superior in convenience, in rapidity, and in cost, that it put the canals out of business. Rivers continued to be used only where railroads were not yet built and available. What we call inland waterway transportation in the United States was never rapid or dependable, or efficient, or economical, except in comparison with the dirt road. Traffic, both human and material, left the river and went to the railroad whenever the latter became available.

No other country in the world ever developed so rapidly as the United States. There were several reasons for this, one of which was the improvement in transportation facilities through construction of the railroads. It was a thing unprecedented in the history of the world. Not even the coming of the steamboat, which preceded the railroad by a generation, affected the shifting of traffic to the most efficient transportation agency. When a railroad was built along a stream on which steamboats were operating, the bulk of traffic moved from water to the land. This continued for 100 years.

Then came the internal combustion engines which revolutionized land transportation. There has never been anything in the experience of the world that so affected the habits of mankind as the automobile and the truck. They needed better highways on which to travel, than the dirt roads. Therefore, in the last quarter of a century we have more than duplicated the cost of building railroads, in the building of concrete and other types of highways, which "took us out of the mud." So we came to have our railroads; our highways on which motor vehicles operated, and our waterways. Between them, they now provide more facilities for transportation than there is traffic to move. Between them they represent an enormous investment of capital, public and private. Between them has become that degree of competition that always arises when there is a surplus of any commodity or any form of service. That competition today is so keen as to bankrupt all forms of transportation unless that competition can be directed and controlled.

During the 100 years of railroad development, it came to have a virtual monopoly on transportation. The railroads became so strong as to partly control and influence government itself.

In addition to obvious benefits conferred, railroad management committed many sins, both against units of government, and investors of capital. I shall not undertake to rehearse these offenses against the welfare of society and of the welfare of the railroads themselves. To this audience, these things are an old story.

No sovereign, whether a monarch or a republican form of government such as ours, can permit a monopoly to control an essential service or a production of an essential commodity. Therefore the antitrust laws; therefore the beginning of regulation of railroad transportation which started with the Interstate Commerce Commission Act of 1887. The degree to which we have regulated railroad transportation is, again, a subject so familiar that I shall not spend any time in discussing it.

Some 10 or 15 years ago motor-vehicle transportation operation over roads constructed with money from the Public Treasury developed to an extent that it was not only a threat to the railroads through diversion of traffic, but it was ruinous to the highway operators themselves. In 1935, after some years of discussion and agitation, we undertook as a national policy to regulate highway transportation in somewhat the same degree and following to some extent the same pattern as had been followed in the regulation of railroad transportation. One essential difference is that railroads

and railroad business are highly centralized and comprise comparatively few units. On the other hand, highway transportation is highly decentralized and includes millions of units. This distinction must always be kept in mind. While the railroads were at the height of their power, while they retained their virtual monopoly on transportation, while the adequacy of their regulation was still a matter of doubt, there came a movement to revive river transportation as a check upon a monopoly which the public feared and which no one was certain as yet could be adequately regulated. There was no other reason for a revival of inland waterway transportation. The inland waterways never have, do not now, and never can handle traffic as efficiently, as expeditiously, or as cheaply as the railroads; or, for that matter, as the highways. True, inland river rates are lower than parallel and competing railroad rates, but river transportation is not "cheap" transportation. It is not low-cost transportation. It is the highest cost of any of the general forms of transportation. The difference between the charges on the inland waterways or the railroads and the highways, is made up by a subsidy out of the Public Treasury which is paid by the taxpayers as a whole. Of course, low river rates can be maintained if the taxpayers' money improves the channels of the rivers, provides the wharves, and pays all expenses except the actual operation of a boat or barge. In this connection it must be considered that the railroads which compete with the waterways are taxed to meet part of the cost of creating and maintaining a river channel right-of-way for their competitors.

There is no justice in such a policy. Not even when adequate and complete regulation of railroad service was achieved did the pressure for inland-waterway improvement cease. By that time it had pretty largely become a "racket." It is that now. Many smart men are making a living out of promoting a so-called inland-waterway improvement. They get support from cities, from newspapers, large corporations that own their own barges and can move their own freight on a publicly built right-of-way at a lower charge than the railroads make; they make a business of interesting chambers of commerce and commercial bodies; in putting pressure on Senators and Representatives for huge appropriations for "river improvement" which will give some particular city or number of cities a "freight-rate advantage." To these commercial bodies, to the newspapers who advocate this policy, the only thing of interest is their immediate advantage. They are willing to have the general public taxed for benefits for themselves, for their own communities, and for the traffic of large corporations.

I repeat, inland-waterway transportation is not low-cost transportation; it is the highest cost transportation as compared with the highways or the railroads. The only reason for lower charges is the subsidy paid by taxpayers out of the Public Treasury. Without such a subsidy, inland-waterway transportation could not exist for a month.

The important thing in this connection is whether we are going to continue to tax the whole people for the benefit of a comparatively small number of people. Are the cities and trade centers located off the rivers to be not only taxed but additionally penalized by lower freight charges given their competitors located on the rivers? My answer is, "No."

There is no more outrageous and no more unjustifiable and no more flagrant waste and misuse of public money than in subsidizing high-cost transportation for the benefit of a comparatively few people and creating favoritism and discrimination between localities, trade centers, and cities. I find no fault with Great Lakes transportation, which is efficient and economical transportation. I am in favor of maintaining that character of water transportation, but as long as I am a Member of the United States Senate I shall oppose this inland-waterway transportation racket.

We Members of Congress are pestered by waterway racketeers, as well as some earnest and honest people, who do not understand that to not only maintain but to extend the public subsidy given is uneconomic. These men appear before committees of Congress, purporting to represent farm organizations and appeal to farmers as being benefited by "cheap river transportation." I would not undertake to say that no case can be found where some individual farmer may have secured a slight benefit in the price of his grain because of subsidized river transportation, but I do make the flat declaration that farmers as a whole have not profited a cent by the billions of dollars spent on "river improvement." If traffic moving on the rivers had to pay all of the cost attached to river transportation, including the improvement and maintenance of the channel, no traffic of any consequence would move upon the rivers.

The inland-waterway racketeers, individuals and organizations, hold out to the public the idea that it is getting some benefit from raids upon the Public Treasury to make river navigation possible. The fact is that the bulk of tonnage moving upon channels created with public money belongs to great corporations that own their own boats and move their own traffic. In most cases the commodities so moved are sold to the public, not on a basis of lower river rates, but on a basis of the higher railroad rate. The great corporations pocket the difference. This has been proven over and over again. The great oil companies, the great cement companies, the great steel companies, the great coal companies move their own traffic on their own boats and barges and sell to the public, generally speaking, on a railroad-rate basis. They take an additional profit because of what has been done with public money.

I proclaim my belief here and now that a sound public policy would be one that imposed upon all traffic using facilities created out of the Public Treasury tolls that would reasonably recompense the taxpayers for the money taken from them. If that were done traffic would move by the cheapest and best route. Only recently a representative of one of the great oil companies called upon me to discuss the status of the transportation bill now pending. I stated to him what I have stated here. He very frankly said, "Well, if you do that we will not use the river and we are getting ready to use the river in a big way." My answer to him was that as long as I was representing the public interest in the Senate of the United States, and praise God, I shall never represent any other interest except the public interest in the Senate, I intended to advocate the policy I have outlined here with all the strength and vigor I possess.

I realize that among my hearers are traffic managers for the corporations described, and for cities who desire favorable transportation conditions paid for out of the Public Treasury. Some of them I number among my very good friends. They naturally do the best job for their company, or their city, that they can. I expect them to do that. I expect them to take advantage of all the damn foolishness that their companies, and cities, and waterway-improvement associations can induce the Government of the United States to commit, but I don't want them to ask me to vote to continue that damn foolishness, and I don't think they will. In their hearts they know the truth as I have stated it here.

We in Congress meet with a singular phase of this situation. There are great newspapers, all of which claim to be reputable, and most of them are, who will condemn rackets and racketeers for corrupt and wasteful use of taxpayers' money in their own cities but these same newspapers will advocate a policy that is more wasteful than any political machine in their own city has ever been. When we come down to the talking about public morality in the handling of public money, I find it difficult to make a distinction in my mind between Tom Pendergast taking a million dollars out of the Kansas City treasury, and Missouri River promoters inducing the United States to waste \$200,000,000 on trying to make the Missouri River navigable. It can't be done. Even if it could be done successfully, the benefit derived would be nothing in comparison to the money spent.

A sovereign should do justice as between his subjects. We have three competing forms of transportation, i. e., the railroads, the highways, and the inland waterways. The railroads provide and maintain their own rights-of-way. Motor-vehicle operators on the improved highways pay a substantial sum in the form of fees—tonnage taxes, personal-property taxes, and gasoline taxes for the use of the highways. Whether the sum so paid is adequate or not is a matter of dispute, but there is no dispute over the fact that it is a substantial sum. Both of these forms of transportation are regulated by the sovereign. In other words, the Government.

Their competitor upon the river has his right-of-way furnished and maintained without cost to him. There is no justice in that policy but he objects to regulation. The Wheeler-Lea bill brings water transportation under regulation, differences in character of the transportation considered, comparable to that imposed upon the railroads and highways. That is simple justice. No fair-minded man can object to that policy. It is a sound national policy, and for the first time in the history of the country Congress is proposing equality of regulation upon the various competing forms of transportation. I do not mean by that, equality of rates. I make this statement, lest someone misrepresent. The bill by its terms requires the Interstate Commerce Commission "to recognize and preserve the inherent advantages of each form of transportation." No fair-minded man could ask more.

I have but one further suggestion. The Wheeler-Lea bill goes a long way, but not far enough. There should be vested somewhere in the Government the duty and responsibility to pass judgment upon the transportation necessity of inland-waterway expenditures before they are made. You can't build a mile of additional railroad without getting permission of the Interstate Commerce Commission; you can't operate additional busses or trucks upon the highway without going to the Interstate Commerce Commission, and getting a finding that the additional service is in the public interest. But Congress goes along appropriating hundreds of millions of dollars for various waterway projects in the name of cheaper transportation. Most of this is purely "pork-barrel stuff" logrolled through Congress. Beyond that, anyone can operate a boat on the river, even though there are more boats operating now than the traffic requires. This doesn't make sense. It is not sound public policy.

What I suggest finally, is that before Congress appropriates any money for any water projects, because of their claimed transportation value, it should have a finding from the Interstate Commerce Commission that the additional transportation is necessary. The Interstate Commerce Commission can call upon the Army Engineers through the War Department to advise as to the engineering feasibility, which would, of course, be a factor.

I close as I began—the country has a surplus of commercial transportation facilities. No more should be created, especially at the public expense without a finding by a competent and authoritative public body that the expenditure will be justified, and they all should be equally regulated. That would be a sound national transportation policy.

## Amendment Regarding Homestead Lien Law

## EXTENSION OF REMARKS

OF

HON. JOHN G. ALEXANDER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 8, 1940

Mr. ALEXANDER. Mr. Speaker, soon this Congress will be considering additional appropriations and amendments for relief and old-age assistance. Due to the rush and haste which always seems to accompany the consideration of these bills as soon as they appear on the floor of the House from committee, it is consequently not too early to consider suggestions for amendments and improvements in the laws governing social legislation.

Recent reverberations from the great State of Ohio and rumblings from other sections of the Nation indicate that the time is not far distant when the people will demand that certain reforms be enacted and corrections made in our defective legislation.

I have just received a symptomatic communication from an active State-wide civic organization in Minnesota known as the Minnesota Stabilization Council regarding several present defects in the State and Federal relief set-up and suggesting an amendment to the present Federal laws governing old-age assistance. It is interesting to note the trend of thought contained in the following letter:

MINNESOTA STABILIZATION COUNCIL,  
Minneapolis, Minn., January 2, 1940.

Congressman JOHN G. ALEXANDER.

HONORABLE SIR: The following information is for your consideration and the Minnesota Stabilization Council hopes that you will be able to exert your influence in Congress to remedy the great injustice that has been done by an unthinking legislature. We of the Minnesota Stabilization Council are of the opinion that the old-age recipients should be protected in accordance with the intent of Congress when these social laws were enacted. For the purposes of this discussion let us consider briefly the history of old-age assistance and then the present situation in Minnesota and some other States.

## RELIEF VERSUS OLD-AGE (PENSION) ASSISTANCE

*Early pension laws*

According to Webster's Dictionary a pension is a "periodical allowance to an individual, or those that represent him, on account of past services or some meritorious work done by him; especially such an allowance made by a government." Most of our legislation is based on the old English law.

*English pension law*

The Old Age Pension Act (United Kingdom), an act of Parliament passed in 1908, effective January 1, 1909, entitling every British subject of 70 years of age who has been a resident 20 years in the United Kingdom, and whose annual income does not exceed £31 10s., to a pension varying from \$0.25 to \$1.25 per week. It will be noted one does not have to be indigent nor does one have to acknowledge a lien on the homestead.

*The Norwegian law*

In Norway the old-age pensioner is protected by a national law; the disbursements are made by the National Government. The recipient does not have to remain in one locality and may travel in any part of the country if they so desire. The Norwegian law recognizes the fact that the old people may not be vigorous in health and a change in climate may be necessary. On the other hand, these people may have relatives in another state that could furnish partial aid, such as a room or other benefits.

The care of the aged is a public necessity and most of the old-age assistance acts passed by the various State legislatures do not comply with the intent of Congress.

## BILL OF RIGHTS

The Bill of Rights declares, "The general assembly shall not grant to any citizen privileges which upon the same terms shall not equally belong to all the citizens." The various State laws on old-age assistance conflict with the national law and do not afford equal protection under the law.

## RELIEF BENEFITS VERSUS OLD-AGE BENEFITS

A relief recipient in order to qualify must be indigent and must sign a pauper's oath. The applicant for old-age assistance must pass the same qualifications in order to be eligible. This reduces both applicants to a true relief status. However, the relief re-

cipient is not forced to agree to a lien on his homestead, he does not even have to be a citizen of the United States. In addition to this, the relief budget is higher than the old-age benefits. Here are two relief programs that do not afford equal protection under the law to citizens whose needs are the same. These two programs separate the relief recipients into two classes and penalize the individual that may have been thrifty enough in his productive years to acquire a home by placing a lien on his homestead. These old people are the ones that pioneered the State and helped produce its wealth. Many of them gave their sons in the last war, and these veterans with their broken health will not be able to redeem the lien on the homestead.

*Old-age recipients discriminated against*

In Minnesota there is no other relief or assistance program that demands a lien on the homestead. For the meritorious contributions that they made to the building of the State the old people are unjustly discriminated against. And they will be haunted in their declining years by the thought that the home that they and their children created will become the carrion for the vultures that grow fat on human misery. We have been informed that this group did considerable lobbying to get the lien clause in the Minnesota law.

*Federal law should be amended*

As there is a conflict between the Minnesota law and other State laws with the national law, and in view of the fact that there is a group of people that plan on acquiring the homes of the old people on a large scale, we suggest that the Federal law be amended so as to deny financial aid to any State that asks a lien on the homestead or does not comply with the intent of Congress. The Minnesota old-age assistance law not only conflicts with the national law but is also in conflict with the poor laws of the State and is an unjust piece of class legislation. The administrator of State welfare, Mr. Finke, in a talk the other day, made the statement that the lien would be on all money given to the old-age recipient. There are in the State of Minnesota 65,000 old-age recipients that receive an average of \$22.75 per month. The relief budget averages \$30 per month. As a result most of these old-age groups have to be subsidized by the city relief in Minneapolis. We are at a loss to understand how the State can ask a lien for the money that the Federal Government has contributed to this fund, but the Minnesota law states that such money shall be collected.

Respectfully yours,

T. O. FREDELL, Secretary.

I invite comments and suggestions relative to the above communication.

## Friends for the Aliens

## EXTENSION OF REMARKS

OF

HON. VITO MARCANTONIO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 8, 1940

EDITORIAL FROM THE NEW YORK WORLD-TELEGRAM OF  
DECEMBER 7, 1939

Mr. MARCANTONIO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York World-Telegram of Thursday, December 7, 1939:

[From the New York World-Telegram of December 7, 1939]

## FRIENDS FOR THE ALIENS

Dr. William Allen Neilson president emeritus of Smith College, has just accepted the cochairmanship, along with Ernest Hemingway, the author, of a farsighted and useful movement now getting under way under the name of the American Committee for Protection of Foreign Born.

Kicking around the aliens in America regardless of individual merits has become a widespread demagogic device. It is time enlightened citizens rallied to express their disapproval. Such a distinguished name as Dr. Neilson, along with the others of unquestioned patriotism and intellectual eminence should be of the greatest help to this cause.

Hardly a single thoughtful citizen would deny that for every Fritz Kuhn, for example, there are scores of useful aliens in America whose arrival here was a benefit to the country. Yet in feverish times of war and propaganda it is so easy by a mere slip of the tongue to group them all as undesirables. More than 70 so-called antialien bills were pending in Congress, Dr. Neilson has pointed out. The movement for sanity and decency toward aliens is true Americanism.

## War and Peace

## EXTENSION OF REMARKS

OF

HON. VINCENT F. HARRINGTON

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 8, 1940

ARTICLE FROM FORTUNE MAGAZINE FOR DECEMBER 1939

Mr. HARRINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the December issue of Fortune Magazine, entitled "War and Peace":

[From Fortune for December 1939]

WAR AND PEACE—THE PEOPLE OF THE UNITED STATES MUST NOW CHOOSE AMONG RETREAT, ISOLATION, AND INTERNATIONAL LEADERSHIP

There is no word less well understood than "peace." It has bred almost as much extemporized philosophy as Pilate's word "truth," almost as much sentimentalism as Shelley's abstraction "love," and more political pathos than either of them. A kind of divine confusion was invested in this word by the founder of Christianity Himself when He said, "I came not to send peace, but a sword." The nations have neatly turned His great phrase to prove any thesis that suited them, to enslave peoples beyond the seas, and to fight wars to end wars in a warlike world.

It is true that until relatively modern times the problem of the meaning of peace was largely solved by disregarding it. The basic peace concept of the Roman Empire was the concept of force, and during most of European history peace was not a valid concept at all. But to say that the meaning of peace is typically a modern problem is not to say that we are close to the solution of it. Who, for instance, if given absolute power, could devise a peace plan capable of settling the present European conflict on a permanent and constructive basis? Can any possible arrangement of boundaries and spheres of influence satisfy all the parties, or for that matter do justice to more than half of them? Whether there is a peace with victory for the Allies, or a peace with victory for Germany, or a peace with no victory, or even a kind of Wilsonian peace based on a concept of victory without spoils, who will be satisfied? Who will feel secure? The answer to all these questions is plainly, "none." There is in Europe a war that has no prospect of peace. Unless some new ideal is born, the best that the world can hope for is armistice, for a year, 10 years, or, like the last one, 21 years.

This fact has a profound bearing upon the United States in that it demands of us a realistic foreign policy. We have never had this before. We have never needed it. We have always been able to dodge behind what went by the name of international peace. To be sure that kind of peace was nothing much; it was negative, based on a balance of economic and military power; it was merely not war. Nevertheless, in combination with the oceans, it served well enough to enable the United States to participate in trade without incurring any real political responsibility. But that kind of peace, so useful to us, was based upon a civilization, which, for purposes of reference, can best be labeled nineteenth century liberalism. Like that of a ball game, the success of this civilization depended upon all the players playing the rules; and when the Union of Soviet Socialist Republics, Italy, Germany, Spain, and various other countries recently abandoned the rules, the game could no longer be played. The balance has therefore broken down. And since there seems no way whatever to stop the revolution against the liberal system that is now in progress, the collapse may be expected to continue (possibly over a very long stretch of time) until only chaos or militarism remains.

This is exactly why the United States must on no account enter the war. We could not in all conscience send soldiers over there to fight for nothing. Yet the full implication of what this means has not yet dawned upon us. Our ideology, our politics, our economic system, and all our basic rights and liberties are geared to function in an essentially peaceful world. If there were any prospect of reestablishing such a world, we might fight as we did in 1917. But without that prospect it would be suicidal to fight. And we are therefore confronted with a problem that may turn out to be the most serious in our history. That is to say, we are confronted with three choices. We may risk involvement by clinging to the old order of things, conducting such trade as we dare, and hoping against hope that something will turn up. Or we may insure ourselves against involvement by adopting a policy of extreme isolation behind the oceans that have hitherto protected us. Or, finally, we may take the leadership in formulating and implementing a new peace. For the sake of our posterity it is necessary to be clear concerning the choice that we make.

## THE POLICY OF RETREAT

First, the attempt to worry along on the old basis, conducting such trade as we may, and hoping against hope for a European peace of some sort, will bring the definite risk of involvement. In order to avoid that risk we shall have to engineer a wide economic retreat. The present Cash and Carry Act, which bars our ships from belligerent waters, will have the effect of limiting our European trade to war supplies that the belligerents want badly enough to come and get. And while this leaves a relatively wide area of trade still open to us, nevertheless the odds are high that as the war proceeds the area will become smaller rather than bigger. If the "neutral" totalitarian powers become involved, the shrinkage will be drastic. And if, having become involved, they are successful, it will be infinite. In short, by a hoping-for-the-best policy we risk war for the privilege of staging a retreat in the face of forces whose objectives may be unlimited.

## THE POLICY OF EXCLUSION

If we do not like this policy, the next possibility is total isolation. By this means we shall be sure of avoiding war, since it is inconceivable that anyone would be foolhardy enough to attack us directly. We would be required to shut off all international trade, sell our ships, develop practically all of our own supplies, and reduce our defense strategy to the absolute minimum necessary to protect our continental area. We might be able to sell the Panama Canal, which inevitably involves us in world commerce, and fall back on our transcontinental railroads. And we might even be able to do all this and still keep our libertarian system, our rights of man, and our free-acting democracy. But clearly the problems arising from such a course would be stupendous. The virtual certainty is that they would lead to that very totalitarianism that characterizes every state that has attempted self-sufficiency. Leaving aside the grave question of economic growth, we could only avoid absolute government regimentation of our production by relaxing our isolationism, in order to permit a freer flow of goods. But relaxation would again involve us in the risk of clashing with other powers and hence in the risk of war. Isolation, in a modern interoceanic world, means isolation.

## THE POLICY OF A NEW ORDER

There remains, finally, the possibility of leadership. If the United States should take this third course it would have to participate in formulating an entirely new order of peace to replace the old one that has broken down. Moreover, the participation would involve something much more than a mere suggestion or peace plan. It would involve definite commitments toward peace, a definite implementation of the new order. To provide such leadership the United States would have to take her place among the nations as a force for peace.

Now, this is something that the American people have never been willing to do. And their unwillingness appears to be just as strong today as it ever was. So far as the past is concerned, there was certainly very little reason for them to mix in international affairs while a balance-of-power peace was being maintained by Britain. And, so far as the present is concerned, their unwillingness to mix in a peaceless international situation—as already stated—is sound. Yet it cannot be doubted that the people want world peace. And if a new ideal or a new order were presented to them, holding out a reasonable hope, they might want to change their policy, as they have changed other policies in the past. At any rate, since the alternatives are so desperate, it would be criminal to take blind refuge in a refusal to consider anything. As a Nation dedicated to the theory and practice of free speech, it certainly behooves us to consider what peace plans there are; to be aware of their possibilities and their pitfalls; and to search diligently for the ideals that inspire them.

We cannot pause here to enumerate, let alone describe, all the peace plans that have been proposed. And we may at once eliminate two general categories. On the one hand, we may eliminate wishful plans that assume that the old balance-of-power peace can be revived. On the other, we may eliminate the utopian dreams of the pacifists; the hope that peace can be established upon the entire earth within a realistic period of time. Because our problem may be desperate, our discussions must be realistic.

With these eliminations the prospects of peace divide themselves into three categories.

## EMPIRE; LEAGUE; UNION

The least radical line that can be taken with regard to peace is a kind of renovated and modernized imperialism. This new system would be based upon the wishes of the totalitarian powers, on the one hand, and the Monroe Doctrine on the other. The idea is that the major powers should divide up the world into spheres of influence. The United States, under the Monroe Doctrine, would build up a kind of economic empire in the Western Hemisphere, an area of preferential trade. Japan would do the same in China. Germany would do the same in Eastern Europe. Britain would be left with most of her empire, France with most of hers, and the Union of Soviet Socialist Republics would stay within her present borders. It is a neat picture, and it is realistic enough to have attracted the dictators—if indeed it was not their own invention in the first place. From the point of view of the

democracies it has many disadvantages, which cannot be elaborated here, but which may be summed up in the fact that it is this very concept that they are now fighting. Even so, "regional imperialism" ought not to be dismissed without discussion because it would represent a certain minimum improvement over the current situation.

The second category of peace has its cornerstone at Geneva with the League of Nations. Clinically the League is not dead; it is merely in a state of suspended animation. Its international services still function and the vestiges of the assembly may meet soon. Moreover, everyone knows in a general way what was the matter with the League. First, it became a political instrument in the hands of Britain and France for the enforcement of their special brand of peace, as defined chiefly by the Versailles Treaty. Second, when the opportunity came for the League to act, these same powers ducked the responsibility of economic sanctions—a new and powerful implement of peace which has thus never been fully tried. Third, the United States was not in the League. If at least two of these faults could have been corrected, the League might have worked; and it is conceivable that they might be corrected by some further development of the League idea in the future.

This possibility—of a further development of the League idea—leads directly to the third category of peace. It may be that the League is to the history of the nations what the Articles of Confederation were to United States history: a bad flop, which nevertheless prepared the way for the eventual solution. For the United States the solution turned out to be the principle of federal union. And this principle is being widely discussed now as the solution of the democratic world.

Clarence Streit's proposal for a gigantic union of the democracies was outlined in *Fortune* for April 1939, under the title of "Business and Government." It is not, however, the only such proposal, and it need not detain us here. It is more important at present to set up the union idea against the historical pattern of peace, to see the relationship that exists between them.

#### THE MEANING OF UNION

Most peace has been negative—that is, not war. But every so often a group of separate political units, discovering a community of interests, integrate themselves into a new area called a nation; an area in which peace becomes the rule rather than the exception; an area of positive peace, in that, by the consolidation of resources, manpower, traditions, and laws, the whole becomes greater than the sum of its parts. Most modern nations are compositions of this kind: France, for instance; Germany (which was built of 25 states, integrated in turn from about 1,800 principalities); Italy, the Union of Soviet Socialist Republics, Australia, Canada, and the United States.

Now the striking fact is that, with obvious set-backs and temporary reversals of trend, the size of these integrations has persistently increased. The task of integrating the little island of England once seemed insuperable; today, the Union of Soviet Socialist Republics is integrating one-seventh of the land area of the globe. The reason for this lies in the development of transportation, communication, and other technologies, which bear upon the problem in two ways. First, they make the integration possible by linking the political or financial or industrial centers together; and second, they make integration desirable by creating a community of interests where there was none before. In the days of the horse a community of interests was defined largely by natural barriers. If these happened to be mountains, as in Switzerland, the community might be very small. If they happened to be oceans, as in the United States, it might be very large. But however small or however large, the community of interests tended to expand under the pressure of technology. When New York was 6 weeks removed from London no true community of interests existed between them, even though "relationships" might be friendly (i. e., negative peace). But today, when New York is closer to London than it used to be to Philadelphia, a community of interests, while it may not exist, is certainly not inconceivable.

As a means of integration for a modern community of interests, Federal union has no equal. In Federal union the autonomy of the constituent States is retained; only a limited portion of their original powers is forfeited to a central government for the purposes of integration. This arrangement has three important merits: First, not only the traditions but the inherent liberties of each of the parties to the union are preserved. Second, by reason of the elasticity of the structure, a great diversity of economic areas can be grouped together into a meaningful whole. And, third, since each autonomous State governs its own area, such a union can become very large without breaking down at the bottom. It is because of this fact that the United States—concerning which dire predictions were made—never became "too big."

The application of this principle to the present international scene sets up a great hope. It is not the unrealistic pacifist hope of world peace. It is the realistic hope that a number of nations will discover among themselves a community of interests real enough

to enable them to apply the federal principle and thus integrate themselves into a new and larger area of positive peace. By pooling their resources and their manpower under a common system of law, they could stand off the forces of disruption and aggression, set up a vast domestic market, develop a fabulous industrial system, and enjoy the fruits of an expansion comparable to that which followed the formation of our own Union. They could do this without losing their nationalities, their traditions, their native arts and customs, their religious practices, or their civil liberties. On the contrary, these would be underwritten and guaranteed. The Western World might in this event discover new light to dispel the darkness and hopelessness of our present era.

It is not necessary, or indeed possible, for the United States to decide immediately as between all these various courses. But the day has gone when we can dismiss them from the so-called realities of existence. These issues are as real as our industries, our laws, our individual careers; the solutions to them will affect the purposes for which we live, and will determine the manner in which we shall die. From a remote abstraction encountered only in books and state papers, the foreign policy of the United States has become a personal problem for each of the 80,000,000 adults in the land. It is for these people to choose whether they are prepared to create a new world, as their forefathers did, or whether they will be more content to live as best they may among the ruins of the old. And in the casting of this choice it is the duty of everyone to open up all the vast resources of learning and information, education and inquiry, criticism and research, that this Nation of free speakers affords. For it is by no means an exaggeration to say that the destiny of mankind is in our hands.

### The Gavagan Antilynching Bill

#### EXTENSION OF REMARKS

OF

HON. LYLE H. BOREN

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 8, 1940

Mr. BOREN. Mr. Speaker, there is brought before the House today a resolution for immediate consideration of the Gavagan antilynching bill. No one is more strictly opposed to mob violence than I, but to insist that the Congress give this particular measure precedence over the far-reaching issues that agitate this country and the world at this time is, in my judgment, political chicanery, and I propose to vote against its consideration.

Let me call your attention to the fact there were 12,000 murders in the United States last year and only 3 lynchings. Of the 3 lynchings, 2 were Negroes and 1 white. Of course, 3 lynchings are too many for an enlightened nation, but in the body of State and national law there is, at the present time, every necessary legal instrument to control murder, whether it come at the hand of individual or mob. This bill, in my judgment, would not add one single ounce of strength to the legal safeguards now offered American citizens.

Second. This bill indicts our entire police system. It is an automatic indictment of every police system in every municipality, county, and State in the Union. But we have the finest, most patriotic, and capable police in the world.

Third. It is my opinion that this bill is being used as demagoguery's tool to mislead the Negro race in America. I do not believe there is any doubt in the average mind of Congress whether or not this bill will become law. After a few days of unnecessary debate, the bill will pass the lower House and then will lodge in the Senate to die there, after absorbing a great deal of time which should be devoted to constructive purposes, and after remaining an obstruction in the legislative channels throughout this session of Congress. We know this bill is not going to become law—both those who are for and those who are against it know. I feel it is unpatriotic and unfair to the Nation and to the Congress to take the time and energy of this body in this wasteful fashion.

**Jackson Day Dinner**  
**EXTENSION OF REMARKS**  
 OF  
**HON. SAM RAYBURN**  
 OF TEXAS  
 IN THE HOUSE OF REPRESENTATIVES  
*Tuesday, January 9, 1940*

ADDRESS BY HON. WILLIAM B. BANKHEAD, OF ALABAMA

Mr. RAYBURN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by the Speaker of the House of Representatives at the Jackson Day dinner, Washington, D. C., January 8, 1940:

Mr. President, Mr. Vice President, Mr. Chairman, and fellow Democrats, inasmuch as this is the third time in succession that I have been invited to deliver a short address at the Washington Jackson day dinner after the speech of President Roosevelt, I am beginning to get a little bit suspicious that Jim Farley and his associates have been unable to induce any other victim to take the very hot spot of following so captivating and popular a speaker as our President. However, I again enfold myself in asbestos and crave your sympathetic indulgence.

In looking out over this vast assemblage of my fellow citizens, I am distressed, as was the President, to note the absence of at least three very distinguished gentlemen who were extended pressing invitations by our former Attorney General to attend these festivities. Their absence is lamented not only from considerations of personal hospitality but from more significant reasons of the public interest. I pass by without comment the opportunity they so flagrantly dismiss of obtaining a hundred-dollar dinner for nothing. I am inclined to excuse them upon the theory that Republicans of their class and standing do not know exactly what it means to be as hungry as we lean Democrats sometimes get. I am also inclined to believe that the only seduction that might have caused them to waive their scruples would have been for the President to have made an unconditional promise that at this time he would make some definite declaration as to a third term, a matter about which our Republican friends, and maybe some Democrats, seem to have amassed a very considerable curiosity. However, there is a larger reason than mere rations why we would have welcomed them at our board. We think it might contribute to their general well-being occasionally to hear the pronouncement of some sound political doctrines. We must, nevertheless, confess that their unwillingness to be here is at least understandable.

Andrew Jackson fought all his life for the principle that in a democracy the major purpose of government is to advance the well-being of all the people. He waged constant warfare against the false conception that government is the property of a favored class and that minority groups are entitled to special privileges. In view of the history of the leaders of the Republican Party for the last half century or more, I can readily appreciate how the present leaders of that party would hardly feel entirely comfortable sitting down to dine with the shade of Andrew Jackson.

It now appears that the country is upon the threshold of another vigorous and fiery campaign. There is now every indication that the opposition are upon the point of rejecting our most reasonable and brotherly suggestion that our party be allowed to continue the administration of the Government. That being the case, we are prepared to wage war.

That assertion is not made upon any impulse of breast-beating or boastful party pride, nor are we whistling through a graveyard. The Democratic Party enters the Presidential year of 1940 prepared and anxious to go before the electorate upon its record of accomplishment during the past 7 years in office. In taking over the reins of government during the bleak days of March 1933, our party gave a solemn pledge to the people that its efforts would be directed to the furtherance of those ends for which this Nation was founded—the establishment of justice, the promotion of the general welfare, the insurance of domestic tranquillity, and the continuance of peace and the blessings of liberty. This pledge has been fulfilled. We are proud of the record; proud of the fact that in its policies and its program, the Democratic Party has remained faithful to the principles of a just government laid down for its guidance by Thomas Jefferson and Andrew Jackson. We candidly admit some mistakes in judgment and some errors in the work of carrying out our objectives, because temporary mistakes and errors were unavoidable in the broad task of reconstruction, salvation, and rebuilding which had to be accomplished.

I think it appropriate in connection with the name of Andrew Jackson to make brief comment upon a statement made by a

distinguished Senator last week, in which he made gleeful reference to the fact that he had discovered in an old paper that 105 years ago a dinner was given to President Jackson in Washington in celebration of the fact that the national debt had been discharged, the inference being, of course, that a similar demonstration should be held tonight on the same grounds. But I desire to remind that Senator that when Andrew Jackson first came into power for his 8-year administration he was not confronted with the same type of desperate and devastating conditions in the country under which President Roosevelt and his party took over the affairs of the Government in 1933. Andrew Jackson's administration was not already encumbered with a national debt of over \$20,000,000,000. He was not confronted with a pitiful appeal of 15,000,000 American citizens, hungry and unemployed; his midnight slumbers were not disturbed by the crashing of unnumbered banks in the country. The farmers of his day were not appealing to him in tragic tones for some form of relief that would give them some semblance of security against bankruptcy and ruin. The industry of the country was not then paralyzed and in a state of hopeless confusion, nor were the people covered by a withering blanket of doubt and loss of hope. Those were the conditions under which our party inherited authority from the previous 12 years of Republican rule, with its indifference to the storms that any intelligent party leadership must have anticipated. Their only balm in those dark days was the fugitive promise of a duplex garage and a steaming capon in every kettle.

I repeat that every single act written into the statute books under the present administration has been put there for the purpose of advancing the general welfare and promoting the economic, social, and political security of the great masses of the American people.

The most convincing proof that this program has been essentially successful lies in the fact that the minority party has now given its grudging approval to these enactments and, after hearing from the people, has arrived at the unhappy conclusion that it would be political suicide to advocate repeal of the major programs of this administration. There is ample evidence that the leadership of the Republican Party itself has no plan of action as to any alternative program that they desire to suggest. I refer them to a recent statement by the Republican Governor of New Hampshire, from which I quote:

"Even more am I disturbed by the lack of unity exhibited by these would-be leaders. At the present time the three recognized spearheads of our party are traveling in three different directions in their conceptions of party policies and their views of what is best for the future."

It reminds us of the old nursery doggerel: "One flew east, one flew west, and one flew over the cuckoo's nest." As far as we are concerned those birds are at liberty to continue their flight into the deep shadows of political oblivion.

One of those flyers has made the amazing discovery that the main thing about the present Democratic administration to which he objects is the so-called spirit of defeatism which underlies its philosophy of government. We wonder where that young man was living back in the bleak days at the end of the Hoover administration when his party was about to give up the ghost after 12 years of uninterrupted control of Federal affairs. Apparently he never heard of the bread lines the 15,000,000 unemployed men and women in the country, the queues of anxious depositors in front of toppling banks, or the thousands of despondent farmers who watched their holdings disappear under the cruel hammer of the auctioneer. Apparently he has forgotten about a certain United States Senator, a member of his own party, who got up in the Senate and gloomily predicted that perhaps a dictator would be necessary to restore order and prosperity to this land of abundance. There, indeed, you had a period of defeatism and despair.

One hesitates to think of what would have been the state of our people, and, indeed, the Government, if the spirit of defeatism then existing had continued to crush the country and if it had not been happily removed by the advent of an administration that dared to do bold and heroic things for the preservation of our institutions. There is a lesson for each one of us here tonight and for every American citizen in the recent history of our country. That lesson is the inescapable conclusion that to continue the rule of beneficial government in Washington, the Democratic Party must retain control of Federal affairs.

A magnificent program of social reform enacted in the last few years is now beginning to bring its blessings to the American people. This program must be guarded carefully; it must be strengthened and improved in the light of administrative experience and wise judgment; but it is unthinkable that the affairs of government should again be turned over to that party which has shown it is incapable of instituting such reforms and of removing such burdens of injustice and inequality as had grown up in the country under the 12 years of maladministration. To trust the execution of our beneficent program to the unsympathetic hands of those who did everything in their power to block its enactment would be a tragic gamble for the American people. The duty devolves upon us in the coming campaign to bring home to the

electorate, including the independent voters, this great truth; and if we state the case honestly and with bold confidence, there can be no doubt about the outcome.

It has been asserted that one of the chief hopes of the Republican strategy in the November election next will be important gains in the farming sections of the country. To illustrate such a vagary, I assert that because of our Democratic administration the farmers of the United States have been brought out of the darkness of despair into the daylight of new hope, new prosperity, new security. I say "because of our Democratic administration," for the bald truth is that most of the Republican Members of Congress—after themselves neglecting the farmers for 12 years—have not only failed to help but have actually tried to block nearly every important farm measure enacted since 1933. We passed the Triple A act, under which farm prices and farm income immediately began to rise and farm buying began to turn city factory wheels. The Republicans tried to block that. We passed the Farm Credit Act, which kept thousands of farmers from losing their farms. The Republicans tried to block that. We passed the Soil Conservation Act, under which the farmers are saving and building up their land. The Republicans tried to block that. We passed the second Triple A Act of 1938, which gives farmers and the entire Nation the protection of an all-weather, ever-normal granary and crop-insurance program. The Republicans tried to block that. We voted parity payments to give farmers economic equality. The Republicans tried to block that. Last summer we voted money to continue the commodity loans. Even one of the most prominent Republican aspirants for the Presidency voted against that. Another Republican aspirant for the Presidency has called the farmers' honest efforts a "racket." Today, thanks to the constructive help of the Democratic administration, more than 6,000,000 of the 7,000,000 farmers of the United States are taking part in the national farm program. Farmers are enjoying an income double that of 1932. Their money flows to the cities and helps business throughout the Nation. That is a Democratic record of which we can all be proud.

One of the laughable incidents of the last few weeks has been the report that the select Republican committee that was sent west by JOE MARTIN to assemble material for an attack upon the Democratic farm program, concluded their hearings as speedily as possible after becoming convinced that a great majority of the farmers of that section of the country were unwilling to abandon the present Democratic farm program. The truth of the business is that they have no farm or other program, and in this connection I recall that 2 years ago speaking in this place I made some reference to the Dr. Glenn Frank committee that had been set up, supposed to be composed of the best Republican minds, if such there be, to formulate a program of party policy for the 1940 election. So far as any of us have been able to learn, the Frank committee has done only one thing, and that is to provide the most remarkable biological phenomenon of all times, in that during a period of 2½ years of political gestation, they are, as yet, unable to produce even the promise of progeny.

The minority party may make pretensions to being liberal, and in all fairness, some of its leaders may actually think they are liberal. But the fact remains that its new-found devotion to progressive government is nothing more than shotgun liberality. The habits of a lifetime are not shaken off that easily. The wealthy gentlemen who pour their contributions into the treasure chest of the Republican Party are not doing so to make sure that the economic needs of the farmer, the workingman, the unemployed, and the needy are given adequate consideration by the Federal Government. They pay the piper, and they propose to call the tune, no matter what the party candidates or platform may promise before election.

The year 1940 is notable for something more than the forthcoming Presidential election. This year marks the beginning of payments under the Social Security Act, a measure which, during the years ahead, should take its place as one of the finest and most humane pieces of legislation ever devised by a wise government. From the dawn of civilization, there has been nothing more tragic than the plight of millions of worthy citizens who faced the twilight of their years without sufficient income to provide them with the bare necessities of life. In this machine age, the problem has become more acute. The victims have been compelled to depend for their assistance upon the generosity of kind relatives or the hard and bitter bread of charity. The Social Security Act was designed to meet this problem. It is just now getting under way. Its enactment was a shining landmark in the history of civilized government. This act is one of a whole series of laws which the Democratic Party has put into effect to preserve and protect the economic security of the average citizen. That composes the record upon which we are content to go before the people at the next election. Security has been the watchword of this administration; the security of deposits in banks, both Federal and State, and the assurance that in case of failure every dime will be paid to depositors across the counter; security for 2,000,000 youths of the country at worth-while tasks in the C. C. C.; security in the adjustment of farm incomes until they double the annual amount received when this administration came to power; security of employment for millions of idle men on buildings, highways, and other useful construction projects; security in bringing some of the comforts of urban life to 300,000 farm families of America through rural electrification; security for decent homes for slum dwellers in the congested areas of the country; security under the

H. O. L. C. for the preservation of hundreds of thousands of American homes from sale and foreclosure; security of the right of collective bargaining by the labor organizations of the country; security against the crookedness and dishonesty of stock manipulators through the Securities and Exchange Commission; security of a balanced flow of our foreign trade through the enactment of the reciprocal-trade programs; security for the preservation of our own land and country through the modernizing and increasing of the power of our Army and Navy against any possible foreign attack. And, last, the greatest security that comes to the hearts and the homes of the people of America on the issue that has caused the greatest anxiety and apprehension; namely, whether our country shall be drawn into the foreign wars, this administration, through its President, its Secretary of State, its Members of the Congress, has stood, now stands, and will continue to stand resolutely for peace and nonparticipation on our part in a war we did not make and which this administration did everything humanly possible to prevent.

The people of America will not forget the great lover of peace who has had charge, in large part, of our international destiny—Franklin D. Roosevelt—nor the political party that has sustained him in his prayers and efforts for world peace.

### The Militant Democracy of Andrew Jackson Answers a Challenge—We Move Ahead

#### EXTENSION OF REMARKS

OF

HON. JOSEPH R. BRYSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 9, 1940

ADDRESS BY HON. JOSEPH R. BRYSON, OF SOUTH CAROLINA

Mr. BRYSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me last night at the Jackson Day dinner, Wilmington, Del.:

I am grateful for the honor—the very distinct honor—of being your guest tonight. My gratitude is for the privilege of meeting with the stalwart people of Delaware, for Delaware was one of those Thirteen Original States with which my own State of South Carolina struck the blow and won the struggle for American independence. We have in common the heritage of a great, historic tradition.

And I am also grateful for this opportunity to address you on this special occasion when we do honor to the memory of that great American and foremost standard bearer of the Democratic Party, Andrew Jackson.

But it should be remembered that we come together here tonight not merely to glory in the achievements of our great leader but also to attest our loyalty to the principles of democracy for which he fought and then to rededicate ourselves to the great task of keeping them alive.

Of Jackson a great writer has said: "A lover of liberty, he gave his blood to it; a crusader of democracy, he gave his life to it; and liberty and democracy in America will never die so long as the people treasure the memory of his battles and follow the shimmer of Andrew Jackson's sword." How splendid is this description of the militant democracy of Andrew Jackson, how priceless does democracy find the example of his life.

And here I think something should be said of the actual experiences of Jackson's life. Something should be said of just Jackson himself as he rose from birth in the most humble of circumstances to the Presidency of the United States.

I make no effort to conceal my pride at this moment in mentioning here the fact that my home is in the State which holds to be the birthplace of Andrew Jackson. While other States have attempted to claim that honor, South Carolina gave birth to this American hero. And in his last will and testament Jackson distinctly avowed, with all the solemnity attending a testamentary paper, that South Carolina was his native State.

Andrew Jackson was born in obscurity and, like his own mother and father, who had spent much of their lives in Europe, might have died in obscurity. But the fate of Andrew Jackson was better than this, for he was born at an eventful time in the history of an eventful nation.

In a cabin of plain and simple but comfortable design situated in the Piedmont hills of South Carolina Andrew Jackson was born on March 15, 1767. Yes; he was born at an eventful time, because before he attained manhood there was to be signed a Declaration of American Independence and there was to be adopted a Constitution which Gladstone so aptly described as "the most wonderful work ever struck off at a given time by the brain and purpose of man."

In Jackson's day, as in the present day, the opportunity for a young man to rise from the depths of obscurity to the realm of

recognition was greater in America than anywhere else on the face of the globe. The important thing was that Jackson possessed the vision, determination, and driving power to realize his ambitions in this Nation of almost unlimited opportunity.

Jackson's early life was largely that of an orphan, because his father died several days before his birth and his mother died before he reached the age of 14. He had some common-school education and began the study of law while he was still very young. He was admitted to the bar and licensed to practice law before reaching the age of 21.

In 1788 his pioneering instincts carried him westward, and he established himself in the frontier State of Tennessee. He was destined to become Tennessee's most renowned soldier and statesman. In 1789 he was solicitor of one of the Tennessee districts, and the next year he became United States attorney.

In 1796 Jackson was chosen the first Member of Congress from Tennessee, which had just been admitted to the Union. At the age of 30 he was elected to the United States Senate, but resigned at the end of the first session. The following year he became a justice of the Tennessee Supreme Court, where he served 6 years and then resigned.

From the date of his resignation from the Tennessee Supreme Court until the outbreak of the War of 1812 he devoted considerable of his time to farming, at which he was moderately successful. It was during these intervening years that he became a major general of militia.

Placed in command of 2,500 Volunteers in 1813, he marched toward New Orleans. When he reached Mississippi he was directed to disband his forces. Because this would leave them stranded, he had the order modified and marched back to Tennessee. The hardships which he endured on this march won for him the title of Old Hickory.

An uprising of the Creek Indians in Mississippi and Alabama caused him to be sent into that district, where he forced them to terms of peace. It was during 1814 that he became a full major general in the Regular Army, in command of the Department of the South. From that time on he became a national figure.

In the late fall he invaded Florida, then a Spanish province. He claimed it without orders and captured Pensacola on the ground that it was a base used by English troops. Going from there to New Orleans, he began the defense of that city. He was attacked by the British and defeated them in the famous battle of the 8th of January 1815.

And it is fitting that we are gathered here this 8th day of January—a century and a quarter later—to memorialize Jackson's great feat at New Orleans. Jackson's brilliant achievement at New Orleans did much to redeem other reverses which the American forces had suffered on land. General Jackson had now become undoubtedly the foremost military hero of his country.

Although a great military hero, a fighter, a conqueror, Andrew Jackson was at the same time a man with all the refinements of a devoted husband. His devotion for his beloved wife, Rachel, was well stated in the inscription which Jackson himself had written on her tomb, reading:

"Here lie the remains of Mrs. Rachel Jackson, wife of President Jackson, who died on the 22d day of December 1825, age 61 years. Her face was fair, her person pleasing, her temper amiable, her heart kindly. She delighted in relieving the wants of her fellow creatures, and cultivated that divine pleasure by the most liberal and unpretending methods; to the poor she was a benefactor, to the rich an example, to the wretched a comforter, to the prosperous an ornament; her piety went hand in hand with her benevolence, and she thanked her Creator for permitting her to do good. A being so gentle and so virtuous that slander might wound but could not dishonor. Even Death, when he bore her from the arms of her husband, could not transport her to the bosom of God."

During the next few years he was engaged in the Indian wars. He again invaded Florida, and after the purchase of Florida was ratified in 1821 Jackson became its first Governor. He resigned this post several years later and returned to his home in Tennessee.

Although Jackson was being bitterly criticized by some of his enemies he remained an outstanding, popular figure. In 1823 he was again chosen to serve the State of Tennessee in the United States Senate.

But already Jackson was being considered for the Presidency. As a candidate for the Presidency in the campaign of 1824, he received 99 electoral votes against 84 for Adams, 41 for Crawford, and 37 for Clay. This threw the election into the House of Representatives, where the support of Clay went to Adams who was accordingly made President.

However, 1828 saw Jackson waging a vigorous campaign for the Presidency. He achieved a remarkable victory in the election of 1828, securing 178 electoral votes, while John Quincy Adams received only 83. I have given here only a brief biographical sketch of Andrew Jackson from the date of his birth to the time of his inauguration as the seventh President of the United States.

Andrew Jackson made great and lasting contributions to democracy during his two terms as President. Jackson must be credited with translating the democratic philosophy of Jefferson into reality. It was he who threw democracy into action; it was he who set in motion all the wonderful processes of democracy. It was the militant democracy of Andrew Jackson which set the pace for our growth into a great and powerful nation.

I should like to read to you here what the contemporary writer, Claude G. Bowers, has to say about Jackson:

"Andrew Jackson was the organizer of democracy. He mobilized the scattered forces of ordinary men, vitalized them with his energy, fired them with his faith, and made sharpshooters of them, every one. He made the trapper in the wilderness, the worker on the wharf, the toiler in the factory, and the farmer in the field realize that the Government is his Government in days of peace as well as when he is solemnly reminded of it in days of battle."

Continuing, Mr. Bowers adds: "His devotion to human rights did not blind him to the legitimate rights of property. He was not an enemy of business; he was so much the friend of honest business that he fought to make it free."

The assumption that the devotion of the masses to Jackson made him the enemy of business is ill founded and false. The assumption that the devotion of the men and women who toil in the field and factory to our present leader, Franklin D. Roosevelt, makes him the enemy of business is equally ill founded and false. To those who are ever ready to do this country the injustice of projecting bitter arguments on this false assumption, I say to them, examine the facts, ascertain the truth.

The fact is that we must keep the smoke pouring out of industry's chimneys if this Nation is to prosper, and the President of the United States seeks today, as he has always sought, ways and means to promote industrial recovery. The American people will long remember that Roosevelt met the disaster of our business depression with positive action—action which restored confidence and launched recovery.

At another Jackson day dinner in Washington 4 years ago President Roosevelt said:

"I am happy to stand here tonight and declare to you that the real issue before the United States is the right of the average man and woman to lead a finer, a better, and a happier life. That was the same issue, more than 100 years ago, that confronted Andrew Jackson."

As we assemble here tonight let us proclaim the fact that this issue has been squarely met. The day when our Federal Government failed to deal with problems of unemployment, bank failures, agricultural distress, sweatshop labor practices, discrimination against organized labor, and the ruthless exploitation of national resources—that day, when our Federal Government stood idly by and remained unconcerned about the consequences of these national problems—that day, I say to you here tonight, is gone forever. America will never abandon the great social and economic gains which have been achieved during the administration of Franklin D. Roosevelt.

Just as the militant democracy of Andrew Jackson answered the challenge of his day, the social and economic democracy of Franklin D. Roosevelt has answered the challenge of our day.

First. Yes; we believe in the Social Security Act. It points the way to a brighter day for the aged who have made their contributions to the upbuilding of this Nation to the blind, lame, and halt, and to the men and women who become unemployed through no fault of their own. I say to you most emphatically we may improve the provisions of this act, but we shall not abandon it.

Second. Yes; we believe in the Fair Labor Standards and National Labor Relations Acts. They assure to the working men and women of this Nation a decent standard of living and point the way to a brighter day in industrial relations. I say to you most emphatically we may improve the provisions of these acts, but we shall not abandon them.

Third. Yes; we believe in the banking legislation of recent years. This legislation has stabilized banking and afforded protection to the Nation's bank depositors. I say to you most emphatically we may improve certain features of this legislation, but we shall not abandon it.

Fourth. Yes; we believe in the conservation policies adopted in recent years. These policies point the way to the future protection of America's wealth of natural resources; and I again say to you most emphatically we may modify and alter these policies in certain respects, but we shall not abandon them.

Here, without elaboration, I wish to make this single, yet pertinent, reference to the President's foreign policy. In short, it is a thing of outstanding statesmanship, protecting American interests in the present world crisis and doing the all-important job of keeping us out of Europe's war.

Thus, I could continue in the enumeration of the many legislative landmarks established during the past 8 years. But the achievements I have already cited are alone enough to assure the American people that the Federal Government under the leadership of Franklin D. Roosevelt has answered the social and economic challenge of this day—we are now moving ahead.

The outlook in America today is much as the President described it in his report last week to Congress on "The state of the Union" when he said:

"The American people will reject the doctrine of fear, confident that in the thirties we have been building soundly a new order of things different from the order of the twenties. In this dawn of the decade of the forties, with our program of social improvement started, we must continue to carry on the processes of recovery so as to preserve our gains and provide jobs at living wages."

And as the President added:

"In the spirit, therefore, of a greater unselfishness, recognizing that the world—including the United States of America—passes

through perilous times, I am very hopeful that the closing session of the Seventy-sixth Congress will consider the needs of the Nation and of humanity with calmness, tolerance, and cooperative wisdom.

"May the year 1940 be pointed to by our children as another period when democracy justified its existence as the best instrument of government yet devised by mankind."

In conclusion, I give my political creed. I believe in the philosophical democracy of Thomas Jefferson, I believe in the militant democracy of Andrew Jackson, I believe in the idealistic democracy of Woodrow Wilson, and in the social and economic democracy—the democracy of the forgotten man—of Franklin D. Roosevelt.

### The Reconstruction Finance Corporation Versus A Small Business, the Hickory Clay Products Co., of Mineral City, Ohio

#### EXTENSION OF REMARKS

OF

HON. JAMES SECCOMBE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 9, 1940

STATEMENT BY CLOYD W. MILLER

Mr. SECCOMBE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Cloyd W. Miller, president of the Hickory Clay Products Co., of Mineral City, Ohio:

#### TWO SIDES OF THE DISCUSSION—GOVERNMENT (R. F. C.) VERSUS A SMALL-BUSINESS MAN REGARDING LOAN, TERMS, RESPECTIVE RESPONSIBILITIES

##### THE GOVERNMENT'S SIDE

R. F. C. offers to loan \$20,000.  
R. F. C. demands security as follows:  
First mortgage on property it appraised at..... \$171,930  
Outside security..... 50,000  
221,930  
R. F. C. demands 11-to-1 factor of safety.

Twenty thousand dollars offered.

In defense of this sum the R. F. C. said I had said, "We may not need as much as \$35,000 and would not accept any more than needed up to \$35,000." I did say this, confirming our intent not to borrow a penny more than needed and to use the money carefully.

Ronan, of R. F. C., said we could not get money elsewhere, implying this was a reason for accepting whatever R. F. C. offered, regardless of whether the sum was sufficient or the terms fair.

##### THE BUSINESSMAN'S SIDE

We need \$35,000.  
We offered:  
First mortgage on property R. F. C. appraised at approximately \$125,000.

We offer 3.6-to-1 factor of safety. We are asked relatively more security per dollar loaned than larger industrial corporations, and the railroads are granted better terms even than they.

Thirty-five thousand dollars needed.

It would be the worst sort of management for us to try to do what we must do with 60 percent of the money we may need. Too, the sum allocated or set aside for us should be in fair proportion to the security offered. We, as sound managers, must keep in mind the risk of failure and that failure would take from us a plant worth \$125,000 and liquidate the present ownership of our company.

The two banks with whom we deal have declined to loan, one of them saying that our risk is the type R. F. C. should handle. Ronan used argument such as might be used by a private institution that had no obligation such as has the R. F. C. under the law, and to this I add that Shannon of the National City Bank of Cleveland, said to me, November 4, in his office, that Government administration and legislation of recent years probably have had much to do with his bank's adoption of its present policy toward small enterprises such as ours. It takes more than the application of straight banking principles to redevelop ailing industry.

#### THE GOVERNMENT'S SIDE—CON.

Ronan, for the Government, says (1) that the business is ours; (2) that we want to make money; (3) that if we are going to repay the loan, extra security is of no importance. Coombs, for the Government, says (4) that the R. F. C. Directors do not think we have a Chinaman's chance to make any money; (5) that we must accede to Government terms regardless; (6) that were it not for my persistence it would not loan us money; and (7) something was added about gambling with us.

#### THE BUSINESSMAN'S SIDE—CON.

We submit Government only needs security. Asking that we provide a mortgage first on assets which are separate from manufacturing operation for which money is sought plus guaranty by my outside personal income imposes unreasonable requirements, and this very imposition compels examination of R. F. C.'s conduct and motives, and Government's responsibilities to small private enterprise. We want no favors; what we ask is based solely on our rights under the law.

Government puts a premium on reason in absently denying that legislation of recent years has not made the possibility of profit more difficult.

That its policies of the last 5 years in labor, price raising, social security are not disadvantageous as compared with former conditions.

That its railroad administration, permitting our transportation rates to exceed railroad operation costs 25 percent to 40 percent are not subversive. (I. C. C. cost study 3681, file No. 28-A-12.)

That permitting the use of a "secret" railroad weighing system iniquitous in character on our material does not make our problem more difficult and hazardous. This system has for years encouraged vicious and unconscionable competition within our industry and may be in violation of I. C. C. law.

That public utterances of high Government policy-making officials, Berle and Corcoran, do not raise a fair question about Government's motives. Corcoran calling businessmen "polecats," deserving no quarter, and Berle saying Government will ultimately own all productive plants.

Such thinking is absurd when it is realized that our plant cost \$125,000, and it is in splendid working condition. Furthermore, if we wanted to get out of business we could probably sell the plant for more than \$50,000. We have faith in this property as a means of making money, and we want to save it so that the benefits to be derived from it will accrue to our ownership. It is a natural resource-conversion project.

On the subject of research, we asked Chairman Schram months ago to send a competent person to Ohio to see our industry, the competitive plants, what changes there have been in recent years, the transition there has been in the industry, what we must do to adjust our company to existing conditions. Without adequate research, how can intelligent discretion be exercised?

We reviewed it very carefully, and found it contained six errors of fact, and, naturally, due to these errors, erroneous conclusions. We carefully answered and corrected each and every statement therein. Later the fact that we had in our possession a "private" Government document seemed to cause so much consternation in the R. F. C. office that our answering effort apparently accomplished little. But our facts and

There is an implication in the Government's observations that in getting a loan of \$35,000 from it that we want to unload our plant on the Government and get out from under.

We have finally gotten Director Husband's word that he will send shortly a competent person to visit us.

One of the directors of R. F. C. gave me a copy of their decision, dated July 5, 1939, turning down our loan application. I presume it was given to me to defend, in a general way, the Government's position. I believe after this was done that my contact and discussions should have been solely with the directors because of embarrassment to subordinates it caused. Minor officials are entitled to considerate treatment as well as we are.

## THE GOVERNMENT'S SIDE—CON.

The Government makes no attempt to justify its favoritism in terms in making loans—it ignores our statements on this subject completely.

## THE BUSINESSMAN'S SIDE—CON.

arguments persist and are valid. We thought we were being nice to R. F. C. to help it get its facts straight. This decision contained this sentence: "Management does not appear sound." A captious remark wholly unsupported by evidence—we adequately answered this. The soundness of our management is established, and is not now questioned, so far as I know. On the subject of soundness we may properly say that New Deal economics have not yet been proved sound, and much of it is sharply challenged by the ablest economists in the United States.

Government loans railroads enormous sums on secondary security without expecting they will be repaid out of profits; no personal guaranties asked. It loans close industrial corporations without personal endorsement.\* From us it has asked prime security plus personal endorsement.

It surely was not intended by Congress that R. F. C. should exercise biased or favoring discretion in the allocation of public funds.

The practice of increasing the severity of terms as the business operations are less in magnitude shows how the difficulties of small-business men are increased, rather than diminished. Was this the intent of Congress?

Regarding statements of Government, it seems to us they are mostly platitudes showing a serious lack of understanding of our business problem. There has been a lack of willingness of R. F. C. highest officials to discuss the matter. The subordinates say too much in a peremptory manner about what we must do. An air of boredom is displayed.

Our statements have been supported with facts. The note of flippancy in statements of R. F. C. men—for instance, the one that the directors do not think we have a Chinaman's chance to make money—speaks for itself. Such remarks do not indicate understanding of the importance of our problem and are a far cry from constructive or sympathetic assistance to a small enterprise.

### The Hickory Clay Products Co., of Mineral City, Ohio, Applies for a Loan From the Reconstruction Finance Corporation

#### EXTENSION OF REMARKS

OF

HON. JAMES SECCOMBE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 9, 1940

LETTER BY CLOYD W. MILLER

Mr. SECCOMBE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter written by Cloyd W. Miller, president of the Hickory Clay Products Co., of Mineral City, Ohio, to Sam Husbands, of Washington, D. C.:

MINERAL CITY, OHIO, November 11, 1939.

Mr. SAM HUSBANDS,  
Reconstruction Finance Corporation, Washington, D. C.

DEAR MR. HUSBANDS: Mr. Mitchell arrived yesterday morning at 6, and we started our tour of inspection immediately. We visited and saw 13 plants. The résumé below shows the total number of kilns, the number formerly used in the manufacture of fireproofing and since changed to burning of other kinds of material, part to products for the steel industry, and the balance to very high-grade glazed material. Of the kilns not in use our nine are the only

\*Goshen Clay Products Co., Newcomerstown, Ohio, was loaned \$70,000.

ones really fit to use, the other two plants having about gone to pieces. We plan to make a medium grade of facing tile for which there is a growing market.

## Beehive kilns

1. National Fireproofing Co., East Canton (also 2 circular continuous kilns for spray glazes)	20 afire.
2. Stark Brick Co., East Canton	48 afire.
3. Metropolitan Paving Brick, Minerva	18 afire.
4. Consolidated plant, near Minerva	20 idle.
5. Malvern Clay Co., Malvern	28 afire.
6. Robinson Clay Products Co., Malvern	16 afire.
7. P & M plant, near Waynesburg	28 idle.
8. Whitacre-Greer Fireproofing Co., Waynesburg	51 afire.
9. National Fireproofing Co., Waynesburg	20 afire.
10. National Fireproofing Co., Magnolia	18 afire.
11. Whitacre-Greer Fireproofing Co., Magnolia	17 afire.
12. Hickory Clay Products Co., Mineral City	9 idle.
13. Fairfield Brick Co., Zoarville	6 afire.

299

	Total beehive kilns	On highest-grade ware	Not in use	Survivors on fireproofing	Converted to steel products	Face brick	Sewer pipe	Formerly on fireproofing

Total	299	106	57	46	68	6	16	217

<sup>1</sup> Plus 2 circular continuous kilns for spray glazes.

I want you to reflect for a few minutes on what the above facts mean and what the possibilities are in the Ohio clay industry from the viewpoint of expanding American industry. Formerly there were 217 kilns, 13 extrusion machines, making hollow ware or fireproofing in this district. This has been reduced to 46 kilns, 3 extrusion machines, and the others have either quit entirely or converted their properties at considerable expense to manufacture other material. This conversion has been required for one reason which is entirely controlled by national economic policy in freight transportation. If freight charges properly considered the economic welfare of the Nation, all of these plants which were formerly in fireproofing, and low-grade clay products would still be in this field. If that were true, there might be new plants with 100 to 150 kilns making the material to which these old plants have been converted.

I have been disgusted with politicians and economists in the last few years saying we no longer have any frontiers in America. The facts are that we have economic frontiers all over America which have been destroyed utterly by maladministration of the railroads and a shortsighted public transportation policy. As a matter of fact, low transportation costs, probably half what they are now, were the reason the frontiers could formerly be exploited in the public interest. The railroads became an integral part of the frontiers. Over the years railroad influence became the most singly powerful and subversive in the country, and I believe it is today. That is the reason I think Jesse Jones does the country a disservice when he so often releases to the press information about what the R. F. C. is doing for the railroads. This is political catering to a powerful minority that has had, I believe, the most to do with preventing American economic recovery.

With the information about our industry here and from Mitchell you will know what I meant in writing to Bassett about research. Work such as Mitchell and I did yesterday is of great value to you in determining whether applicants should have credit; it also provides invaluable information on which to base recommendations to Congress. The fact that your agency has to allocate public funds gives force to your recommendations to Congress far greater than from any other governmental agency.

Mr. Mitchell met Ralph Schory, the vice president of our company, and also Paul Belden, one of the leading and most successful operators in the Ohio industry. Ralph is one of the ablest operators in the business, a ceramic engineer from Ohio State University and a splendid person. Paul has become a good friend of mine over recent years. Mitchell will tell you about these men and my friendship and association with them. Mitchell and I had a delightful day, although we missed our lunch, at least Mitchell did. We went to see Schory at his home about lunchtime, and I went to the kitchen and visited with Helen and had a piece of pie while Mitchell and Schory talked.

I thank you for sending Mitchell. He seemed to get more interested as he proceeded, and I was gratified with his comprehension, even though we crowded a great deal into the one day.

Sincerely yours,

CLOYD W. MILLER,

President, the Hickory Clay Products Co., Mineral City, Ohio.

**The Life Story of Cloyd W. Miller, President of the Hickory Clay Products Co., of Mineral City, Ohio, Submitted to the R. F. C. in Connection with Application for a Loan**

**EXTENSION OF REMARKS**

OF

**HON. EARL R. LEWIS**

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, January 9, 1940*

ARTICLE BY GENEVIEVE BURKE AND CLOYD MILLER

Mr. LEWIS of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following story of the life of Cloyd W. Miller, president of the Hickory Clay Products Co., of Mineral City, Ohio, written to the Reconstruction Finance Corporation for the purpose of securing a loan from that Corporation:

**MY LIFE—CLOYD MILLER**

This story is written for the benefit of, and dedicated to, the directors of the Reconstruction Finance Corporation at Washington, Emil Schram (chairman), Carroll B. Merriam, Charles B. Henderson, H. B. Klossner, and Sam Husbands.

I have been trying for over 16 months to borrow money from the R. F. C. and during this time have confined my information largely to my business experience, our enterprise, etc. Little has been said about my formative years or training prior to entering business. Very recently I learned that the R. F. C. is still inquiring about my character, and I believe it will be helpful to you to have knowledge of my early training, in what environment I grew up, and what I did prior to entry into business. The Horatio Alger tone may provoke merriment, but I can take it. I think what I seek to bring out justifies the intrusion upon your time.

I was born on February 7, 1883, in Goshen, Ind. My father was a cabinetmaker and my mother a school teacher. After 3 years mother divorced father and he died when I was 7. Mother taught school in Elkhart County for 37 years; still lives in Goshen, in her eightieth year. From the time I was 6 to 11 she balanced an annual family budget on \$320 a year—8 months' work at \$40 per month. I vividly recall the account book, a 5-cent memorandum, which had income on one side and outgo on the other, and was accurately balanced each week. I saw her annual summaries over these years, showing it cost us \$305 to \$315 each year to live and pay our debts. It took her 5 years to retire a \$25 debt, at \$5 a year, to a local dry-goods store contracted while she was living with my father. Five dollars per month rent was our maximum, but we had a fine, clean home in as little as two rooms. Balanced budgets were firmly impressed upon my mind very early. At 11, I started selling newspapers, and from then on bought my own clothes, though I paid no board until after high school. Sold collar holders, ice picks, Success magazines, and worked in a truck patch and on farms in summer during high-school years. Graduated a Latin student from Goshen High School at 17 in year 1900.

In July went to work for the Goshen Buggy Top Co. It jobbed blacksmith supplies, carriage hardware, and built buggy tops. I was stenographer, office boy, invoice clerk, janitor, etc. During the first winter began to go to Elkhart, Mishawaka, and South Bend, Ind., to sell our goods to blacksmiths. Pay started at \$4.50 per week and within a year advanced to \$5, and later to \$6. During that time I nearly memorized a 52-page catalog of the goods we bought and sold.

The boys in our high-school class often discussed going out to make our fortunes. Becoming restless in the summer of 1902 I solicited the interest of Haines Egbert, the local hardwood lumberman, who knew men in Helena, Ark., and he got me a job with the Helena Box Co. Went there in October 1902 to learn the lumber business. Inspected lumber on the yard, handled a crew of men, worked 11 hours a day, did a little stenography work in the office, and received \$50 per month. After 8 months I was put in charge of the output of a cottonwood sawmill located 8 miles from Reydel, Ark., on the Arkansas River. My pay was raised to \$75 per month. Graded the lumber at the sawmill, handled the teamsters who moved it to the railroad and loaded the cars. Reduced the cost of tearing down the lumber piles at the mill about half, using 3 men to do this work which formerly took 6 or 7 by changing handling methods. This job ended abruptly. I was fired because I wrote a sassy letter to my boss at Helena. Later I frequently referred to him when seeking a better job. He was both annoyed and embarrassed by my persistence in this and wrote me about it. Years later I met Mosby at a resort in Florida, we played golf together for 2 weeks, but he did not mention firing me.

Went back to Goshen with \$300 saved during 15 months in Arkansas. Haines Egbert got me another job with the Studebaker Corporation at South Bend at \$7 a week. Worked 2 days and quit

because I wasn't satisfied with this pay, and remember how sharply Mr. Egbert scolded me for quitting.

In February of 1904 went to work for the Lesh-Prouty-Abbott Co. in East Chicago, Ind., as a stenographer and walnut lumber inspector at \$50 per month. My experience there was dull because I didn't have enough work to do. Mr. Abbott, a Goshen man and very successful, was a splendid person. One day when I almost killed the driving horse by driving into a down wire after a storm he said, "Well, Cloyd, I can't criticize you for driving too fast because I drive too fast myself."

Within 6 months was looking for another job because I wanted more pay. Mr. Abbott didn't think my job warranted a raise. I answered ads seeking help in the American Lumberman. One was from the Ford River Lumber Co., with offices at Wells, Mich., Upper Peninsula. Met Daniel Wells in Chicago, told him I wanted \$60 a month to start. In a few days he wired me to come, and I left East Chicago for Wells in October 1904. At Wells I was in an office in which was done part of the work of the I. Stephenson Co., the Ford River Lumber Co., Mashek Chemical & Iron Co., and the Escanaba & Lake Superior Railroad. My work was stenography in the land and lumber department of the Ford River Lumber Co. Daniel Wells was the son of J. W. Wells, of Menominee, Mich., who built up these interests. He owned about one-third. Mr. Wells gave me a pass on the Escanaba and Lake Superior Railroad to visit logging camps and told me to be gone 1 day a week. The Ford River Lumber Co.'s plant office and general books were kept at Ford River, Mich., 10 miles from Wells. In about 5 months the bookkeeper there resigned and I asked Mr. Wells for the job, although I had never kept books. The books at Ford River required five full foolscap pages for the trial balance. Mr. Wells asked me whether I could keep books; I answered yes and got the job. The retiring bookkeeper stayed for a month to show me the work, became utterly disgusted because not only was I a poor writer but I smeared the books with erasures and dirty hands and failed to get my first trial balance. This was pretty bad, but good fortune was on my side. Mr. Wells hired an expert cost accountant from Chicago to install a new set of books and cost system. DeVor, the cost accountant, spent nearly a month in Ford River showing me how to use his forms and transferring our accounts from the old ledgers to the new books. He taught me how to keep books and I got the next trial balance. From then on it was easy. For that company I developed each month thereafter a 14-page cost and profit and loss statement, showing every department of our operation. It was completed, copied, and mailed from our office on the 5th day of the month to five directors, all done in longhand. I am sending a copy of this statement, which I prize very highly, to Director Husbands and want him to return it. This experience provided knowledge of cost accounting which has been invaluable to me throughout my business career. My pay at Ford River was raised to \$90 a month, a 50-percent advance, in 5 months. In about a year I was made buyer and manager of the company store, which sold \$10,000 worth of merchandise monthly. I made frequent trips to Chicago to buy. My pay was raised to \$166.66 per month. In 1906 the directors of these companies fell out. The properties were owned, one-third by J. W. Wells, one-third by Isaac Stephenson, former United States Senator from Wisconsin, and one-third by the Daniel Wells, Jr., estate, controlled by Milwaukee trustees. The J. W. Wells interest sold out for \$750,000 cash. This change brought to the attention of old Isaac Stephenson my salary of \$166.66 a month; he said the most he had ever paid a bookkeeper was \$125 a month, and I could stay on at that. I told Senator Stephenson that if I had to start over I would start with a different company and resigned.

While at Ford River I checked out under my signature alone over \$300,000 each winter to logging producers and their woodsmen. The company stopped hiring an outside auditor, which had been an annual practice, because I showed Mr. Wells the audit was of no value. It simply verified my trial balances and got exactly the same profit-and-loss results I had already ascertained. I showed Mr. Wells that these auditors, who charged us \$1,100 for 2 weeks' work, had failed to check the cash disbursements I had made to woodsmen on time orders from the logging camps; also how I might have embezzled \$40,000 or \$50,000 the previous winter, which would not have been detected by this auditor. Mr. Wells forthwith quit outside auditors, raised my pay, and raised my bond from \$10,000 to \$40,000.

Left Ford River early in 1907, again answered an ad in the American Lumberman, and hired out to the Wheeler Lumber & Bridge Supply Co. at Des Moines, Iowa. Started at \$100 a month, to be raised to \$125 in 6 months and \$150 in a year. My boss was George A. Field, a fine person. This firm had a large retail lumber yard, and at wholesale sold 3x12x16 Oregon fir bridge plank to the county supervisors of Iowa. My work was of a clerical nature, and during the 6 months there I heard lumber salesmen from the producing districts trying to sell lumber to Field. I also got my first first-hand information about graft in government. Iowa was split three ways by three wholesalers who sold to the counties. Wheeler worked on his one-third, and the others laid off. A number of the county supervisors, but not all of them in our group of counties, had special arrangements with Wheeler to divide unearned increment. I was not well satisfied with my work here because again I did not have enough to do, and made up my mind I was going to sell lumber. I told my wife I was certain I could sell more than the dumb Doras who were calling on Mr. Field.

In 6 months I resigned without another job, but as before I was negotiating by mail with firms that had ads in the American

Lumberman. Was called to Cleveland, Ohio, by the Robert H. Jenks Lumber Co. on November 1, 1907, to interview them about a sales manager's job. They were the largest wholesalers of lumber in Ohio at that time, employed 50 people in their office, consisting of 13 stenographers, plus clerks, accountants, and 5 sales managers, who handled different woods in each department. I was hired for northern woods, white cedar posts, shingles, and west coast material, which was just coming into Ohio. My experience in Des Moines, where a great deal of west coast material was used, got me this job. Went to work on December 1, 1907, and a year later was in charge of enough sales of that company to produce over half of the gross profit of the entire business. We had 17 salesmen on the road, and frequently I went out with salesmen who had been selling for years to show them how to do it, although up to that time I had never had a day's road experience as a lumber salesman.

Within the first year with this company I saw how I could get into the lumber business with very little money. My positions had mostly been in manufacturing where it took enormous sums. In the summer of 1909 I wrote to Daniel Wells, my former boss at Ford River, Mich., and told him what I wanted to do. He had moved to Detroit and had invested heavily in the steel business. In September in Detroit I told him I had \$2,100 saved and that we needed \$5,000 to start. I offered my bankbooks as security for a loan of \$2,500, which would be my share in the business if he would put up \$2,500 for his share. He agreed to do this, and said, "Do you want to start business next week?" which took me back a little. I said, "No; I think we should start January 1," so I could complete my plans. Went to Detroit at Christmas time, got Mr. Wells' check for \$5,000, and as I walked out of the Ponchartrain Hotel I took the check out of my pocket and said to myself, "Well, squirt, you are in business now and its too late to crawlfish." I was just 26 years old, but I realized fully, I think, the responsibilities I had undertaken. We had a partnership. Mr. Wells gave me a copy of his personal statement, which we sent to the Lumbermen's Credit Association and to Dun's and Bradstreet's. We started business with a commercial rating in these agencies of \$100,000 capital responsibility, first-rate credit.

I never called on Mr. Wells for additional money. We paid spot cash for our lumber in carload lots, bought and sold 360 cars the first year, discounted all our bills, and lost no accounts. We made, as I recall, \$4,200 the first year. Each year we added to our cash reserve, keeping most of the money in the business to take care of our growing volume. In 1913 we incorporated. This business continued active for 18 years, and we made quite a lot of money during the war. In 1917 we shipped millions of feet of lumber to a housing project in Firestone Park in Akron. After 1928 the wholesale lumber business dwindled and within a few years most of the wholesalers in Cleveland were out of business. My time after 1926 was more and more taken by the Hickory Clay Products Co. at Mineral City, Ohio.

In 1913 I built a home on Cleveland Heights, a suburb of Cleveland. In 1914 I had saved about \$12,000, which was outside the Miller-Wells Lumber Co., and decided to build an apartment to permanently protect the living of my family. We organized the Cloyd W. Miller Co.; I took about \$13,000 of the stock myself and sold \$11,900 to others. We borrowed \$30,000 from the Cleveland Savings & Loan Co. and built a 16-suite apartment, the first English basement apartment in Cleveland. It is located at 1871 East Ninety-seventh Street. This company owns it today, and it has enjoyed practically full occupancy for 23 years. It has paid an aggregate of 190-percent dividends during these years, plus retirement of the mortgage. Rents went up during the war, gradually declined during the twenties, so by 1932 they were below what we started with. Since they have gone up some and are now about what they were at the beginning. Fortunately, we picked an excellent street, which has not deteriorated, and is within 10 minutes' walk of One Hundred and Fifth and Euclid Avenue, one of the best outside centers in Cleveland. Many of our customers have been with us for years. I presume some elements of sound management have contributed to the history of this property.

Along in 1925 I decided to promote and build a clay plant. I acquired control of clay lands in 1923 to 1924. I knew something about the clay industry of Ohio having sold a great deal of bulkhead lumber to sewer-pipe companies over the years. There were a good many reasons why I wanted to get into the manufacturing business. I was tired of logging it on the road selling lumber. I wanted to produce my own product so that I could build quality into it and sell something that I would not forever have to explain and apologize for. Wholesaling lumber from widely scattered sources involves a lot of work which is not needed on one's own product. I knew something about the conversion of timber having had experience at sawmills. The clay resources which are tapped in Ohio were well located as to markets and I thought always would be. I did not foresee what has transpired in railroad history. When the building industry began to decline in 1927 I supposed, if I thought about it at all, that transportation would follow economic trends. Such things at that time were taken for granted. Transportation had been raised about 100 percent during the war on most products, and on the clay products in this section up to 70 percent. It was not until 1931 that I realized the railroads had no intention of bringing down their rates to help solve the economic effects of the depression. It seems they were to be saved on the backs of the people. This is perfectly clear now. They started with a program in direct opposition to the trend of price levels. They have persisted in it and, actually in the last few years, have

had their rates restored to the war peak of 1920. They were reduced 10 percent in 1922 and about a year and a half ago this 10 percent was again added.

In 1932 we filed a freight rate case with the Interstate Commerce Commission, and since I have participated in most all of the big cases, Ex parte 103, Ex parte 115, Docket 25000, not in Ex parte 123, and also took a leading part in Docket 26515, Eastern Brick Rates. The first speech I ever made was before the Interstate Commerce Commission. This work required much study and through it I began writing on building and transportation economics.

When I first approached the Reconstruction Finance Corporation for a loan, I suppose I might have given you this more intimate history of my life, but it did not occur to me that it might be helpful or that it was necessary. My interest in public affairs has gradually increased in recent years. It sprung from my study of the railroads and what their administration has done not only to this industry and our company but the entire country. They have had much to do with the failure of the Nation to recover. Not only have they hurt the country but they have nearly destroyed themselves—poor management and too much political influence have been their undoing. Economic correction in transportation will regenerate the energies of the country beyond the fondest hopes of social dreamers.

One purpose of this story is to give the directors of the Reconstruction Finance Corporation my background, my early experience, my successes and failures. As for character, I believe it is a growing, living, virile thing—it is slowly acquired through experiences, many harsh and bitter, others pleasant and delightful. It needs most the vehicle of work and opportunity. Whether I have good character is for my friends and acquaintances to say, but I surely have had the opportunity to develop it.

My associations in Cleveland and my friends are largely within the City Club. This is an intellectual group which has conducted a public forum for years. It is nationally known for its fairness. It leans to the liberal side. I am a conservative, reactionary, perhaps, economic royalist, but still said to have a good social outlook. The thing I have in common with the most liberal men in that organization is my atheism, with a certain contempt for hypocrisy and intolerance.

Whatever you get from this personal story, you will be impressed with the opportunities I had as a young man. I could get jobs, could be promoted, could get backing, and could go into business. Public concern today is the lack of such opportunity. Opportunities for young people do not now remotely compare with those I enjoyed. This we must correct. I think in recent years our country has done many things which however well intentioned are in the wrong direction and will fail completely to accomplish what is expected or desired. Some of the results already appall us, the confusion does not seem to lessen and it may be increasing.

Maybe it is an indication of character to express myself frankly, or maybe I exhibit vanity, or maybe it is pressure which has been delicately referred to. You decide.

It is not clear why our loan was not made months ago. It is doubtful whether a better hypothetical case could be designed. Our problem is a perfect example of what Congress had in mind when the R. F. C. law and its amendments were passed. The administration of the law seems to have encountered imponderable difficulties which may not be lightly ignored. Is the task too complex for mastery? If R. F. C. administration cannot rid itself of every last vestige of politics and if constructive research is not emphasized and done, I fear the law will turn out disastrously for the people.

### Summary of Information Furnished R. F. C. in Support of Application for a Loan to the Hickory Clay Products Co., of Mineral City, Ohio

#### EXTENSION OF REMARKS

OF

HON. FREDERICK C. SMITH

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 9, 1940

LETTER FROM CLOYD W. MILLER TO RECONSTRUCTION FINANCE CORPORATION

Mr. SMITH of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from Cloyd W. Miller, under date of December 11, 1939, to the Reconstruction Finance Corporation:

MINERAL CITY, OHIO, December 11, 1939.

Mr. SAM HUSEANDS,  
Director, Reconstruction Finance Corporation,  
Washington, D. C.

MY DEAR SAM: De-airing: Referring to our phone conversation Sunday morning, you, of course, should know something about a de-airing extrusion clay machine, which is an improvement we propose

to install. Why you should not have known it before is hardly a fault of ours. No one in your organization ever asked me about it.

This technological advance in extrusion clay machinery got on the market about 6 years ago and almost revolutionized the industry. This machine has a vacuum chamber on the front of it which, under about 27 pounds' pressure, pulls all of the air out of the moving column. This produces denser material, a much smoother piece of ware, and eliminates blisters entirely, which have been the curse of the facing-tile industry for a generation. The industry has gradually adopted this machine, and I know of no operator in this part of Ohio that does not have one. The experimental stage has passed. Some manufacturers questioned the principle involved when it was introduced, but gradually the machine has been installed by almost everyone, and for the material we propose to make this machine is necessary. To improve the quality of our ware so we may compete with other facing tile we must have it. Your suggestion that we buy the machine on time is unsound for several reasons. If we pay cash we can probably buy it for several hundred dollars less than on time. On time we will have to pay 6 percent on unpaid balance, while the money from you should not cost over 3 percent. This is sound management and financing.

Face tile: Your persistence in classing us with brick plants seems inexcusable at this stage. I have repeatedly explained the difference to you. There is a growing market for facing tile. I do not know whether this is true about brick. I am not a brick producer. The firms in this locality that have dickered with me for this property during the last year have wanted it for facing tile. The fact that your clay loans as a whole are in arrears may not be used against this application, because most of them have been brick loans. Furthermore, many of those loans were made for the shallow purpose of employing men, without exhaustively analyzing their business possibilities. Do you not need more competent research talent, of a kind you can rely upon?

Sum needed: I have asked you to loan us \$35,000—\$10,000 for improvements; \$15,000 for inventory; \$10,000 to carry accounts. We below list the improvements we may need:

Shed 90 by 300, open on all sides for stock.....	\$3,000
Addition to machine room 24 by 60, two sides and roof.....	2,000
De-airing machine and installation.....	6,000
Power cutter.....	1,000
Hummer screen.....	1,500
Excavating behind plant.....	1,000
Steam powerhouse, 20 by 30, for drying steam.....	3,000
14-inch lathe and small shaper.....	500
Roof over raw clay, two sides, 16 by 60.....	1,250
Oak plank on overhead tram for trucks.....	250
Engineering.....	1,000
Total.....	20,500

Am I fair in asking you to loan me \$10,000 toward this \$20,500 of improvements? Does this look as if I am unwilling to accept my fair share of the responsibility in this undertaking? Do you think that \$10,000 is too much working capital to carry the accounts for sales of \$15,000 a month? Could you handle that volume of accounts on any less? If you think you could, tell me how you would do it. Do you think that a \$15,000 inventory is too large? We have had on this yard as much as \$30,000 worth of fireproofing in years gone by. How can \$25,000 do a \$35,000 job, the former amount being your latest suggestion yesterday? What is at the bottom of offering one-half of our needs?

Profit record: You referred to our lack of profit record of the last 5 years, though you know why we have not made profit. Plants of this kind do not make a profit when they are not operating, and the carrying charges invariably cause serious loss. Using this 5-year rule in approaching this risk is wholly destructive. Twelve years ago when I started this business we used \$125,000 to make these plant improvements. Did we have any profit record before that to guarantee that we would make money on the investment of \$125,000? Did we have any acquaintance in this trade? Did we have any good will to back this plant when that investment was made? Of course not, and if anyone had tried to apply the rules that you now impose for the continuance of this business the improvements would never have been made.

Repetition: Over the 16 months that I have been negotiating with you I have time and again explained this entire situation and these facts to your subordinates and to the directors of your organization, and your failure to understand is incredible.

Paternalism: You suggested that I go ahead with a sort of promise you would loan us more should we need it, depending, of course, on how we get along. Starting with less than is surely needed would be suicidal, hopelessly unsound. I do not want to be the subject of a paternalistic government. I want my rights under this law so I can proceed with what I deem a reasonable chance of success. I also want to retain my self-respect.

Transition: Several weeks ago you sent Mitchell out here to look over the plants in this neighborhood and to confirm what I had told you in letters and in person. I took him to 13 properties, and I showed him the transition in this industry. Out of 290 kilns, 57 are inoperative and 48 are ready for the junk pile. I also showed him that 217 kilns out of the 299 had formerly produced fireproofing, a low-grade product commonly called hollow tile, made out of No. 6 clay. Of those 217 kilns, only 46 continue the manufacture of this low-grade ware; 57 are inoperative and 114 have turned to the manufacture of new products using for the

most part No. 5 and No. 4 clay, which are better clays, instead of No. 6. We have in this locality very fine clay deposits, and it is indeed fortunate that there is available to these plants or to some of them higher grade clay (No. 5) which contains less objectionable matter and therefore can produce facing tile and high-grade glazed ware. We want to make facing tile and kindred products; in other words, utilize to the most profitable advantage the excellent qualities inherent in No. 5 clay. This is the reason it is not necessary to destroy our plant, as hundreds of plants have been destroyed in the clay industry throughout the country.

Building labor rates: I have dealt with causes of the transition of the industry in our locality in other communications. High costs of building are responsible, and these costs are directly traceable to governmental policies in transportation and labor. Your directors know something about the high costs of building. Thurman Arnold is now doing, in my opinion, the most constructive work for the building industry that has been done in a generation. Assuming, however, that he cleans out all the rackets and criminal activities that today exist and have for years in the building industry, we will still be left with craft labor rates in the building trades probably 50 percent too high in terms of average rent yield. What has been done by any candidate for office in the United States in recent years about this economic realism? Do you know a politician in the United States today that has guts enough to get on a public platform and say that building labor rates are twice as high as they should be? Will your directors make a recommendation to Congress to examine this fact and ask them to correct it?

Freight rates: As to transportation, what politician or public official do you know today who has the courage to say on a public platform that freight rates are 35 to 40 percent too high? Ask Joe Eastman what he thinks. Freight rates were raised about 100 percent on low-priced industrial and farm products from 1915 to 1920, and there they now are. Do you know a financier or banker of railroads today—and you directors are prominent in that field—that has the courage to say that freight rates are too high? Daniel Willard, the president of the Baltimore & Ohio Railroad, told me in his office several years ago that I was absolutely right about freight rates, and still he, one of the ablest railroad men in this country, seems to be without influence in this practical situation. Government is responsible for these uneconomical conditions in transportation and labor, and government has failed us.

Expediency: The philosophy of expediency, opportunism, in this country has run its course. The challenge to the democratic form which we have enjoyed is here now. If public opinion will not support fundamental economic remedies in the interests of the people as a whole as against advantages to minorities, we will lose our present form of government. Insidious measures designed principally to roll up votes must stop. They belong permanently in the dog house. Fundamental barriers to the exchange of goods and services must be removed.

Destruction of productive industry: Millions of dollars' worth of plants converting natural resources have been dismantled and destroyed in recent years. In our locality the Metropolitan Paving Brick Co., who make tile, face brick, and paving brick, has destroyed 4 plants, one of which cost more than a million dollars. The Cleveland Builders' Supply Co., at Cleveland, which formerly had 14 plants producing brick and tile in Cleveland, is now operating but 4; it has destroyed several and said recently that it will probably never operate more than 6. The Camp Co., at Mogadore, near Akron, formerly had 2 large plants, one of which it has destroyed. The National Fireproofing Co., it is reported, will soon tear down 3 units at Aultman, Ohio. It owns a very large plant at East Palestine, Ohio, which has not operated for 8 or 9 years, and unless conditions change it will probably be destroyed in the not distant future. These have been natural-resource conversion projects located right in the heart of the greatest potential building markets in the world, and still our Government stupidly, carelessly ignores these potential production facilities. How in God's name are we going to find jobs for six or seven million men when Government policies continue to encourage the destruction of productive enterprise?

Pressure upon directors: When Mitchell was here he very courteously remarked that your directors "would not submit" to pressure. He also said to Ralph Schory, our vice president, that my letters "confused" your directors. He added to me that he would not have answered your decision of July 5, which was handed to me by Merriam. He tried, I believe, in a gracious way to tell me that one needed to use subtle methods to help get a loan approved. He could not have meant anything else because I believe he was sincere when he said, "Miller, you have not applied for enough money," and I believe he was sincere when he said as I left him, "Miller, I am going to do all in my power to get your loan approved." He had previously said he understood exactly what we need. Now, the questions arise: Do you not believe your own man? Have you no confidence in your own man's ability to appraise this situation? Do you think that I somehow deceived him when he was here? Is it not humanly possible to get across to your directors the facts? As to pressure, his use of the word implied improper pressure, but I do not believe that the directors think that I have used improper pressure. Pressure of facts and argument and conclusions, sure, but based wholly upon merit. The Government, of course, does not intend to imply that I dare not discuss publicly my relations with it in a public matter. The loaning of public money to anyone is a public matter.

Politics: One of the faults of R. F. C. administration is its reliance solely upon the directors' own final decisions on every loan, of all sizes, everywhere in the United States. How can responsible subordinates ever be developed without some authority? How can politics ever be rooted out? How can centralization of power in Washington be reduced when 5 men hold on to it so zealously? The scheme for covering all sorts of political ramifications involved in the handling of public money is too obvious and thus surely defeats the sincere purposes of the act. If Jesse Jones desires an efficient, effective bank, he can only have it by building men to impartially do the work. Let America examine the banks in Canada. If a change of R. F. C. administration were made along these lines, it would obviate the need of the Mead bill.

Schram: Jones' comment—Why are your directors so remote and distant? Why are they so unapproachable? When I drive 350 miles to see one of them on Sunday, why does he not reciprocate the compliment and talk to me a few minutes? Jesse Jones said in his congressional testimony on the Mead-Allen bill:

"The directors and executive force of the Reconstruction Finance Corporation are most sympathetic to the problems of loans to distressed business. We live with it day and night, Sundays and holidays, and it could not be otherwise."

Very generous terms: As to terms, I quote from Jones' testimony before the same committee:

"Any deserving borrower, who can furnish security that will reasonably assure repayment of his loan, can have a loan, if he will apply to the Reconstruction Finance Corporation for it, and on very generous terms, provided the loan will serve a useful purpose and is consistent with the law \* \* \*"

If this is the intent why has our loan not been made? We have offered "adequate" security required by law. Why does Reconstruction Finance Corporation deny us "very generous terms" and demand triple adequate security plus \$50,000 of disciplinary security? Jones' statement was doubtless made in good faith but our experience denies it utterly.

I also quoted from Jesse Jones, printed in an article, "Big Texan," by Webb Waldron, Readers Digest for December.

"A man may have all the assets in the world but without character he's a poor risk."

I provided you with a 4,000-word thesis on my character. I have made an acceptable case in support of my application of this loan, straightforwardly showing you the weaknesses of a property as formerly operated, the causes of the transition in this industry, the character and ability of our management. I have contacted 15 to 20 different men (Gelback, Smith, Hall, Carpenter, Fraser, Cheadle, Davies, Merriam, Bassett, Ronan, Cole, Schram, Clark, Husbands, Coombs, Mitchell, Henderson, Klossner, Costello, and Coit) in your organization repeating endlessly the facts about this proposal. Was turning me over to a new person time after time a part of a plan to tire me out, or was I the buck literally being passed around, or is this simply governmental inefficiency?

Discord: Despite my disposition to be generous and considerate toward your agency it is curious indeed why we have been treated so. There is a limit to which even governmental bureaucracy may sensibly go in trying to put a citizen in his place or belittle him. For any intelligent person not to think this loan has been scuttled time after time for ulterior reasons, is simply beyond credence. Your directors understand the merit and common sense of our proposal. A loan applicant is being made the martyr of discord among the directors themselves. Stuffed-shirt formality, commonly called high hating, and evasion is a transparent cloak in these circumstances. Since Merriam gave me that decision which I innocently answered there seems to have been a deliberate effort to wear me down. My letters go unanswered. I have been forced to go to Washington several times and nothing I've done there could not have been accomplished better by mail were sympathetic response and attention being given our application.

With kindest personal good wishes, I am,  
Sincerely,

CLOYD W. MILLER, President.

Wallace E. Pierce

#### EXTENSION OF REMARKS

OF

HON. FRED J. DOUGLAS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 9, 1940

Mr. DOUGLAS. Mr. Speaker, words are a feeble gesture on an occasion such as this. We often think we can command the proper words to express ourselves, but could I call on a limitless vocabulary, I am sure when I try to speak about my beloved friend, WALLACE E. PIERCE, words seem inadequate to express my feelings of bereavement, sympathy, and appreciation.

No words of mine are needed to endear him to you or for him to have the place he rightfully occupies in the community and in the country.

His entire existence was hallowed with the love of his Creator and man and consecrated with the helpfulness of those in distress and cheer for those struggling out of despair. Ever dedicated to the cause of human freedom, he struck off the shackles of unmerciful dominion wherever he found them.

WALLACE PIERCE was a strong and vigorous American, conservative without being reactionary. Possessing a keen mind and a great force of character, he applied himself industriously to the study of national affairs. He led a useful, patriotic life, and it is a great sorrow to us all that so young a man was not spared to enjoy the brilliant future that lay before him.

Memories of his noble endeavor, of his geniality, and of our pleasant associations shall linger so long as we survive. The Congress can ill spare men of his kind.

#### Bodies of "Red" Dead Lie Frozen in Fantastic Forms—Thousands Add to Weird Aspect of Silent Near-Arctic Wilds

#### EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 9, 1940

ARTICLE BY LELAND STOWE

Mr. ANGELL. Mr. Speaker, the extraordinary session of the Congress recently concluded was given over entirely to consideration of war legislation. It was clearly demonstrated, not only from the discussions in the Congress, but from the Nation at large, that the American people are of one mind—that they will not again take part in a foreign war. Our duty is at home. Our own democracy is on trial and our welfare is in the balance. As time passes and we note the progress of the wars now taking place in the Old World, the destruction of property and of lives, more and more we are convinced that we must not under any considerations send our own forces overseas. That we may the more clearly appreciate the destruction that is being wrought between the contending forces now engaged in the northland, I ask leave to extend as a part of my remarks a report made by Leland Stowe, foreign correspondent for the Chicago Daily News, with the Finnish Army in the east. This report appeared in the Washington Evening Star in its issue of January 3, 1940. It is as follows:

In this sad solitude lie the dead: Uncounted thousands of Russian dead. They lie as they fell—twisted, gesticulating, and tortured. But they lie beneath a kindly mask of 2 inches of new-fallen snow. Now they are one with the cold, white shapes of the illimitable pine and spruce trees. An unknown legion of fallen, they have been sacrificed by Winter's hands and covered over with Winter's spotless sheet. They will not go back to the earth now for many months.

But even this profuse, virginal coverlet of near-Arctic wilderness cannot quite conceal the anguish of their last movement or the catastrophic suddenness of their end. Here all the pain and all the cruelty of their betrayal has been preserved by the frost king of the far north. It is as if Madame Tussaud, of the famous London Waxworks Museum, had decided to preserve one of the war's final horrors—as if she had created this scene of false peace and inexpressible tragedy and with appropriate simplicity had called it the field of battle.

Every January deep solitude hovers above the snows of Tolva-jarvi. But today it is infinitely deeper than in other years, for it is heavy with the ultimate loneliness of death, and thousands of the dead may be as lonely as a single one. Endless, profound, and voiceless peace, where the wounds of war are frozen and will bleed no more. In this place we have heard of a great, magnificent

victory. In this place the silence speaks of things which man may destroy but never more restore or resurrect.

#### SHATTERED TANKS ON ROAD

When we rode out upon the narrow finger of Lake Tolva's peninsula, we were not prepared for this. It is a thin and twisting road with pines and spruces standing high on either side and the white, frozen, bosom of the lake just beyond. All along this central artery of the battlefield, all along the road that leads to Lake Agla, 20 miles away, we saw the shattered tanks, and broken supply lorries, and heaped debris of the "red" army's annihilated divisions.

All along the roadway we saw strange shapes bulging beneath the snow among trees and shapes sometimes which might have been logs. Sometimes they looked like crooked limbs cast into the discard by the woodsman's axe. Sometimes heavy felt boots, bared of snow by the stumbling contact of some passing Finnish soldier, protruded suddenly and revealed the naked truth. Sometimes, too, we saw soldiers dragging frozen shapes, like pieces of cordwood, from the forest, and here and there bodies lay in crude contorted piles waiting for a final, nameless, common grave.

But, for the most part, last December's snowfall had cloaked these forms in the immaculate anonymity of the far northern winter. Nature had done her charitable best. It still did not quite seem possible that these could have been human beings only a few days ago, or that the mask of Tolva's snow concealed more and more hundreds of dead.

Then our white-painted army bus stopped at a point on the crest of the ridge. We climbed out and followed our guide into the forest on the left. "There are many of them here," he said. "They were all wiped out by our machine-gun fire." It was true; there were very many of them here.

#### SHOCK TROOPS LIE DEAD

Suddenly we found ourselves among whole groups of white-covered figures. Some lay straight on the ground, but mostly the arms were drawn convulsively upward or projected stiffly above the shoulder. Mostly their legs were bent or doubled. Sometimes one body, curiously oversized with its 2-inch coating of snow, lay grotesquely across and against the surrounding white. These were the Russian dead; and soon we saw that most of them wore heavy overcoats, that their boots were good, and that all had carried gas masks. They belonged to a picked shock-troop division of the Red Army. Now they were strewn on both sides of the road for more than a mile along the extended peninsula, and then, farther on, and yet farther, among the spruces and beside the road that leads to Aglaarvi.

All about us lay featureless human shapes, their masks of snow making them more anonymous than death itself. Beside one of these I paused. Why did one wonder what these men looked like and what might be written on their faces? Slowly I brushed the snow away. An unshaven face with an alabaster forehead emerged first, and then the stubble of close-cut black hair. This face was peaceful, as if its owner had fallen asleep here in the blizzard. It was the face of a man of 30—still frozen and lifeless.

But there were other faces on which was written such suffering as can scarcely bear contemplation. One of these belonged to a young soldier who had been shot in the right knee. He lay with both hands clutched desperately against the wound. This had been the young Russian's last action, and the terrible frost of 25° below zero—perhaps 35° below—had mummified him in the precise attitude in which he had died.

We could not look for long. Never has any battlefield been more deeply saturated with the imploring silence of the dead. It was all about us; that and the frozen figures and motionless, speechless faces.

Steel helmets with a slender red star painted on them lay where they had fallen. From some of the pockets protruded letters or newspaper clippings, or membership cards in the Bolshevik Comsomol organization; these had spaces for dues to be paid up to the year 1946. Oddly enough beside one soldier we found the photograph of a young man lying in a coffin. It would be impossible even to dig a grave for his brother here until spring.

#### LETTER FROM SOLDIER'S WIFE

Someone also picked up a packet of letters written by a soldier's wife back in Leningrad. Although they were written by an almost illiterate woman, he was able later to translate them. They told how she had written letter after letter, but still had received no answer since he had been taken by the "red" army in October; how she had sent 5 rubles this time and 20 rubles another; how she had sent a picture of their little boy Loonja; how the bills could not be paid, and how they waited for him to come home.

"I spent the holiday, November 7, very badly," wrote the soldier's wife. "I cried all the time. Loonja keeps asking when is daddy coming home. He asked Uncle Pete, 'Haven't you seen my papa?' Uncle Pete said he had not seen you, but that you were coming home soon. Loonja said, 'Well, tell mother that daddy is coming home and that if he comes at night, she must wake me up as soon as he comes.'"

I hope that I did not see this Russian soldier's face. We left him there, with countless hundreds of other proletarians of the Soviet Union, in Tolva's snow-bound forest of dead. There must have been many Finnish dead also, though we did not see them—perhaps because they had been the first to be carried away. On almost all these rigid, frozen bodies there must have been similar letters.

But they will never be read again. In this vast solitude, all will return to the earth when another inevitable spring burgeons the pine and spruce forests of eastern Finland.

### Voice of the Unknown Soldier

### EXTENSION OF REMARKS

OF

HON. FRED C. GARTNER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 9, 1940

ARTICLE BY COL. VINCENT A. CARROLL

Mr. GARTNER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Col. Vincent A. Carroll, which appeared in the Philadelphia Inquirer on Sunday, November 5, 1939:

#### VOICE OF THE UNKNOWN SOLDIER

(By Vincent A. Carroll, colonel, Cavalry Reserve, U. S. Army, past national vice commander, American Legion)

Flags were flying when this soldier of America marched off to the World War. Bands played along Fifth Avenue and Main Street. Cheers rose to the skies, and he smiled at the crowds, because he was young and unafraid.

Today he rests beneath a monument which bears the phrase, "Known but to God." It's a lonely phrase, but then the Unknown Soldier died in a lonely way. And today, as war grips Europe again, I feel that this soldier might like to return and talk to America.

"We were not afraid to die," he might say, "the soldiers that I represent. Many of us volunteered. Some left college courses half finished; some left fields half plowed. But all went willingly when the time came, because every man thought he was going to fight for something great and good, something bigger than himself."

"I was the youth of my generation," he might continue. "I had ambition and hope for the future. I was the son of a brakeman or a railroad president, or the son of a manufacturer or a farmer. I had inherited an American's birthright, the opportunity to chart my own destiny in a free nation. But today I am the Unknown Soldier."

"I am a symbol of all those men who slipped from the war theater like ghosts, leaving only the empty word, 'missing.' We didn't want to go out that way. We didn't want our families and our friends to wait and worry and never be able to say, 'He is here, or he is there.'"

"But the past 21 years have blurred those memories. They have become like lengthening shadows, finally settling to the peace of darkness. Until this Armistice Day my spirit has been at rest. Now that peace is troubled."

"Mixed with the even tread of the sentry guardians there are new and ominous sounds. Is America preparing to march again? Are these sounds a prelude to war? Will they finally be translated into another sound—the sound of a bugle blowing taps for the young men of this generation over a grave like mine?"

"It must not, it cannot be. There are no more wars for America to fight except the last one on earth, and only if need be to protect and maintain her form of government. Men build monuments to memories. And I hope that the monument above my body will keep the memories of 1917 and 1918 alive."

"Through the years since those memories were born I have heard my comrades raise their voices and urge that America be kept safe from within as well as from without. I have also heard voices from other lands. These voices have spoken not to America but to people from their own lands who have come to America, urging them into action that would destroy our American Republic and leave us helpless in the face of a world revolution. Other foreign voices talk of our entry into new wars. But these voices have not troubled my spirit."

"I remember too well the imperishable principles given us by George Washington. He warned against foreign entanglements. And I know that those of my generation wish to see this warning preserved. We want to see it handed down unchanged to the next generation, just as we received it in American schools."

"I know, too, that those of my time were more sensible of the American tradition than even were the founding fathers. For when it came to us this tradition had been tried and found good. It was a refuge to the oppressed and an example to the oppressor."

"That tradition was named democracy in free America. The democracy we fought for and died for was different. Ours was made for freedom and peace; the other was made for dictators and war. The clashing imperialisms of Europe and Asia are not for us. Our first duty, our every obligation, is to America. We cannot interweave our destiny with the destiny of other nations."

"Today, as gentle autumn winds rustle bright leaves above my resting place, I would like to make a quiet plea. I would ask that

the peace of this season remain and be carried through successive seasons. I would ask sane thought, rational actions to preserve this peace. For, with the vast legion which I represent, I feel that American youth should never again have to die the lonely way on foreign soil because of wars which have no meaning or value to the land they represent—America."

#### A LEGION FOUNDER

Once Vincent A. Carroll took off his full-dress suit and gave it to Prince Nicholas of Rumania so that the distinguished visitor could attend a Philadelphia dinner in his honor. But most of the rest of Mr. Carroll's life has been spent doing things for his own countrymen.

Born in Philadelphia, he was graduated from the University of Pennsylvania Law School and was admitted to the bar in 1915. Two years later he exchanged his brief case for a rifle. In August 1917 he was commissioned a second lieutenant in the National Army, sent to Camp Meade, Md., and assigned to the Seventy-ninth Division.

Five months later his title was Captain Carroll, the only officer out of a thousand-odd, then being promoted, to jump more than one rank. In France he won high efficiency rating, the rank of major, and was cited for gallantry in action and recommended for the Distinguished Service Medal by his commanding general.

The summer of 1919 found him back in Philadelphia picking up the threads of his interrupted law practice. Shortly afterward he was appointed Special Assistant Attorney General of the United States and a special United States attorney at Philadelphia; then he became assistant district attorney of Philadelphia County.

Tall, carefully dressed, and a fearless prosecutor, Mr. Carroll has tried hundreds of murder cases, thousands of other cases growing out of Philadelphia's more serious crimes. Somehow he has found time to keep up his duties as a Reserve officer, although, in his own words, "I work 25 Sundays a year and at least 2 nights every week." As a Reserve officer he became Lieutenant Colonel Carroll, then Colonel Carroll of the Cavalry Reserve, United States Army, in command of the Three Hundred and Fifth Cavalry.

Colonel Carroll was one of the founders and original members of the American Legion and a past national vice commander. He was the first commander of Philadelphia's Post 270 and later chairman, National Defense Committee, Department of Pennsylvania.

Perhaps the best index of Mr. Carroll's services to his city, State, and Nation may be had from a note:

"Again I congratulate you. Keep up the good work.

"CHARLEY."

"Charley" was Charles Edwin Fox, then district attorney, and his words needed no repetition. For Mr. Carroll tends naturally to service, whether it is in the form of a full-dress suit or in fighting for his country. Certainly no man could be better equipped to voice the imagined thoughts of America's Unknown Soldier.

#### Ferdinand A. Silcox

#### EXTENSION OF REMARKS

OF

#### HON. ANTHONY J. DIMOND

DELEGATE FROM ALASKA

#### IN THE HOUSE OF REPRESENTATIVES

Thursday, January 4, 1940

#### RESOLUTION BY CHAMBER OF COMMERCE OF JUNEAU, ALASKA

Mr. DIMOND. Mr. Speaker, in the recent untimely death of Ferdinand A. Silcox, Chief of the United States Forest Service, the Nation suffered a distinct loss.

In Mr. Silcox were to be found the ability and the outstanding virtues which eminently fit a citizen for public service. Possessed of high intelligence and really prodigious capacity for intellectual work, of unimpeachable integrity, our late great friend at the same time was so sound in judgment and so keen in his appreciation of relative values that his passing leaves a void not likely soon to be filled.

The death of Mr. Silcox was sharply felt in Alaska. The esteem in which he was held in the Territory is shown in a resolution adopted by the Chamber of Commerce of Juneau, Alaska, on December 21, 1939, which is as follows:

Be it resolved by the Juneau Chamber of Commerce, That the people of Alaska have heard with profound regret of the death of Hon. F. A. Silcox, Chief Forester of the United States; that in the death of Mr. Silcox, Alaska has suffered a severe blow in the loss

of an official charged with the important task of administering the forest reserves of the Territory, an official who understood his work and fully appreciated his responsibility and who convinced the people of Alaska during his recent visit that the administration of his department, while he remained at its head and while his theories of government were permitted to be carried out, would be in their best interest at all times; that Mr. Silcox' charming personality, common sense, and frankness made for him firm friends of all who were privileged to meet him last summer; and therefore we feel free to speak for all the people of Alaska in our expression of sorrow in the loss of a real friend; be it further

Resolved, That in appreciation of the high regard entertained by the people of Alaska for the deceased forest chief we express to the President of the United States and to the Secretary of Agriculture the sincere hope that Mr. Silcox' work may continue to live in a perpetuation of his methods and theories of administration; be it further

Resolved, That copies of this resolution be sent to the President of the United States; the Secretary of Agriculture; Hon. A. J. Dimond, Delegate to Congress; and Hon. Ernest Gruening, Governor of Alaska; and to Hon. B. F. Heintzleman, regional forester.

#### Reciprocal-Trade Agreements

#### EXTENSION OF REMARKS

OF

#### HON. ALBEN W. BARKLEY

OF KENTUCKY

#### IN THE SENATE OF THE UNITED STATES

Wednesday, January 10, 1940

STATEMENT BY HON. CHARLES L. McNARY, OF OREGON, AND  
LETTER BY HON. CORDELL HULL

Mr. BARKLEY. Mr. President, a statement issued by the distinguished Senator from Oregon [Mr. McNARY] was the basis of a letter written to him by the Secretary of State on December 16, 1939, to which I referred on Monday last, dealing with certain phases of the reciprocal-trade agreements. I ask that the statement of the Senator and the letter of Secretary Hull be printed in the RECORD.

There being no objection, the matters referred to were ordered to be printed in the RECORD, as follows:

#### STATEMENT BY SENATOR McNARY

It is notable that Secretary of State Hull has never discussed reciprocal-trade agreements in the light of changed conditions made necessary by the conflict in Europe.

For 5 years the United States has been operating under the trade-agreements program. These agreements were concluded in peacetime, and definitely assumed a continuation of normal trade and economic activity in the world. Even in normal times these agreements have proved a real hardship to many American producers. Since hostilities have ensued, new elements have entered the picture, and are creating additional hardships to those who produce and toil in America.

The most immediate effect of the war is a depreciation of foreign currency in relation to the American dollar. It will be noted that from December 1, 1938, to December 1, 1939—exactly a year—the British pound declined 17 percent in relation to the dollar; the French franc declined 66 percent from May 1936, to December 1939, in relation to the dollar; while the Canadian dollar has declined practically 12 percent from December 1 of last year until the same date this year.

Depreciation of currency imposes a heavy burden on this country whose currency remains at the old level. Indeed, the effect is two edged. First, it raises the price of American goods to foreign buyers in terms of their money. This results in a decline of demand for American goods and a diversion of trade from the United States to other countries. Second, and most important effect of trading with countries having depreciated currency, is the ease with which they sell their own articles of commerce. In plain language, it means a substantial reduction in the price of articles imported into the United States. The practical effect is that it removes the tariff on imported articles and places labor on the farm and in the factory on a level with the underpaid workers in other lands.

As an example, if an article cost one pound in England, American importers had to pay \$4.72 for the article at the time of signing the trade agreement. Today, this article costs but \$3.90. Actually, we are subsidizing imports of goods which we produce. Any program which permits goods from countries which have depreciated currencies to enter the United States at substantially reduced duties is opposed to the best interests of American agriculture and industry.

However, there is a partial remedy for this situation. In all these so-called reciprocal trade agreements provision is made for modification or cancellation if at any time variations should occur in

exchange rates which either Government considers prejudicial to its industries or commerce.

Here the power is conferred upon the Secretary of State to act upon his own initiative. In my opinion he should avail himself of negotiation or cancellation of the various agreements in the interest of fairer treatment of American producers.

TEXT OF LETTER, DECEMBER 16, 1939, FROM THE HONORABLE CORDELL HULL, SECRETARY OF STATE, TO THE HONORABLE CHARLES L. McNARY, UNITED STATES SENATE

The Honorable CHARLES L. McNARY,

*United States Senate.*

MY DEAR SENATOR McNARY: Thank you for sending me your statement to the press, enclosed with your letter of December 12, 1939. I am glad to comply with your request to give you my views on the subject matter of the statement, which deals with certain aspects of the trade-agreements program.

I find in your statement a number of categorical assertions. At least the more important of these should certainly be examined in the light of actual facts.

The central point of your argument relates to the effects upon our foreign trade of recent wartime currency depreciation in Canada, Great Britain, and France, especially in connection with the adjustments of our tariff rates granted to these countries in the trade agreements concluded with them. You claim that our country has suffered so serious an injury as a result of the depreciation of these currencies that we should immediately invoke the exchange rate provisions in our trade agreements for the purpose of modifying or canceling the agreements themselves.

Your sole evidence of injury is the citation of a theory—that when one country depreciates its currency unit, another country, whose currency remains at the old level, inevitably finds its exports to the depreciated-currency country retarded and its imports from that country stimulated. Without discussing the merits of the theory, let us look at the facts.

An examination of what happened to our export and import trade with the three countries you mention during the first 2 months of the war—namely, September and October, 1939 (the latest complete figures available)—as compared with the corresponding period of 1938, reveals the following data:

In the case of Canada, our exports to that country rose, between the two periods, by \$35,989,000, while our imports from that country increased by only \$23,322,000.

In the case of Great Britain, our exports to that country rose by \$8,121,000, while our imports from that country increased by only \$1,320,000.

In the case of France, our exports to that country rose by \$1,131,000, while our imports from that country declined by \$4,503,000.

Taking the three countries together, our exports to them showed an increase of \$45,241,000, while our imports from them rose by only \$20,139,000.

Whatever may be the case in the future, the theory you cite, in its application to the situation with which we are immediately concerned, falls completely to square with the facts. Yet it is on the basis of this theory, which to date has been entirely at variance with the facts, that you ask the Nation to upset trade agreements with three commercially important nations.

Experience shows clearly that variations in foreign exchange rates constitute only one among many factors which influence a country's export and import trade. Depending upon the operation of these other factors, a depreciation of foreign currencies may or may not adversely affect a country's industries and commerce. To protect ourselves against the possibility that a depreciation of foreign currencies may have such an adverse effect upon our trade, we have written into our trade agreements a safeguarding provision, which, in the agreement with Great Britain, for example, reads as follows:

"If a wide variation should occur in the rate of exchange between the currencies of the United States of America and the United Kingdom, and if either high contracting party should consider the variation so substantial as to prejudice the industries or commerce of the territories of that high contracting party, such high contracting party shall be free to propose negotiations for the modification of this agreement; and if agreement is not reached within 30 days after the receipt of such proposal, the high contracting party making the proposal shall be free to terminate the agreement in its entirety on giving 30 days' notice in writing to that effect."

We are prepared to give full effect to this safeguarding provision whenever adequate evidence is developed to show that the depreciation of another country's currency has, in fact, prejudiced the industries or commerce of this country. Your statement contains no such evidence. Nor has evidence of this type, with reference to any country with which we have concluded a trade agreement, been presented, to date, to the interdepartmental organization charged with the execution of the trade-agreements program.

Equally unsupported is your assertion to the effect that "even in normal times these [reciprocal-trade] agreements have proved a real hardship to many American producers." To which producers do you refer?

Surely you do not mean those millions of producers in agriculture, forestry, mining, and manufacturing industries—including many in your own State of Oregon—who, in recent years, have been overwhelmed by lack of adequate foreign markets for their surplus output, and to whom the reduction of trade barriers in

foreign countries, secured through trade agreements, has given a new hope, a new opportunity, and an actual expansion of sales at home and abroad. They could not have been hurt by the trade agreements.

As for the branches of production immediately affected by the adjustments of our tariff rates embodied in the trade agreements, every possible care has been exercised by the interdepartmental trade-agreements organization, comprising five departments of the Government, to make sure that the producers concerned are amply safeguarded against injury. Experience in connection with the negotiation and operation of 22 agreements offers abundant proof of this. It also affords full demonstration of the fact that, here again, we are prepared to reconsider any action taken whenever adequate evidence is developed to indicate the need for modification—whether such need arises out of the appearance of facts previously unknown to the Government or out of changed conditions.

Let me cite two cases. In 1938, after the trade agreement with Czechoslovakia was signed and its terms were made public, new information was presented to the interdepartmental organization, which indicated the desirability of making changes in the duty adjustments granted in connection with certain glass and cork products. Accordingly, before the agreement was put into effect, we negotiated an amendment embodying the necessary changes. In recent weeks, because of emergency conditions arising out of the European war, it has been found desirable to alter the terms of our trade agreement with Canada as regards the reduction of our import duty on fox furs and skins. Accordingly, on November 30, 1939, I issued formal notice of intention to negotiate with Canada a supplemental trade agreement relating to these products.

There is in existence a convenient channel through which information and views bearing on every feature of the trade-agreements program can be presented by the interested parties both before and after the negotiation of any agreement. It is the Committee for Reciprocity Information. With that channel you are well acquainted since you have availed yourself of its facilities on several occasions to furnish the interdepartmental trade-agreements organization with valuable data in behalf both of industries concerned with a possible adjustment of our tariff duties and of industries seeking to secure a reduction of trade barriers against their products in foreign countries. If you or anyone else have evidence pointing to the desirability of change in any phase of the trade-agreements program or in any of the existing trade agreements, such evidence is thoroughly welcome. But I am sure that you would neither expect nor desire the Executive branch of the Government, in performing a function with which it has been charged by the Congress, to act on the basis of unsupported assertions.

Finally, I should like to refer to your statement that "Secretary of State Hull has never discussed reciprocal-trade agreements in the light of changed conditions made necessary by the conflict in Europe." More than 2 months ago, in an address before the National Foreign Trade Convention in New York, on October 10, 1939, I gave special consideration to precisely this problem. I dealt with it even more extensively in my address before the national annual meeting of the American Farm Bureau Federation in Chicago on December 5, 1939. In case these addresses have escaped your notice, I take pleasure in sending you herewith copies of the full text.

I should like to call your attention particularly to my Chicago address. On that occasion I presented what I consider as conclusive evidence of the advantages secured by the country as a whole, and more specifically by our farmers, from the operation of the trade-agreements program. I also indicated some of the urgent reasons why this Nation, in its own best interest and in the face of the present grave emergency conditions, should continue to adhere to the policy underlying that program.

Please let me assure you that the Department of State and the other appropriate agencies of the Government are studying with the utmost care every phase of the possible effects of war in Europe upon the foreign trade of the United States and upon the operation of the trade agreements now in effect. The step we have taken with respect to the Canadian agreement, mentioned above, is an example of our readiness to act whenever circumstances point to the need for action.

Your entire statement, taken in conjunction with other utterances recently made by you, clearly has for its purpose the discrediting and destruction of the trade-agreements program, which would mean a return to the embargo tariffs of the Hawley-Smoot regime or their equivalent, and to a process of iniquitous logrolling in tariff adjustment. The "evidence" you now adduce in support of your assertions that trade agreements have imposed hardships on our domestic producers is on a par with the "evidence" trumpeted throughout the country 10 years ago by the sponsors of the Hawley-Smoot tariff, in support of their reckless assertions that tariff embargoes would give our agriculture and industry permanent and resplendent prosperity.

We all know that the operation of the Hawley-Smoot tariff did not prevent, but was largely responsible for, the worst economic disaster which has ever struck our country. No one can disprove the fact that the trade-agreements program has been an essential factor in bringing about the substantial economic recovery from the heartbreaking conditions of the early thirties which has occurred in this country during the last 6 years. During the present emergency no greater misfortune could befall our Nation than a return to the evil policy of tariff embargoes which would inevitably be the case if the trade-agreements program were abandoned.

That would be tantamount to leading the country back to the kind of economic prostration into which a policy of tariff embargoes helped so greatly to plunge it only a few years ago.

Sincerely yours,

CORDELL HULL.

## The Significance of Inter-American Solidarity

### EXTENSION OF REMARKS

OF

HON. MORRIS SHEPPARD

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Wednesday, January 10, 1940

ADDRESS BY HON. JOSEPHUS DANIELS

Mr. SHEPPARD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address delivered by Ambassador Josephus Daniels before the Institute of Public Affairs of the Southern Methodist University, at Dallas, Tex., on December 2, 1939, on the subject The Significance of Inter-American Solidarity.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The American countries, by evolution, have in our day reached the high plane where their relations are characterized by the term "good neighbor." This designation connotes the ideal which forward-looking men have desired in past years when suspicion has been a fruitful source of misunderstandings and conflicts.

There was a time when our neighbors to the south characterized the United States as "the Colossus of the North," regarding our superior wealth and strength as giving us the power, which was sometimes used, to assert dominance. Later they described our policy as one of "the big stick"—as, for example, when they felt we took Panama in order to build the Canal connecting the Atlantic and Pacific Oceans. Theodore Roosevelt frankly avowed his belief in the so-called "big stick" policy in a message to Congress September 6, 1904: "The United States may be forced to act as a police force, however reluctantly. In applying the Monroe Doctrine to Cuba, Venezuela, and Panama we have acted in our own interest as well as in the interest of humanity at large." Amplifying this policy, Theodore Roosevelt said:

"Any country whose people conduct themselves well can count upon our hearty friendship. If a nation shows that it knows how to act with reasonable efficiency and decency in social and political matters, it need fear no interference from the United States."

Otherwise—with Uncle Sam as jury and judge—the advocate of the "big stick" promised intervention.

Others, when marines were landed in small countries and assumed the right to supervise elections and direct certain fiscal operations that benefited American investors, were not slow to designate such assumption of power as "dollar diplomacy." It was in the Taft administration that the policy of the State Department's active interest in regard to business came to be known as "dollar diplomacy." Secretary Knox declared that the Monroe Doctrine "did not depend upon technical legal right but upon policy and power." Under Secretary Welles not long ago made a declaration showing the change of policy when he declared: "Dollar diplomacy, I am glad to say, is now a thing of the past."

Again, when, without force or reaping benefits, Uncle Sam was believed to be taking smaller nations under his wing and preaching to them a morality he himself did not always practice, there was no lack of criticism at the attempt to play the "big brother," an attitude which ran across the grain of a sensitive and proud people. These accusations were sometimes unjust and sometimes had more or less justification. They were not without some support in the United States, as when Woodrow Wilson in 1913 at Mobile said that small pan-American countries "had the hardest bargains driven with them in the matter of loans than any other peoples in the world," and declared "we ought to be first to take part in assisting in that emancipation."

Woodrow Wilson, on January 6, 1916, said that "the Monroe Doctrine demanded merely that European governments should not attempt to extend their political systems on this side of the Atlantic," and observed that there "was no promise in it of what America was going to do with the implied partial protectorate which she apparently was trying to set up on this side of the water." Mr. Wilson added that the pan-American countries had not been certain what the United States would do with her power, and commented: "That doubt must be removed." It was not removed until the Franklin Roosevelt administration gave assurance that the Monroe Doctrine would not be used as a shield for imperialistic activities. He made it clear that the Monroe Doctrine was "for the Western Hemisphere against outside aggression, not as a weapon to be employed by one American government against another."

Thus was set at rest the fear expressed by a Honduran statesman: "The Monroe Doctrine, instead of being considered as a guar-

anty of independence by Latin-American countries, has been regarded as a menace to their existence." The utterances of orators and editors in the United States contributed to such fears, as when Henry Watterson declared for the annexation to the United States of every foot of land from the Rio Grande to the Panama Canal, and a flamboyant jingoist speaking at a banquet in New York opined:

"American for Americans, yes; but understand it means North America for North Americans. We must take all of the territory south of the Rio Grande. \* \* \* Looking at the map of South America, we see that it is the shape of a ham. Uncle Sam's favorite dish is ham."

It has been such imperialistic bombast, misrepresenting the sentiment of our country, that has embarrassed all diplomats and statesmen charged with incarnating the true American spirit.

If there was fault and misunderstanding and crimination and recrimination, as there were, the blame was not all on one side. Some orators and writers south of the Rio Grande were quite as violent in condemnation of the policies of the United States as the most vocal critics in our country. This situation confronted Mr. Roosevelt when he became President. He did not declare that his country was all white and the other countries all black. He did not review the misunderstandings of the past or assess the praise or blame of his own people and Government or other peoples and governments. In effect, he wiped the slate clean by a new declaration shot through with brotherhood and friendship and mutual cooperation, summed up in the words "good neighbor," saying in his inaugural address:

"In the field of world policy I would dedicate this Nation to the policy of the good neighbor—the neighbor who resolutely respects himself and, because he does so, respects the rights of others—the neighbor who respects his obligations and respects the sanctity of his agreements in and with a world of neighbors."

It may be—I do not know—that Mr. Roosevelt was familiar with a golden Mexican legend which runs like this:

San Ysidro was plowing his garden one spring day. He looked up and saw an angel, who said to him: "The Lord wants to see you, Ysidro. Come with me." He answered that he was busy. "I can't go now. You tell the Lord that I am late in getting my corn planted and that I'll see him when I have finished."

The angel retired, but soon another heavenly messenger appeared in the field and said: "The Lord wishes to see you immediately, Ysidro, and directs me to say that if you do not come at once, He will send hot winds and drought that will wither your corn."

Ysidro, dripping with perspiration in the hot sun, continued plowing, pausing to send back the message: "I've seen hot winds and droughts many a time before. They don't bother me. I can bring water from the river. Tell the Lord I can't come now, but I will see Him when I have finished planting my corn."

Not long afterward another heavenly courier with stern mien tapped Ysidro on the shoulder and said, "I am commissioned to tell you that the Lord does not like your attitude and sends word to you that unless you come with me right now, He will send a plague of locusts to devour your corn from the top and a plague of cutworms to eat its roots."

Ysidro did not stop plowing, but sent back the answer: "That does not frighten me. I've had plagues before, but by use of fire and hoeing and hard work I've harvested my crop all right. You tell the Lord I'll finish my plowing tomorrow and will see him when my work is completed."

The messenger from the skies disappeared, and before the fourth messenger descended he had finished several furrows. This last angel had the appearance and bearing of authority. As he flapped his wings and walked along the furrows to keep step with the stubborn plowman, the angel spoke sternly: "The Lord isn't going to argue with you any more, Ysidro. He commands me to tell you that if you do not come with me without a moment's delay, He will send you a bad neighbor."

That threat terrified San Ysidro. He called, "Whoa" to his mule, who stopped short, and he wrapped the reins around the plow handle. The look in his eyes showed that fear had taken possession of him.

"The Lord says unless I come He will send me a bad neighbor, does He? I cannot stand that infliction. Life isn't worth trying to live with a bad neighbor. You tell the Lord I can stand hot winds and droughts, locusts, cutworms, and all kinds of plagues. I can endure anything but a bad neighbor. I'll go with you right now," and he stopped short in the middle of the row, not even waiting to unhitch the mule from the plow.

The announcement by President Roosevelt of the good-neighbor policy created an atmosphere of friendliness in all Pan America, which was strengthened when deeds followed words, eliciting from Dr. Saavedra Lama, Argentine Minister for Foreign Affairs, the statement that it had brought about "for the first time a current of community of ideas and sentiments without suspicions and without ill will." Certain powers of semiguardsmanship in Cuba, under the Platt amendment, were surrendered by the United States; marines were withdrawn from Central American countries; a revision of the Panama Treaty that cemented friendship with the isthmian republic; the declaration at the Montevideo Pan American Conference that no country had the right to intervene in the internal or external affairs of another; the negotiation of treaties of reciprocity to promote the exchange of commerce and the placing of foreign trade upon bases of mutual benefit; and other guarantees formulated by the recent Pan American conferences have resulted in the closest and most friendly relations between the countries on this hemisphere.

In December 1933, in an address at the celebration of the birthday of Woodrow Wilson, President Roosevelt quoted with approval the historic declaration of President Wilson, made at Mobile in 1913, in which Wilson had said, "The United States will never again seek one additional foot of territory by conquest." I had the honor to accompany President Wilson on that trip and was thrilled when I saw that his speech was received with enthusiastic applause by diplomats south of the Rio Grande, as well as by his own countrymen. It is well at this time further to reflect upon Wilson's epoch-making address, concerning which Roosevelt said, "The complete fruition of that policy (largely as a result of the convulsion of the World War and its aftermath) has not in every case been obtained." He added, "And in this we, all of us, have to share the responsibility." He continued:

"I do not hesitate to say that if I had been engaged in a political campaign as a citizen of some other American republic I might have been strongly tempted to play upon the fears of my compatriots of that republic by charging the United States of North America with some form of imperialistic desire for selfish aggrandizement."

"As a citizen of some other republic, I might have found it hard to approve of the occupation of the territory of other republics even as a temporary measure."

"It therefore has seemed clear to me as President that the time has come to supplement and to implement the declarations of President Wilson by the further declaration that the definite policy of the United States from now on is one opposed to armed intervention."

The high-water mark of the "good-neighbor policy" was reached at Panama this October, insuring continental solidarity, when the declaration of Panama was promulgated by the unanimous vote of all the 21 pan-American countries. That conference fulfilled the aim of Simon Bolivar, who called a like gathering at Panama in 1826. He was unable to bring his proposal to that happy fruition it so richly deserved, but his failure was obviously due to the fact that his ideals were those of today, of a hemisphere linked by the churning screws of steamers, by beating wings, and by words and messages transmitted with the speed of light under the seas or through the air; but the lack of communication in those days could not but jeopardize the free and friendly exchange of ideas between the peoples of the Americas.

A quarter of a century ago, war clouds rose over Europe. The Americas, strong and prosperous with the first flush of youth, but lacking in the understanding only to be gained through experience, were not ready for the moral upheaval, for the disruption of their sea-borne trade and their overseas markets and sources of supplies, nor for the financial crisis which so quickly seized the world. The ideals of Bolivar had not yet matured. We in the Americas were still young and still lacked the light cast so long before by George Washington and Simon Bolivar. We did not yet realize what should be our goal and our service to humanity—a continental solidarity, both moral and economic, for the maintenance of peace in this hemisphere—a tolerant and secure haven for the oppressed and a place where our folk may enjoy their God-given right to the pursuit of life, liberty, and happiness.

One hundred and thirteen years after Bolivar's Panama conference, the clouds of war have again risen over Europe. But this time, the Americas are prepared, and the ideals of Bolivar found their expression in the harmony of understanding which brought about the meeting of the ministers of foreign affairs of the American republics in Panama from September 23 to October 3, 1939.

This conference was called on the basis of the declarations solemnly taken by these American republics in Buenos Aires in 1936 and implemented at Lima in 1938. In Buenos Aires, the nations of this hemisphere entered into an agreement, in the case of an international war outside this hemisphere which might menace the peace of the American republics, to consult as to how best the signatory states might effectively cooperate in the preservation of peace on the American Continent. They also agreed, in the Declaration of American Solidarity and Cooperation, that every act susceptible of destroying the peace of America affects each and every American republic and justifies the initiation of the procedure of consultation. At Lima the American republics reiterated the principle of consultation and provided that it should be resorted to whenever the peace, security, or territorial integrity of any American republic is threatened and with this in view the conference implemented the principle by establishing that the ministers for foreign affairs of the American republics, when deemed desirable and at the initiation of any one of them, should meet.

Shortly after the outbreak of war it became evident that a situation had arisen which might disturb the peace of America and which would justify the initiation of the procedure of consultation, and so the Government of Panama, following a preliminary exchange of views among several of the American republics, extended invitations for consultation at Panama.

The purposes of the meeting may be listed briefly as follows:

First. The American republics should endeavor to reach some uniform standards for use in each government's individual determination and assertion of its rights and obligations as neutrals. The advantage of reaching such a uniform basis for consultation of these matters would obviously strengthen the capacity of each individual government to maintain its sovereign rights and also to strengthen the collective capacity of the several nations to maintain and preserve peace on our continent.

Second. There was the question of individual or collective measures to preserve our lands from the conflict overseas and keep war away from our world.

Third. Recalling the destruction and dislocation of inter-American economic, financial, and commercial intercourse so costly to the Americas during the years of the Great War, as well as thereafter, the conference had agreed to discuss and consider practicable steps to defend national economies of the American republics against the shock of the present war as well as to establish long-range programs to cover the years when this tragic incident may have run its course.

Finally, the making of efforts to endeavor to arrest the present conflict or at the very least to humanize its effects.

There were some 14 basic resolutions taken, and I feel that it may be of interest to you for me to tell you a little about some of them.

Regarding the maintenance of neutrality there were several declarations and resolutions. The meeting approved a resolution that each government of the American republics transmit to the Pan American Union in Washington, D. C., for the information of the other governments, the text of all measures that might be taken by that government relative to its neutrality in the present war. This, you will readily understand, makes it possible to obtain a measure of cooperation which otherwise might not so easily be reached. In the joint declaration of neutrality of the American republics reference was made to the spiritual union attained by the peoples of America through the similarity of their republican institutions, their unshakable will for peace, their profound sentiment of humanity and tolerance, and through their absolute adherence to the principles of international law, of the equal sovereignty of states and of individual liberty without religious or racial prejudice, and the meeting of the Foreign Ministers reaffirmed the status of the general neutrality of the republics, leaving to each government and people the right to establish in its individual and sovereign capacity the methods of application; to see that their right and status as neutrals would be fully observed and respected by all belligerents. They further declared that they would keep their territories from being utilized as bases for belligerent operations, to prevent the inhabitants of their territories from engaging in unneutral activities, to make such regulations with regard to belligerent warships that would prevent the taking place of action such as would disturb the peace of this hemisphere and to take other measures of similar import, so as to fulfill their obligations as neutrals. They also resolved to formulate subordinate rules facilitating police and judicial measures seeking the maintenance of neutrality; and finally they resolved that should the war and the present state of emergency still exist a year hence that the Foreign Ministers would meet again in Habana on the first of October of 1940.

The humanitarian measures taken are interesting for their high ideals which reflect the spirit of high civilization in this hemisphere. In the joint declaration of continental solidarity the governments of the American republics, while reaffirming the declaration of solidarity proclaimed at Lima in 1938, also stated that they would make every effort, both spiritual and material, to maintain a strong peace and harmony among the republics of America as an indispensable requirement to the effective fulfillment of their duty to humanity in the world-wide historical development of civilization, a resolution free from any selfish purpose of isolation and inspired by a deep sense of universal cooperation, the American nations in the resolution entitled "Humanization of War," resolved to appeal to the European countries now in conflict to settle their controversy by pacific means, by justice and law, and not by brute force; also to appeal for their abstention from the use of those methods of warfare which would increase the suffering of those wounded engaged in the war and those who remain at home; and to express the hope that the work of the Red Cross be supported and protected by every effort available to the peoples of this hemisphere. Interesting too for its noble conception was the resolution regarding contraband of war; the meeting resolved to register opposition to the listing as contraband of foodstuffs and clothing intended for the civilian population and not destined directly or indirectly for the use of a belligerent government or its armed forces; to declare that the granting of credits to belligerents for the acquisition of such foodstuffs and clothing is not considered contrary to neutrality. In the resolution entitled "Maintenance of International Activities in Accordance With Christian Morality" the foreign ministers of the American republics representing their several governments declared the reaffirmation of their faith in the principles of Christian civilization; their condemnation of attempts to place international religions and conduct of warfare outside the realm of morality; their rejection of all methods for the solution of controversies between nations based on force or the violation of treaties; their qualification as unjustifiable the violation of the neutrality or the invasion of weaker nations in the conduct of war and their protests against all belligerent actions not conforming with international law and the dictates of justice.

The foreign ministers also resolved to establish a close and sincere cooperation between the American republics for the protection of their economic and financial structure. With this in view there was the resolution that the governments of the American republics should designate experts to constitute the Inter-American Financial and Economic Advisory Committee. The purpose of this committee would be to protect the stability of economic relations between the republics and to promote a greater and freer exchange of economic supplies between these countries.

Finally, in the declaration of Panama, the governments of the American republics, through their representatives at Panama, having solemnly ratified their neutrality in a conflict disruptive of the peace of Europe, set forth their views that the present war could in

no way justify the interests of the belligerents prevailing over the rights of neutrals. With this in view, the conference suggested that the waters to a reasonable distance from the coast lines of the American republics should remain free from the commission of hostile acts or belligerent activities by nations involved in the European conflict.

In accordance with the second resolution taken by the consultative meeting, the representatives of the 21 republics of the Americas went in a body to the statue of Bolívar, the liberator, at the close of the session, to pay their respects and to express the gratitude they felt for their immortal predecessor.

In lands beyond the seas, where flaming death rides the clouds of war, bringing misery and disease, both moral and physical; bringing tragic squalor and poverty; impoverishing the minds, the stock, and the good earth of the nations involved, there appears the dawn of a futile tragedy, such that the civilization for which our forefathers strove and died, and the hopes of mankind for a permanency of peace, liberty, and well-being—all seem to be plunging into a veritable twilight of the gods, a holocaust amidst the blood-red rays of the setting sun of human civilization. But, God willing, the spirit of Bolívar, as manifested at Panama, will guide us through the stormy seas of this tragic era and bring us into the lee shore of sanity and human decency, where our folk may continue to live in sentient concord in a stronghold where the American republics will preserve and forever maintain a haven for liberty, tolerance, and peace.

### Reciprocal-Trade Agreements

### EXTENSION OF REMARKS

OF

### HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Wednesday, January 10, 1940

RADIO ADDRESS BY HON. ARTHUR CAPPER

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address delivered by me on January 7, 1940, as a part of the American Forum of the Air on the subject Reciprocal-Trade Agreements.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, I am opposed to the reciprocal-trade agreements as now being applied. In the few minutes that I have to discuss this subject, I shall attempt to deal with the principles involved, and with the effect of these agreements upon our farmers, especially, as well as upon the producers of other raw materials.

In voicing opposition to these reciprocal-trade agreements, and in opposing any extension of the Trade Agreements Act, I can assure you in good conscience that I am engaging in neither personal nor political partisanship.

Frankly, I have the greatest liking and sincere respect for Secretary of State Cordell Hull. I believe in his sincerity, in his personal integrity, in his patriotism; my heart warms to him for his stubborn courage. There is much in his "good neighbor" program that I heartily approve, but I think the present system of carrying on these trade agreements is wrong.

On the score of political partisanship, I believe my record in and out of the Senate verifies the statement that I never have approached the farm problem, or any other important question affecting the welfare of the United States and the people of the United States, from a politically partisan angle, and I trust that I never will.

I have supported—and I have opposed—policies and programs of Republican Presidents, just as I have supported and I have opposed programs and policies of Democratic Presidents, solely on what I believed to be the merits of the proposition under consideration.

I have cooperated at every turn of the road with Secretary Wallace and his Triple A, even when I felt that some of its policies were unsound and some of its methods impractical.

I say I never have played partisan politics in connection with the farm problem nor any matter where the welfare of the American people was at stake, and I trust that I never will.

Now I am in favor of building up our foreign trade, but not at the expense of our domestic welfare.

I am not in favor of sacrificing the farmers of the United States nor the independent oil producers of the United States in order to promote foreign trade.

Any attempt to build up our foreign trade at the expense of our domestic economy is attacking the problem from the wrong angle. I hold it is a fundamental fact that our trade with foreign countries flourishes most in periods of domestic prosperity.

When farmers have adequate purchasing power—and that is multiplied seven or eight times through its extension to national

purchasing power—then is when we import the largest quantities of necessities and spend most freely for foreign luxuries.

I say that those interests in the United States which are interested in shipping, in importing, in exporting, even those interested in foreign trade for its effect on our political relations with foreign nations—I say the intelligent way for these interests to stimulate and expand foreign trade, exports and imports alike, would be to join the forces who want to create first a sound domestic prosperity. In the long run, trade depends upon markets. Markets depend upon purchasing power.

Anything which improves the purchasing power of the American people will encourage foreign trade. Anything which tends to destroy or to impair the purchasing power of the American people, or of any considerable group of the American people, defeats the admittedly desirable objective of increasing foreign trade.

I am for increasing our foreign trade through policies that will increase the purchasing power of the American market.

I am opposed to what I consider the fallacy of trying to build up foreign trade through diminishing the purchasing power of the American market.

Now, there are one or two things in connection with the reciprocal trade agreements policy that I hold are self-evident.

The reciprocal trade agreements policy is based upon mutual adjustment of tariff rates downward; upon removing or lowering tariff barriers. That sounds fine. But let us look at what it means in fact rather than just in sound.

I believe it is self-evident that the purpose of reducing the tariff rate on any commodity in these reciprocal-trade agreements is to encourage the country with which it is made to believe that it will dispose of more of those commodities in the American market.

When a Canadian agreement is made reducing the tariff on beef cattle shipped into the United States, the Canadians have a right to believe they will ship more beef cattle into the United States. And they did, and they do sell us more beef cattle under the treaty.

When the excise tax on imports of crude petroleum and fuel oil is cut in half, as in the recent agreement with Venezuela, it is the plain intention to encourage the shipment into the United States of more crude and fuel oils from Venezuela—and, under the favored-nation policy, also more crude and fuel oil from Mexico.

Recently we have heard a great deal about a proposed trade agreement with Argentina. It happens that nearly all of the products of Argentina are directly competitive with the products of American farms. When it was proposed that changes be made in the tariff rates on numerous farm products of Argentina, we were entitled to believe—and Argentina was entitled to believe—that meant more of these farm products would be imported into the United States from Argentina.

If it did not mean that, then the State Department was attempting to flimflam the Argentine people—and Secretary Hull would not be guilty of flimflaming those people. The Argentine negotiations seem to have been abandoned in the past few days. I have no doubt the negotiations were dropped at this time for political reasons; but the fact that this agreement was not finally negotiated does not make the trade-agreements policy any more desirable—it simply temporarily saved the American farming and livestock interests from being seriously injured through one of these reciprocal agreements.

Every one of these agreements is in effect a promise to the country with which it is negotiated that more of its commodities will be disposed of in the American market.

Now I hold another fact is almost self-evident. That is that no American farm product produced in surplus quantities is bringing better than parity price on the American market. Many of our farm products are selling away below cost of production.

You cannot beat the law of supply and demand in an open market. If you increase the supply in an open market such as we have inside the United States for farm products, you lower the price.

So it is inescapable, as I see it, that when you increase imports of farm products into a domestic market already oversupplied, you drive the price still farther below parity—and this while the Federal Treasury is pouring out billions of dollars in the attempt to bring parity prices to the American farmer.

My friends, these two programs, the Triple A and the reciprocal-trade agreements, just do not make sense. Try to reconcile them and see where you get.

Now I know that supporters of trade agreements will produce figures and statistics galore—to show that the additional imports of wheat, or beef, or dairy products and so forth, are such a small percentage of domestic consumption that the effect is imperceptible.

But the effect is not imperceptible. It is immediate and very noticeable.

The reason is simple.

In an open market the lowest offer sets the price.

We have an open market on farm commodities inside the United States.

I could produce plenty of figures to prove this, if it were necessary, or even if time permitted. Heavy shipments of beef cattle from Canada at St. Paul sent the markets down at Kansas City, Chicago, St. Paul—at every interior market. In 1 year under a 2½ cents per pound tariff rate, Argentina shipped into the United States 23,000,000 pounds of casein; in a year under a 5½-cent rate, less than a quarter million pounds.

I could multiply these examples countless times. I could read into the record—as I expect to do some of these days in the Senate,

where Senators are not limited to 12 minutes—hundreds of letters from farmers and exhibits and figures and statistics from producers and from official records, showing beyond reasonable doubt that the bulk of the trade agreements already negotiated have resulted in decreasing the American market for American farm products, with resultant lowering of farm income and sharp contraction of farm purchasing power.

I am firmly convinced that those manufacturing interests that are seeking foreign markets for their products at the expense of producers of raw materials in the United States are contracting their American markets far and away more than they are increasing their foreign markets. They are pursuing a most short-sighted policy—trading the substance, a good American market, for the shadow, foreign markets in low-income countries.

I am opposed to the reciprocal trade agreements program because it is taking away from the American farmer enough of his American market to drive farm prices down to the point where the American farmer's purchasing power is seriously impaired.

American farm purchasing power is more essential to American industry and to national prosperity than the foreign markets that are opened up to our manufacturers through the trade agreements.

With all due respect to Secretary Hull and those interests which support his trade-agreements program, I say they are paying a higher price for a little foreign trade than the foreign trade is worth to the United States.

Again I say the American farmer is entitled to the American market.

I propose to do everything in my power to protect our livestock industry, our dairy industries, our farmers, and producers of other raw materials against the continuance of this baneful and destructive reciprocal trade agreements program.

I say again, and I cannot state my view too strongly, the Reciprocal Trade Agreements Act should be taken off the statute books.

No one man, nor any executive department, should be given the power to negotiate trade agreements that affect so vitally the interests of American producers of farm commodities and other raw materials; that touch the very heart of our agricultural and industrial life.

If reciprocal-trade agreements are to be made—and as I said before, I am in favor of extending our foreign trade but not at the expense of our farmers—if they are to be made, they should be ratified by the Senate or by the Congress elected by the people before they become effective. They are too important to be subject to the autocratic power of one man who is an appointed official, the people having no voice in his selection.

I believe in getting government as close to the people as possible. I know of no other major nation with a democratic government that allows such treaties or agreements to go into effect without legislation approval. For us to do so is contrary to the spirit of our own Constitution.

This power should be returned to the legislative branch of government, where it belongs, if it is to be exercised at all.

### Jackson Day Address

#### EXTENSION OF REMARKS

OF

HON. FRANCIS T. MALONEY

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Wednesday, January 10, 1940

ADDRESS BY HON. FRANCIS T. MALONEY, OF CONNECTICUT

Mr. MALONEY. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by me at the Jackson Day dinner held at New Haven, Conn., January 8, 1940.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It gives me great pleasure to return to Connecticut on the great occasion of Jackson Day to join with the members of my party in celebration of the victory of "Old Hickory" at New Orleans. Democrats gather on this day this year, as every year, to perpetuate the never-fading memory of a forceful, purposeful, and energetic soldier and statesman, a man of steadfast quality and high ideals, who, in spite of a cutting criticism and the wounds of an undying bitterness, refused to turn from his path, and who left to us a heritage that we treasure and that members of a grateful and an enduring party shall forever cherish.

Jackson began life under difficult circumstances. Through a humble beginning, in a humble place, he early learned the problems of the oppressed, and he never lost his love for the underprivileged and the unfortunate. He had a hatred of special privilege and the courage proven on the field of battle and in peacetime conflict remained with him until the last day of the wintertime of his life at the Hermitage.

As a practicing lawyer, a Member of the House of Representatives of the United States, a Member of the United States Senate, and of the Supreme Court of Tennessee, as well as in far-flung wars against internal and foreign foes, he saw life in its saddest and more bitter aspects. His trials were many, and the path he traveled was more often rough than even, but he went to the Presidency of the United States in 1829 splendidly equipped to render a great service to his country—and he rendered that service.

Jackson was a frontiersman and in many other respects a pioneer, and he inspired the Democrats who came after him to hold high the torch which he kept so brightly aglow. That inspiration seems never to have been more effective than during the period through which we have just passed.

We do not meet here particularly to criticize those who oppose us politically, nor especially to boast of our accomplishments, but it is fitting, it seems to me, that we give some notice to what goes on about us, both within and without the party of Jackson. It is fitting that we should give praise where praise is due, admit mistakes where there have been mistakes—and there have been some—and perhaps it is not altogether unfitting that we should refer briefly to certain expressions of some of those who are not of the party of the hero of 1812.

Ours has been a sad period in many ways—as was the life of Jackson—but it has been joyful in other respects, as was his experience in part joyful. He suffered from sadness in Washington. He was subjected to ridicule, and he endured the burning hate of men who enjoyed a special privilege that he was determined to destroy.

It is but natural that on this night, of all nights, we should think of the present occupant of the White House; and as I think of him, I find ever so much in his public life that reminds me of Jackson. I feel that in some instances President Roosevelt is entitled to greater credit than Jackson, for Jackson, while he came up from the depths the hard way, learned the plight of the unfortunate through the easy learning way of bitter experience. President Roosevelt was born in an atmosphere of comparative ease and comfort and was compelled to study the problems of his less fortunate countrymen. Early in life he stepped out of the role in which he seemed to have been cast to play a more difficult part, which compelled a personal sacrifice. Since that time he has personified the steadfastness of purpose, the hatred of special privilege, and the unyielding courage with which Jackson was endowed.

A day or two ago a distinguished Republican—one among the multitude available for the Presidency of the United States—found that the original Jackson Day dinner proudly observed the "extinguishment of the national debt," and suggested that a newspaper report of that occasion might serve as a suitable souvenir for the Jackson Day dinners of this date. He neglected to mention, however, that Jackson's election to the Presidency of the United States closely followed the administrations of distinguished Democrats and outstanding statesmen, and that it was easier to sail in the wake of Jefferson and Madison and Monroe and Adams than it was to come after the devastating decade during which we were under the direction of Harding and Coolidge and Hoover.

I do not want to dwell long upon the record of the administration which just preceded that of President Roosevelt or to refer much to the first and second and third term of special privilege, because the story is an old story now, and is burned indelibly upon the minds of the American people. That period has left scars not easy of erasure, and to expect that any man or party could so soon undo all of the mistakes of that era is beyond the bounds of reason.

In the presidential heritage of Franklin Roosevelt were failing banks, stricken business, broken homes, and broken hearts—and more than a hundred million people weary and worn and afraid—and a rapidly ascending national debt that was inevitable after a period of carelessness and governmental neglect. Aside from the national debt of \$21,000,000,000 there was an additional staggering public debt which involved about all of our towns, cities, counties, and States. The private debt was almost too terrible to think about, and many of those who had not surrendered to despair were anxious to surrender. Some of them clamored for dictatorship as a way out. Some of them—not of our party—saw in Franklin Roosevelt a potential benevolent dictator who might possibly save them from catastrophe. And my fellow Democrats, let me remind you—with all of the seriousness that I possess—that he did save them from catastrophe, and without dictatorship.

It is well enough now—when the storm is nearly over—much of public and private debt wiped out—when American business has returned to an all-time high—when the financial standing of cities has been restored—when banks have been bailed out and homes and savings protected—when the frightened men who had known a special privilege in the better days, have regained their composure—to condemn the captain for getting a little water in the boat, and for reaching port and safety a trifle late with some discomfort to the passengers.

If we had the time, nothing would give me a greater pleasure than to review in some detail the succession of accomplishments of the years following the political revolution of 1932. Mistakes—of course. Failure here and there—certainly. Bureaucracy—no doubt of it. But some of us cannot, and will not, forget that Franklin D. Roosevelt, almost alone, with a courage that equaled if not surpassed that of Jackson, saved our system, and put us on the road to safety.

They may—those of them who do not like President Roosevelt—enjoy the "humor" of club car jests, and try to take unto them—

selves the victories of his administration, but you may be certain that the great masses of the American people understand and are truly grateful, and that the historians of the future will make the record clear.

We in Connecticut, with an administration friendly to business—where men are leading the way back to work—are again enjoying improved conditions. Incidentally, for so long as I can remember, all administrations in Connecticut have been friendly to business, and of late years, as we elected a larger Democratic representation to the legislature, our administrations have become friendly to labor. If anyone disputes this, I would like to have him tell me what particular administration in the history of our State has been unfriendly to business or name a Democratic administration that was not friendly to labor. And in Connecticut men are returning to work in large numbers, because action by the Federal Government and the brighter national outlook have accelerated business. Our market places are in the other 47 States of the Union and in many of the other countries of the world.

A courageous and determined national administration opened up these markets to a very great extent, and the industrial State of Connecticut is naturally among the first to enjoy the harvest. The national administration has been attentive to all of the States of the Union, although there were some selfish people who were willing to deny to Americans living elsewhere the opportunities and benefits that we enjoy.

I have visited most of the States of the Union during these past 10 years and have had opportunity to look upon stricken regions and saddened people, and I am grateful to God that I live in a section which seems especially blessed and is certainly among the more fortunate. For that reason, among many others, I am among those who have been not only willing but anxious to cooperate with our national leadership in the noble and determined effort to raise the standards in these stricken places and desolate regions. The effort is going forward, and some day in the future—and I hope in the not too distant future—when men measure what Franklin Roosevelt left by what he found, he, too, will join the immortals, among whom Jackson was outstanding. He will be recorded as one who overrode a selfish group which was powerful, and he will have done it because his love for the less fortunate was stronger than their hate.

He will be recorded as one who had an intense interest in young people and no less a love for the aged and those in between. Oh, that time permitted a recital, in specific detail, of the instruments and agencies through which he afforded relief and comfort and some measure of security. His work is not yet done.

How long it will take only Heaven knows, but it will be done, because our people will continue to meet in the shadows cast by Jackson and his illustrious predecessors, and the sterling stalwarts who came after him, down to Franklin D. Roosevelt.

President Roosevelt did not just establish new principles. He made old principles living realities. It seems that it was left to him to put into effect the dreams of Jefferson and Jackson and Lincoln and Wilson, and those of some others, of course. He has given new life and new hope and a new meaning to democracy, and down through all of the years this enduring Nation will be grateful that he was at hand in a dark hour of our national life.

President Roosevelt is leaving a list of achievements and accomplishments too long for one volume, and among them are the fulfillment of those democratic principles pronounced more than a century and a half ago—principles long advocated and almost as long partially neglected.

President Roosevelt has restored a faith in government, and, like Jackson, returned the power of government to Washington and transferred the financial capital back to the Nation's Capital.

President Jackson's greatest fight was with an all-powerful banking group. That part of his experience excites my interest, because I am a member of the Committee on Banking and Currency of the United States Senate.

Several days ago the banking commissioner of the State of Connecticut said something distressingly amazing. Connecticut papers printed a story declaring that he had said, in a statement prepared for our Governor, that the bank depositors of Connecticut "should be made to realize" that the "unfriendly attitude of Washington toward enterprise in general is the direct cause of lower savings-bank dividends."

Made in an informal statement, I should regard that as indicative of carelessness, but in a prepared statement it was most unfortunate and it is untrue. Here, again, time denies me the opportunity to comment in detail, but if President Roosevelt has been especially friendly to one group within our midst, that group is made up of the bankers of the United States.

He saved their banks.

No longer is it necessary that small depositors, with whom our banking commissioner is so much concerned, worry about the loss of their small deposits.

As a matter of fact, since the establishment of the Federal Deposit Insurance Corporation, two insured banks have failed in Connecticut, with deposits totaling over a million and a half dollars. Funds replacing the insured deposits were immediately made available by an agency of the Federal Government.

Since 1933 the Reconstruction Finance Corporation has bought over \$7,000,000 of the capital obligations of Connecticut banks, thus further increasing depositors' protection.

The Home Owners' Loan Corporation has refinanced for banks and trust companies in Connecticut nearly 7,000 distressed mortgages, aggregating \$26,000,000.

One hundred and three of the one hundred and twenty-one State national commercial banks in Connecticut are insured by the Federal Deposit Insurance Corporation. These 103 banks, so I am informed, recently had deposits of approximately \$480,000,000. Over 98 percent of the depositors were protected by deposit insurance as of the beginning of last year.

Contrary to what seems to be a general impression, bank earnings during the past few years have been very satisfactory, although some bankers continue to complain of their low level. I am told that for the year 1938 over 80 percent of all insured commercial banks had net earnings in excess of \$5 per \$100 of invested capital, and I am further advised that nearly 40 percent had net earnings in excess of 10 percent of their total capital funds. It is unlikely that the 1939 figures will give a much different picture.

Also in his statement Commissioner Perry said: "They (savings bank depositors) should be made to realize that every successful enterprise pays directly or indirectly into the earnings of (1) bank stocks, (2) railroads, and (3) power companies, and every hindrance to successful enterprise of every sort tends therefore to reduce savings bank dividends."

If it were not apt to excite the emotion and fear and ill feeling of some of our people, that statement would be amusing. I am unaware, as I said a moment ago, that bank earnings have been at a particularly low level. Railroad securities, it is true, have suffered to a great extent, but I would like someone to tell me in what way Washington has been unfriendly to the railroads or, better still, in what way the trouble of the railroads may be attributed to Washington. Jesse Jones has been criticized for his lack of generosity in many instances, but his attitude toward the railroads has been entirely free from that form of criticism.

And the power companies are not doing very badly. More electric power is being sold today than ever before, and the securities of those companies which have been free from questionable practices are well priced. Mr. Perry also seems to forget that banks for the most part hold only bonds of power companies, and as a matter of fact only the bonds of the "better" power companies. So that if the net income of the utilities were doubled, it would not, therefore, greatly affect the yield on utility securities held by banks, as bonds are fixed-interest obligations.

I am not so sure that Mr. Perry is not unfriendly to Washington, and while I am not now offering a criticism of the reduction in interest rates, I should like to have Mr. Perry, if he cares to do it, give the people of Connecticut a list of the salary decreases to which bankers have been subjected. I have no criticism of bankers. I have a high regard for the bankers of this State and I have a feeling that they deplored the statement of Commissioner Perry.

Democrats have a cooperative spirit toward Republican administrations other than at election time, and we gave little annoyance during the three-term administration of special privilege which held office prior to 1932, excepting during the presidential campaigns. (I might say in parenthesis that we didn't annoy them much even then.) We have not enjoyed such treatment, however, and those who are willing to play blind during a Republican panic, see a bogeyman "just around the corner" each day that the Democrats are in power.

I do not like name calling. I have never resorted to that practice, and when I cannot approach political opposition in a charitable and courteous attitude, I shall leave public office. I know that members of the administration of which I am a part have been guilty of name calling and, in some instances terribly guilty; but in my opinion it did not begin to compare with the name-calling practices of those opposed to this administration.

There are conscientious and good men in the business life of our country, within and without our party, who sincerely and properly deplore name calling and insist that if the administration would only stop the practice there would be a better feeling throughout the land.

I think that is true, but if these men would only devote their effort to those closer to them, who excite the feeling and sometimes the anger of the administration by a name calling, the name calling, in my opinion, would be over. But just so long as men outside practice verbal abuse they will excite it on the inside—because men are human—and there are some things that human nature cannot endure.

Let us again condemn all of those of our party who have been abusive and deceitful and dishonest, and express regret and apology for those who have been misguided.

Let me urge you, my fellow Democrats, to be tolerant in every respect. I must remind you again, as I have before, that we were harshly critical of those opposed to us in the days before 1932, because they were neglectful of certain groups in our national life, and especially attentive to other special groups. Let us avoid the mistake they made. Unless we do avoid it we have failed, and we deserve the same kind of criticism, and we deserve to be driven from office. If we fail to protect business, and bankers, and industrialists, we cheat ourselves, and we help to destroy.

Perhaps it is natural that we have a much greater interest in those sometimes described as the underprivileged, because so many of us have come from the neighborhoods in which they dwell, but our natural sympathies should not excite us to the point of neglecting the interests of other groups—and for more than one reason. First, it would not be fair, or American, and next it would be stupid, because our structure of government and economic system is the best yet devised, and it should be protected at any cost—even at

the cost of political defeat. Let us erase the demagogue from our lists, adhere to the teachings of the founders, and keep faith with those who entrusted us with the governmental guidance of their affairs.

This administration has not been unfriendly to business, and like every other administration is quite aware that only through the success of business can the administration or the country or our people enjoy success.

We are now, and always, prepared to give an accounting of our stewardship in Washington. We make admission of our mistakes, and we demand recognition of our accomplishments. Our party average will be high. Some of the mistakes are but natural, because all of humanity, even where gifted with brilliance or genius, is frail.

Measure President Roosevelt with the leader of any government in the world, and find me an American who would exchange him for that leader.

Measure the welfare and conditions of our country with those of any other country in the world—taxes and depression and all—and show me the man who would live there rather than here.

Tell me the place where the future is more bright or where the opportunity is greater.

Dictators are born in depressions. Freedom is stifled by panic. If President Roosevelt were of a dictatorial mind, let me remind you that he was afforded the chance to "take over." He is hateful of dictator government and, courageous and patriotic American that he is, he has raised the standard of democracy in America because of his insistence that we practice what we proclaim. Under his leadership we are pointing the way toward a better world.

We have kept the peace at home and we will show the way of peace to the nations now suffering the horror of war. President Roosevelt leads America's peace bloc, and when peace and quiet come to the rest of the world, and he looks back, I pray he will find comfort and consolation in the memory of the part he played.

I am confident he will have the gratitude and kindly feeling of men and women everywhere. I am sure that he will find joy in a recollection of the dark days during which he ever pressed forward.

It is true that in many cases the laws passed in these late years need changing and correction and perfection. Almost every business, even with its rightful dictatorial power, goes through that experience. Every plant in America knows an occasional failure in its plans and models and sometimes has to scrap its tools and dies. It is then the way of America—to try anew—and again—and harder. That has been the way of President Roosevelt. Through the light given us by such leaders as Jackson, and kept aloft and aglow and fanned to a greater brilliance by President Roosevelt, it will always be that way.

Do not be too greatly alarmed by the unfair critics. There is certain to be political persecution and criticism in the days ahead. Such has been the situation since the dawn of civilization. There have been black sheep in every flock and in every party—and a betrayer in every group—but the majority have been good, and in most instances the leadership most bitterly condemned was proven to be right. I think it is so now.

But be expecting a criticism, and welcome it if it is fair or sincere. We deserve some of it. We also deserve some praise.

The people of the United States are witnessing the dawn of a greater security. The Government is going to recognize the continuing needs of the people. They will be protected in their youth, and those who are deserving in their old age. They will be protected when ill health darkens their door. The people of the country know this. They will not turn back.

I have a feeling of certainty that Jackson is tonight looking down upon the country he loved and served, smiling his satisfaction and joy because the Presidential leadership of the United States is in the hands of another man of courage and strong faith, another frontiersman, another pioneer leading his countrymen on the path of governmental righteousness. Jackson knows how rough is the way, but he knows as well—better now than he could have known a century ago—that righteousness will prevail, and that the people of the United States desire to press onward.

### The President's Annual Message

#### EXTENSION OF REMARKS

OF

HON. JAMES J. DAVIS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 10, 1940

ANALYSIS BY PAUL BLOCK

Mr. DAVIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an analysis of the

President's message by Mr. Paul Block, which appeared in the Pittsburgh Post Gazette January 8, 1940.

There being no objection, the analysis was ordered to be printed in the Record, as follows:

[From the Block newspapers]

PRESIDENT ROOSEVELT'S MESSAGE

We have always had high respect for the office of the President of the United States, but at times have found it necessary to disagree with the views and actions of various Presidents. In the case of President Roosevelt we have had to disagree frequently because of his apparent dislike of industry and businessmen. This attitude is most unfortunate, since it, more than anything else, is responsible for the lack of confidence in Mr. Roosevelt and his administration which businessmen have.

And so, if we do not agree wholly with President Roosevelt's message to Congress, it is only because it seems so clear from his words that his greatest concern seems to be about the war in Europe rather than the serious economic problem which faces us at home.

We fully appreciate the gravity of the wars in Europe and Asia and their effects on our country and our people. Few will quarrel with the President's insistence on adequate defenses. Nor can we deny that complete isolation, as Mr. Roosevelt indicated, is unthinkable in a world where the relationship among nations is more intimate and more interdependent than ever.

It is rather on the means by which he proposes to pay for the needed defenses that we differ. Taxes added to the present burden will only work greater hardships on business and consequently produce greater unemployment among workers.

Could not the President have agreed that, for every dollar spent for national defense, a dollar would be cut out of the extravagant expenditures of the administration? Could he not have said, for example, that while there were approximately 500,000 persons employed in the executive branch of the Government when he took office, there are now well over 900,000, an increase of some billion dollars a year in the cost of government? Could he not have promised to reduce this staff to its former size, urging Congress to use the saving for defense?

And if the President is so concerned about national defense, what is to be said of the condition in which the country enters a war period? Thanks to New Deal spending, the national debt is greater than ever before in history. Despite New Deal panaceas, millions continue without jobs. Certainly this is an unsound internal condition constituting a real obstacle to national defense.

Nor does our grave domestic situation make us any more secure against the intrusion of alien philosophies. As the President himself well pointed out, dictatorship gains a hold only when democratic action has failed. Should not war conditions therefore focus his attention more than ever on the prompt solution of our troubles here at home? To neglect them is to hide one's head ostrich-like in the sand just as much as the complete isolationist whom Mr. Roosevelt so effectively scored with the same comparison.

But perhaps the most controversial portion of the message was that which dealt with the reciprocal-trade treaties. My newspapers have already made plain their opposition to some of the harm created by these treaties, and we have supported these views with facts and figures. Many, and especially the farmers, declare that the treaties have not helped our agricultural interests, as the President claims. During years when we were producing and destroying agricultural surpluses, we were importing the same commodities in increasing amounts from abroad. If the treaties are as flexible as the message indicated, why were they not sufficiently elastic to allow us to change our imports to commodities we do not produce in excess of our needs?

And what is the furious rush about these treaties, the "emergency" about which the President speaks? The usefulness of the pacts as forces for peace is certainly questionable. And since it has taken long months to negotiate many of the treaties, it would hardly seem ruinous to take the short additional time necessary to pass them through Congress.

For his eloquent appeal for national unity Mr. Roosevelt is to be praised. The plea, however, sits somewhat strangely on his tongue. We, with the President, abhor doctrines which set class against class. We agree that angry controversy wins less than calm consideration. But is he not the man who said he would bring business to its knees? Is he not the man who spoke of "economic royalists"? Does one not recall hasty remarks about a horse and buggy or an attempted purge meted out as the reward for independence?

Mr. Roosevelt could have proved the sincerity of his desire for national unity and recovery if he had announced in his message that the indictment and the threats against business which constantly come from the various branches of his administration would be postponed—at least temporarily. Had he done so, he would have acted in the interest of both business and of labor, for, as business is helped, workers are helped as well.

If it has seemed that we disagree with much of what the President said, it should be remembered that we applaud him for his earnest devotion to the cause of peace and for his proper concern in our national defense. Only because we feel he has consistently failed to reach a solution of our first and most vital problem—national recovery—do we take exception to a considerable part of his message.

PAUL BLOCK, Publisher.

## Public-Debt Carrying Charges

## EXTENSION OF REMARKS

OF

HON. THEODORE G. BILBO

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Wednesday, January 10, 1940

ARTICLE BY ERNEST K. LINDLEY

Mr. BILBO. Mr. President, apropos the subject under discussion today—the President's Budget and our national debt—I ask unanimous consent to have printed in the Appendix of the RECORD an able and interesting as well as consoling article by Hon. Ernest K. Lindley, appearing in the Washington Post of this date.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post of January 10, 1940]  
CARRYING CHARGES—THE KEY TO THE NATION'S DEBT  
(By Ernest K. Lindley)

The most significant figure in the Budget to me is the cost of paying interest on the national debt. Last year it was \$940,000,000. This fiscal year, the President estimates, it will be \$1,050,000,000.

The cost of paying interest is the most accurate absolute measurement of the weight of the Federal debt. This year this cost is rising above \$1,000,000,000.

Think of it! For interest alone, \$1,050,000,000! About \$8 for each man, woman, and child in the United States. This is a lot for the taxpayer to have to put up just for interest. (It is also a lot to receive. Every dollar put up by taxpayers for interest is paid out to the bondholders. One billion dollars plus is a lot of money, either way, whether you are paying it or receiving it. It is no larger on the paying side than on the receiving side.)

Nevertheless the cost of the interest payments—the cost of carrying the debt—is what I, as a taxpayer, am interested in. The carrying charges are part of the operating cost of the Government. They have to be paid when they come due. The debt itself does not have to be paid. It can be refunded. When current receipts exceed current operating costs there will be a surplus, which may be used to reduce the debt.

## MELLON PREFERRED TO REDUCE TAXES

But the debt does not have to be reduced; we can just keep on paying interest on it indefinitely. This is the way it has been done by the British, whose name and customs stand for financial orthodoxy. It has been many a long year since the British Government has made any effort to reduce its internal debt. For more than a century the British national debt has been going up—in wartime by leaps and bounds. During that period the British have never had a severe inflation. Their worst was during the World War, and it was about as severe as ours during the same period.

Even Andrew W. Mellon did not think it necessary to pay off our national debt. While he was Secretary of the Treasury it was reduced, partly by cashing in on assets the Government had acquired during the World War, partly by an excess of tax revenues over current expenses. During the twenties the entire Federal debt could have been paid off without hurting anybody. But instead, Mellon preferred to reduce taxes. As a result, the debt was not paid off. Many people, including myself, thought he and Presidents Coolidge and Hoover, and Congress, made a serious mistake. Nevertheless, Mellon showed by his actions that he did not consider it important to pay off the national debt when it could have been paid off easily.

What is most interesting (or, if you prefer, most alarming) about the rise in the cost of carrying the national debt above \$1,000,000,000 is this: It has happened only twice before in our history. The first time was in 1919–20, while CARTER GLASS was Secretary of the Treasury. The second time was in 1923, while Mellon was Secretary of the Treasury.

## THE 1920 DEBT INTEREST HIT BILLION MARK

The cost of carrying the national debt—its weight on the back of the taxpayer—was \$1,020,000,000 for the fiscal year 1920. The next year it was \$999,000,000, higher than it has been at any time under Roosevelt up to this year. In 1922 it was \$992,000,000, still above the Roosevelt record up to now. In 1923 it jumped up to the all-time high of \$1,056,000,000.

Maybe my memory is faulty, but I can't recall anybody complaining about the back-breaking burden of the national debt during those years 1919–23. Especially not in 1923. There was a round of applause, I believe, when Mellon finally got this burden safely below \$1,000,000,000, the point which Roosevelt is just coming up to after several years of the loudest wailing about a back-breaking burden which has ever been heard from a supposedly sturdy people.

When CARTER GLASS and Andrew Mellon were in the Treasury the burden was more nearly back-breaking, of course, because we had fewer backs to support it. Our population was smaller. Also,

during some of those years our national income—measured in dollars—was smaller.

## DEBT WEIGHT CUT SINCE HOOVER ERA

This brings us to the truest measurement of all of the weight of the Federal debt—the carrying charges in relation to ability to carry them—our national income.

On March 3, 1933, the day Herbert Hoover left the Presidency, the cost of carrying the Federal debt was about 1.77 cents out of each dollar of the national income. In his current Budget message President Roosevelt gives his predecessor a "break." He takes the income for the calendar year 1933, which was somewhat higher than for 1932 and early 1933, and uses the debt on June 30, 1933. This works out at 1.63 percent of the national income for 1933.

In 1939 interest on the Federal debt took only 1.45 percent of the national income. In other words, the weight of the debt had decreased since Hoover left office. The total debt was much larger; the interest payments were somewhat larger. But our ability to pay—our national income—had increased so much that the debt is now lighter. If it is back-breaking now, what was it 20 years ago when CARTER GLASS was Secretary of the Treasury, 15 years ago when Andrew Mellon was Secretary of the Treasury and Calvin Coolidge was President, and 7 years ago when Herbert Hoover sat in the White House?

## The British Debt

## EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 10, 1940

ARTICLE BY HUGH S. JOHNSON

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD an article by the pen of Gen. Hugh S. Johnson pertaining, in part, to the subject matter of another one of his articles which I inserted in the RECORD of Monday, January 8, 1940, relating to British stoppage of our ships and British seizing and raiding of our mails. The article also deals with the excuses put forward by Lord Beaverbrook for England's failure to pay her war debts.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Daily News of January 8, 1940]

## ONE MAN'S OPINION

(By Hugh S. Johnson)

In the news of a single day we learn (1) from Lord Beaverbrook that America and not England is responsible for the British ducking of her billions of debt to us and (2) that the British Government has ignored our protests of her interference with our rights and commerce on the high seas—seizing, reading, and censoring our mails; hijacking our ships on the high seas; taking them through waters where, by our neutrality laws, they are not permitted to go and subjecting them to extravagant and costly delays; blockading not merely Germany, which she has a right in international law to do, but also blockading German exports to us, which amounts to blockading us. This she has no right to do. Finally the British have imposed, without much protest from us, a system of so-called navicerts, which requires an American ship to get clearance from British representation in America if she wishes to escape interference or seizure by the British Navy. This also is a form of blockade of our coasts without warrant in international law.

The matter of British indifference to our few remaining rights at sea which we have not already surrendered to avoid conflict with her, is in course of diplomatic discussion. It is therefore not ripe for critical comment—more than to say that Britain again, as in the World War, is doing some of the things for which we fought her in 1912.

But this blast of Beaverbrook's adds insult to injury. He says that when America cut the gold content of the dollar, British citizens who held American bonds were forced to accept paper dollars worth 40 percent less than the gold guaranteed in the bonds. Technically this is correct. But the effect of the dollar devaluation was to permit British money overnight to buy more American goods and common stocks—in fact to buy them at a cheaper price than American money could buy them. The net result was overwhelmingly in favor of Britain by billions of value.

The British lord of the press says that President Wilson, General Pershing, and eight wartime Congressmen, "encouraged Britain to think that the war debts would be canceled and that the money was a contribution in lieu of immediate manpower."

If there was any such encouragement, I never heard about it, and I was pretty close to headquarters at the time. But if there

was, what responsibility or authority would any American official have so blithely to wipe out several billion dollars of taxpayers' money?

We didn't need to contribute money "in lieu of manpower." We gave the manpower with a lavish hand. For what we bought from Britain—and it was a great deal—we paid in cash. She repaid us in jawbone and then resold much of the bargain to her own people for cash and recouped herself.

It is a damned poor time to revive this "Uncle Shylock" British alibi which has been exploded over and over again. The Allies never asked us for anything in that war that we did not give without a single selfish reservation. The debt settlement scaled down the actual debt heavily. They were made freely by the British—and kept only so long as she could squeeze the money to pay them out of the Germans. Lord Beaverbrook's is a welcher's squawk.

### Jackson Day Address

#### EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, January 10, 1940

ADDRESS BY ROBERT H. JACKSON

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by Hon. Robert H. Jackson, Solicitor General of the United States, at the Jackson Day dinner held at Cleveland, Ohio, January 8, 1940.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I begin to feel that Andrew Jackson needs an attorney—to defend his memory from his followers. These \$25 and \$50 and \$100 dinners are turning this man of the people into our most expensive Democrat. What a politician he must have been. His name is still our best money-raiser—a century after he had lost all power to appoint anybody to anything. His creed has a strong appeal to us tonight. He had a fighting faith in a republican form of government—completely controlled by Democrats.

But Andrew Jackson's policy rose above mere party expediency. He was the first American political leader to seek his support among all the people and to shape his policy for the needs of all the people.

But Andrew Jackson knew better than to think a party can serve itself alone. I know what it was that attached families to his cause with an intensity which has lasted for generations. My own people, pioneering not far from here, in debt to eastern land speculators, hailed him as the champion of humble men—the ill clad, ill housed, and ill nourished of his day. This faith kept us "regular" Democrats. We looked always for another such leader of the people, and found him in Franklin Delano Roosevelt.

Forces are gathering for a fight in 1940 that in many ways resembles the line-up for Jackson's great battle of New Orleans. We are holding lines for democracy today as truly as he held them a century and a quarter ago.

Our scouts would report today, as did his, that advancing against us are the "regulars" of a standing army—well drilled, well fed, and perfectly equipped.

They have the artillery of the press, the machine guns of the big interests, and the best commissary that money will buy. And regulars are unlike volunteers—they fight from training and interest rather than from the inspiration of a leader.

So the first principle of our campaign is that we Democrats should waste no energy worrying about what the Republicans may do. Who their candidate is and what their platform is will not much matter. They are a party of money and organization, not of enthusiasms. There probably is not a million popular votes difference between their best candidate and their worst one. This is apparent from the fact that their best leadership and performance in office has produced for them but relatively few votes more than their poorest leadership and performance. Their vote has become remarkably unresponsive to either their record, their promises, or the personality of their candidates. Let me read you cold figures of their vote in the five Presidential elections since the Great War. Notice how steady and dependable it has been.

1920—Harding	16,000,000
1924—Coolidge	15,700,000
1928—Hoover	21,000,000
1932—Hoover	15,700,000
1936—Landon	16,600,000

This is a significant consistency in the light of the vicissitudes of 20 years.

The Harding record, so bad it produced a third-party movement, could not drive its 1924 vote below 15,700,000. A rare combination of prosperity and bigotry could not lift it above 21,000,000 in 1928.

Four elections out of five indicate that we should begin our calculations by conceding any candidate they name, on any kind of platform, an all-weather, dependable vote of around 17,000,000, which they are pretty powerless to much increase and on which we are not likely to make any inroads.

Great transitions in politics make their sign so simply we often miss the meaning. For generations the Republicans met in convention ahead of us, and appropriately so. The real leadership of the country was in their affirmative program.

Today they are openly afraid to lead, and if they do meet first it will be because of a greater fear of being known to be afraid to lead. Whatever of leadership the Republican Party had has passed, and today it admits it must wait to see what we do so it may know what to be against. Its policy is to wait, and then say "no" whenever we say "yes." That, of course, is not statesmanship, it is not leadership, it is not helpful to the country. But do not forget that whatever it is, it is good for about 17,000,000 votes. And don't forget that those 17,000,000 are at least a couple of million more than any Democrat ever got—except Roosevelt.

Seventeen million regulars for the Republicans—how many for us?

Our following shows, in the same elections, no such steadiness or consistency. On the contrary, it is extremely sensitive to our party attitudes and leadership. Look at our volatile vote:

1920—Cox	9,150,000
1924—Davis	8,300,000
1928—Smith	15,000,000
1932—Roosevelt	22,800,000
1936—Roosevelt	27,400,000

One important fact is clear; it is the fluctuation in the Democratic vote which has decided the last five elections. Our standing army has at times dwindled to less than 9,000,000 votes—approximately one-half the standing army of the Republicans. We can only win by calling to the aid of our regulars the volunteer militia who join our campaigns because they feel they are fighting for something dear to them—as the frontier militia fought for Jackson at New Orleans.

These election returns therefore should convince us that the elections of 1940 will turn on the Democratic convention, not on the Republican convention.

And they also ought to convince us of the futility of trying to nominate a candidate to please Republican editors or to get Republican votes. We do not win elections by converting Republicans, and whenever the country has to choose between two of a kind, it takes a Republican.

This is now well understood. I no longer fear, therefore, as I did a year ago, that we Democrats might try to compete with the Republicans in naming a conservative. Life among the majority is still dear to conservative Democrats, and they are not going to a convention hell-bent for suicide. We will recognize the real conservative voting strength to be what it was in 1936—about 17,000,000—and recognize that no substantial part of it ever did or ever will vote for a Democrat.

Our problem is to keep the volunteers we have twice had under the leadership of President Roosevelt. Our strength is only equal to winning when the most people vote. The voters who stay at home decide these elections, and every stay-at-home vote is a help to the Republicans in the doubtful States. We are always defeated when the country feels there is not enough difference between the two parties to be worth the trouble of voting.

It is plain that our chances depend on a candidate and a program that will reach down into the precincts with an appeal to the average man and woman strong enough to overcome all lethargy and bring them to the polls. We cannot get more than 17,000,000 votes, and therefore we cannot win, unless we have a candidate who reaches votes which cannot be organized and can only be reached as Franklin Roosevelt has reached them—through the heart: the vast army of quiet, unassuming people who have followed Roosevelt since 1932, in the teeth of organized ridicule, social ostracism, and political chicanery, because they believed in what he said he believed.

Of course, a strong affirmative character who can rally our allies like that to the side of our outnumbered regulars always offends some timid persons. Always we have some groups "taking a walk."

But there are few men who can bolt the party without bringing in others to take their place, just because those others like a man who has enemies—if they are the right enemies.

The great walk was in 1936; that was the year we had the most votes.

Give the Democratic Party the usual stay-at-home voters and we can let the Republicans have all the "walkers"—both left and right. If you add all of the Smith votes of 1928 to all of the Davis votes of 1924, you count all dyed-in-the-wool conservative Democratic strength twice. But the aggressive liberal of 1936 had more votes than both of them put together, and on top of that some 4,000,000 more to throw away. Every Democrat knows that we have not won Republicans to our side and that the only problem is to get our votes from the same people who gave them to us in 1936. This can only be done if those same people feel that our party's success has some deep meaning in their lives, if they feel we are still fighting for them and for their homes.

Under these circumstances it is inevitable that we should first turn to the one leader who has this loyalty and devotion in the humble homes of the Nation whence cometh our help. Of course, I do not know what his answer will be. But I do know what the rank and file of Democrats and of citizens generally hope it will be.

Whether President Roosevelt ultimately will allow or will not allow his renomination, I am one who earnestly hopes that he will not announce to the public or even make within himself any decision at this time.

Why should President Roosevelt become the one man in all public life now committed to accept or not to accept a nomination?

What public good would be served by binding him when all others remain free?

Of course, it would serve the convenience of other aspirants if Mr. Roosevelt would tie himself up to some commitment so they could lay plans of their own. But why not let Mr. Roosevelt know the other fellows' plans before he decides, instead of letting the other fellows know his plans so they can decide?

We don't want the greatest asset of the Democratic Party put in hock. We enjoy the President's making fun with those who use the hunter's strategy of trying to "smoke out" his game. The American people want Mr. Roosevelt, before he decides on whether he will retire, to know such important things as the state of the international situation; what issues arise in this session of Congress affecting his program and the public welfare; and, more than all, what would the consequences of his decision be in terms of party policy and leadership.

While the country, along with the rest of the world, is going through a period of tension and danger, the people feel more comfortable if the one man of experience, of great following, and of great power remains a free man.

The cool confidence with which this country today faces the modern clash of social and economic forces, which have been mismanaged in Europe to the point of revolution, dictatorship, and war, is fundamentally due to confidence in the competence and good will of this man.

Lincoln had that power—to hold his people's courage to the great moral issues of their time—to hold them together not only to start, but to finish, after the first flush of excitement was past and the burden became really heavy.

That same magnificent power to give men the steady courage to throw themselves against problems bigger than ever men have faced—that same power to inspire the trust of millions who trust nothing else, and no one else, in our political and business life, in our common defense and our general welfare—rests in the White House today in Franklin Roosevelt.

He is our Lincoln.

We must not make the mistake of treating lightly the responsibility of our own party in this hour. The very fact that leadership is cast upon our party makes the country doubly critical of our performance—and rightly so. The first concern of the American people at this hour is that no interests, no prejudices, no hates, and no ambitions be allowed to involve us in the war abroad. President Roosevelt's bold, but prudent, foreign policy, keeping the American flag far enough from the fire to keep it from being singed, has in a few months changed the feeling that it was inevitable that we must become involved to a feeling that it is inevitable that we must not, and will not, become involved. The opposition in the coming campaign may be free to play politics with foreign policy, but we in whose hands destiny rests must stand squarely with the President against every pressure to let American policy get into zones of danger.

And the second great concern is much like the first. We do not want America to go to war, but more than that we do not want the war to bring its moral and intellectual consequences to us. We want none of its dictatorship either of a proletariat or of the Fascist kind; we want none of the censorship, the suppression, the ideology, or the hysteria that follows in the train of war. Rather, as one historian, with the perspective of the scholar, has well said: "The real danger, from the liberal point of view, is not that Nazis and Communists will destroy liberal democracy by free speaking, but that liberal democracy, through its own failure to cure social ills, will destroy itself by breeding Nazis and Communists."

That comes close to being the keystone of our liberal philosophy today. We must fight radicalism by removing its provocations. The New Deal must go forward—not perhaps at the same pace, and certainly not without heed to the lessons of its own experience. We must not fall into the error for which we so freely blame others of letting pride or stubbornness prevent us from learning or correcting shortcomings in our own legislation or administration.

But our liberal attitude must always be that unrest in America must be dealt with by remedy of its legitimate grievances. Under such a program dissatisfaction might be noisy, but never dangerous. To this end our program of unemployment insurance, old-age benefits, relief, the youth administration, farm recovery, and public works must go on, as the need appears, the cost of them far more than offset by the terrible cost of not having them.

On the last day of the old year an outstanding historian, free from the bias of practical politics, called attention to our entrance into the fifth decade of a century whose story already includes among its decades "one of world-wide war; one of anxious, uneven recovery; and finally a fourth decade of renewed collapse, ending again in conflicts that are spreading devastation over two continents and all the seas." It would be a humiliating thought that our country, richest in material things, most resourceful in invention, should leave such a record of itself. But Professor Nevins also points out that we have also had the "decade of a great rally." He characterizes "many of the new American efforts" as "stumbling and inept," but he proceeds to say:

"But it is also true that the great rally of 1933 and the succeeding years released a new spirit, a fuller comprehension of the interdependent character of the various elements in American economy, and of the need for a firmer social solidarity. It is too much to expect that the first 10 years would furnish us with many well-wrought applications of the new attitude. To have the new spirit itself is gain enough."

The country will choose to go forward to better-wrought applications of this spirit. And it will not choose to do so under any leadership that has missed knowing the spirit itself. As the nineteenth century owed the release of its latent spirit of democracy to Andrew Jackson, so the twentieth owes the release of its spirit to Franklin D. Roosevelt. For our country, no less than for our party, this spirit is our greatest heritage and our only hope.

Andrew Furuseth

## EXTENSION OF REMARKS

OF

HON. ERNEST W. GIBSON

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Wednesday, January 10, 1940

TRIBUTE BY PETER B. KYNE

Mr. GIBSON. Mr. President, during his service in the Senate, Senator Robert M. La Follette, Sr., father of the present distinguished senior Senator from Wisconsin, was the author of the seamen's bill and other legislation helpful to those who sail the seven seas. In the work of framing the legislation, and in pushing it to final enactment, Senator La Follette was assisted by a sailor named Andrew Furuseth. They worked together for years. Furuseth called on the Senator every Sunday morning to discuss legislation for the benefit of the sailor. Furuseth died about a year ago, and his ashes were scattered at sea, as he had requested.

Peter B. Kyne has written, in appreciation of the work of Andrew Furuseth, an article which appeared in the December 1939 issue of the Reader's Digest, under the title of "St. Andrew the Sailor." I ask unanimous consent that this article may be printed in the CONGRESSIONAL RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Reader's Digest of December 1939]

ST. ANDREW THE SAILOR—THE MOST UNFORGETTABLE CHARACTER I EVER MET  
(By Peter B. Kyne)

When the bloody water-front federation strike gripped San Francisco in 1903, I was a 23-year-old clerk in a lumber company office. One of our schooners had arrived with redwood lumber to be discharged on a barge out in the harbor—with scab labor, of course. The boss ordered me to procure some scabs, and a water-front policeman furnished three for \$10 a head. Although there was a strong possibility that I would be beaten or killed by strikers, the boss blandly ordered me to escort the men out to the vessel.

After some adventure I got them aboard safely. I realized, however, that I would have to stay there to protect them; the skipper had a riot gun and a rifle but was too jittery to use either. Before we could start work, a launch filled with strikers bumped alongside. As one man grasped the shrouds to pull himself aboard I poked the riot gun at him and said sweetly: "And when the other foot comes up on the rail, mister, you get 11 buckshot in your belly."

A year of soldiering in the Philippines had given me the ability to say that sort of thing with an air of conviction. So he stood there on one foot and we stared at each other. He wore an ill-fitting suit, shabby and cheap, and a brown derby was shoved well down on his large ears. He would have been tall if he hadn't been stooped and round-shouldered. His piercing brown eyes and high cheeks and prominent nose gave him the look of an eagle. I knew he was a leader. He said he wanted to come aboard to argue with my scabs. I couldn't permit that—not after having paid \$30 for them—so I bade him be off before I blew a hole in his launch at the water line. He departed.

Long after the strike had ended the same man entered the office one day and said, "I am Andrew Furuseth, secretary of the Sailors' Union of the Pacific, and I wish to see your manager." I had heard of Andrew Furuseth and nothing good of him, either. He was a radical, a disturber of the maritime status quo, an insolent fellow who dared tell the bosses how many hours their employees should work and for how much. So I demanded to know his business.

Now, lumber schooners in the Pacific coast trade in those days were not equipped with toilets, washbasins, shower baths, or mess-rooms. At meal time the men squatted around large pans on deck

and helped themselves, while the cold winds chilled the soup and rain and salt spray diluted the stew. Sailors had always been fed that way, so why change?

In prowling over a schooner we operated Furuseth had discovered an unused space 9 feet long between the after end of the deckhouse and the winch. He wanted the company to build there a little mess hall where the sailors could sit down at table and eat like human beings; he had a blueprint and bids that proved it would cost only \$250. So I sent him in to the Pooh-Bah. Furuseth soon emerged weeping. "You are a cruel, hard-hearted man," he cried. "It is true. When the slave becomes a master he, too, becomes a tyrant. It will not be long before public opinion will force you to do what you are not decent enough to do willingly."

After that we began to have difficulties. Crews would make one voyage and quit, and the vessel would lie at the dock all day while a new crew was rounded up. This was expensive and the Pooh-Bah blamed Andrew Furuseth. Finally I suggested that he tell Furuseth we would build the mess hall. He did—and Andrew Furuseth was happy. He held no grudge. He knew he was educating that man.

I stayed on at my job. The romance of the business had gripped me; I was laying up treasures of material that later I peddled to the magazines. I was having fun and some of it lay in getting acquainted with Andrew Furuseth, in our office and in a water-front restaurant where we ate 20-cent luncheons.

Andrew Furuseth, born in Norway in 1854, had sailed under seven flags. He knew sailors, and knew the conditions in every port of the seven seas. Those were the days of wooden ships and iron men. Sailors poorly housed, badly fed, terribly overworked, in many cases brutally treated and paid starvation wages, were the last slaves under the Stars and Stripes. Andrew Furuseth came ashore to dedicate his life to setting them free.

He started with the organization known still as the Sailors' Union of the Pacific. Strikes? Plenty of them and bloody, too, for single men in fo'castles, like Mr. Kipling's single men in barracks, do not grow up into plaster saints. It was a long hard war and neither side gave quarter. Men hate and fear the one who reduces their dividends and Andy was hated and feared, misunderstood and vilified. The late Robert Dollar, founder of the Dollar Steamship Line, once said to me passionately: "That Furuseth is a damned Socialist." As a matter of fact he was not. But after 40 years of battle Dollar came to understand and appreciate Andrew Furuseth and they were friends at the finish.

Furuseth haunted Congress 21 years to press for the revision of the seamen's laws. In 1915 his congressional lobbying bore fruit as the La Follette seamen's bill. Senator La Follette said on the floor of the Senate: "I shall never be able to express my great obligation to Andrew Furuseth, who for the past 4 years has called on me almost every Sunday morning to talk with me about this legislation. He is one of the most intelligent men it has been my good fortune to meet. For 17 years he has been sitting up there in that corner of the gallery waiting to be made free. . . . Woodrow Wilson later said Furuseth held him spellbound with the power of his speech and argument."

Opposition to the La Follette seamen's bill had been terrific; after it became a law a powerful publicity campaign, led by Dollar, was launched to rescind it even before it had been tried out. I had left the water front 7 years before to become a writer. I realized the public was being misled and that Andy didn't know how to start a backfire and had no money to do it. So I wrote an article which blew the shipowners out of the water. Andy was very happy about it and very grateful when I brought him hundreds of favorable clippings. A year later when I called on him to ask how the law was working out he told me sadly that it had been nullified "by interpretation" by the Secretary of Commerce. Seventeen years of patient waiting and labor gone with the wind! Yet Andy was not embittered and not defeated.

Although he had little formal schooling, Andrew Furuseth was easily the world's greatest authority on maritime economics and the history of laws affecting seamen, from the days of the Hanseatic League onward. He was the workers' delegate to the Geneva Conference of the 28 large maritime nations in November 1935.

He was the most honest and fearless man I ever knew. He kept his covenants and expected his sailors to do the same. Once he even took court action against the leader of a committee on a steamer for falsifying the position of the strikers. Often, in the old days, I saw him whip his sailors into line. They had a habit of claiming overtime not due them—according to the mate—and by the contract with the sailors' union the mate's decision governed. So, just before the vessel was due to sail, they would desert and stand on the dock, hoping the captain, to save the loss from demurrage, would call them back and approve their claim. I used to bring the pay roll down to the vessel and hang around. Whenever one of these outlaw strikes was pulled I would telephone Andy. The sight of that gaunt figure hurrying to the fray would send the strikers back on the job and the ship would be moving away before Andy could come aboard. But from the dock he'd shake his fist at the men who had let him down, promising to discipline them when they returned to port.

In 1921 Communist voices in the sailors' union cried for a new contract based on the wartime scale of profits to shipowners. But a depression was on and the wise Andy vigorously opposed the movement. The demagogues won and the strike was called. The shipowners had no business anyhow, so as fast as the vessels arrived in port they laid them up and ignored the strike. In 4 months the sailors and the longshoremen who had struck in sympathy were back under the paw of the owners. However, from that

time on Andy's influence in the union began to fade; he had been elected president of the International Seamen's Union and he gave more and more of his attention to national legislation affecting sailors as a whole.

To me he was always a pathetic figure. I can see him now walking up the Embarcadero with long strides, his ill-fitting suit flapping around him, his brown derby down on his ears, in his eyes the flame of the zealot, looking neither to left nor right. He never married and I think he never had a really good meal or slept in a decent bed until the last year of his life when he was in hospital. Once, when it was reported to him that he was to be arrested, he said: "Very well! They cannot give me plainer food than I've always eaten, they cannot give me a narrower bed than I have always had, and they cannot make me lonelier than I have always been."

Andy never drew a salary in excess of \$75 a month; he would not accept more from the sailors' union than a sailor earned. And when they sent him to Washington with a liberal expense account he lived in mean thrift, walked miles to save taxi fares, and brought the saving back to the union treasury. Once when Senator La Follette asked him what provision he had made for his old age Andy replied: "I have made no provision. When my work is finished I hope to be finished. I shall borrow no fears from time."

When the San Francisco general strike came in 1934, Andy lived in a wretched little room out on Divisadero Street. He heard his sailors contemplated action which he deemed unwise. The street-car operators and taxi drivers were out. Andy, then 80 years old, walked nearly 3 miles to Sailors' Union Hall on the water front to plead for moderation. The Communist element booed him off the stage. Andy's old boys wouldn't have done that.

The long walk and the emotional crisis put too great a strain upon the brave old heart and he collapsed. Back down the years a young physician named Alonson Weeks had read in the Coast Seamen's Journal a bitter attack on the Marine Hospital and its staff. The hospital was no great shakes, but the staff was capable, honest, hard-working, and devoted. Young Dr. Weeks telephoned Andy a roaring protest, and Andy, always fair, always honest, came out, investigated, acknowledged error, and promised there would be no more unjustified attacks. The next time he required medical care Andy went to Weeks and for 30 years he trusted no other doctor. So when his heart betrayed him he was carried to St. Luke's Hospital, where Dr. Weeks was now one of the staff surgeons. At St. Luke's he clamored to be put in a ward but was outvoted. They put him in a private room, and the International Seamen's Union paid for it.

Four years later I met Andy in Dr. Weeks' office and he put his arms around me as if I were a son. Weeks said, jokingly, "Do you know this nut of an author, Andy?" And over my shoulder Andy said: "Peter Kyne was the best friend the sailors ever had with the exception of Senator La Follette." I choked up; I remembered that in my youth I had promised to put 11 buckshot in the old saint's belly. The old man held my hand like a little boy afraid of the dark. He reminded me he was 84 years old and that his heart was a ruin but he was going back to Washington, hoping to get one more piece of legislation over; that accomplished, he was willing to die. He was borrowing no fears from time.

He died in Washington—it was only last year—and his ashes were scattered at sea, as he had asked.

In my 50 years I have adventured and I have met some colorful men, but Andrew Furuseth was easily the most unforgettable man I ever knew. He had an ideal and never lost sight of it, never quit fighting for it, and never fought unfairly. He was just, kind, gentle, considerate. He loved his fellow man and laid down his life for that love. He was industrious, brave, and an aristocrat of the mind. If we had Andy back with us we would be kinder to him now than we used to be; we had to have a Harry Bridges in order to appreciate Andy. If he were back with us, young and militant, San Francisco would not be as it is—practically a closed port. How he would have fought the class hatred that stains unionism now!

I cherish the hope that one day some wealthy shipowner will erect a colossal statue of Andy on Telegraph Hill overlooking the port, where, in the days of '49, the semaphore signaled to the argonauts the arrival of a vessel off the Golden Gate.

Vale, Andy! Pax vobiscum!

## Dedication of Southern Research Laboratory

### EXTENSION OF REMARKS

OF

HON. JOHN H. BANKHEAD, 2d

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 10, 1940

ADDRESS BY HON. THEODORE G. BILBO, OF MISSISSIPPI

Mr. BANKHEAD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address delivered by the junior Senator from Mississippi [Mr. Bilbo]

on the occasion of the dedication of the Southern Research Laboratory at New Orleans, La., December 29, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The beginning of civilization is coincident with the domestication by man of plants and animals.

Human progress for 6,000 years thereafter was exceedingly slow. The next step forward in the advancement of civilization was the invention of the printing press. Then followed a rapid spread of learning until a new world, crowded with undreamed-of possibilities, swung into view.

About the beginning of the seventeenth century the human race began to try to understand the world in terms of physical force, with no apparent advancement at that time in knowledge concerning the organic or living. The incentive to invent penetrated all strata of society with the result that the machine age was ushered in, based primarily upon discoveries made in the science of physics.

In the beginning of this age the motive power was coal. Those countries possessing coal, iron, and other minerals and skilled labor took the lead in manufacture and acquired fabulous riches. Then came the World War, also the invention by Haber and Bosch in 1913, usually described under the title of "fixation of atmospheric nitrogen," a process that gave to agriculture the key to increased plant growth.

Here was opened the field for organic chemistry. The late European war demonstrated that a nation failing to establish itself on an organic chemical basis cannot keep pace with the progress of the world. Organic chemistry stands out preeminently as the source of future unprecedented accomplishments. The mechanical inventions of the machine age for the past 100 years will appear infinitely small in comparison with the chemical discoveries destined to be made for the next century.

Organic chemical processing contemplates an unrestricted utilization of Nature's renewable resources. Improvement of manufacture and supply of mechanical power characterized the machine age. The chemical age centers upon the supply of better source materials from organic life for mechanical power and industrial use.

The problem confronting the country today is the realization of the dream of farm chemurgists which has for its objective the displacement eventually of approximately 250,000,000 tons of raw materials now drawn annually from the mineral kingdom by a like amount of organic farm products drawn from the vegetable kingdom for industrial uses in the United States.

When the mineral output equaled the farm output unemployment was unknown. Today with the farm product in tonnage far below the mineral output unemployment threatens our social order. To balance this production so that each kingdom will produce an equal tonnage is the problem with which we are now confronted. It is useless to attempt to help the farmers in any other way except we bring about a situation whereby the farm land will supply the larger part of the raw materials for industry.

The demand of this chemical age in which we now live is that the raw products of industry shall come increasingly from the farm. The leading organic chemists of today confidently claim that industry can make use of all agricultural surplus; that industry can substitute organic chemical material produced on the land for practically an equal volume of presently processed inorganic or mineral materials; that industry's finished products, as they become more and more organic in composition, will surpass in quantity and efficacy their present-day counterpart of wholly inorganic composition. Therefore, the objective of the modern organic chemists is the full utilization by industry of the agricultural output. Civilization can never return to a state of complete employment until there is a shift from mineral to vegetable sources for the raw materials of industry.

According to an eminent authority, later historians will write concerning the powerful nations of that future day: "These great nations took careful heed of the dawn of the chemical age. They adjusted their internal affairs to a chemical basis and directed utilization of agricultural output so that main products and by-products met total consumption."

Having envisioned this approach to the farm problem and the unemployment situation of the country the Congress of the United States passed a law in 1938 establishing 4 regional research laboratories devoted to the discovery of new and wider industrial uses and outlets for farm products, 1 in the North, 1 in the South, 1 in the East, and 1 in the West. We have here met to lay the cornerstone of the Southern Laboratory in New Orleans, La. This laboratory will be devoted to the discovery of new uses for industry of farm products grown exclusively in the Southern States. These laboratories are adequately financed by an authorized appropriation of \$1,000,000 yearly for each, and an initial appropriation of \$4,000,000 for the construction of the buildings and the purchase of the necessary equipment. It is estimated by Secretary Wallace that there will be 800 scientists employed by these 4 laboratories, 200 for each.

It has come to pass that after 6,000 years or more in the history of the world have gone by organic chemistry has brought us back to the study and nurture of plants and animals, those natural agencies that first engaged the attention of the human race as it was emerging from the darkness of barbarism into the light of civilization.

Theodore Rousseau said many years ago: "The artist does not paint the picture on the canvas; he merely lifts the veils, one by one, that hide it."

It is in this sense that the organic chemist, the research scientist, will lift the veils from the face of Nature, one by one, and show us through the on-flowing years the sources of a fabulous wealth that today lies concealed in the organic products of the soil.

These are the new frontiers that are yet but soon to be crossed. The geographical frontiers have disappeared but we are slowly coming to understand that the call of the wild and the call of the unknown are the same.

All honor to those adventurous souls—800 strong—who will be drawn into a life of research with and through the scientific facilities here afforded. It is my confident belief they will transform the "Number one economic problem of the South" into the one universal hope of the Nation.

We are, at this moment, entering upon a new day. We stand, as it were, tiptoe upon a lofty eminence, supported by four chemurgic columns of Herculean strength—the four chemical laboratories that rest on the four corners of the Nation—and behold the rising sun of this new day making purple glory in the east.

## The Farmer Under the Industrial-Mobilization Plan

### EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 10, 1940

RADIO ADDRESS BY FRED BRECKMAN

Mr. BYRD. Mr. President, it gives me pleasure to request unanimous consent to insert in the CONGRESSIONAL RECORD the radio address delivered by Mr. Fred Breckman, Washington representative of the National Grange, entitled "The Farmer Under the Industrial-Mobilization Plan."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Since the outbreak of the European war more thought has been given in this country to what is known as the industrial-mobilization plan, the detailed provisions of which are virtually unknown to the people of the United States. This plan embodies the ideas that have been worked out by the military and naval authorities of the country, as to the methods to be pursued in coordinating and assembling the financial, industrial, agricultural, and human resources of the Nation for concerted effort in the event that this Nation should become involved in war.

After the World War had ended, a study of its history revealed that the state of unpreparedness in which the United States was caught when it went into the war resulted in a serious delay in our actual participation in the conflict. There was tremendous waste, due to our lack of organization, our inexperience, and duplication of efforts. Our standing army was not much larger than the combined police forces of several of our largest cities; we needed arms, ammunition, and ships, together with all kinds of other supplies and equipment. All this was required at once and regardless of cost.

#### EVILS ENTAILLED BY "COST-PLUS" PLAN

Those who received contracts from the Government were paid on the basis of cost, plus 10 percent. The higher the costs soared, the greater the profits of the contractor, because it will readily be seen that a profit of 10 percent of \$1,000,000 netted him a larger return than a profit of 10 percent on \$500,000. This led to the payment of wages previously unheard of—in ammunition factories, in shipyards, and in all kinds of other establishments holding war contracts. Salaries and bonuses of executive officers were boosted in proportion. If a concern holding a war contract had a president receiving \$10,000 a year, it was regarded as good business to increase his salary to \$20,000, thereby assuring larger net profits to the owners or stockholders.

During the period of America's participation in the war, tens of thousands of new millionaires came into existence, and notwithstanding the heavy taxes that were levied by the Government to defray the cost of the war, at its conclusion we had a national debt of more than \$27,000,000,000.

The high wages paid to workers in the war industries and the huge profits made by contractors supplying war materials to the Government gave rise to the demand for adjusted compensation on the part of those who served in the armed forces, eventuating in the payment of a soldiers' bonus some years ago.

#### GENESIS OF MOBILIZATION PLAN

As a result of the studies made by the military and naval boards subsequent to the war, it was seen that some adequate plan for the

control and coordination of military and civilian activities would be necessary before we should get into another war.

The industrial mobilization plan was the result of these studies. The genesis of the plan goes back to 1924, when there was a widespread demand through the Nation for what is generally termed "universal mobilization for war purposes." Under the authority of various resolutions passed by Congress, the Committee on Military Affairs of the House held extended hearings on the subject.

The studies of the Army and Navy boards were continued until 1928. Then the general demand for a universal draft law which would conscript manpower, wealth, and industrial resources in time of war resulted in the introduction of legislation to this end. Hearings were held before the Committee on Military Affairs, but there were no tangible results in the way of legislation. The agitation of 1928 for a universal draft bore fruit in the appointment of a War Policies Commission in 1931. It was to this Commission that the original industrial mobilization plan was submitted in detail. That plan was the progenitor, so to speak, of all the revised plans which have since been produced.

The metamorphosis into a secret document of the original industrial mobilization plan, the purposes of which were to be educational and to promote peace by the Nation-wide dissemination of its details among the people, has been a singular evolution. In a statement of the War Policies Commission on May 13, 1931, Gen. Douglas MacArthur, then Chief of Staff, in submitting the War Department's mobilization plan, described its purposes in the following language:

"As a practical step, then, in the promotion of peace the War Department strives to assist in impressing upon our own people the serious and terrible nature of modern war and the obligation devolving upon every citizen and upon every resource to participate equitably in carrying the burdens it imposes. A widespread knowledge of these fundamental truths, backed by a program to insure a proper distribution of war's burdens, cannot fail to have a sobering influence upon any group tempted from selfish motives to urge the adoption of national policies that might eventually result in international conflict."

#### WHAT CAREFUL STUDY REVEALS

The industrial mobilization plan of 1931 was revised in 1936 and again in 1939. A study of these plans discloses that the different methods of control set up under the various boards, commissions, and bureaus shall be effective at the moment the President shall declare a national emergency due to the imminence of war, and would give us nothing short of a military dictatorship. Under the mobilization plan the instant Congress passes the validating legislation the President of the United States as Commander in Chief of the armed forces, becomes in fact the sole arbiter of our destinies. His orders and proclamations would have the force and effect of law. Under the various controls provided in the mobilization plan the fate of finance, banking, industry, labor, agriculture, commerce, and the disposition of the persons and the activities of the civilian population would rest entirely in the hands of the Chief Executive and such subordinates as he might designate to carry out his will.

The President would be advised, and in most cases represented by, special boards and commissions, the composition of which in every case is set forth in the mobilization plan.

#### FARMER WITHOUT REPRESENTATION

On these boards and commissions, and particularly on the advisory committee set up to assist the boards and commissions, finance and industry would be heavily represented. Organized labor would have some slight representation, but nowhere in these plans does there appear to be any provision for agriculture to have a voice in shaping the policies which will so vitally affect the destiny of our basic industry and the whole agricultural population. Nowhere does there appear any provisions for representation for agriculture in the determination of priority control, price control, commandeering, control of foreign trade, and the various other controls which constitute an absolute and rigid regimentation of finance, industry, commerce, agriculture, labor, and the civilian population as well.

The American Federation of Labor took notice of this state of unbalance in the plan and at its annual convention at Cincinnati last October passed a resolution condemning the mobilization plan because of the controls it would establish over labor without proper representation on boards and commissions of control.

Not only the hosts of labor, but those engaged in agriculture and all the other groups in our national life should seek to familiarize themselves with the details of the industrial mobilization plan and have an opportunity to do so.

Following the fashion that has been in vogue for some years, the plan is designated alphabetically for sake of brevity as the IMP. The letters IMP combine to form the word "imp." If this plan is not drastically modified in conformity with the processes of democracy, there is justification for saying that it is the imp that will destroy our liberties in the event that we should be drawn into another war.

#### CONSTITUTIONAL RIGHTS SUSPENDED

A perusal of the plan makes it clear that virtually all the rights and immunities granted to the citizen under the Constitution and its Bill of Rights would disappear the moment the Chief Executive of the United States should declare that an "emergency due to the imminence of war" existed. All that would be necessary to bring this about would be the validation of the plan by Congress, which, under emergency conditions, might happen almost over night.

Under the mobilization plan, there have been provided a number of ways in which the free and independent status of the American farmer could be very speedily changed. To put it briefly, under the plan, the farmer would no longer be able to plant and reap as he saw fit; he would be compelled to work under the orders, direction, and compulsion of the military authorities, or of the civilian authorities operating under them. Not only would the farmer have to submit to these controls and compulsions, but so would his wife and children. A study of the various measures designed for the control and regulation of our agricultural, industrial, and commercial activities under the plan reveals the powerful and complete way in which these controls can be used to compel acquiescence on the part of the people. There is, for instance, the Bureau of Priority Control. Any farmer who might not like the orders issued or the slim returns granted him for the work of himself and his family could be brought into subjection, because, if the Government so willed, he could get no supplies, fertilizer, machinery, or fuel.

A second instrumentality is price control, while a third is the power of commandeering. In addition, any farmer who did not readily submit to the directions of the different agencies constituting his immediate contact with the Government could be deprived of credit at the banks, if the Government so decreed.

There is a clause in the 1939 revision of the plan that will startle every liberty-loving American citizen. This clause contains the suggestion that it might be found advisable to continue during the reconstruction period the various agencies and controls set up for wartime purposes.

Twenty-one years have elapsed since the close of the World War, but we have not yet succeeded in repairing the damage sustained by our agricultural, industrial, and economic system as a result of that conflict. Who can forecast, even with approximate accuracy, the duration of the reconstruction period following the next war?

Is there not full justification for the fear that during the progress of another war, with the strict controls and the universal regimentation that it would bring in its train, together with the long period of reconstruction, the liberties which the American people have enjoyed for a century and a half might be lost beyond recovery? Under these circumstances, we certainly should not plunge heedlessly and needlessly into another war.

It is both wise and necessary that we should have an industrial mobilization plan; but the people have a right to know what it contains, and it should be in harmony with the genius of our institutions and the fundamental principles of American democracy. When Congress reconvenes in regular session next month, the veil of secrecy which now enshrouds this vital subject should be lifted and the whole matter brought to the full light of day.

### Commission to Survey National-Defense Requirements and Resources of the United States

#### REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 10, 1940

Mr. VAN ZANDT. Mr. Speaker, today I offered a resolution providing for the establishment of a commission to survey the national-defense resources and requirements of the United States.

My resolution, I wish to emphasize, is not offered in a spirit of criticism. On the contrary, I am in complete accord with the objective the President desires to reach. However, I cannot agree with the methods by which the President proposes to bring security to the Western Hemisphere. There are a number of matters in connection with our national defense on which I believe the Congress and the people should have more light before we proceed further with the \$2,000,000,000 program to bolster our defenses. That is the sole purpose of the proposed survey.

The proposed commission would be truly representative. It would be composed of Members of the House and Senate, Cabinet officers or their representatives, representatives of agriculture, labor, business, industry, and finance, retired Army and Navy officers, flyers, and women.

I would like to help the President "sell" his program to the country, but I also would like to know whether greater efficiency and economy could be attained by streamlining our national defense. Every other great power has long since unified its defenses, some retaining separate air forces. This matter should be explored.

There also is every reason to believe that a national defense planning board should be set up to formulate a long-range program. The surprising rise in a few short years of dictators whose only god is force behooves us to look ahead.

Hence, my sole object is to lay down an organization that is so sound in principle that political changes will not alter the principle or the policy of our national defense. We all know about the distressing experiences of the past when a change in our national administration has changed our entire national defense policy.

If the United States is prepared to defend the Western Hemisphere, the American people might as well know now just how we propose to go about it. Once they know, they will not begrudge the money spent in defense of their liberties. Since the taxpayers pay the bills, they are entitled to a maximum of security at a minimum cost. Professional jealousy should not stand in the way of progress.

Providing for the establishment of a National Defense Commission for the purpose of surveying the national-defense resources and requirements of the United States, including the advisability of adopting a permanent progressive national-defense policy, the establishment of a Department of National Defense, a National Defense Planning Board, and for other purposes

*Resolved, etc.*, That to provide for "the common defense," to promote the "general welfare," and to insure "domestic tranquillity" in the United States of America, there is hereby established a commission to be known as the National Defense Commission (hereinafter referred to as the "Commission").

The Commission shall be composed of five Members of the House of Representatives, to be appointed by the Speaker of the House of Representatives, and five Members of the Senate, to be appointed by the President of the Senate. The Commission also shall include among its members the Secretary of State, the Secretary of the Treasury, the Secretary of War, the Secretary of the Navy, the Secretary of Commerce, and the Administrator of Veterans' Affairs, any of whom in the event of their inability to serve are hereby authorized and directed to each appoint a representative to serve as members of the Commission.

The Commission is hereby authorized and directed to select and appoint as members of the Commission one member each to represent the interests of agriculture, labor, business, industry, and finance. The Commission is hereby authorized and directed to select and appoint as members two Army officers and two naval officers, not on the active lists of the Regular Military Establishment, two aviators with at least 10 years of experience in aeronautics, and two women recognized for their meritorious service in wartime. The chairman of the Commission established under this resolution shall be chosen by the members thereof.

SEC. 2. That for the purpose of obtaining information necessary for legislation the Commission is hereby authorized and directed to conduct a comprehensive survey and study of the national defense, including the following:

(1) The advisability of completely revising the National Defense Act in the light of events in Europe and Asia and the need for legislation to establish a peacetime defensive system, based upon the national objectives of the United States, which can be rapidly expanded into a wartime defensive system, which will carry out the national objectives of the United States.

(2) The advisability of establishing a Department of National Defense, under which the armed forces of the United States would be combined and coordinated to provide for a more adequate national defense in any emergency.

(3) The practicability under a Department of National Defense of promoting and accomplishing among all branches of the armed forces: (a) Coordination of effort and efficiency; (b) savings in purchases of military and naval matériel; (c) unified responsibility; and (d) elimination of duplication of effort and conflict of authority.

(4) The advisability of establishing a National Defense Planning Board to formulate a long-range national defense policy that has sufficient flexibility to meet any changes required by developments and maintain an orderly, progressive program.

(5) The advisability of expanding and speeding the naval program and to examine the necessity for what is known as a "two-ocean Navy."

(6) The advisability of further expansion of the air forces of the Army and Navy, the number and type of planes required and a coordinated program and policy for training personnel and cooperation between Army and naval air operations.

(7) The advisability of granting Government subsidies to commercial air lines, requiring their transport planes to be convertible bombers and specifying that their pilots be commissioned in the Reserve corps of the Army and Navy.

(8) The advisability of perfecting a comprehensive program for rapidly mobilizing industry and commercial shipping into a defensive force.

(9) The advisability of supplementing "educational orders" by providing an adequate "liquid fund" to be expended under the direction of the Secretary of National Defense for the encouragement of inventions, research, experiment, and development of arms, munitions, and implements of war.

(10) The advisability of determining the interests and responsibilities of the United States under the Monroe Doctrine, the

Declaration of Panama, and the pledges made in the name of the United States by the Chief Executive to defend Canada in the event of an armed attack by any other power.

(11) The advisability of determining the interests and responsibilities of the United States in the Philippines if and when that Commonwealth becomes independent in 1946.

(12) The advisability of formulating a definite military and naval program in keeping with the announced policy of the United States in the Orient and the possessions of the United States from the Aleutian Islands to the Samoan Islands.

(13) The advisability of acquiring territory in the Atlantic Ocean and the Caribbean Sea which might serve as enemy bases.

SEC. 3. That the members of the Commission shall receive no compensation for their services but shall be paid their actual and necessary traveling, hotel, and other expenses incurred in the discharge of their duties.

SEC. 4. That there is hereby authorized to be appropriated the sum of \$100,000 to defray the necessary expenses of the Commission. The Chairman shall be authorized to appoint, with the approval of the Commission, such assistants and subordinates as he deems necessary to the conduct of the survey.

SEC. 5. That the Commission shall submit preliminary reports to Congress from time to time, if deemed advisable by the Commission, and shall submit a final report and recommendations to the Congress on or before January 3, 1941.

SEC. 6. That the Commission, or any subcommittee thereof, shall be authorized to sit and act during the present Congress at such times and places within the United States, whether or not the Senate and House are sitting, have recessed, or have adjourned, to hold such hearings, to require the attendance of such witnesses and the production of such books, papers, and documents, and to take such testimony as it deems necessary. Subpoenas may be issued under the signature of the Chairman of the Commission or any member designated by him, and may be served by any person designated by such Chairman or member. The Chairman of the Commission or any member thereof may administer oaths to witnesses. Every person who, having been summoned as a witness by authority of said Commission or any subcommittee thereof, willfully makes default, or who, having appeared, refuses to answer any questions pertinent to the matter herein authorized, shall be held to the penalties provided by section 102 of the Revised Statutes of the United States, as amended (U. S. C., 1934 ed., title 2, sec. 192).

## Exports of Farm Products

### EXTENSION OF REMARKS

OF

HON. CLARENCE J. BROWN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 10, 1940

Mr. BROWN of Ohio. Mr. Speaker, as a result of New Deal policies the balance of foreign trade of the United States in agricultural products has been steadily going against the interests of the American farmer. Imports of farm products from foreign lands have been increasing. Exports of agricultural products raised on American farms have been decreasing at an alarming rate.

Official figures of the United States Department of Commerce show that our exports of agricultural products for the first 10 months of 1939 are much less than our exports of the same products during the same period of time in 1938. The decline in such exports cannot be attributed to war conditions, as only two months—September and October—of the war period are included in these figures. They are:

*Farm products—United States exports of agricultural products, 10 months, 1938 and 1939*

[U. S. Department of Commerce figures]

Export items	Unit	10 months ending October—		Decrease, 1939 from 1938
		1938	1939	
Grains:				
Barley.....	Bushels.....	14,755,000	5,087,000	9,668,000
Corn.....	Bushels.....	137,709,000	25,634,000	112,075,000
Oats.....	Bushels.....	7,144,000	203,000	6,941,000
Wheat.....	Bushels.....	77,382,000	61,165,000	16,217,000
Total grains.....	Bushels.....	236,990,000	92,089,000	144,901,000
Hay.....	Tons.....	60,629	2,106	58,523

Farm products—United States exports of agricultural products, 10 months, 1938 and 1939—Continued

Export items	Unit	10 months ending October—		Decrease, 1939 from 1933
		1933	1939	
<b>Fruits:</b>				
Pears, fresh	Pounds	130,213,000	76,774,000	53,439,000
Peaches, fresh	Pounds	10,745,000	9,510,000	1,235,000
Prunes and plums, fresh	Pounds	15,964,000	13,724,000	2,240,000
Prunes, dried, or evaporated	Pounds	182,022,000	138,206,000	43,816,000
Total pears, peaches, plums, and prunes	Pounds	338,944,000	238,214,000	100,730,000
Oranges	Boxes	7,141,000	5,543,000	1,598,000
Apples in boxes	Boxes	5,814,000	4,856,000	958,000
Apples in barrels	Barrels	759,000	472,000	287,000
<b>Nuts:</b>				
Pecans	Pounds	3,682,000	2,378,000	1,304,000
Walnuts	Pounds	12,332,000	7,829,000	4,503,000
Cattle hides	Pounds	28,671,000	23,267,000	5,404,000
Fox furs, undressed	Number	141,288	48,403	92,885
Tobacco, unmanufactured	Pounds	379,690,000	297,095,000	82,595,000
Cotton, unmanufactured	Bales	3,665,000	3,387,000	278,000
Cottonseed cake and meal	Tons	42,145	5,421	36,724

There is real food for thought in the above figures.

Our reciprocal trade agreement program is a two-edged sword wreaking havoc with American agriculture. On the one hand, the American market is not being properly protected against agricultural imports from foreign lands. On the other, the sale of our own farm products to other countries has declined greatly. No wonder American agriculture is not prosperous. No wonder our farmers are looking to Congress for understanding and aid. The American farmer is fast awakening to the fact that the present administration has been selling him down the river.

### Forest Purchase Units

#### EXTENSION OF REMARKS

OF

HON. EUGENE B. CROWE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 10, 1940

Mr. CROWE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

Members of Congress in whose districts purchase units are located

State	Congressman	Purchase unit
Maine	Ralph O. Brewster	Grand Lake.
Do	James C. Oliver	White Mountain.
New Hampshire	Arthur B. Jenks	Do.
Do	Foster Stearns	Do.
Vermont	Charles A. Plumley	Green Mountain.
Pennsylvania	Robert F. Rich	Allegheny.
Do	Benjamin Jarrett	Do.
West Virginia	Jennings Randolph	Monongahela.
Do	John Kee	Monongahela-George Washington.
Do	Andrew Edmiston	Monongahela.
Virginia	Thomas G. Burch	Jefferson.
Do	Clifton Alexander Woodrum	Jefferson-George Washington.
Do	A. Willis Robertson	Jefferson.
Do	John W. Flannagan, Jr.	Do.
Kentucky	Joe B. Bates	Cumberland.
Do	Andrew Jackson May	Jefferson.
Do	Virgil Chapman	Cumberland.
Do	John Marshall Robison	Do.
Tennessee	B. Carroll Reece	Cherokee.
Do	Estes Kefauver	Do.
North Carolina	Zabulon Weaver	Nantahala-Pisgah.
Do	A. L. Bulwinkle	Pisgah.
Do	Robert L. Doughton	Do.
Do	William O. Burren	Ucharie-Yadkin.
Do	Harold Dunbar Cooley	Ucharie.
Do	Graham Arthur Barden	Croatan.
South Carolina	Butler B. Hare	Sumter.
Do	Joseph R. Bryson	Do.
Do	Clara G. McMillan	Francis Marion.
Do	James P. Richards	Sumter.
Georgia	Malcolm C. Tarver	Chattahoochee.
Do	B. Frank Whelchel	Do.

Members of Congress in whose districts purchase units are located—Continued

State	Congressman	Purchase unit
Florida	Robert Alexis Green	Osceola.
Do	Millard F. Caldwell	Choctawhatchee.
Do	Joe Hendricks	Ocala.
Alabama	Frank William Boykin	Tombigbee.
Do	George M. Grant	Conecuh.
Do	Sam Hobbs	Talladega.
Do	Joe Starnes	Talladega-Chattahoochee.
Do	Pete Jarman	Talladega.
Do	William B. Bankhead	Black Warrior.
Do	John J. Sparkman	Do.
Mississippi	Wall Doxey	Holly Springs.
Do	William Madison Whittington	Delta.
Do	Ross A. Collins	Bienville.
Do	William Meyers Colmer	De Soto.
Do	Dan R. McGehee	Homochitto-Delta.
Louisiana	A. Leonard Allen	Kisatchie.
Texas	Martin Dies	Sabine-Angelina.
Do	Nat Patton	San Jacinto - Davy Crockett.
Oklahoma	Wilburn Cartwright	Ouachita.
Arkansas	Wilbur D. Mills	Ozark.
Do	Clyde T. Ellis	Do.
Do	Fadjo Cravens	Ouachita.
Do	David D. Terry	Ozark, Ouachita.
Do	William F. Norrell	Ouachita.
Missouri	Dewey Short	Table Rock, Pond Fork, Gardner.
Do	Clyde Williams	Wappapello, Fristoe, Gardner, Gasconade, Clark, St. Francis.
Do	Orville Zimmerman	St. Francis, Wappapello, Fristoe.
Illinois	Claude V. Parsons	Shawnee.
Do	Kent Ellsworth Keller	Illini, Shawnee.
Indiana	Gerald W. Landis	Pleasant Run, Lost River.
Do	John William Boehne, Jr.	Patoka, Lafayette.
Do	Eugene B. Crowe	Pleasant Run, Lost River, Patoka.
Ohio	James G. Polk	McArthur, Little Scioto.
Do	Thomas A. Jenkins	McArthur, Symmes Creek, Hocking Valley, Little Scioto.
Do	Harold K. Claypool	McArthur, Hocking Valley.
Do	Robert Thompson Secrest	Muskingum, Hocking Valley.
Iowa	Thomas E. Martin	Koosauqua.
Do	Karl M. LeCompte	Chequest, Chariton, Grand River.
Do	Cassius C. Dowell	Chariton.
Michigan	Albert J. Engel	Manistee.
Do	Roy O. Woodruff	Manistee, Huron.
Do	Fred Bradley	Marquette, Hiawatha.
Do	Frank E. Hook	Ottawa.
Do	Fred L. Crawford	Manistee.
Wisconsin	Reid F. Murray	Nicolet.
Do	Joshua L. Johns	Do.
Do	B. J. Gehrmann	Nicolet, Chequamegon.
Minnesota	Harold Knutson	Chippewa.
Do	William A. Pittenger	Superior, Chippewa.
Do	Richard T. Buckler	Chippewa.
North Dakota	Usher L. Burdick	Souris-Cheyenne.
Do	William Lemke	Souris-Shetonne.
Utah	Abe Murdock	Davis, Provo.
Do	J. W. Robinson	Provo.
Idaho	Compton I. White	Arrowrock.
Do	Henry C. Dworshak	Do.
Oregon	James W. Mott, W. M. Pierce	Marys Peak.
California	Clarence Frederick Lea	Northern Redwood, Southern Redwood.
Do	Harry L. Englebright	Eldorado, Tahoe.
Do	Bertrand W. Gearhart	Sequoia.
Do	Alfred J. Elliott	Do.

### The Antilynching Bill

#### EXTENSION OF REMARKS

OF

HON. W. F. NORRELL

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 10, 1940

Mr. NORRELL. Mr. Speaker, there has never been a time since our Government was created when it was important that we move as a unit more so than it is today. With wars and rumors of wars all about, with trouble and dissension prevailing in most all parts of the world, except probably our own Nation, and when we in this Nation are faced with an

unbalanced Budget, faced with unemployment by millions, unsolved problems relative to industry, labor, and none of the economic problems of agriculture and other domestic subjects having been solved, we find a majority of the membership of the House of Representatives casting aside these questions and calling the antilynching bill up for consideration and final passage.

This bill has made its appearance in the Congress just before election day since 1922. It does appear, however, that above all times in the history of this Nation that, in place of trying to "play politics," the membership of this House should be concerned in devoting their time toward trying to solve our own economic problems and toward endeavoring to move as a unit in world affairs so far as our Nation is concerned, it should be at this time.

I am opposed to the antilynching bill for several reasons:

First. Because the problem of lynching has already been solved by the people of the United States. There was a time when lynchings occurred at the rate of more than 100 per year, but last year there were but 3 incidents in the entire United States—1 of a white man and 2 of Negroes. It is possible, and highly probable, that there will be no lynchings in 1940 if our ratio of past improvement continues.

Second. Because the antilynching bill is unconstitutional. It places Federal supervision over the States and their subdivisions as well as their officials and thereby takes from the States powers not delegated to the Federal Government. Under the provisions of the bill it is possible that the officers of the States and counties and municipalities, and even private citizens, might face felony charges in the Federal courts for failing to do something that they had no knowledge of or opportunity to prevent. The bill provides that the county where the crime of lynching is committed shall be liable to pay liquidated damages to the relatives of the victim in sums varying from \$2,000 to \$10,000, and the county would be called upon, of course, to pay such sum as fixed by the Federal court. How would the Federal court collect this money? The county treasurer might take the position that, under the laws of his State, he has no authority to pay the judgment. There might not be any State law providing a method of payment of such judgments. In all of these events the officers could be held for contempt of Federal court, under the provisions of this bill. You would have the county officials obeying the laws of their States and, at the same time, held in contempt of Federal court.

Third. I am opposed to this bill because it is an attempt to destroy our democratic form of government. Under the American system the States are the only agencies through which a democracy may function. A democracy is not controlled from the top but from the bottom. In place of having a central form of government, democracy recognizes the rights of the people to govern themselves. Back in the early days when the original States recognized their need for some central form of government to do certain things which the States separately could not do, the representatives of the Thirteen Original States met in Philadelphia and proceeded to delegate limited functions to a central agency of government then established. If the Federal Government can take over the enforcement of penalty for murder, through lynching, by that same authority it can take over the enforcement of all other criminal laws, and by the same act it can take over the enforcement of all civil laws, and all local self-government would thereby be destroyed. With the destruction of self-government goes the destruction of democracy and the administrators of the Federal Government must of necessity become the dictators.

My fourth reason for opposing this bill is that if the Federal Government supervises the enforcement of the law against murder by lynching it should at the same time include murder by the machine-gun gangsters of New York, Chicago, and other cities of the country where murder has increased rather than decreased during recent years. The sponsors of this bill do not exhibit much interest in punishing the racketeers and gangsters, kidnapers, and others who are committing heinous crimes in their own sections; but in order to fool the Negro just before each general election they shed crocodile

tears over the horrors of lynching when, as a matter of fact, there are now no such crimes being committed.

My fifth reason for opposing the bill is because it is evident that if the antilynching bill is to become the law of the land it should not further penalize and punish the victim of the criminal who has been lynched, as the present bill would do; but it appears that the woman who has been outraged by the Negro beast should be placed upon an equal basis with the Negro criminal at least and be given the same financial consideration. If the Federal Government is to protect the rapist, it certainly should also protect the one outraged. It may be said that rape has not caused all of the lynchings, but it is a fact that out of the total of 1,055 lynchings in the United States from 1882 to and including 1936, 908 were of Negroes who had committed the heinous crime of rape upon some white woman. Yet there is no relief given to the victims, and under this bill they are punished by having to assist in the payment of judgment to be rendered in favor of the family of the one who committed the crime and was lynched, and also the relatives of the victim who was raped face prison sentences.

Sixth. The last reason I shall give for opposing the bill is because it is unfair to the South, which is more interested than any other section in preventing lynching. It is calculated to injure rather than help the Negro, who must of necessity depend upon his neighbors for protection rather than some Federal official of remote distance. I hope that it is not an exhibition of the feeling which may have at one time divided this great Nation into sections, because, although I am the grandson of a Confederate veteran, and others of us from the South are descendants of Confederate veterans, we are anxious now that this Nation be not composed of North, South, East, or West, but that it be composed of one people united for the common good of all. In conclusion may I repeat, Mr. Speaker, that the American people are expecting this Congress to devote its time toward making an honest effort to balance the Budget and toward solving the problems of agriculture, labor, the unemployed, and aged, and the many other problems which must be met and dealt with by the present Congress?

H. R. 7693

## EXTENSION OF REMARKS

OF

HON. JOHN G. ALEXANDER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 10, 1940

Mr. ALEXANDER. Mr. Speaker, on January 4 I introduced H. R. 7693, a bill entitled "Granting pensions and increase of pensions to certain soldiers, sailors, and marines who served in the Philippine uprisings and campaigns from July 5, 1902, to December 31, 1913, and for other purposes."

This bill, as the title indicates, provides a modicum of justice for those men who gave the best years of their lives in the service of our country in the wilds and jungles of the Philippine Archipelago during those tough years of reconstruction and rebuilding immediately following the Spanish-American War.

I have just received a letter from one of these men which states that when I introduced the bill I executed a humanitarian act for the veterans of the Pulajane and Moro campaigns.

Other veterans of the Insurrection of the Philippines have been granted pensions and have justly enjoyed such benefits for these many years, while these veterans of the Pulajane and Moro campaigns carried on during the years immediately following the official closing of the Philippine Insurrection are classed as peacetime-service men.

Those veterans who are qualified by the provisions of H. R. 6827, now H. R. 7693, to receive benefits are past middle age, many permanently disabled, and all are generally suffering ill

health, largely as a result of service in the jungles of the Philippines at a time when sanitary conditions were practically unknown in the islands. It can readily be seen that those veterans are greatly handicapped in the struggle to provide for themselves and dependents.

In view of the above statements, and in justice to those men who gave honorable and hazardous service to the Nation by putting down the uprisings against the authority of the United States of America in the Philippines between the dates of July 5, 1902, and December 31, 1913, I ask you, in the name of justice and equality, to do your utmost to bring this belated recognition to those veterans by giving all possible assistance to enact H. R. 7693 to law at this session of the Congress.

I have received many other letters regarding this same matter, indicating a widespread interest in the question. The following from a comrade in Tennessee is representative of the others:

JOHNSON CITY, TENN., January 8, 1940.

HON. JOHN G. ALEXANDER, M. C.,  
House Office Building, Washington, D. C.

DEAR CONGRESSMAN ALEXANDER: I have noticed in the CONGRESSIONAL RECORD of January 4 that you had introduced a bill, H. R. 7693, providing pensions and increases of pensions to certain soldiers, sailors, and marines who served in the Philippine uprisings and campaigns, from July 5, 1902, to December 31, 1913. Inasmuch as this bill, if enacted into law, may materially help me, I am deeply interested in same, and would appreciate very much you sending me a copy of this bill if and when same is printed.

I would like to give you a very brief description of my personal case, that you might know just how much your bill will mean to me. I enlisted on January 22, 1904, served until January 21, 1907. During this time I served practically all of my enlistment in the Philippines and was engaged in numerous battles, engagements, expeditions, and skirmishes, which are a matter of record in the War Department. Then, after being discharged from the service, I applied for a pension under the general pension laws, and was given a small rating, which was increased in the years following until I was at last rated as total permanently disabled, and was receiving pension for such degree when the Economy Act was passed; then I was reduced to a small amount, which was eventually discontinued.

You may be assured that my sympathy is with your bill and that I will communicate with my Congressman and two Senators urging them to support your bill.

Yours very truly,

SAMUEL M. BOOTH.

## Wildlife in New York State—The Great State of New York Has Its Own Open Spaces

### EXTENSION OF REMARKS

OF

HON. FRANCIS D. CULKIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 10, 1940

ARTICLE FROM THE SYRACUSE (N. Y.) POST STANDARD

Mr. CULKIN. Mr. Speaker, pursuant to the permission of the House, I append hereto an article taken from the Post Standard, Syracuse, N. Y., telling of the take of deer in New York State during the 1939 fall hunting season. I invite the attention of the Members to the fact that the kill amounted to 14,511 deer. They were all bucks, as the legislature is chivalrous, and there is no open season on does. The average Member of the House visualizes New York as the home of the predatory interests, with Wall Street in the saddle. This article will convince the House that New York has a mixed terrain. Besides the "sidewalks of New York," we have vast stretches of woodland and bosky dells where the deer are permitted to live out their lives naturally and are free from interference except during the 30-day hunting season. The Members from the Western States take great pride in that they are the possessors of the great open spaces where nature's processes are unhampered except where a seagoing Member at the behest of an ambitious chamber of commerce procures the spending of a couple of hundred million dollars on some reclamation project.

It should be remembered that this is a scientific killing and in no way depletes the herd. However, it does not include the deer killed with fish poles in summer. Dame Rumor, who is, of course, a "lying jade," says there are many such. I am wondering if any Western State can match this kill. If not, they must yield the palm to my State and cease their prating about the inherent and natural wildness of their localities. The appended article is proof of the foregoing:

[From the Syracuse (N. Y.) Post Standard]

STATE HUNTERS KILL 14,511 DEER DURING SEASON

ALBANY, January 1.—The largest number of deer ever reported to the conservation department was taken in New York State during the 1939 fall hunting season. Figures compiled by the bureau of game and released today by the conservation department show that a total of 14,511 elusive whitetail deer were killed during November. This figure, representing an increase of slightly more than 20 percent over the previous year, was largely attributed to the opening of six new counties in the southern tier.

Deer hunting was permitted in 33 counties of the State during the 1939 season, 5 more than in the previous year. Open seasons in the Adirondacks, the Catskills, the southern tier, and what are termed as outside counties were also substantially changed last fall. In the Adirondacks the season opened 15 days later than usual, and the department officials said that despite the fact that hunting conditions were far from favorable the later season was a contributing factor to the increased kill of deer. Likewise, the counties in the Catskill region showed a slight increase. Here, too, the increase was attributed to the change in the open season.

In the 9 southern-tier counties, 6 of which were open to deer hunting for the first time this fall, a total of 3,968 deer were reported. A decrease was noted in the take in Broome, Cortland, and Steuben Counties, where an open season prevailed for the first time a year ago. Gardiner Pump, superintendent of the bureau of game, said the slight decrease in these 3 counties indicated that open deer seasons are an effective means in harvesting the surplus of the game crop and in reducing the size of the herd, thereby minimizing damage to farmers' crops.

Five counties throughout the State, namely, Hamilton, Allegany, St. Lawrence, Franklin, and Essex, each reported more than 1,000 deer taken during the open season. Cattaraugus County in the southern part of the State fell just outside of this classification with a total of 933. The largest number of deer taken in any county of the State was reported by Hamilton. A total of 1,571 deer was reported from this county, an increase of 75 over the previous year. In the Catskill region, Sullivan County was again the most productive, with a total of 796 this fall.

In the counties listed as outside counties there was a decrease of 219 deer killed this fall. However, this was due almost entirely to the fact that no hunting was permitted in Putnam County this year. Last year 208 deer were taken in that county.

Conservation Commissioner Lithgow Osborne, in releasing the deer-take figures, declared that the exceptionally large number of deer reported killed in the southern-tier counties substantiated the department's contention that an open season in this part of the State was necessary to reduce the size of the deer herd. The commissioner also pointed to the fact that two of these counties—Allegany and Cattaraugus—were included in the first six counties reporting the largest total. Both of these, the commissioner said, are classed as semiagricultural counties and provide ideal food and cover, a factor largely responsible for the enormous increase in the number of deer in this part of the State.

## The Antilynching Bill

### EXTENSION OF REMARKS

OF

HON. JOHN L. McMILLAN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 10, 1940

Mr. JOHN L. McMILLAN. Mr. Speaker, I would like to take this opportunity to say a few words regarding the so-called antilynching bill which is before the House for consideration at the present time. I cannot understand why my fellow Democratic Members of the House from New York and the other Northern States should insist on bringing a measure of this nature before the House of Representatives at this time. We all know that we have hundreds of problems to be considered this session of Congress, both of national and world-wide importance.

First, I want it distinctly understood that I do not advocate lynching and do not believe that there is a single Member of this House who would not prefer giving every prisoner

the full advantage of the law. I am just as certain as I am standing here today that should this bill become a law there would not be a single court in the United States that would hold this legislation to be constitutional.

We all know that if we place a law on the statute books giving the Department of Justice or some other Federal bureau authority to walk up to a county treasurer and ask him to pay the Federal Government \$5,000 of the county tax fund because a mob had committed an act of lynching the result would be that the county treasurer would refuse to pay same, as he would have no authority to pay funds of this nature to the Federal Government under the Constitution.

Furthermore, I know that all the Members of Congress are well aware of the fact that all trials of this nature in the South would be handled by a southern Federal judge, southern jury, and southern United States district attorney, which would make it impossible to secure a verdict against any sheriff when he had been overpowered by a mob. I believe every sheriff and peace officer of the United States would be justified in tendering his resignation if Congress should place a law of this nature on the statute books.

I cannot understand why this bill was not presented to the Judiciary Committee of the House, which membership is composed of some of the best lawyers in the United States. We all know that, if this bill had been presented to the committee as other bills are presented for legislation, it would never have reached the floor of the House.

I am a new Member of the House and do not have very much authority; however, I find that there is a way to let my views be known to the other Members on legislation of this nature. We all remember that it has been only a short time since South Carolina and Mississippi held the Democratic Party together and nursed it in its infancy until it grew into the party we have today. Our northern democratic friends would certainly not be here on the floor of the House today as Democratic Members of Congress had it not been for the South holding the party together after the Republican landslide in 1928.

We people of the United States have practically solved the lynching problem and I am glad to say that lynching is practically a thing of the past. I believe that there are more murders committed by gangsters of New York in 1 hour than we had lynchings throughout the United States during the entire year of 1939. Therefore, you can see that there is only one reason why this bill is being forced down the throats of the southern Members of Congress here today—to get votes for the northern white Members of Congress and to enrich the pockets of the highly educated, colored northern bosses and different officials of the colored societies. I am glad to say that I do not have to depend on getting votes in that manner and, when the time comes that I find it necessary to secure votes by antagonizing my fellow Members of Congress and the less fortunate people of my district by making them think they are getting beneficial legislation when they are actually getting legislation calculated to cause serious racial trouble in sections of the United States where everyone is peaceful at the present time, I will go back to the farm. I certainly have nothing against the colored race as I was born and reared on a farm where my father worked and housed approximately 100 Negroes at all times. I know that they are as happy to see me when I return home as any of my constituents and they are well aware of the fact that they will be prosecuted if they commit a crime, the same as any of the white citizens living in my district.

I am proud that I am a southerner, having lost both my grandfathers in the Confederate Army during the War between the States; and, in my opinion, I think it is high time that the sections of the country which became rich on account of the Civil War should stop crucifying us and permit us to continue to solve our own problems in the most efficient manner which we have been following during the past 60 years. I do not believe that any other country could have made the progress the South has made during the past 60 years with the racial problem and hundreds of other similar problems facing them after the Civil War.

LXXXVI—App—9

As I stated before, this Government is composed of two systems of government—Federal and State. I am a strong advocate of States' rights and believe that every State should be allowed to solve its own problems; and, in my opinion, we people in South Carolina have done a good job of this, and will continue to do so, without any meddling from far distant outside sources.

We may pass a law which will control and direct the sheriff, judges, and peace officers and lay a tax of \$5,000 upon the taxpayers of the county, but again I would like to state that I believe every thinking man in this House will agree with me that a law of this nature would not be held constitutional. I certainly hope the time will soon come when members of our own Democratic Party of the North will not try to get votes by making the Negro race think they are getting something when their real friends are among the southern Members of Congress. I believe that education and religion will completely do away with all lynching within the next few years, as justice has been expedited so that it is possible for a prisoner to receive due process of the law without delay.

I can assure you that the so-called reformers are not assisting our colored race by irritating the white people of the South, who are actually the best friends the Negro race has at this time. We have just about solved the lynching problem in my State and I believe that, if outsiders would stop meddling in our business, lynching would soon be a thing of the past.

As stated before, I do not advocate lynching and do not know of anyone in my State who does not believe in giving a prisoner the full advantage of the law. I do hope every Member of the House will study this legislation very thoroughly before they cast their votes and try to consider the possible effect legislation of this nature will have on our future generations.

### A United America

#### EXTENSION OF REMARKS

OF

#### HON. J. THORKELSON

OF MONTANA

#### IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 10, 1940

Mr. THORKELSON. Mr. Speaker, previously I have discussed the Senate and shall now discuss this subject further. Looking back, I can only reach the conclusion that the founders of our Republic were fearful of imperialistic domination similar to that which they had experienced in the various countries wherefrom they had emigrated or from which they had been expelled for political or other causes. It was for their own protection that State and State governments were designated to represent the aristocratic element in our Government and given power by the people to select two Senators to the Senate of the United States. With the same foresight, they provided article I, section 2:

The House of Representatives shall be composed of Members chosen every second year by the people of the several States.

The wisdom of the rule for electing Members to Congress was apparent, in that the people themselves controlled the election of all public officials, the United States Senators indirectly through their own State governments, and Members of the House of Representatives by direct election. In this manner, the two Houses became a check upon each other establishing a finer balance in the government, one for the interest of the State, and the other for the interest of the people. To provide a still better balance, two special powers were granted to the Senate and two to the House of Representatives. The Constitution provides that the Senate shall approve treaties and Presidential appointments, and shall conduct hearings on impeachment of public officials. The House of Representatives shall appropriate all moneys, and shall prefer charges of impeachment.

The wisdom of this arrangement is apparent, for the powers of controlling the purse strings and removal of public officials by impeachment were left to the House of Representatives. In this manner, the people again protected themselves, for excessive expenditures and corruption of public officials can be controlled by instructing newly elected representatives to proceed as directed by their constituents.

The adoption of the seventeenth amendment did not affect the House of Representatives, but did affect the upper House, for the Senators are now elected by direct vote, in exactly the same manner as the Representatives. At first glance this may appear better, but on further study, it will be found to penalize the people. The Senators, like the Representatives, now depend for election entirely upon the majority vote, and will like others no doubt sacrifice soundness to be elected to office.

The evil of this is well exemplified in this administration. In many instances the only ability required to be elected to Congress since 1930 is simply faith in Roosevelt and the New Deal, which, of course, received public acclaim. It was for that reason that many Members in both Houses were elected to office on promises to blindly follow the leader. Many people who voted for the followers of the New Deal are now opposed to it, yet nothing can be done about it, because the followers were elected for 6 years, and will go on under the next administration until they run their course.

All of this could not have happened before the seventeenth amendment was adopted and is, in my opinion, a most convincing reason why we should not tamper with the Constitution of the United States.

In discussing this subject, I find that many people have forgotten that the States at one time were represented in the Senate of the United States, and that States' rights and representation in the Senate were abolished when the seventeenth amendment was adopted. This lack of interest may be forgiven in the younger generation, but it is certainly inexcusable in older, matured business people. It is difficult to account for this indifference toward the Government, for surely no one can be blind to the eventual outcome. Let us not forget the words of Washington, "Despots arise on the ruins of public liberties."

While discussing the loss of State representation and State control of the Senate, I often encounter this observation: "Do you recall the corruption in the United States Senate before the adoption of the seventeenth amendment? Do you remember how many Senators were bribed by the vested interests, and that frequent Senate scandals were largely responsible for this change in the Government?"

My answer, of course, is yes. I do remember and I admit that conditions were, to say the least, disgraceful. But would you, if one or two houses in your town were burning, set fire to the whole town to prevent future conflagrations? Or would you extinguish the fire and remove fire hazards.

Do you believe we were justified in destroying States' rights and State representation in the Senate of the United States in order to eliminate a few corrupt Senators? Do you not believe that it would have been a wiser plan for the State legislatures to recall these traitors and treat them as common criminals?

I am firmly convinced that our present chaotic State follows a well-laid plan directed by pseudo nobles in a decaying empire the purpose of which is to secure their position by weakening our Government, the empire's most threatening competitor. To bring this about, our Republic had to be destroyed, and it is my conviction that the interest which is now engaged in sabotage of the Government and private industries is the same anti-American interest that engaged in bribery and corruption of public officials in order to mold public sentiment favorable to the adoption of the seventeenth amendment. The full effect and danger of this is far-reaching and will become more acute as the older statesmen cease to guide the Government.

Before adoption of the seventeenth amendment, each State through its representatives in the Senate directed the Federal Government in the interest and for the general welfare of the United States. Today the reverse is true. Each State

is now seeking aid from the Federal Government in its own interest, with little consideration for the United States.

Our ancestors moved forward and carved the Nation you see. We are sitting and whittling the structure away.

The States, however, cannot escape responsibility, for money borrowed by the Federal Government must be repaid by industries, business, and people within each State. When the Federal debt and our currency are repudiated, the people again pay, through the losses they will sustain in investments and savings. The point to bear in mind, however, and one that should be of interest to everyone, is that the international bankers, designated on the Treasury Balance Sheet as "Interests Outside of the Treasury and the Governors of the Federal Reserve Banks," will not sustain any loss, for they own and control over \$15,000,000,000 in gold, now stored in the Treasury of the United States, and in addition, many of the Nation's larger industries. So it is, for us, "Heads they win, tails we lose."

This should be of interest to every State in the Union, as their own representatives in Congress propose larger appropriations for Federal spending. Agriculture and industry should also bear in mind that money borrowed by the Federal Government on States' credits when loaned to foreign governments becomes a weapon of destruction to agriculture and industries in the United States. The truth of this may be found in restricted and regulated crop production, and in the steadily increasing surplus of farm produce.

Unemployment springs from closed food processing plants, stagnant business, and idle factories, all of which can be charged to unsound administration trade policies. It is this planned destruction of farming and manufacturing that Congress should stop, before it destroys our Nation's industries.

Expression on this subject must come from the electors of the Congressmen who voted for this legislation, and in the future it is imperative that each State give the most serious consideration to the ability and patriotism of those chosen to serve in the Nation's Congress. It is only by the most careful public selection of candidates in primary elections and the same support in the general elections that the evil of anti-American influence can be overcome in both major parties. For the benefit of those who blindly follow the dictates of political parties, I quote the first President:

I have already intimated to you the danger of parties in the State, with particular reference to the founding of them on geographical discriminations. Let me now take a more comprehensive view and warn you in the most solemn manner against the baneful effects of the spirit of party generally.

This spirit, unfortunately, is inseparable from our nature, having its root in the strongest passions of the human mind. It exists under different shapes in all governments, more or less stifled, controlled, or repressed; but in those of the popular form it is seen in its greatest rankness and is truly their worst enemy.

The common and continual mischiefs of the spirit of party are sufficient to make it the interest and duty of a wise people to discourage and restrain it.

It serves always to distract the public councils and enfeeble the public administration. It agitates the community with ill-founded jealousies and false alarms; kindles the animosity of one part against another; fomented occasionally riot and insurrection. It opens the door to foreign influence and corruption, which find a facilitated access to the Government itself through the channels of party passion. Thus the policy and the will of one country are subjected to the policy and will of another.

These are cold facts, spoken by President George Washington in his farewell message, when, after two terms in office, he voluntarily retired as President of the United States.

His words are as true today as they were then, and the wisdom of his advice is evident as we observe the evils rampant in both major political parties.

Nothing can be expected from either political party, for the national organizations of both are subservient to those who pay the expenses. This is also true of the Presidential candidates, for they, too, are dominated and led by the same financial interest. On the election day it makes little difference to these invisible rulers which candidate is elected to office of President, but if there is a preference, the weight of the rulers in the invisible government will favor the candidate most suitable to them. This statement proves itself as we identify past and present administration advisers.

I realize this is not the language of a politician and while I have been frank in my statements, I do not want them to appear antagonistic but rather as a friendly criticism of an outworn political system. On this point, however, I wish to be clear: I want those who read this to understand that I have no greater respect for political parties than the esteem in which they were held by the first President of the United States when he said:

The alternate domination of one faction over another, sharpened by the spirit of revenge natural to party dissension, which in different ages and countries has perpetrated the most horrid enormities, is itself a frightful despotism. But this leads at length to a more formal and permanent despotism. The disorders and miseries which result gradually incline the minds of men to seek security and repose in the absolute power of an individual, and sooner or later the chief of some prevailing faction, more able or more fortunate than his competitors, turns this disposition to the purposes of his own elevation on the ruins of public liberty.

Let none of us forget that the Senators, the Presidential electors, and the Members of the House of Representatives are now elected by direct vote, so it does not matter about political parties, creed, or color; majorities put them in office. Should anyone object to the candidate elected, it will be of little avail, for such objection will be overruled by the majority that elected him to office. The majority can now elect its candidate, no matter whether he be anti, pro, or just a plain American. The majority rules. In other words, we are now a democracy instead of a republic with State representation and control of the Senate. It is this destruction of constitutional government which is responsible for the many differences of opinion, not only among the three branches of the Government, but also among public officials and the people themselves. It is a deliberate and planned confusion created by anti-Americans, so that they may step into power on the failure of the American people to grasp the true situation.

In conclusion, it is well to keep before us the fact that we are in the midst of a plan to confuse the people as to the actual situation, not only in the United States but throughout the world. The daily press has been of no aid in revealing the true situation and should, for that reason, receive scant attention from its readers, in this respect. This is clearly evident as we read editorials and other remarks published by the various columnists in which they use the words "Nazi," "Fascist," "antiracial," "anti-Semitic" as stock names for those with whom they disagree, for those names were created by the anti-Americans as a cloak to shield their own subversive activities. We should instead demand that everyone adhere to and be guided by those fundamental principles, so clearly set forth in the Constitution of the United States, for it is only upon that ground we can again become a united America. The people should demand that each Member in Congress, in the executive and judiciary branches of the Government, honor his oath of obligation, for in so doing they will preserve and protect the people's rights by defending the Constitution of the United States.

### An Address of Welcome to the Newly Admitted Citizens Before the United States District Court at Chattanooga, on November 22, 1939

#### EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 10, 1940

ADDRESS BY HON. GUS A. WOOD, OF CHATTANOOGA, TENN.

Mr. KEFAUVER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following welcoming address by Hon. Gus A. Wood, of Chattanooga,

Tenn., to the newly admitted citizens before the United States district court at Chattanooga on November 22, 1939:

May it please the Honorable Court, Mr. Chairman, newly admitted citizens, and ladies and gentlemen, I consider it a distinct privilege and a high honor to greet you here on this occasion and as a representative of the American Legion to address you for the first time as fellow citizens of our great country. We of the American Legion would have you regard us as an organization dedicated to the great task of fostering and perpetuating a true spirit of Americanism, earnestly striving to inculcate not only in you but in every citizen of our common country a spirit of individual responsibility to the community, State, and Nation. Now, for the first time, we can regard you newly admitted citizens as our fellow workers—joint laborers in a common endeavor to impress upon our own generation and to transmit to posterity those eternal principles of justice, freedom, and democracy which have in the past and will continue to make these United States of America a beacon light of hope for the oppressed peoples of every generation.

We are proud of you newly admitted citizens; proud of the fact that you have seen fit to voluntarily lay aside old loyalties and old allegiances and to assume new ones; proud of the fact that of your own free will and accord you have foresworn each and every obligation which you previously owed to any foreign prince or potentate and have in turn assumed, upon your solemn oaths, the duty to support and defend the Constitution of your newly adopted land. It is our sincere wish for each of you that your future here among us will be fraught with the greatest possible measure of happiness, and that none of you will ever have the slightest cause to regret the solemn step that you have taken here today.

Citizenship in our great country is no insignificant thing and should not be taken lightly by any of us. Our form of government, of which you have now become an integral part, offers to its citizens many advantages that cannot be fully enjoyed at this time by any other people on the face of the earth. Your studies preparatory to your examination here today have doubtlessly outlined those advantages to you, and time does not permit me to mention all of them here. But I cannot but remind you that from the moment that this distinguished court pronounces the order of your admission to citizenship, from that moment and for as long as you may live the protecting arm of the mightiest of world powers is thrown around you, jealous of every personal and property right which our Constitution and laws insure to you.

Whatever may have been your status in the past; whether you come to us from one of the enlightened democracies of the old or new world, or from one of those totalitarian states where every right of the individual is subservient to the will of the state, you may now confidently assume this new citizenship, boid in your right to expect and enjoy the fullest measure of life, liberty, and the pursuit of happiness. No more will you be deprived of your right to worship God according to the dictates of your individual consciences; no more will you be tried for any real or pretended offense, but by a jury of your fellows; no more can your property be confiscated; your homes and your possessions will forever remain inviolate from the sneaking eyes and thieving fingers of a secret police. You may have your opinions and you may voice them, free from the threats of a magistrate or a mob. All of these and more are guaranteed to you under our democratic form of government, of which you are now a part.

Let me remind you, however, that these rights and liberties which we here freely enjoy are not the result of any mere fortuitous circumstance. These rights were won upon a thousand battlefields, millions of lives were freely offered that you might enjoy them. They are the result of the struggles and sacrifices of our liberty-loving ancestry for many generations, and from the dim and distant past there comes down to us through the ages the warning cry of the fathers, "eternal vigilance is the price of liberty." If we would keep them, we must be zealous in our enjoyment of them, lest in perilous times we voluntarily surrender this, our sacred birthright, for a mess of pottage in the form of some fleeting cure-all.

Therefore, I say to you in all earnestness, that from these great advantages so freely bestowed upon you, there devolves upon your shoulders the grave responsibility of doing your part to see that this Government of ours shall continue to exist, and in the words of the immortal Lincoln, "that government of the people, for the people, and by the people, shall not perish from the earth."

What are the duties and responsibilities that you here assume? In these perilous times, when the nations of the Old World are locked in deadly combat, we naturally think of the possible destruction of our country and its free institutions by a foreign enemy. I maintain that there is no real danger here. With a Navy second to none, a well-equipped army and air force, together with vast resources of men and material, should the time ever come when our liberties are threatened by a foreign invader, we can rest assured that the valiant sons of America, both native-born and naturalized, will rise to a man and sweep the invader from off our shores. Woe be unto that nation who mistakes our sincere love of peace and hatred of war for a philosophy of "peace at any price." Some 22 years ago it was said of us that we had become a nation of money lovers—had grown soft and flabby by luxurious living and would never be able to wage a successful war. The pages of world history have recorded in no uncertain way the utter falsity of that idea.

But there are other duties of citizenship which, though not so glorious and spectacular, are equally as important, and in the zealous performance of these commonplace duties lies the real destiny

of America, and in our failure to realize their importance and to be responsive to them lies the only danger that can ever confront our institutions. It is through our failure to appreciate the advantages of our democratic form of government and to safeguard it by every thought and act that our real danger lies. Just as our arm, bound to our body in inactivity, will soon wither and become useless, so these duties of citizenship, which are both a privilege and an obligation, will be forever lost to us if we underestimate their importance and neglect to perform them. The duty to vote in every election—not blindly with only a party label in view but intelligently—after a thorough investigation of both the men and the measures proposed; the duty to support your elected officials, both high and low, as long as they continue to make an honest effort to serve you and are free from the carping criticisms of petty politics; the duty to observe the laws of your State and Nation, regardless of whether you personally approve them or not, remembering always that the method of changing these laws has been secured to you in the ballot; the duty to contribute honestly and gladly your fair share of governmental expense in the form of taxes; your duty to serve as jurors whenever called upon to do so, and to support with your voice and influence the administration of the law by your courts; the duty to rear children and to equip them with a thorough education to the best of your ability. These are some of the duties of citizenship which you here have assumed, and having performed these duties to the best of your ability, you, as humble citizens, are fully entitled to all of the honor and glory which illuminate the pages of our sacred history.

And having done your part to preserve the dignity of this great Nation, when you come to the end of life's brief journey and to lie down to quiet rest, the place of your final earthly abode may well be known as hallowed ground, and upon the hearts and minds of your fellow citizens there may well be carved in loving memory their greatest tribute:

"There lies an American."

### Purchase of Radio Time for Discussion of Controversial Questions

#### EXTENSION OF REMARKS

OF

HON. JAMES F. O'CONNOR

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 10, 1940

#### RESOLUTION OF THE BILLINGS TOWNSEND CLUB NO. 1 OF BILLINGS, MONT.

Mr. O'CONNOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted by Billings Townsend Club No. 1, of Billings, Mont.:

Whereas the National Association of Broadcasters, representing about 90 percent of the American broadcasting stations, has issued an edict barring the purchase of radio time for discussion of controversial questions on the air; and

Whereas said association still allows the discussion of political questions, discussions of the Federal Social Security Law, discussions of religious matters by persons not objectionable to the association, and also the discussion of the advantages of the use of cigarettes, all of which questions are highly controversial, and yet have refused to allow Dr. Townsend to discuss the Townsend plan, one of the most important economic issues before the American people today; and

Whereas advertisers on radio programs, by their patronage, are, in effect, supporters of the unjust and tyrannical action of the broadcasters; and

Whereas the legitimate radio field has been circumscribed by said rule to the detriment of radio users all over the United States: Now, therefore, be it

*Resolved by Billings Townsend Club No. 1, That our Senators and Representatives in Congress be urged to immediately demand that the Federal Communications Commission cancel the radio licenses of all stations adhering to the above-mentioned rule and denying the right of persons to discuss controversial questions on paid time. If such licenses are not canceled by the Federal Communications Commission, we urge our representatives in Congress to pass a bill requiring such action by said Commission, when the constitutional right of free speech is infringed or denied by any broadcasting station or chain of stations: Be it further*

*Resolved, That we urge all persons believing in the right of free speech on the air to refrain from buying or using any products now advertised by any manufacturers over stations affiliated with the National Association of Broadcasters until the aforementioned rule be abrogated: Be it further*

*Resolved, That we urge all persons to refrain from buying any more new radios until the freedom of the air can be assured: Be it further*

*Resolved, That copies of this resolution be sent to the Montana Senators and Representatives in Congress, and that they be urged to take immediate, appropriate, and united action to protect the rights of American citizens to be heard over any radio stations or network in a fair and temperate discussion of any controversial question.*

(Adopted at regular meeting November 27 and signed by members present.)

### Jackson Day Address

#### EXTENSION OF REMARKS

OF

HON. JAMES F. O'CONNOR

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 10, 1940

ADDRESS BY HON. BURTON K. WHEELER, OF MONTANA

Mr. O'CONNOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. BURTON K. WHEELER, of Montana, at the Jackson Day dinner at Denver, Colo., January 8, 1940:

I am happy to be in Colorado again. In 1905, fresh from law school, I came to this great State to practice law. At Telluride, at Ouray, at Montrose—in fact, nowhere on the western slope—did they seem to recognize my legal talents, so I went my way to Montana, where they were more appreciative. But I still have a warm spot in my heart for Colorado.

I do not indulge in flattery when I say that Senators ALVA B. ADAMS and EDWIN C. JOHNSON constitute one of the most able and most efficient teams in the Senate. They admirably safeguard the interests of your State. And in addition they have the broad vision that marks them as statesmen. We have not always agreed. There is something wrong with anyone who always agrees with you. God gave us our intellect and a conscience, and I have an idea He intended us to use them. The truth serves everyone the best, but too many lack the courage to be frank. ALVA ADAMS and ED JOHNSON are frank—brutally so at times. That is one reason I am so fond of them.

I am sure we all miss one beloved face tonight. Edward P. Costigan has joined the immortals. A lion in defense of principle, he was sweet and gentle in all his personal relationships. His passing

deprived me of a true friend, America of an able public servant, and the poor and oppressed everywhere of a devoted champion.

I cannot pass on to the subject at hand without paying a tribute to another one of Colorado's Representatives in Congress, the Honorable John A. Martin, who just recently passed on. It may be truly said of the deceased Martin that he was a great liberal and was noted for his rugged honesty and deep sincerity. His place in the House will be difficult to fill. I might also properly add that Colorado is signally favored by the outstanding ability of all of her Representatives in the lower House.

In addressing this great democratic gathering I speak to you and to the people of this country not as Democrats, not as Republicans, but as American citizens interested in the welfare of 130,000,000 of our fellow men.

Tonight in every section of this great Nation Democrats have gathered to do honor to Andrew Jackson. He was the liberal of his day. Some called him a radical. Today we all honor him as a patriot. He was a friend of the oppressed, the defender of the Republic, and the great President of a century ago. He served, courageously and well, his Nation and its people during one of the great crises in American history.

What was the crisis of his time? The forces of reaction had assumed control of the Government and were using it to further their own selfish purposes to the detriment of the great masses. The immortal Jefferson had given us the Bill of Rights and protected our liberties. Jackson, the frontiersman, came out of the West—of that day—to seize the Jefferson torch of political freedom and to give us economic justice. Jefferson was a scholar and a philosopher. Old Hickory was neither, but he knew and loved the people. Jackson waged an unending political battle against the Tories of that time. Jackson knew that political liberties without economic justice were meaningless. Jackson knew that the way to preserve democracy was to make it work.

Under their inspired leadership an arrogant money monopoly was crushed. Land speculators seeking to preserve the public domain for themselves met defeat at his hands. Public lands were opened and courageous pioneers pushed ever westward to build their homes and to make of this a mighty nation. Jackson, for the common good, fought to protect the weak against the strong, to stamp out malpractices by a designing few, to aid the underprivileged of his day, even as it has been done in this age by our own Franklin Delano Roosevelt.

In 1932, a century later, this country faced another grave crisis—and again the Democratic Party responded to a sacred call. Liberal Republicans and Progressives throughout the Nation turned to us. The great inarticulate masses were heard to speak on November 8 of 1932, and the party of Jefferson and Jackson began the task of saving America, of bringing order out of chaos.

From 1920 to 1933 the American people witnessed an incredible era. Incredible because of the graft and corruption. You remember all too vividly the little green house on K Street; the Teapot Dome scandals; the Veterans' Bureau; Jess Smith, Gaston Means, and Doheny. You will remember that we drove an Attorney General from the Cabinet into oblivion, and a Republican Secretary of the Interior from the Cabinet into the penitentiary. We saw banks fail, savings wiped out, and mortgages foreclosed. Factories stood as silent as tombs. Workers crowded the breadlines and farmers were driven from their farms. Towns, cities, and States were bankrupt. You in this State remember the tourists that came to Colorado, in box cars, during the good old days of 1929 and 1930. But old guard Republicans only chanted the slogans, "back to normalcy" and "prosperity is just around the corner."

During those dark days a farmer in North Dakota said to me, "Senator, we are living in round houses. We have worn off the corners looking for the prosperity that is just around the corner."

And in this tragic period the Republicans did nothing; nothing about the human suffering; nothing about mortgage foreclosures; and nothing about corruption, until a few of us Democratic Senators, including your own Senator Adams, forced their hand.

Is it any wonder that the rank-and-file Republican joined most of the Nation in welcoming the Democratic Party into power?

This administration, under the leadership of your great President, acted—acted quickly to stabilize the banking system. We provided jobs for the jobless and loans to the needy farmer and distraught home owner. Legislation was promptly enacted that insured bank deposits, recognized the rights of labor, curbed gambling by the speculators with other people's money, and prevented the sale of worthless securities to widows and orphans. A shattered and demoralized nation breathed again—but the task was not done. Assistance for the aged, for the blind, and for widows and dependent children was furnished. A permanent old-age pension and unemployment-compensation program was launched that will mitigate the terrors of old age and workless periods. We recognized the existence of a youth problem and established the Civilian Conservation Corps and National Youth Administration, which have since aided young America. All these tasks and many more were accomplished without sacrificing civil liberties or resorting to dictatorship. Our job was to save American democracy and to do it quickly.

We made mistakes—those that always attend the necessity for action—we Democrats made the mistakes, and we Democrats will correct them. During the next 5 years our party will perfect and consolidate the reforms and advances of the past 7 years. And we will do it within the Constitution of the United States.

I am not surprised that we make mistakes. I am surprised that a Congress, that has done so much, has not made more of them. Thousands upon thousands of bills are introduced, and it is hu-

manly impossible to read and digest them. Some inefficiency is the cost of democracy. It is possible to have more efficiency under a dictatorship, but not necessarily so. Witness what is happening in Finland where a small efficient army fighting for their liberty is hurling back the hordes of an inefficient Mongol dictator.

If we remain true to the Democratic Party, if we unite upon a sound liberal platform, we shall elect a President of the United States in 1940.

Let us admit that the Republicans did not make as many mistakes, but they made one grand blunder—that of doing nothing. They fiddled while democracy waned.

The question the voters will answer in 1940 is simple. Will the country go back—back to the old guard Republican—back to the party that saw no corruption and unbridled graft; that heard no pleas from the oppressed and the underprivileged who walked the road of starvation; and that did nothing?

Some of you will recall the Presidential campaign of 1924. You will recall how I attempted to put the Republican nominee on the witness stand in an effort to determine his views on certain vital issues of the day. Tonight I would like to ask old guard Republicans what legislation would they repeal? Would it be the Social Security Act, bank deposit insurance, C. C. C., the power programs, or legislation designed to aid the farmer and labor? The G. O. P., as in 1924, will not answer. No Republican candidate will.

The Republicans have denounced New Deal reforms. Some old-guard leaders will publicly, though not privately, state they approve "the principle" of many liberal enactments. These generalities will confuse no one. It is true they dislike the principle less than the concrete reform. Actually you and I know that, returned to power, the G. O. P. would destroy all progressive accomplishments. And the people have not forgotten that incredible era which preceded 1933 when the old guard reigned supreme. They successfully thwarted every attempt made by the Democrats and progressive Republicans to aid the underprivileged or to reform glaring evils.

As a Democrat I would like to tell you that we have solved all of our social and economic problems—but in good faith I cannot do so.

Nine or ten million workers are unemployed. Farm foreclosures have not stopped. Though farm income has increased, the problem of agriculture is still with us. Government expenditures continue to exceed revenues. A democracy that does not furnish the essentials of human dignity for its people is not worthy of the name. No government can long endure when large numbers of its people are in want. Government doles destroy the moral fibre of a people—it makes them easy prey for the demagogue or the man on horseback.

In addressing the National Association of Manufacturers a few weeks ago I said, "Let us, of course, realize the periods of national emergency, such as we have been experiencing, put the possibility of a balanced Budget beyond the power of either a liberal or a conservative administration."

Immediately a Pennsylvania newspaper in a front-page editorial criticized it and asked the question, couldn't we balance the Budget if mills, factories, and railroads were working at full speed? Then it added, if the Government of the United States would cooperate with business, industry would immediately run at capacity and the Budget could be balanced without difficulty.

I agree with that part of the editorial that states that if factories, mills, and railroads operated at full speed we could quickly balance the Budget. I will go further and state that if business picked up to that extent very few people would complain about paying taxes—and we could soon retire a considerable portion of our public debt. I would go still further and say that I know of no Democratic Senator who isn't willing and anxious to cooperate to the fullest extent with honest business in an effort to effect prosperity in this country. It is the patriotic duty of every Government official from the lowest to the highest to cooperate with its customers—the general public—whether they are businessmen, farmers, or workers. We all want prosperity. And we must restore it to preserve democracy.

The American genius for production has long been recognized—but mass production requires mass consumption. Fair prices for the farmer and employment for the worker at good wages mean legitimate business will boom. It is a sort of trinity—business, labor, and agriculture. Each is dependent on the other. Impoverish one and catastrophe visits the other. Each must cooperate with the other and with government if democratic United States is to continue to be the great Nation we presently know.

Labor and management of one great essential industry are cooperating. Many regard the solution of the railroad problem as a key to prosperity. Certainly it would be a vital factor. Over a million people are directly employed by the railroads of this Nation—the livelihood of thousands and thousands more is dependent on huge railroad purchases of steel, lumber, and supplies. Railroads do not have a perfect record. Their financing methods, their reorganizations, and their public relations have too often left much to be desired. I have introduced legislation to correct many of the evils and to bring about a coordination of all forms of transportation. It will presently become law. But we must not let our outlook be clouded by past mistakes. We must look to the future—one who would destroy the railroads or the savings of the investors in any enterprise should undergo a mental examination.

The cooperation between railroad labor, railroad industry, and the Government can and should constitute a guide for other great industries.

There are other conditions to which we must devote ourselves. The youth problem is a challenge to democracy itself. Statistics indicate that over 3,000,000 young men and women under the age of 24 lack employment—over 600,000 new persons swell the labor market each year—and technological improvements constantly make production possible with fewer and fewer workers. Because industry faces a shortage of certain skilled workers I have suggested to business that they inaugurate some system of training or apprenticeship. If industry does not act to serve the youth, government must—and the cost will come in increased taxes.

Another problem confronting the country is the conservation of natural resources. There was a time when the people of the West believed that the precious metals in our mountains and the timber in our forests constituted our greatest resources. But today we have come to realize that the water flowing from snow-clad mountain peaks is our greatest resource. We of the Democratic Party are making every effort to conserve it and make it serve mankind. Dry-land farmers must be taken from a Government dole and given an opportunity to farm irrigated acres—to rear and educate their children, to build homes, schools, and churches. As contented citizens they can help save this Nation. Many arid acres have been reclaimed but there are many more. Water conservation is still in its infancy. Such a program not only serves the West, it serves the Nation by affording the East a market for its manufactured goods. Conservation of natural resources creates rather than destroys the wealth of the Nation.

Much has been said and done about the monetary problem. Our Republican friends, like the English, French, and Japanese, criticize us for buying the gold and silver of the world. But my friends, one of the reasons why Government bonds and American currency are so valuable is that we have gold and silver in our vaults. Worthless, do I hear you say? Let the Government turn it loose, put the Government stamp upon that gold and upon that silver and see how quickly it will be grabbed by our Republican friends, their financial backers, and by every country in the world. From the beginning of time everybody has wanted and will always continue to want our gold and our silver. When the world regains its sanity—when the murderous wars in Europe and Asia end—gold and silver must again be the basic money and world trade will be resumed.

I have just come from Washington. There they are predicting peace in the spring. I hope they are right. The next peace treaty must be productive of a lasting and enduring peace—not merely a cessation of hostilities. The full force of this Nation's moral influence must be directed to this end. The next peace treaty must be within the spirit of justice and humanity—and not in avarice and revenge. It must do more than revamp the map of Europe, it must readjust economics to permit every nation to live and its people to work and to enjoy not only the necessities but some of the luxuries of life. It must be a treaty to serve the people—not tyrants, dictators, or rulers. Only such a treaty will insure the blessing of peace to mankind.

As Americans, Democrat or Republican, our first and final duty is at home, not in Europe and not in Asia. We need not fear armed invasion by any means from any nation 3,000 miles away. We can and should, therefore, devote ourselves to a solution of domestic problems—not European difficulties. The danger to the United States and to democracy comes from within, not from without. We have nothing to fear from a mad dictator in Europe, but we do have much to fear from continued unemployment and an unsolved agriculture problem. These are the primary problems that face us and their solution must be found within the framework of traditional American principles. In a spirit of constructive cooperation we can do this. American labor, agriculture, and capital working with Government can solve all our problems. We do not hate any race or nation. We must keep peace with the world and at the same time extend the borders of economic and social justice at home. We are the richest, the freest country on this earth and the last haven, the last frontier of tolerance and reason. By making the United States a better place in which to live, by maintaining our sanity and balance, we best serve democracy, civilization, and the world.

### Trade Agreement With Argentina

#### EXTENSION OF REMARKS

OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 10, 1940

JOINT STATEMENT BY THE GOVERNMENTS OF THE UNITED STATES AND ARGENTINA

Mr. ROBERTSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following joint

statement by the Governments of the United States and Argentina issued by the Department of State:

JOINT STATEMENT BY THE GOVERNMENTS OF THE UNITED STATES AND ARGENTINA

In the reciprocal-trade negotiations between the Governments of the United States and Argentina, notwithstanding the efforts of both parties, it has not been found possible to reach a satisfactory basis to permit the conclusion of an agreement, and the two Governments have agreed to terminate them.

In effect the Argentine Government on the one hand has not been able to admit that concessions to be obtained from the United States for their typical regular export products to that country, such as linseed and canned beef, among others, should be restricted through the acceptance of a system of customs quotas which would tend to limit the possibility of expanding its shipments of said products to that country. At the same time it has not been possible to accede to the adoption of commitments considered incompatible with an adequate financial policy and of the defense of the currency.

On the other hand, the Government of the United States, in accordance with its policy as invariably applied in the 22 agreements already negotiated, of not exposing domestic producers to material injury in the process of promoting healthy international trade through reciprocal concessions, has felt obliged to insist on limitations of the kind referred to above with respect to certain commodities.

This divergence between the two Governments is recognized by both in the same frank and friendly spirit which has characterized the whole negotiations.

### Trade Agreement With Uruguay

#### EXTENSION OF REMARKS

OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 10, 1940

ANNOUNCEMENT BY THE DEPARTMENT OF STATE

Mr. ROBERTSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following announcement from the Department of State:

DEPARTMENT OF STATE,

January 8, 1940.

The Department of State announced today that trade-agreement negotiations with Uruguay had been terminated. These negotiations have been conducted in an atmosphere of the utmost friendliness and cordiality. However, because of the similarity in important respects of the export trade of Uruguay and Argentina with the United States, it has been found necessary, in view of the recent termination of negotiations with Argentina, to terminate also the negotiations with Uruguay.

### Wage Earners' Protective Conference

#### EXTENSION OF REMARKS

OF

HON. STEPHEN BOLLES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 10, 1940

LETTER FROM THE AMERICAN WAGE EARNERS' PROTECTIVE CONFERENCE

Mr. BOLLES. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include a letter from the American Wage Earners' Protective Conference, as follows:

Very recently America's Wage Earners' Protective Conference (the tariff group of the A. F. of L.) met to discuss experiences had under reciprocal-trade treaties and again to consider labor's attitude on this subject.

Enclosed you will find copy of statement unanimously approved which sets forth in unmistakable terms the position of America's

organized workers on reciprocal-trade treaties. Included therein are likewise several recommendations which it is hoped will merit your serious and favorable consideration.

In brief America's wage earners' opposition to reciprocal-trade treaties is based upon the following:

1. That Congress cannot divest itself of powers delegated solely to it by constitutional provision, and that any attempt to do so either by shifting such authority and power to the President or anyone else is wholly unconstitutional.

2. That the merger of powers into one department of government fixed jointly in the executive and legislative branches of government is not only contrary to constitutional prohibition but is essentially destructive of the fundamental conception of our Government founded on balances and checks.

3. That the unconstitutional delegation and merger of authority indicated in points 1 and 2 has been so adroitly accomplished as to prevent even the review of such unconstitutional acts by the Supreme Court of our land, which in itself is an unconstitutional method of approach.

4. That reciprocal-trade treaties entered into in violation of the foregoing two points and without the approval of the United States Senate are unconstitutional, and that these treaties are therefore void.

5. That the alleged protective and essentially important terms and provisions of a number of these unconstitutional trade treaties are being disregarded by the other nations, and without protest or any attempt on the part of our Government officials to have the terms of such trade treaties fully observed.

6. That the terms and provisions of these alleged reciprocal-trade treaties are contrary to and in conflict with the established labor policy of our Government as manifested in many of the laws enacted by Congress in that products of workers in foreign countries are produced under what we consider and legislatively recognize as substandard labor conditions, and such products are permitted to enter our American markets in competition with products produced by American workers employed under such labor standards as have been obtained through collective bargaining and the Fair Wage and Labor Standards Act. If we are to protect our American standards of labor we must preclude competitive products of workers in foreign lands produced under substandard labor conditions. Any other procedure is bound to be of great detriment, not only to the retention of our labor standards but likewise through the loss of our job opportunities. By permitting the continuance of such competition the whole of our national labor policy is being undermined and slowly destroyed.

7. That the protection of job opportunities accorded to America's wage workers under the restrictive immigration and Asiatic exclusion laws are being nullified through the permitting of entry into American markets of the competitive products of workers in foreign countries, such workers themselves being denied entry into our country.

8. That the terms and provisions of such illegal trade treaties can only result in further demoralizing our national economic structure and in transferring additional job opportunities of America's workers to workers in other countries.

9. That the only reason our American markets have not been flooded with products of workers in foreign countries is due to the fact that millions of persons in European and Asiatic countries for the past few years and now, temporarily we hope, have been denied employment in peacetime pursuits and have been engaged exclusively in the armed forces and in providing equipment and supplies to those under arms. This condition cannot last indefinitely and the reckoning will be ours unless we take immediate remedial action now. Hopeful, as we are, that these workers in foreign lands will soon be free again to engage in peaceful pursuits, it is realized that unless actual customs protection in the form of an excise tax is imposed on the entry into the American markets of competitive products of workers in foreign countries, and, unless the provisions of the Fair Labor Standards Act are extended to such competitive products, our national economic structure will be still further jeopardized, and, the job opportunities of additional hundreds of thousands of America's workers will be placed in jeopardy, if not actually transferred to workers in foreign countries.

Therefore, we petition the Congress of the United States to:

(a) Repudiate by formal action any and all existing treaties with foreign nations which treaties have not, as the Constitution specifically requires, been ratified by the Senate of the United States.

(b) Impose an excise tax on the entry of competitive products which products compete in the American market with the products of America's workers so that products of America's workers will be privileged to enter into American markets at total delivered costs which are not higher than the delivered costs of competitive products of workers in foreign countries.

(c) That the provisions of the Fair Labor Standards Act be extended to cover all workers, engaged in the production of competitive products entering into American markets whether such workers be employed in the production of such competitive products in the United States or any other country.

Trusting that this petition will receive your early, careful, and favorable consideration.

Respectfully yours,

MATTHEW WOLL, President.

## Justice to Colored Race Demands Enactment of Antilynching Bill

### EXTENSION OF REMARKS

OF

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 10, 1940

Mr. WOLVERTON. Mr. Speaker, today we face an issue that challenges our belief in democracy. Equal protection under the Constitution for all classes of our citizenship is one of the fundamental principles of our form of government. It is our duty to uphold and preserve that principle to the fullest extent. There can be no deviation from it to the slightest extent without thereby weakening the structure of our Government.

Today, by the provisions of this bill, it is sought to guarantee and make certain the application of this principle in the interest of a class of our citizens who have, on too many occasions in the past, been denied the right of trial by jury, which is the very foundation of equal protection under the Constitution and law of our land. To lynch any citizen, even the humblest Negro, is a denial of one of the most sacred rights guaranteed to us by the Constitution. To permit such is to substitute hate, fury, and prejudice for judicial procedure. There is none who can justify such a substitution.

The claim is sometimes made that conditions create a necessity to do so. There is no condition that makes necessary an exception to the constitutional right of trial by jury. There is no condition that creates the right for any infuriated mob to take the law into its own hands.

We must never lose sight of the fact that the right of life is a sacred right and as such is entitled to have every protection. The right of trial in a court of law, before life can be taken, is an equally sacred right. This bill seeks to do nothing more than protect this sacred right as against those public officials who, derelict in the performance of their sworn duty, permit that sacred right of the citizen to be interfered with. It is a principle of justice that is so inherently fair and right that there can be no reasonable question raised to its validity.

It is also frequently said that lynching is decreasing, that it does not happen as frequently as it did some years ago. We may well be grateful that in some measure this is true. But the fact remains that there is no denial that lynching does occur. Even one case would be one too many. It was not so long ago that one of the most horrible cases of lynching did take place. Its brutality was beyond description. As long as such do occur there is need for a law of the kind now before the House. Infrequency of lynchings now as compared to heretofore is no answer to the enactment of this antilynching law. If conditions should improve to the extent that no lynchings would take place, then, of course, there are no prosecutions under this act; but if a lynching should occur, then the provisions of this bill would be in effect. It is the hope of those of us who favor its enactment that the necessity will never arise for its enforcement, and certainly those for whom its enactment is sought would likewise be equally pleased. But the law should be upon our statute books ready for enforcement if and when any lynching should occur.

In presenting my views on this bill I have sought to avoid making any argument that would inflame passion or prejudice. I have even avoided giving the gruesome details of lynchings that have happened in recent times. I have presented my views upon a basis that would justify its enactment as a further evidence of our belief in the fundamental rights of American citizenship. The enactment of this bill would leave no doubt of our desire and willingness that every

citizen should enjoy to the fullest extent the equal protection of our laws. It would make more certain and secure those constitutional rights of which we are all justifiably proud. There is no greater obligation upon us as Members of Congress than to do any and all things that will establish and guarantee to our people, regardless of race, color, or creed those rights given them by the Constitution. In the fulfillment of that obligation and duty I shall support this anti-lynching bill because it seeks to guarantee equal protection of the law to a class of our citizens who have at times been denied the benefits of that great principle.

### Dies Committee

#### EXTENSION OF REMARKS

OF

HON. FRANK CARLSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 10, 1940

Mr. CARLSON. Mr. Speaker, I have just read the report of the Dies committee to Congress and personally I believe this committee is entitled to commendation and praise for its splendid work. Every American citizen who studies the rapid growth of communism, fascism, and the other forms of dictatorial government in Europe must be concerned about the future of our democracy.

As a nation we cannot stand idly by while these movements are growing in foreign countries, with any feeling of security, unless we, through thorough investigations and the spotlight of publicity, expose every subversive influence in our land.

We are spending hundreds of millions of dollars for national defense, but I hope we will not be so concerned about foreign enemies that we will forget our domestic ones. Someone has said that our country could never be destroyed by an enemy from without, but if we are not on the alert we might be destroyed from enemies within.

The committee report reads that not over 1,000,000 people of the United States have been seriously affected by un-American activities. This, if it is true, is but a small percent of our total population, but we must remember that a small amount of leaven soon permeates the entire loaf. This propaganda can be subtly spread through such groups as the Workers Alliance, American Student Union, and several other organizations that are listed as front organizations for the Communist Party.

These organizations and movements thrive and greatly extend themselves during periods of economic stress. With unemployment, labor disturbances, farm problems, and a general social unrest, our country is a most fertile field for those who preach and teach foreign doctrines and foreign "isms."

Thousands of aliens have entered our country illegally during the past few years. Many of these were smuggled over the border or by ships docking at various ports. Several thousand who came over on visitors' visas overstay their allotted time and remain in this country. Many of these aliens are here for no other purpose than to spread dissension and distrust in our own land. They are apostles of communism and other doctrines foreign to our democracy. This is another reason for the continuance of the Dies committee.

The first session of the Seventy-sixth Congress voted an appropriation of \$100,000 for this important work. In my opinion it is one of the best investments we made. We can and do vote sixty to eighty million dollars for the construction of one battleship, and it is my contention that the Dies committee might well be considered as part of our national-defense program. Let us vote to continue it and not be niggardly with its appropriation.

### Dramatic Proof of the Danger in the Third-Term Threat

#### EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 10, 1940

EDITORIAL FROM THE BALTIMORE SUN

Mr. SPRINGER. Mr. Speaker, I ask unanimous consent to extend my own remarks in the RECORD, and to include therein a very enlightening and interesting editorial which appeared in the Baltimore Sun on this date, which editorial is as follows:

[From the Baltimore Sun]

#### DRAMATIC PROOF OF THE DANGER IN THE THIRD-TERM THREAT

The Jackson Day dinner in Washington was one of those occasions on which an unexpected incident overshadows the scheduled feature. Mr. Roosevelt's speech was, of course, the scheduled feature. He was in half-humorous, half-philosophical vein. His underlying theme was that motives of public men are all-important, but, after elaboration of that theme, he added that information, experience, and good manners also are important. It was a good enough sort of speech, rather vague, rather abstract, not too profound, not too clever. It left some of the political analysts thinking it was a Presidential valedictory, some thinking it was a Presidential bid for a third term, some thinking it was a Presidential hedge. It might have been any of these, and, therefore, it is not strange that an incident of the dinner overshadows it in importance.

Mr. Essary writes in his report of the dinner that an embarrassment occurred at the beginning of the formal part of the program. Distinguished guests, seated at the head table, were introduced to the great gathering. Among them was Senator HATCH, of New Mexico, who sponsored the law which undertakes to restrict the political activities of officials and employees of the Federal Government. Mr. Essary says that when Senator HATCH was presented: "A veritable storm of boos greeted him as he rose. It continued for what seemed to be minutes. The officeholders restricted in their political activities by the Hatch Act finally were diverted by calling the name of Secretary Hull." In that incident is a subject which deserves far more attention from the thoughtful citizen than speculations about the political significance of a speech which is open to three different interpretations by Washington's analysts.

When Mr. Roosevelt assumed office the Federal Government had 563,487 civil officials and employees. On November 30 last—after Mr. Roosevelt had been in office 6 years and 9 months—the Federal Government had 932,654 civil officials and employees. The increase during Mr. Roosevelt's administration thus far has been 369,167, or a shade less than 66 percent. Many of the top men whom Mr. Roosevelt has appointed, to old posts and to new posts, were at this dinner in Washington. The charge for the dinner was \$100 a plate, and only top men could afford that price. And it was these top men who attempted the humiliation of Senator HATCH because he had undertaken to restrict their political activities. It was these top men who sought publicly to humiliate a Senator because he had practiced Mr. Roosevelt's preachment at this very dinner on the "relative unimportance" of politics "compared with the paramount importance of government."

No sober citizen can ignore this demonstration when considering the third-term issue, which Mr. Roosevelt avoided. The essence of the tradition against the third term lies in fear that the vast powers of the Presidential office will be abused if continued too long in the hands of one man. That was the fear which governed when Jefferson followed the example of Washington and when his lieutenants and successors, Madison and Monroe, followed his example and made the tradition secure for generations. For many years past the serious danger of abuse of the powers of the Presidential office has been in manipulation of the army of officeholders. In our day the danger is the greater because this army is enormously increased and now, under the President, controls billions in subsidies and makes regulations which have the force of laws. And yesterday we saw the top men in this army attempting publicly to humiliate a Senator who would limit their political activities.

The incident was in itself shameful. Mr. Roosevelt, talking later about good manners as one of the valuable elements in public life, might well have made the incident an object lesson. But above all is the revelation that has been given of the quality and temper of the top men in this army of officeholders which Mr. Roosevelt in

less than 7 years has increased 66 percent, from 563,487 to 932,654. There, in that revelation of quality and temper, is a shining nugget of fact for the sober citizen to consider when the continued validity of the third-term tradition is debated before him. This army of job holders will obey a political commander in chief in anything.

### A. F. of L. Does Not Oppose Trade-Agreement Program

#### EXTENSION OF REMARKS

OF

HON. FRANK H. BUCK

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 10, 1940

#### CORRESPONDENCE BETWEEN SECRETARY OF STATE AND PRESIDENT OF AMERICAN FEDERATION OF LABOR

Mr. BUCK. Mr. Speaker, in view of the misleading headlines and articles which appeared in the morning papers of Monday, January 8, 1940, with reference to the attitude of the American Federation of Labor toward the trade-agreement program, I take this opportunity of inserting in the RECORD the following correspondence between Secretary of State Hull and President William Green, of the American Federation of Labor.

The following is the text of Secretary Hull's letter to which President Green replied:

JANUARY 8, 1940.

HON. WILLIAM GREEN,  
President American Federation of Labor,  
Washington, D. C.

MY DEAR PRESIDENT GREEN: I notice in a number of the morning newspapers of today headlines and implications to the effect that the American Federation of Labor has expressed its opposition to the reciprocal trade agreement program and to the further continuance of the entire program, together with existing trade agreements negotiated under it.

I shall thank you to inform me as to whether this correctly represents the official position of the American Federation of Labor. Sincerely yours,

CORDELL HULL.

In reply President Green wrote as follows:

AMERICAN FEDERATION OF LABOR,  
Washington, D. C., January 8, 1940.

HON. CORDELL HULL,  
The Secretary of State,  
Washington, D. C.

MY DEAR SECRETARY HULL: I am pleased to reply to the inquiry submitted in your esteemed favor dated January 8. The headlines and implications appearing in a number of newspapers this morning to the effect that the American Federation of Labor has expressed its opposition to the reciprocal trade agreement program, and to the further continuance of the entire program, are incorrect. No such action as set forth in the headlines referred to has been taken.

I express regret that the misleading headlines referred to were published in a number of the morning newspapers. Very sincerely yours,

WILLIAM GREEN,  
President, American Federation of Labor.

### Must There Be an End to Progress?

#### EXTENSION OF REMARKS

OF

HON. GEORGE HOLDEN TINKHAM

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 10, 1940

ARTICLE BY PROF. GUSTAV CASSEL

Mr. TINKHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by

Prof. Gustav Cassel entitled "Must There Be an End to Progress?" in the October 1939 number of the Quarterly Review, issued by the Scandanavian Bank, Stockholm:

[From Skandinaviska Banken]

MUST THERE BE AN END TO PROGRESS?

(By Prof. Gustav Cassel)

Ever since the world economic crisis broke out just 10 years ago, people have been accustoming themselves to trade depression as a natural state of affairs, and have come to regard a temporary rise up to the level of 1929 as the utmost that could be hoped for. In other words, people have given up the idea of continuous progress as the normal course of economic development. They have thus lost the right standard for what should be considered as a healthy development and, in judging all the economic experimenting that has been going on in the world, have contented themselves with far too small demands. According as hopes of continued progress have sunk, the quondam interest in a redistribution of what we already possess has been revived, and has manifested itself in ever sharper relief both in the social struggle and in the contest of nations for the dominance of the world.

It seems to be a matter of considerable importance to endeavor to reply to the question whether there is really any objective necessity for abandoning the idea of continued economic progress at the pace we had previously accustomed us to regard as normal. When I drew up the fundamental principles of my theory of social economy, I found it to be essential to throw clear light on the conditions requisite for progress and especially to concentrate my analysis on the simplest case, namely uniform progress. On the basis of the very defective material which at the time was available, I considered that the figure for normal progress could be put at about 3 percent per annum. Roughly speaking, this means the doubling both of capital and income in the course of every 25 years. Many people presumably regarded such a development as something quite incredible. Subsequent investigations, which were based on a very extensive material, have, however, shown that production during the time when commerce was free has, on an average, actually increased fully to that extent. Carl Snyder's index for the world's physical production shows for the period 1865-1914 an average increase of 3.15 percent per annum. An immigration country which at the same time received large supplies of capital from outside came up to a considerably higher standard. In the United States, for example, one could probably reckon with a normal rate of progress of 4 percent per annum, which meant the doubling of production in the course of 18 years. Estimates made at Cornell University show that the country's total basic production during the period 1839-1914 increased by 4.03 percent per annum (Farm Economics, February 1932, where Snyder's figures are also given with diagram).

The World War naturally interrupted this course of development, but as soon as the post-war crisis with its revolutionary effects on the monetary system had been overcome, economic progress recovered its former characteristic intensity. From 1924 to 1929 world production, according to Snyder's statistics, increased by somewhat over 20 percent, or by 3.9 percent per annum. This fact indicates that progress has an interior force which cannot be repressed even by such a catastrophe as a world war. Why then should the year 1929 be regarded as a turning point, after which no further progress is to be expected?

There is, I presume, scarcely anyone who would seriously contend that the physical conditions for continued progress are lacking. Generally speaking, raw materials exist in an abundance which the world, in its present strange condition, almost regards as a misfortune. In cases where some shortage of raw materials might be expected to manifest itself, there are possibilities, for a long time ahead, for the opening of new fields of production. True that continued progress cannot be conceived without some geographical redistribution of production. But this is an idea to which we have long been accustomed. Russia has possibilities for large-scale production on modern lines, which as yet can merely be dimly conceived. It can scarcely be doubted that Russia, with a more efficient economic organization, could attain results in the way of progress which would fully equal what any other country has achieved, nay, indeed, might stand out as new world records.

The world economy has shown an astonishing capacity for adjusting itself to the requirements of progress. These requirements have nowise been uniform in respect of different raw materials. On the contrary, as the result of technical developments, certain materials have acquired greater relative importance; but it has also proved possible to increase the output of those materials at a more rapid pace than that of average progress. Professor Högbom's investigations into this question must be regarded as some of the most remarkable material that has been placed at the disposal of modern economists (Mineral Production, Ingeniörsvetenskapssakademins Handlingar Nr. 117, Stockholm, 1932). This author has found that for each of the principal raw materials there is a characteristic and singularly constant quota of progress. This quota differs considerably in respect of different materials, being, for example, 4.5 percent per annum for pig iron, 5.9 percent for copper, and 3.6 percent for lead.

Despite the fact that the requirements of different raw materials have varied greatly according to the course of development, it has always been found possible to produce those materials in precisely

the proportion required. Does not this remarkable fact strongly support the view that it would be possible for a long time ahead to increase world production at the pace that was previously normal?

Why, then, should we abandon the idea of continued progress and indulge in fruitless and devastating controversies regarding the distribution of the limited supplies that already exist? There has been much talk about the profound "structural changes" of the post-war period as an impediment to continued progress. But does not this talk indicate an attempt to escape responsibility for the trade depression? Have not passed times also had their structural changes, and has not a vigorous economic movement succeeded in overcoming the difficulties of adjustment and maintaining the rate of progress? There is also reason to ask how far the unsatisfactory structural conditions of the present time may be due to irrational human action, which it should be possible to change. For example, the aggregate effect of the commercial policy of all countries has undoubtedly been to impede international commerce, with a consequent marked reduction in the effectiveness of the world economy. It is, in fact, impossible to maintain that the stagnation of progress is in any way due to objective necessity.

Progress has never been a machine. It has always been dependent on whether human forces working for increased progress have been allowed sufficient scope. It is possible to narrow that scope in such a degree that progress is stopped. But then people must not declare that the stagnation was necessary or that it was idle to believe in the possibility of continued progress.

The world-production index published by the League of Nations, which comprises 81 primary articles, rose for the years 1925-29 from 95 to 106, but afterward fell back to 103 for 1935. The development during the first-mentioned period was not particularly marked (somewhat less marked than according to Snyder's above-mentioned index); but the decline during the following period must be regarded as very considerable, if viewed relatively to the development which would have ensued if progress had only continued at the pace of the preceding period. The fall of the index during the period 1929-35 is solely due to the marked shrinkage of production in North America, where the index number fell from 103 to 87. None of the other countries for which separate index numbers are given shows any decline in production during this period, whilst several of them exhibit a considerable increase. This gives us reason to direct our attention particularly to the course of development in the United States.

The Federal Reserve Board's index for American industrial production, the basis of which is 100 as an average for the years 1923-25, had in 1929 risen to 119. For 5 years this meant an increase of 19 percent, corresponding to an average rise of 3.8 percent per annum, which for industrial development in the United States must be considered extremely moderate. Industrial production in that country subsequently fell, for the year 1932, right down to 64. This catastrophic fall was followed by a recovery. A new maximum was reached in 1937 with the index number 110, but in the following year the index fell again, down to 86. Now what does this signify? Had progress after 1929 been allowed to continue at the same pace as in the preceding 5-year period industrial production for 1939 should have reached the index number 169. And yet the average for the first 7 months of 1939 is only 97. These figures give us some idea of the real extent of the devastation to which American industrial production has been exposed.

The general economic decline in the United States is reflected in the figures for the national income. The annual statistics of the United States Department of Commerce for the national income (estimated as "the gross value of all goods and services produced minus the value of raw materials and capital equipment consumed in current production operations") showed for 1929 a figure of 82.7 milliard dollars. For the year 1933 this figure fell to 42.5 milliard dollars. For 1938 it was 64.0 milliard dollars. These figures must now be corrected to allow for the changes in the purchasing power of the dollar. If we take as a basis the Labor Bureau's index for wholesale prices and recalculate all the income figures in the 1926 dollar, we shall find that the course of development in regard to national income shows less violent changes, but that it in any case exhibits an extremely disheartening decline. The figures are reproduced in the accompanying table, and the chart illustrates the trend. (Original figures for income, unbroken line; recalculated in the 1926 dollar, broken line.)

[Chart not printed in Record.]

	National income in milliard dollars	Bureau of Labor Statistics wholesale price index 1926=100	National income in milliard dollars and 1926 value of money	Hypothetical national income in milliard dollars and 1926 value of money if annual increase from 1929 were 4 percent
1929	82.7	97	85.2	85.2
1930	69.1	86	80.4	88.6
1931	54.2	71	76.4	92.1
1932	40.1	65	61.7	95.8
1933	42.5	66	64.4	99.6
1934	50.6	75	67.5	103.6
1935	55.8	80	69.7	107.7
1936	65.2	81	80.5	112.0
1937	71.9	86	83.6	116.5
1938	64.0	79	81.0	121.2

In order to realize the significance of this trade depression, let us assume that the increase in the national income after 1929 had proceeded at a normal rate. With a 4-percent annual rise in the national income, the United States could have increased it up to 121 milliard dollars for 1938. The difference between this and the actual figure, 81 milliards, is 40 milliard dollars with the 1926 purchasing power. Expressed in the 1938 dollar, this corresponds to 31.6 milliard dollars. Thus, instead of an income of 64 milliard dollars, the year 1938 should have shown an income of 95.6 milliard dollars. Such figures must be kept in mind if we wish to form a true idea of what American economy has lost by dropping its normal rate of progress. In the chart the assumed normal development is represented by a dotted line. It graphically shows the immense loss that has accumulated during this period as a whole.

If we now ask ourselves: What are the reasons of this portentous deterioration in the effectiveness of American production? we shall be entering on a very controversial subject. I do not intend to engage in a detailed discussion of this question. Anybody can see from the chart that the process of deflation which began in 1929 and which entailed a very marked increase in the purchasing power of the dollar, must have been a factor of fundamental importance. How this deflation could have been avoided, and how the recurrence of such a calamity could be prevented for the future, is a central problem of monetary analysis as well as of practical financial policy.

What is intended here, however, is to endeavor to eliminate such explanations of the trade depression as are quite at variance with reality but which, as experience shows, are nevertheless very popular and are liable to influence economic policy. I am alluding primarily to the theory that the course of development up to the year 1929 had proceeded at an abnormally rapid pace and had entailed an inordinate accumulation of capital assets. This view is completely devoid of foundation, as anybody can convince himself by comparing the period in question with previous booms in the United States. I have dealt with this subject in an article in this quarterly for October 1932, and, though the views expressed there have never been refuted, the talk about an abnormal development of capital up to the peak of 1929 has been perpetually recurring.

This theory becomes quite grotesque if it is contended that the said boom, in view of its excessive intensity, must necessarily be followed by such a set-back as that which subsequently occurred. There is no necessity at all for such a set-back. A continued increase of the volume of American production at the previously normal rate would undoubtedly have been quite possible. In the United States there was a sufficiency of manpower and most other factors of production. The raw materials which had to be imported could easily have been procured, seeing that the United States, as a rule, have had what is commonly called a favorable balance of payments, which might have been utilized for something far better than an enormous importation of gold. We are thus forced to the conclusion that the immense loss sustained by American economy after 1929 must have been due to errors in organization. Such errors it should be possible to remedy. But, if we are to make a determined effort in this direction, we must above all things free ourselves from the view that after 1929 all idea of continued economic progress would have to be abandoned. Our figures show that nothing of any real value is to be gained for the masses by a better distribution of the unduly reduced national income, but that, on the contrary, with continued progression vast resources would be available for raising the standard of life of the entire population. A rational social-welfare policy has undoubtedly had a great mission to fulfill, and much work still remains to be done in this field, but it lies chiefly in the direction of enhanced efficiency of labor, or, rather, in the spread of the high standard of efficiency already reached in some lines to all parts of the national economy. A mere reshuffling of a national income which in itself is quite insufficient would evidently be an ineffectual remedy. Conceived in this sense, a new deal will be a most misleading program.

## Magna Carta Overrated

### EXTENSION OF REMARKS

OF

HON. MARTIN L. SWEENEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 10, 1940

EDITORIAL FROM THE GAELIC AMERICAN, NEW YORK CITY, DECEMBER 16, 1939

Mr. SWEENEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a recent editorial published by the Gaelic American, of New York City, on the subject *Magna Carta Overrated*.

[From the Gaelic American, New York City, December 16, 1939]

MAGNA CARTA OVERRATED

The Lincoln Cathedral original of the Magna Carta, which was exhibited at the New York World's Fair, has been placed in the

custody of the Librarian of Congress for the duration of the European war by Lord Lothian, English Ambassador. In entrusting the Latin document to the Librarian Lord Lothian spoke to the people present and said, without qualification, that the charter was the foundation of American liberties.

The Magna Carta was not even a foundation of liberty in England or anywhere else. It was a Norman-French document, written in Latin, and the Anglo-Saxons had no part in its drafting or signing. In King John's time the Anglo-Saxons were hewers of wood and drawers of water in the service of the Norman barons. A very much overrated document, the Magna Carta hardly recognized the rights of the common people. The barons were made subings in their own bailiwicks and their tenants and laborers had no more rights than the cattle and sheep that browsed on the manorial demesnes.

There was nothing original or startling in the provisions of the Magna Carta. The limited liberties enumerated were known at the time and in force in most of the European countries. After signing the much-lauded and much-misunderstood document, King John did not observe it in all its provisions and it was centuries after before the common people of England got any relief from the overlordship of the barons. The unwritten English Constitution did not recognize that farmers, tradesmen, agricultural laborers, and those who worked for a living had no rights that the barons need respect. Even as late as the last quarter of the eighteenth century the House of Commons was composed of landlords or their kindred and the Members of the House of Lords held their seats as a hereditary privilege. In both the Lords and the Commons the Members belonged to the same class—the lords of the soil. The owner of an estate secured his own election or that of his son or other followers, as those who had the franchise had to vote at the bidding of their landlord and were brought to the polls in cars supplied by the candidate or his friends. Rotten boroughs were many, and it was of this last quarter of the eighteenth century that Sir Robert Walpole said of the Members of Parliament that every man had his price. Liberty, as it is understood in America, was unknown in England. Up to a recent period the franchise was restricted and only a small minority of the English people had the privilege of voting at parliamentary or other elections. In 1932 the total of the English electorate was 430,000; today is 29,000,000.

The colonists, even those who came from England to America, heard nothing of the Magna Carta. They had to seek foreign homes to make a living and to enjoy that freedom and opportunity denied them in the land of their birth. The Magna Carta was not regarded by the American patriots as a foundation of liberty. At the time of the American Revolution the people of England outside the titled caste had no voice in this Government. The descendants of the Norman barons were yet in the saddle, and to a large extent the same caste still dominates the English Parliament. Freedom of the press was almost nonexistent, and every denomination outside the state church was outlawed and persecuted. It was to escape persecution and exploitation that the early emigrants endured the hardships and long voyages on unsanitary and frail ships. Even the colonists of English descent did not look on the land of their birth or extraction as a land of liberty, and those who wrote the Declaration of Independence and the United States Constitution had some other inspiration than the Magna Carta or the English system of government. The framers of the United States Constitution were versed in history, ancient and modern, and they embraced what was good in all systems into a Constitution that is unique and original. The men who framed it were no mere imitators, or copyists, nor had they any foolish illusion that the Magna Carta, embodying caste government, was a good model to transplant from a monarchy to a republic.

A very pretentious New York paper had an editorial on the depositing of the Magna Carta for safety in the Congressional Library, calling it a precious relic of the Anglo-Saxon race. The Anglo-Saxons had little or nothing to do in forcing King John to sign the Magna Carta. It was written in Latin, and if any particular credit goes out to anybody for the class document, it must go to the Norman-French who enslaved the Anglo-Saxons.

### A National Referendum Before Conscription for Foreign Wars

#### EXTENSION OF REMARKS

OF

HON. HAMILTON FISH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 10, 1940

Mr. FISH. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include the following joint resolution (H. J. Res. 408) providing for a national referendum before drafting citizens and aliens for military service outside of the Western Hemisphere or the Territorial possessions of the United States, which I introduced on January 8, 1940:

House Joint Resolution 408

Resolved, etc., That after the approval of this joint resolution no citizen of the United States nor alien therein shall be drafted for

foreign service in its armed forces outside of the Western Hemisphere or the Territorial possessions of the United States, unless and until Congress deems a national crisis to exist, in which case Congress shall by concurrent resolution refer the question to the people, to wit:

"Shall citizens of the United States and aliens therein be drafted for military service outside of the Western Hemisphere or the Territorial possessions of the United States?"

Sec. 2. The people of the United States who are qualified to vote for Representatives in Congress shall be given an opportunity to express their sentiments on the foregoing question on the first Tuesday after the expiration of 30 days following the adoption of a concurrent resolution by Congress submitting the question, in like manner as provided by the constitutions and laws of the several States for the submission of amendments to a State constitution, the result thereof to be transmitted promptly by the constituted authorities of each State to the presiding officers of the two Houses of Congress, to be by them tabulated and presented to their respective bodies.

This resolution differs materially from the Ludlow war-referendum resolution, which is opposed by the veterans' organizations as jeopardizing our national defense and interfering with the constitutional right of Congress to declare war, and does not call for a constitutional amendment. It could be adopted by a majority vote in the House and Senate at this session of Congress.

I want to emphasize that this resolution carries out the sentiments and desires of 90 percent of the American people to keep out of foreign wars, and particularly not to send our youth to fight in foreign lands. I propose to make an active campaign for the adoption of this resolution at the present session of Congress and have already received pledges from numerous important groups that they would give it their active support and that resolutions in support thereof will be or have already been adopted, and I shall bring it to the attention of all such interested groups for their consideration and action. It is my intention to take the issue to the people over the radio and in every way possible in order to insure action at the present session of Congress.

This resolution far transcends party lines, and I have been assured of the cooperation of the gentleman from Indiana, Representative LOUIS LUDLOW, as well as a large number of Members of Congress who have heretofore opposed the Ludlow war referendum. This resolution in no way interferes with national defense or the constitutional right of the Congress to declare war.

All interested groups or organizations are invited to cooperate in behalf of the early consideration and adoption of this resolution and urged to contact their own Members of Congress in behalf of its passage.

### The Grapes of Wrath

#### EXTENSION OF REMARKS

OF

HON. LYLE H. BOREN

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 10, 1940

Mr. BOREN. Mr. Speaker, my colleagues, considerable has been said in the cloakrooms, in the press, and in various reviews about a book entitled "The Grapes of Wrath." I cannot find it possible to let this dirty, lying, filthy manuscript go heralded before the public without a word of challenge or protest.

I would have my colleagues in Congress who are concerning themselves with the fundamental economic problems of America know that Oklahoma, like other States in the Union, has its economic problems, but that no Oklahoma economic problem has been portrayed in the low and vulgar lines of this publication. As a citizen of Oklahoma, I would have it known that I resent, for the great State of Oklahoma, the implications in that book.

Mr. Speaker, this great American Nation is distinguished from all other countries in the world in that the Government makes no distinction between its people in such a way as to lay any lines of demarcation between classes, whether

social, political, or economic, and I want it understood in my subsequent remarks that I use the word "class" in the sense of economic concept and not in application to individuals or groups. I would say that the class of people who make up the farmers of America, and more particularly the tenant farmers, are the most patriotic, most democratic, and finest moral fiber in the Nation. I am 30 years of age and 20 years of my 30 years have been spent on the tenant farms of Texas and Oklahoma.

I stand before you today as an example, in my judgment, of the average son of the tenant farmer of America. If I have in any way done more in the sense of personal accomplishment than the average son of the tenant farmer of Oklahoma, it has been a matter of circumstance, and I know of a surety that the heart and brain and character of the average tenant farmer of Oklahoma cannot be surpassed and probably not equaled by any other group in the world. Today I stand before this body as a son of a tenant farmer, labeled by John Steinbeck as an "Okie." For myself, for my dad and my mother, whose hair is silvery in the service of building the State of Oklahoma, and whose hands are calloused with the toil known by every tenant farmer of Oklahoma, and for every good man and good woman, every fine son and noble daughter of the great, good class of people which this putrid-minded writer labeled as "Okies," I arise to say to you, my colleagues, and to every honest, square-minded reader in America, that the painting Steinbeck made in his book is a lie, a damnable lie, a black, infernal creation of a twisted, distorted mind. Though I regret that there is a mind in America such as his, let it be a matter of record for all the tenant farmers of America that I have denied this lie for them.

Some have blasphemed the name of Charles Dickens by making comparisons between his writing and this. I have no doubt but that Charles Dickens accurately portrayed certain economic conditions in his country and in his time, but this book portrays only John Steinbeck's unfamiliarity with facts and his complete ignorance of his subject. Let me call to your attention the fact that in the first few pages of his manuscript that he had tractors plowing land of the Cookson Hills country where there are not 40 acres practical for tractor cultivation. He had baptisms taking place in the irrigation ditches in country near Sallisaw, Okla., where an irrigation ditch has not run in the history of the world. He took Sallisaw out of the hills of eastern Oklahoma and placed it in the Dust Bowl. His careless disregard for these matters indicates only his complete disregard for the truth. It is certain that he wrote about a country he had never visited and a people with whom he was not acquainted and had never contacted.

Some have said this book exposes a condition and a character of people, but the truth is this book exposes nothing but the total depravity, vulgarity, and degraded mentality of the author.

I am surprised that any preacher in America could find a word of commendation for a book which brings such malicious vulgarity to the door of the church. Let me ask you, and every man of mind and character in America, if there is one of you who would sanction placing this book in the hands of your young daughter?

Let it be to the eternal credit of the Postal Service of the United States that they have banned its obscenity from the mails.

I have worked in the cottonfields, the broomcorn fields, and the wheatfields in almost every area of the State of Oklahoma, yet there is not one thing in the book which would remind me of the thought, the action, or the conditions of the people and the places I have known. I have traveled over the most of the United States and a few foreign countries, and the only places in all America that I ever saw anything which compared in complete negation to this manuscript were the writings on a toilet wall in a dilapidated depot. Take the vulgarity out of this book and it would be blank from cover

to cover. It is painful to me to further charge that if you take the obscene language out, its author could not sell a copy.

The grapes of wrath that John Steinbeck would gather in a world of truth and right would press for him only the bitter drink of just condemnation and isolation for his unclean mind.

I would have you know that there is not a tenant farmer in Oklahoma that Oklahoma needs to apologize for. I want to declare to my Nation and to the world that I am proud of my tenant-farmer heritage, and I would to Almighty God that all citizens of America could be as clean and noble and fine as the Oklahomans that Steinbeck labeled "Okies." The only apology that needs to be made is by the State of California for being the parent of such offspring as this author.

Mr. Speaker, let it be a matter of record that the English language does not hold vituperative contents sufficient for me to pronounce completely the just condemnation of this man and his book. The lies that he has written he cannot recall; the words he has put into the mouth of these people will whisper eternally in his ear and haunt his wretched soul as the degraded creations of his hallucinations in filth and mire.

### Mr. Roosevelt's Budget

### EXTENSION OF REMARKS

OF

### HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 10, 1940

EDITORIAL FROM THE BLOCK NEWSPAPERS

Mr. SHAFER of Michigan. Mr. Speaker, under permission to extend my remarks I desire to include the following editorial from the Block newspapers:

#### MR. ROOSEVELT'S BUDGET BILL

As head magician of the New Deal, President Roosevelt staged a brilliant performance of sleight-of-hand in the Budget which he has presented to the new Congress.

For some years now we have been accustomed to wander annually with Mr. Roosevelt through the wonderland of his budgets, admiring their sly underestimates of expenditures, their bright prophecies of increasing revenues sprung from nowhere, their booby traps of shifting figures, hidden items and other artful snares for the unwary. The harsh realities about national finances which we have to face the next morning have nothing whatever to do with the rabbits and the rope tricks which the President evokes like a prestidigitator at a children's party. That, however, is not important. It's still a great show while it lasts, and one can only come away with increasing admiration for the Roosevelt wizardry.

This year the Presidential Houdini was in top form. Presto! The six hundred millions the New Deal will extract from the taxpayers for social security disappeared from the Government's receipts and also from its expenditures, permitting the illusion of a neat reduction. Chango! A billion and a half dollars appeared from nowhere; only the sharpest eyes in the audience detected the magician in the act of extracting it from the Treasury's working balance. A few more words of stage gibberish and seven hundred millions were deftly slipped out of the capitalization of the Federal lending agencies. And as a final act of breath-taking legerdemain, he turned to some of his assistants in Congress, and asked them to produce four hundred and sixty millions for defenses by additional taxes.

Mr. Roosevelt's magic has allowed him thus neatly to avoid the problem of spending as much as ever, without exceeding the legal limit of the debt which the deficit now so nearly approaches. Examined without benefit of sleight-of-hand, the President's fiscal plans call for spending \$9,027,000,000 as against receipts of \$6,151,000,000. This leaves an actual deficit of \$2,876,000,000, which will place the New Deal in the position of exceeding the debt limit. Only Mr. Roosevelt's lighter-than-air bookkeeping has saved the appearance, if not the fact, of borrowing more than the law allows.

Mr. Roosevelt's eighth successive deficit budget is a mightily able exercise in magic, but is a cruelly disillusioning document to those who still believe in honest bookkeeping and who know that no person, no business, and no government can for long spend more than is received without being overwhelmed in bankruptcy.

## Antilynching Bill

## EXTENSION OF REMARKS

OF

HON. LEWIS D. THILL

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 10, 1940

Mr. THILL. Mr. Speaker, I will vote for and support the antilynching bill—H. R. 801—because it will do much to prevent the disgrace and tragedy of lynching.

I am opposed to lynching because it violates every principle of honor and legal procedure. The mob which participates in lynching acts on hearsay evidence, which is barred by the courts of the United States. The members of the mob act as judge, jury, and executioner. Under such circumstances the mob victim is deprived of his constitutional right of facing his accuser. He is deprived of the right of defense by counsel. He is deprived of those precious rights guaranteed by our Constitution.

It is a reflection upon the locality where such mobs overrun constituted legal authority and show no confidence in the courts. In such places where lynchings take place, is it not self-evident that the accused has little chance to escape proper punishment? If the victim is guilty, he would no doubt, under the law, receive proper punishment within a few weeks instead of taking punishment at the hands of the mob shortly after the crime is committed. When such action by a mob is condoned, it sets a dangerous precedent in that it implies that anyone at any time or place has the right to take the law in his own hands. When an innocent man is lynched, the guilty one escapes and for all practical purposes the courts have been closed to the guilty one who is still at large.

The United States Government should extend its strong hand to protect its citizens against murderous mob action, and those responsible for such mob action should not be permitted to scoff at law, order, and civilized decency. Our Constitution, Mr. Speaker, insists that the life of every American citizen shall be protected by our Government; that all of us, white or colored, shall enjoy the equal protection of the law, and the mighty force behind governmental authority.

It is reasonable to expect that the passage of this bill will exert a beneficial influence upon the Negroes, who have so often been the victims of mob action. We must remember that the American Negro in a short space of time has made more progress in the ways of civilization than perhaps any other people in a similar period of time. There is no field of American science or culture to which the Negro has not made valuable contributions. George Washington Carver, working in the quiet of his study and laboratory, has done immeasurable service to American agriculture and industry. It is my belief, that the passage of this bill will do much to improve the spirit and self-confidence of our colored brothers and will still further promote their scientific advancement and achievement.

I am happy to be able to support the antilynching bill, which will to a great extent discourage lynching and foster orderly procedure under the law.

## Milk Problem in the State of Vermont

## EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 10, 1940

Mr. PLUMLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to call attention to the ever-

present milk problem with which the dairy farmers of the State of Vermont are confronted.

The Vermont dairy farmers produce, as many of you realize, over one and one-third billion pounds of milk each year; the milk produced goes in tremendous quantities to the metropolitan areas along the New England and north-eastern seaboard. To illustrate this I need only call your attention to the fact that 52 percent of all the fluid milk consumed in the so-called Boston milkshed is produced in Vermont; great quantities likewise go to the New York market.

Thus, each owner, each operator of a dairy farm in Vermont, is vitally interested and concerned in the price of this particular farm product; he is similarly concerned in the stability of this important milk market to which he ships his production.

Much time, much effort, much study has been given to this whole problem, including the disruptive elements which continue to create instability in the milk market, which continue to deny to the dairy farmer the just profit to which he is entitled for his labors. In this connection I would like to incorporate in my remarks at this point the statement of my friend, the Honorable E. H. Jones, the commissioner of agriculture for the State of Vermont, who also is the chairman of our Vermont Milk Control Board.

The statement is as follows:

SOLUTION TO MILK PROBLEM LIES IN LOWER COSTS OF DISTRIBUTION—COMMISSIONER JONES FAVORS DIFFERENTIAL BETWEEN PRICE OF DELIVERED AND STORE-SOLD QUARTS; SCORES HIGH UNION TRUCKERS' WAGES

(By E. H. Jones, Commissioner of Agriculture and Chairman, Milk Control Board)

The Fortune Magazine article, "Let 'Em Drink Grade A," as summarized in the current issue of Readers' Digest, is so full of practical information that it may well be studied by everyone who has difficulty in understanding the complexities of the milk situation. While the title is something of a misnomer, the author obviously is no novice in milk marketing affairs.

He says "The trouble with milk is price." Right. "And that is not incurable." Right again we hope. He goes straight at the root of the matter with this inquiry: when farmers receive 5 cents per quart or less for their milk, why are consumers asked to pay sometimes as high as 16 cents per quart for it? It is now generally understood that farmers receive barely enough for their milk to cover the cost of production, and the public apparently does not begrudge them a price sufficient to provide a decent living. It is also conceded that the price to consumers under present conditions should not be advanced. Therefore, the remedy must be sought somewhere between these limits. This means lower costs of distribution if and where possible.

## TRUCKERS' PAY UNJUST

Casting no reflection on the substantial old line distributors, most of whom are of the same kind of flesh and blood as we ourselves, it is believed that many of them have become involved in systems of distribution which are not only expensive and uneconomical, but which throw the whole milk industry out of balance. With the ridiculously low compensation for long hours of labor performed by the producer, it is neither fair nor equitable for city union truck drivers to extort \$50 per week for transferring the milk from processing plant to consumer's door step, thereby saddling the industry with an expense of 4 cents per quart for their short hour service which carries no risk or investment. Whether this injustice can be remedied remains to be seen, but there are several other projects in sight by which it may be possible for this excessively wide spread between producer and consumer to be equitably reduced.

## SHOULD LOWER DELIVERY COST

It is earnestly hoped that we are on the eve of an overhauling of milk distribution which will bring the desired results without injustice to any of the participants. A plan to avoid the huge cost of daily deliveries by many distributors covering the same territory seems one of the first tasks to be undertaken. Already United Farmers' Cooperative Creamery Associations, which operates a distributing plant in Boston, is attacking the problem of less deliveries. Sheffield Farms Co. of New York, which purchases large quantities of Vermont milk, is trying out a two-quart paper container at a reduced price per quart. At the recent meeting of the Vermont Dairy Plant Operators' and Managers' Association in Burlington, R. W. Bartlett of the University of Illinois, a native of Orleans, Vt., gave a most interesting description of a new process for extracting the oxygen content of milk, thereby prolonging its keeping qualities several days. If this project should prove practicable and workable milk so processed might properly be delivered weekly rather than daily with a reduced delivery cost which would be a tremendous aid toward the objective of a narrower spread. More power to these people who are honestly endeavoring to work out this problem.

## FAVORS TWO-PRICE SET-UP

It is the firm conviction of the writer that the principle of a price differential between delivered milk and that sold in stores is sound. It is just as sound as the universal practice of self-service in cafeterias. It was given a fair trial in Burlington, but had to be abandoned because it didn't work in that market area. The milk-control board reached the conclusion the benefits of the plan were outweighed by the difficulties, delays and costs of a hew-to-the-line policy of administration. Failure in Burlington, however, does not disprove its usefulness elsewhere. In our search for practical methods to increase consumption and reduce the producer-consumer spread in large city markets the promotion of store sales at a proper differential is worthy of consideration. Too high delivery costs drive the consumer to the use of canned milk and milk substitutes.

As the author of Let 'Em Drink Grade A points out, an exorbitant premium is sometimes charged for grade A milk. It is true that the difference in butterfat value between it and grade B is negligible, but the use of grade A should not be discouraged. It must meet a higher standard of sanitation in its production and must carry a materially lower bacteria count, which adds to its desirability and to the safety of its use. The Vermont Milk Control Board has several times been requested to fix a premium of 2 or 3 cents per quart on grade A and vitamin D milk, but has kept the premium at 1 cent because it believes that it is sufficient to cover the extra cost of production.

## MUST SOLVE OWN PROBLEMS

It is noted that the Fortune magazine writer has avoided reference to Federal milk orders and agreements. Many of us Vermonters who oppose the general principle of Federal intervention in State affairs are very willing to recognize the benefits we have received from Federal control of the milk markets of Boston and New York, to which most of our milk is shipped. It is not desirable and should not be necessary, however, for Federal supervision to be continued as a permanent policy. It is essential that our best thought and effort be directed toward solving these marketing problems for ourselves, to the end that the northeastern milk tub may eventually stand on its own bottom.

Now I would like to incorporate in my remarks at this point the digest of the Fortune article appearing in the Readers' Digest, to which Mr. Jones refers in his statement.

The digest is as follows:

## LET 'EM DRINK GRADE A

(Condensed from Fortune)

Most Americans know that there is a milk problem. They know it because milk is continually in the news and the news is always bad: news of farmers who, having milked the American cow, proceed to dump her product into the country lanes in fierce milk strikes; news of racketeering of unions that upset milk delivery wagons in the city streets; news of endless investigations into the milk trust, which is damned for manipulating prices. But behind the headlines, Americans know there is a milk problem in a very practical sense. They know that whereas the farmer gets between 3 and 5 cents for his milk, they are asked to pay from 9 to 16 cents for it. So farmers feel they are underpaid; housewives are sure they are overcharged. Both are correct.

American business has a long record of bringing products such as the automobile and the radio to an ever-larger public. But with milk the problem of low-price mass distribution remains unsolved. Between 1929 and 1936 our per capita consumption of milk dropped 6.8 percent.

The milk business is bigger than the \$2,000,000,000 automobile business and the \$2,800,000,000 meat-packing industry. Milk brings in the biggest single chunk of all farm income, 19 percent of all cash United States farmers receive. Obviously the milk business, because it is so big, affects our whole economy; an increase in the cash received by farmers for milk helps to stimulate industry, a decrease to depress it.

But vast though the dollar dimensions of the milk business are, its measurement in human terms is even more significant. The great majority of Americans are not consuming nearly as much milk as they should for health and stamina. Dietitians estimate roughly that children should have a quart of milk a day and adults at least a pint. By this standard our per capita consumption of fluid milk would be about 250 quarts a year; actually it is 170 quarts. Dr. Herman Bundesen, president of the Chicago Board of Health, recommends a quart a day in his newspaper column; consumption in his own city is seven-tenths of a pint.

The trouble with milk is price. And that is not incurable. Milk can be distributed so as to bring the farmer the same 5 cents, or better, and be sold to the city housewife at 9 cents or 10 at the outside. It will not be easy—the one company in Chicago that has tried to get milk to the consumer at low prices has had to fight labor, big business, and the Department of Agriculture. But it can be done—and is being done, here and there.

The forces that operate to keep the price to the consumer so high form a standard pattern. It is a rare city where two or three companies do not supply at least half of all milk sold. The big distributors buy their milk mostly from cooperative associations of farmers. The farmer receives one price for milk consumed as fluid milk, another and lower price for the same milk if it is used as "surplus," for making butter, cheese, condensed milk, or ice cream. The money he actually receives is the "blended price," based on the

apportionment of the total milk supply between these two uses. The big companies buy all the farmer's milk and then tell him how it was used. The farmer has no facilities to check up on the companies' reports.

Another element in the struggle is labor. Unionized milk drivers are paid \$50 a week in Chicago—an average of 4 cents for each quart they deliver. They earn \$40 to \$50 in New York, similar high rates in other cities. Naturally they want to keep their jobs, so they encourage home deliveries and discourage store sales. In Chicago, union drivers warned stores not to buy from strike-breaking independents; stores that did not heed were bombed. One price-cutting farmers' co-operative suffered 75 percent breakage of its bottles. Milk-wagon drivers have urged union labor in various cities not to buy milk in paper containers (handled in stores). Pins have been stuck in the containers to make them leak, lemon juice has been needled into them with hypodermic syringes to sour the milk.

Governmental agencies have used strong tactics to hold up the price of milk. The Federal Government no longer tries to set retail prices, but State, county, and city authorities have been busy. It is cheaper to sell milk through stores than to deliver it to homes, yet in 30 out of 129 cities recently studied State law forbids any difference in price, and in 35 other cities the price in stores and from delivery wagons is the same. Where there is no law there are other ways of getting results. Most powerful weapon is the refusal of health authorities to inspect and license farmers who want to ship milk and thus increase the supply. In a famous Chicago case 300 farmers willing to pay all inspection costs had to go to court before they could compel the city's health department to send inspectors. In Portland, Oreg., efforts to limit the milkshed went so far that licenses and quotas were for a time traded for cash like stocks and bonds. Ordinances regulating pasteurization also can be manipulated to close the market to newcomers.

The result of all these factors is that the retail price of milk has remained high throughout the depression, higher than other foods, higher than the cost-of-living index, higher than wages. Consumption of fluid milk has fallen off.

Milk magnates sometimes express doubt that the consumption of milk would increase measurably if the price were to come down. But there is considerable evidence that it would. The First National chain began to sell milk in its Boston stores at 2 cents under home-delivery price and its business was increasing rapidly until a new law limited the spread to 1 cent and for good measure added that milk sold in paper containers should be priced a cent above bottled milk. Milk consumption in the Boston area thereupon dropped 100,000 quarts a day. Boston stations sold milk at 5 cents to people on relief, 7 cents to W. P. A. families. Use of milk by relief families went up 50 percent; total consumption for Boston increased 10 percent.

As income rises the consumption of milk rises with it. Families with \$15 to \$20 a week use a little less than 2½ quarts a week per person. Families with \$50 and more buy upward of 3½ quarts per person.

Another significant fact: Since 1927 the price of condensed milk has been sinking steadily, and sales have increased by 60 percent.

The one immediate hope that more people can get all the milk they want lies with store distribution, but the present price is set by the cost of home delivery, a service that many people cannot afford.

Even home-delivery costs could be brought down somewhat. A Milwaukee survey showed 7 companies delivering in each of 147 blocks; 2 blocks were visited by 17 trucks. But the saving here could hardly be more than a cent a quart, even if some legal way could be found to enforce less duplication.

But the typical 4-cent spread between the price of milk at the pasteurizing plant and at the retail store can be cut drastically, especially by chain stores. Safeway stores, delivering milk to 29 of its units in 18 California towns, found the cost to be four-tenths of a cent a quart, not 2½ cents, which is the average spread elsewhere. All in all, the store price of milk could be 4 cents under the home-delivery price without taking anything from farmer or storekeeper.

The trend to store sales is apparently on the increase. In Chicago, Detroit, Washington, Los Angeles, and Boston independent operators are selling milk through stores at cut prices. Store sales are growing in New York. In that market Borden and Sheffield keep their own brand names out of the stores, but they have subsidiaries under other names selling milk to stores for resale at a cent under their own home-delivered brands.

Why in many cities do the store prices remain high? The answer is pressure—pressure from the unions, from the big milk companies, from the farmers. The companies do not want to antagonize the unions. They have large investments in home-delivery equipment. For all their protestations, they may make fairly good money out of home deliveries in ways not immediately apparent. For example, there are profits on special items. Grade A milk, its difference from grade B negligible, has sold in New York at 3 cents more a quart. It averages only 0.15 percent more butterfat, and that is like buying butter at \$8 a pound. Then there is vitamin D milk, containing a few drops of fish-liver oil or exposed to irradiation, and sold at a cent over grade A. Every move the milk companies make, from their chocolate-vitalax extras to their advertisements, shows plainly that they regard themselves as being in a specialty business and not as dealing in a staple.

But store sales at lower prices would vastly increase the sale of milk. Why don't the big companies want that added volume? The answer reveals the structure of the milk companies in all its beauty.

They do not need to push the sale of fluid milk because the milk not taken fresh by consumers is "surplus" milk, at a class 2 price, and they convert it into milk products in which there is a big profit. In 1936, 89 percent of Borden's net income was from manufactured milk products. National Dairies increased its scale of milk products 40 percent, while its fluid-milk volume dropped 21 percent.

As for the farmers, they have been convinced by a long series of painful demonstrations that any price cut in the cities will come out of their hides. The big companies explain regretfully that their own costs are fixed and that they cannot possibly absorb the drop in price. Only the big companies, so the theme goes, prevent "chiselers" from battering down prices paid to farmers. True, where the law permits, independents pay the farmer a price a little below class 1 but above the "blended" price, so that the farmer's actual cash return is greater. But what, ask the big companies, would happen to the class 1 price if price cutters and chains got the upper hand? Are not chain stores notorious for loss-leader tactics, wrecking a market? So the farmers have become staunch supporters of the class price system, which they thought up in the beginning, and hostile to the chains and independents.

The chains are in a spot. They are unpopular in many quarters, afraid of further antichain legislation. If they should cut milk prices, even though they paid the farmer the same price as ever, it is likely the big buyers would cut the farmer's price "to meet competition" and the farmer would retaliate through his lobby with some new law cracking down on the chains.

How soon milk will be cheaper is largely up to the consumer and the clarity with which he formulates his wants. If he thinks it over, he will not wish to destroy the home-delivery system, but will insist that those who do not want it shall not be required to pay for it. Similarly, he will not want to insist that all stores sell milk at the same price. Stores which sell a big volume should be allowed to reflect resultant economies. Then the housewife could make her choice; she could have milk delivered at the top price, get it at the neighborhood store for a lower price, or buy it at a shopping center for even less.

If public opinion can form along some such lines, a change in the parlous state of milk might proceed very fast. Some big companies are already experimenting cautiously with a 2-quart container selling at a lower price per quart; some are paying more attention to store sales. Once increased consumption from lower prices is demonstrated, then the big companies and the farmers both may see the light.

### New Philosophy of Government Laid Down By President

#### EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 10, 1940

Mr. SHAFER of Michigan. Mr. Speaker, in his recent Budget message President Roosevelt laid down a new and startling philosophy of government which explains the tax-spend-lend-elect formula which the New Deal administration has followed for the past 7 years. In his message the President had a paragraph which reads as follows:

In the early thirties—prior to 1933—fiscal policy was exceedingly simple in theory and extraordinarily disastrous in practice. It consisted of trying to keep expenditures as low as possible in the face of a shrinking national income. Persistence in this attempt came near to bankrupting both our people and our Government.

If this paragraph means anything, Mr. Speaker, it means that if an individual, or a city, or a state, or a nation gets into a position of having an income so depleted that it does not meet expenditures the old rule of thrift, of economizing to make both ends meet, is a sure way to bankruptcy. The reverse of this policy necessarily must be that when income is depleted, one should borrow and spend to get rich.

The point the President sought to make, of course, was that back in 1933 the New Deal had immediately begun to borrow and spend far beyond the Government's income and had put idle wage earners back to work. Of course the flaw in this reasoning is the startling fact that after 7 consecutive years of increasing annual deficits and a national debt now approaching the \$45,000,000,000 mark, there are almost as many wage earners out of work today as there were in 1933. If the war in Europe had not speeded up some of our industries

during the past few months, the number of unemployed wage earners January 1, this year, would have been fully as large as the number of unemployed wage earners back in 1933.

### Antilynching Bill

#### EXTENSION OF REMARKS

OF

HON. MATTHEW A. DUNN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 10, 1940

Mr. DUNN. Mr. Speaker, my reason for wanting to support the bill which is now before the House is because I look upon it as a humanitarian measure.

I do not believe there is a race of people in the world who has been and is being more persecuted than the unfortunate Negro. He is discriminated against in every State in the Union. The South is not any more responsible for obstructing the progress of the Negro than the North, East, and West. In my opinion, in proportion to the population of the rest of the country there are just as many people in the South who have and are today doing what they can to promote the welfare of the Negro.

I hope the time is not far off when the persecution of colored people and all other peoples who are being discriminated against because of their religion, nationality, or race will be permanently discontinued.

### Prohibition of Certain Exports to Japan

#### EXTENSION OF REMARKS

OF

HON. WILLIAM H. KING

OF UTAH

IN THE SENATE OF THE UNITED STATES

Thursday, January 11, 1940

LETTER BY HON. HENRY L. STIMSON, FORMER SECRETARY OF STATE

Mr. KING. Mr. President, the situation in the Orient, now and for a number of years last past, presents tragic aspects. Though China and Japan are distant from the United States, we cannot close our eyes to the conditions there, and to the cruel and relentless war which has been prosecuted and is being prosecuted by Japan against inoffensive Chinese. It is reported that more than 40,000,000 Chinese have been driven from their homes, and their property, in part, at least, destroyed, and that several million Chinese have been killed; cities and towns have been bombed, and defenseless men, women, and children in noncombatant areas have been destroyed.

A number of years ago, when Japan seized Manchuria, there was universal condemnation of that act. An American statesman, Hon. Henry L. Stimson, was then Secretary of State. In a very able state paper he protested against the conduct of Japan, and, as I recall, called attention to the fact that the seizure of Manchuria was a violation of the Nine Power Pact, if not the Four Power Pact, and certainly was in contravention of the terms of the Kellogg-Briand Pact.

Unfortunately, Great Britain did not join our Government in protest against the illegal course of Japan. Undoubtedly the failure of the signatories to the treaty in question to join the United States in protesting against Japan's course encouraged Japan to violate further the terms of the treaties

and to seize territory in China. The failure of the signatories to the treaty in question to act promptly when Manchuria was seized has undoubtedly been regarded by Japan as evidence of the fact that they would not adopt measures that would interfere with the predatory course which Japan is now following.

In a letter appearing in this morning's New York Times, Mr. Stimson calls the attention of the public to the situation, and recommends legislation to prohibit the export to Japan of arms, munitions, and raw materials entering into the manufacture of war materials. I believe the majority of the American people agree with the views expressed in Mr. Stimson's letter. I therefore ask unanimous consent to have the letter inserted in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

[From the New York Times of January 11, 1940]

In the problems presented to them by the present chaotic conditions of the European world the Government and people of the United States have taken successfully their first step toward an affirmative foreign policy. They have repealed the automatic arms embargo, which made them in effect an unwilling ally of those nations of whose international conduct they disapproved. They have returned to the policy of their fathers, who believed that peace-loving nations, when they were unjustly threatened or attacked, should be allowed to defend themselves with arms purchased in neutral markets.

Our people have thus shown that they were not afraid to discriminate between right and wrong. They have recognized that there is a difference between official neutrality and moral blindness.

And so far there have followed no evil results of this action, but, on the contrary, much good. The nations which are standing for the kind of international conduct in which we believe have been greatly encouraged, and we ourselves have shown no sign of losing our heads in wild adventures. There has been no uncontrollable war boom, and the American public is studying deeply and trying carefully to appraise the difficult problems with which we are confronted.

#### PROBLEM IN THE EAST

Now we are approaching another national problem brought about by war—this time on the opposite side of the world—in Asia. For 3 years the great resources of our country to a major degree have been thrown continuously to the aid of wrongdoing in the Far East. They have been used not only to assist unprovoked aggression against China but also to facilitate acts of inexcusable cruelty toward unoffending Chinese civilians—women and children. They have been used to promote the violation of treaties which we initiated and which represent the hope of modern civilization in the Far East. They have been used to destroy the humanitarian work carried on in China by American churches, missionaries, and educators. The evil which we have assisted in China has been much more widespread and brutal than anything which has yet happened in Europe, but American responsibility in dealing with it is somewhat different.

It is not our national legislation which is at fault, but a comparatively small number of individual Americans who are directly responsible—chiefly the merchants who are selling to Japan the ore, steel, and scrap iron indispensable for her bombs, and the large oil producers who are selling to her the even more indispensable aviation gasoline for her planes. Today that responsibility has become more clear than ever. The resources of the very few other nations who formerly joined with us in that traffic are now nearly all absorbed in the European war. Except in America there are very few of these indispensable materials for aggression which are now left available to Japan. The focus for responsibility is thus almost wholly centered upon us. The figures of the sordid traffic have been published and republished many times and there is no need for repeating them here. If a prophet Nathan were abroad in the world today, his finger would point unerringly at Uncle Sam and there would be no doubt in his decision, "Thou art the man."

And yet as to the American people as a whole that would be an unjust condemnation. Both the press and the Gallup polls overwhelmingly show that there is no international question on which our people are more thoroughly united than as to the Japanese aggression against China. From the beginning they have accurately appraised the Far Eastern issue and from the beginning their decision has been overwhelmingly against Japan—against her on the original aggression and even more against her on the brutality with which that aggression has been carried out. More than four-fifths of those who have expressed their opinion in a recent Gallup poll are in favor of stopping the evil with an embargo.

#### PLACING RESPONSIBILITY

The real responsibility therefore rests first upon the comparatively small group of Americans who have been willing to soil their hands with this dirty traffic; and, secondly, upon those political leaders who have tried to frighten our Government from doing anything to prevent the wrong by warning them that to do so would surely lead them into war with Japan.

Experienced observers have promptly recognized and publicly stated that such a fear was without credible foundation; that the very last thing which the Japanese Government desires is a war with the United States; and that on the contrary every act and word of our Government in respect to the Orient is followed with most anxious solicitude in Japan. Admiral Yarnell, in a discussion in the New York Town Hall Radio Forum was one of the most recent of such observers, and certainly his authority is outstanding.

But the clearest demonstration came when our Government, after a long period of forbearance with repeated violations of our own rights in China, took sudden and vigorous action and on July 26 last denounced the Japanese-American commercial treaty of 1911, to become effective 6 months from that date. This was followed on October 19 by an extraordinary public address by our Ambassador to Japan expressly warning the Japanese people "that American public opinion strongly resents some of the things that Japan's armed forces are doing in China today"; also that this public opinion "is unanimous."

#### NEW TREATY SOUGHT

Did Japan bluster and threaten war after these abrupt and very direct warnings from our Government? She did not. She at once put the brakes on the long series of aggressive acts of her agents against Americans in China. She promised to reopen the lower Yangtze River. She uttered other conciliatory statements. Some of her statements indicated a complete misconception as to the character and cause of our resentment, but they were certainly not warlike.

And ever since there has been going on in this country a concerted movement, very evidently originating in Tokyo, composed of suggestions and requests addressed to chambers of commerce, Members of Congress, and other prominent persons urging that pressure be brought to bear on our Executive to hasten into negotiation for a new commercial treaty with Japan.

We are also being urged from quarters usually quite easily traceable to Japanese sources not to lose the present "golden opportunity" to offer our good offices toward bringing the hostilities in China to an end. In short, a course has been followed which can be at once recognized as characteristic of Japan's diplomacy ever since, under the leadership of her military leaders, she embarked on her conquest of Manchuria.

Those leaders desire strongly to subjugate China, but they also clearly recognize that a head-on quarrel with us would be fatal to that project. As a result, there follows a suggestion for our mediation, they knowing full well that nothing undesired by Japan can come out of such a proposal, while in the meanwhile any action by our Government to stop our traffic in arms with her will be effectively forestalled.

On January 26 next the 6 months' notice given by our Government of the abrogation of the treaty with Japan will have expired. Our Government will then be morally free to act with respect to our commerce with that country. It is therefore important that our people should consider and discuss the matter thoroughly and in its broadest aspects so that our Government may act in the light and with the support of an intelligent public opinion.

In the first place, our interests in the Far East are not limited to the narrow interests of our present commerce in that region. They are far broader and more permanent. We are the largest nation bordering on the eastern side of the Pacific Ocean. We are increasingly concerned with what happens on the other side. In the past we have not hesitated to recognize the responsibility which that position involved. We have been active and potent in spreading the influence of our civilization as a moral and cultural force among our neighbors on the opposite shore of that ocean. Not only have American missionaries and educators been more influential than those of any other nation in attempts to spread there the peaceful influence of our American principles and mode of life but in the Philippines for over 40 years we have been building up a very successful demonstration of self-government among some 15,000,000 of Filipino people.

#### MOVES FOR PEACE

Our purposes in doing this have not been chimerical or fantastic. They have represented the long-range interests of our country. In each of these methods we have sought to lend our influence toward the maintenance of principles of peace and stability among the crowded populations of Asia. We have recognized that along that line rested the far-sighted interests of our own country. It has been clear to us that among these interests was the continuance of the stability and independence of the naturally peaceful culture of the Chinese Nation.

If for no other reason, we foresaw that in the future development of that culture there rested stable relations and great possibilities of fruitful commerce with us. Today anyone who thinks can see that it is for our interest that there should continue to exist in eastern Asia three independent and stable nations, Japan, Russia, and China, rather than that one or two of these nations should successfully conquer and dominate the third.

Furthermore, when we examine their history during the past 50 years, we do not believe that the Japanese are capable of establishing in China a regime of peace, possessing the characteristics of security, law, justice, order, and stability. In their conquest of Korea, their subsequent 21 demands upon China, and their still later invasion of Manchuria, we recognize that the Japanese have been heavy contributors to the conditions of disorder which have sometimes developed and prevailed in the Chinese Nation; and, last of all, during the past 3 years we can easily see that the methods

of the Japanese Army in China have produced on the part of China's 400,000,000 people a prevailing suspicion, fear, and outright hostility, such that even if Japan were able to occupy forcibly all of China, the relationship between the Japanese in China and the Chinese population would be characterized by constant resort to force and manifestations of violence.

Furthermore, we recognize that the immediate responsibility for this rests upon the Japanese Army, which during the past 10 years has succeeded in obtaining a domination over the civil authorities of Japan to an extent which is contrary to all the democratic principles which we believe in as the best security for a stable national or international policy.

#### TAKING ISSUE TO PEOPLE

For these reasons we have a strong feeling that it is highly desirable in the interests of the United States that the Japanese military organization should become discredited in the eyes of the Japanese people. We know that the Japanese people are highly patriotic and that until they themselves become convinced that their army has embarked on a venture which is a failure and which also has brought severe burdens and hardships upon the Japanese people, it will be unlikely that the people will cease to support it.

I think that in the foregoing I have stated briefly what are the current views of an overwhelming majority of the American people who have at all considered what is going on in the Far East.

Now what are natural deductions from such views and beliefs? In the first place, what light does it shed upon the position we should take toward the organized movement that Japan is evidently making in this country today suggesting that our Government should mediate with a view to stopping hostilities in China? What prospect is there that our efforts would result in any kind of a peace which would be in accordance with the historic interests and aims of our country in that region? Is there any likelihood that Japan would accept a peace of such a character that any high-minded or patriotic American could take satisfaction in it? Is there any likelihood that China would willingly accept the only kind of peace which the Japanese Army would be willing to consent to? Should this country lend its influence toward imposing on China a peace which disrupted her territory or destroyed her independence or made her economically or militarily a vassal of Japan?

#### CHINA'S CONFIDENCE RENEWED

I cannot but believe that the unhesitating answer—the almost unanimous answer—by all such Americans to these questions would be in the negative. I do not claim knowledge of the military situation in China other than what is in the possession of any interested and careful reader of the daily press; but, from such observations as I have been able to make I am convinced that the recent developments in China have given the Chinese Government renewed confidence in the capacity of China to resist and that China has no intention of making peace on the basis of Japanese terms as constantly outlined by her spokesmen.

On the contrary, I have the strong impression that it is Japan whose efforts are beginning to bog down, and these impressions are confirmed by the hurried efforts which the Japanese military authorities have been making to establish in Nanking a Chinese puppet government and to proclaim it as having the support of the Chinese people—a fact which any observer can see is to a very high degree untrue.

So in short I see no reason why our Government should now offer its efforts to force a peace upon China. I believe that to do so would fail to bring any enduring peace; that it would seriously discredit the United States to have abandoned the principles toward China and the Far East which for nearly half a century it has maintained; and that it would seriously impair our future interest in that entire region. I believe further that it would merely tend to assist Japan in acquiring a legal title to some portion of China that the Japanese Army has seized by force. Consider what the effect of such an action on our part would have upon our moral influence toward peace in other portions of the world where war is raging. To one who has learned to value the influence of this country in foreign affairs as one of the noblest and highest influences in a broken world, such a prospect would seem lamentable indeed.

No. Such steps as we take should be in the other direction. They should be toward supporting and effectuating our principles and objectives in the Far East rather than of abandoning them. Holding that aim in view, the course of action easiest and most practicable for the United States would be to discontinue the assistance which some of our people are now rendering to the efforts of the Japanese to destroy the independent sovereignty of China. Without going into detail, there are several lines along which our Government could act.

#### EFFORTS FOR EMBARGO

One step it could take today and that step is in line with what it has already done. It could address its powerful leadership and influence toward persuading those Americans who are now engaged in exporting iron ore and scrap iron as well as aeronautical gasoline to Japan to cease their exportations. The Secretary of State has already successfully applied this method of a so-called moral embargo toward preventing further exports to Japan of airplanes and of machinery for the manufacture of the special kind of gasoline necessary to fly airplanes.

It is hard to see why we should stop with those efforts and not go on and try to stop the export of the special gasoline itself. The

stoppage of the machinery for manufacturing that gasoline is of little present avail so long as we permit the export of the product itself. The readiness of our merchants of airplanes in the past to accept such leadership of our State Department should encourage it in the belief that it would have the support of our oil and scrap merchants in further efforts.

Compliance with such a request by our Government would be worth while as an immediate step in the line of restoring our own self-respect. And it might well be an effective step. But it could hardly be more than a step. In the light of the violence which Japan during the past few years has done to the principles advocated by this country, as well as to our material interests in Asia, such a step can hardly be thought adequate. In order to impress Japan with the seriousness of the feeling of our people as to this matter, I think our Government will probably have to go further.

#### BILLS BEFORE CONGRESS

There are at least four bills now pending in Congress proposing directly to prohibit the export by us to Japan of arms, munitions, and the raw materials out of which arms are made. One of these bills bases its proposed action specifically upon the reason that the arms and materials thus prohibited are intended to be used in violation of the sovereignty and territorial integrity of a nation whose sovereignty and integrity the United States is obligated by treaty to respect.

The passage of such legislation would have the great advantage of demonstrating more clearly than any other method the reason for our action and the emphasis which we place upon right conduct in international relations and particularly upon the treaty for which we are mainly responsible, undertaking to respect the integrity and independence of China.

Furthermore, the fact that our Congress representing our entire people had taken such action would carry with it a weight of influence which would be far more effective in impressing the people of Japan with the sincerity of our purpose than any other action. The stable equilibrium of eastern Asia, in which the United States is so deeply interested and which is now menaced by Japan's attack upon China, cannot be restored without a complete reversal of the conduct followed for several years by the leaders of the Japanese Army. And among the influences which would be effective in ultimately accomplishing that reversal next to the courageous and stubborn resistance of the Chinese Nation would be the knowledge in Japan that the United States, through the action of its representative Congress, had deliberately and clearly taken such a weighty step to evince its disapproval.

Indeed, the influence of such action by our Government would transcend even the great crisis in Asia. Throughout the broken and warring world of today it would show that this Nation recognizes its responsibility for making efforts toward the restoration of law and order and that wherever its peaceful influence can effectively be thrown it will be thrown on the side of independence and freedom and against militarized aggression. It would thus powerfully tend to confirm the already great influence which has been exercised by the repeal last autumn of the automatic embargo legislation.

HENRY L. STIMSON.

NEW YORK, January 10, 1940.

### Tributes to Senator Glass on His Birthday Anniversary

#### EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, January 11, 1940

ADDRESS BY RUSSELL C. LEFFINGWELL AND VARIOUS COMMUNICATIONS

Mr. BYRD. Mr. President, on Monday last the Senator from Mississippi [Mr. HARRISON] had printed in the RECORD a number of tributes to my distinguished colleague, the senior Senator from Virginia [Mr. GLASS], on the occasion of the recent celebration of his birthday anniversary. Included in those tributes was part of the remarks of Mr. Russell C. Leffingwell, of New York. I now present, and ask to have printed in the RECORD the full text of Mr. Leffingwell's remarks on that occasion, together with communications on the same subject from a large number of Senators and other distinguished Americans.

There being no objection, the matters referred to were ordered to be printed in the RECORD, as follows:

ADDRESS BY RUSSELL C. LEFFINGWELL

Because of the high admiration they have for him and the love they bear him, friends and admirers of CARTER GLASS all over the country wish to mark his eighty-second birthday by establishing a professorship of government in his honor here at Sweet Briar.

Here in Virginia CARTER GLASS was born. Here he has made his home. Here he has lived his life, and here, a few miles from Senator GLASS' birthplace and his home his distinguished sister presides over the destinies of this young, thriving, and beautiful college for women.

The business of government has always been an important concern of a free people. It is more than ever the concern of a free people in these days when government is taking to itself more and more activity in the affairs and lives of the citizens.

The enfranchisement of women, an event so recent in the history of our democracy, so recent, indeed, in the lifetime of CARTER GLASS, and of many of us older folk, makes it important that government should be studied by the educated women of the country in order that they may know what is and what is not the function of government; what is good government and what is bad government; what is the free government of a free democracy and what is despotism; and how government should be administered.

We are discarding a free economy, or seem to be doing so. We are tending away from a government of laws to a government by bureaus and to bureaucratic administration. To quote Arthur Macmahon on government in the Encyclopaedia of the Social Sciences:

"The abandonment of laissez-faire is indicated most forcefully in the multiplication of ad hoc regulatory boards. Far from representing sound legislation and perfected administration, they are significant as confessions of a need and as the crude beginnings of control. A society intent on exploitation and schooled to leave adjustments to initiative and competition has become uncomfortable and been forced to act without knowing what it wished to do. The first steps have taken the form of a congeries of unrelated statutes nearly devoid of policy, by which undigested problems have been devolved upon amorphous agencies that administer a kind of compulsory arbitration among conflicting interests."

Evidently it is essential that woman's instinct for good housekeeping, and her experience in it, should be applied to the affairs of the National Government, and that every educated woman in particular should have an opportunity to know and understand the business of government, how it is conducted, and how it ought to be.

If the study of government sounds arid and dreary when presented in terms of the language I have quoted from an encyclopedia, then let it be made fresh and vital by the study of the lives and utterances of the great men who have made the Government of the United States what it is.

The business of government is not an arid thing. It is a human thing. It is in the lives of great men that we find inspiration to study the science and art of government and to seek to apply it to our own times. Virginia was the home of Washington, Jefferson, Madison, and Monroe. It was the home of Patrick Henry, of Marshall, and of Robert E. Lee. It was the birthplace of Woodrow Wilson. This same Virginia is the birthplace and home of Carter Glass.

It was 22 years ago that I first met Mr. GLASS. Those were war-times. He was chairman of the Committee on Banking and Currency of the House of Representatives and I was Assistant Secretary of the Treasury. He had been the chief author and the congressional sponsor of the Federal Reserve Act and the man most of all others entitled to be honored for devising and enacting and instituting the Federal Reserve System. The creation of that System was the most constructive monetary achievement of the United States since the foundation of the Republic. Without the Federal Reserve System the United States could not conceivably have financed its part in the Great War without chaos. In a democracy no great measure is the sole achievement of a single man, but of all the many people, politicians, bankers, and businessmen who contributed to the creation of this Federal Reserve System CARTER GLASS plainly stands out as the man who devised and piloted through the Legislature and enacted this great measure.

After armistice, Secretary McAdoo resigned and CARTER GLASS succeeded him; and for a year and a quarter, or thereabouts, Secretary GLASS presided over the finances of the United States; and in particular it was he who led in the flotation of the Victory Liberty Loan. Secretary McAdoo, in the effort to finance the war, had drawn into the Treasury a little Treasury cabinet mostly of New Yorkers known to him or to his associates in the field of law and finance. To these men, mostly strangers to him, the new Secretary of the Treasury gave his confidence and support in the work they were doing for the Treasury. Secretary GLASS inherited the problem of financing the overhang of the war burden, not less difficult than that of financing the war during the period of active hostilities. The public debt continued to rise very rapidly from Armistice Day until it reached its peak in August 1919. Secretary GLASS had to find means to finance this mounting public debt after the fervor of the war spirit had abated. Then the members of the great Liberty Loan organizations which had been created during the war were naturally anxious to return to their private lives and to the serious business of earning a living in the difficult period of post-war readjustment. And the people of America who had been taught to stint themselves in order to finance their government at

war were likewise weary of the sacrifices imposed upon them by the war and anxious to relax from the high tension and self-sacrifice of the war days. In spite of these difficult conditions, the rapidly mounting debt of the war's overhang on the one hand, and the rapidly waning war fervor of the people on the other, Secretary GLASS launched the Victory Liberty Loan and campaigned the country for it. He never feared failure and never stood in danger of failure. And his great Victory Loan was a great success.

During the year and a quarter when CARTER GLASS was Secretary of the Treasury we lived and worked together daily. Then he went to the Senate and I, not so long after, went back to my law practice in New York. But in those 15 months I learned to admire and love this man of Virginia; this man of the frail, but seemingly indestructible physique, the indomitable will and the great heart. And that love and admiration and the friendship then formed are as much alive today as when our paths separated 20 years ago.

And if it is, as I believe it is, the business of a government of free men, both to govern these men and to preserve their freedom, then the life of CARTER GLASS, of Virginia, as a politician, as a newspaper editor, and as a statesman, is in itself a lesson in government. A free and fearless and untrammelled press he stands for and exemplifies; a free and fearless life in politics he stands for and exemplifies. There is something else that CARTER GLASS has that few have. He has the power of passionate eloquence in a cause. He is uncontrollable in his devotion to the truth. He is possessed of command of the English language unrivaled in his day, and has the power of indignation and the gift of enthusiasm. CARTER GLASS is the true example of the leader of a free people. A great editor, a great legislator, creator, and defender of the Federal Reserve System, Secretary of the Treasury, Congressman, and Senator of the United States, fiery and eloquent defender of the truth: this is CARTER GLASS. In his name and honor friends and admirers of his throughout the country present this birthday gift to Sweet Briar.

And to you, Senator, as a reminder of this birthday party we give this book containing the signatures of many of your friends with best wishes for many happy returns of the day.

James A. Farley: "It is with sincere regret that I find myself unable to accept your invitation. I am particularly sorry because there is no one I would more readily wish to honor than Senator CARTER GLASS. He has been a friend of mine ever since we first met, and I have for him a very high regard and affection."

Mrs. John Nance Garner: "The Vice President regrets that it will be impossible for him to be present. He dearly loves and admires the Senator and considers him one of the greatest living statesmen and one of the most patriotic of our American citizens. It is always a joy to do honor to such a man."

William McC. Martin, president of Federal Reserve Bank of St. Louis: "No honor is too great for Senator GLASS and we are disappointed in not being able to personally tell him so."

Senator KENNETH McKELLAR, of Tennessee: "I am more than sorry that I cannot be present. Virginia has cause to be proud of many of her sons, but of none should she feel more proud than she does of CARTER GLASS. I am one of his greatest admirers."

President John Lloyd Newcomb, of the University of Virginia: "There is no public servant of Virginia more worthy of honor than the distinguished senior Senator, and we would like very much to be of the company on January 4. Please convey to the Senator our very keen regret at our inability to be present."

Senator ARTHUR H. VANDENBERG, of Michigan: "I deeply regret that I cannot accept your invitation. I shall be with you in spirit, joining as always in any tribute to the superlatively splendid citizenship and patriotism of the senior Senator from Virginia."

Senator WILLIAM E. BORAH, of Idaho: "I deeply regret I shall not be able to attend the dinner to be given in honor of Senator GLASS. But I should like you and friends of the Senator to know how grateful I feel to have been invited to have a part in doing honor and paying tribute to Virginia's distinguished statesman and patriot."

"But why should I say Virginia? In the truest and finest sense he belongs to the Nation. To the Nation he has long contributed the wealth of a gifted mind and the unselfish and superior services of a devoted spirit. His unflinching courage in public affairs, the stainless purity of his private and public life, and all those qualities of greatness which make up the genius of CARTER GLASS, as in the case of so many celebrated leaders of the Old Dominion, are imperishably a part of the pride and the glory of the Republic."

DEAR MR. LANCASTER: Will you please convey to both Mr. GLASS and Mr. BYRD my best wishes and very greatly oblige?

Yours very sincerely,

PAUL A. REDMOND.

WASHINGTON, D. C., January 4.

SWEET BRIAR COLLEGE,  
Sweet Briar, Va.

Please give my affectionate greetings to my beloved friend, CARTER GLASS, to whom you are doing honor tonight. To him all honor is due, no less for what he is than for what he has done. His stature has gained in moral grandeur with the years as his character has in massiveness. Few statesmen anywhere at any time have shown such consistent integrity of mind, character, and purpose as he. God bless him.

ADOLPH MILLER.

WASHINGTON, D. C.

Miss META GLASS,

*Sweet Briar College, Virginia:*

Wish it were possible for me to be present tonight and join in the fine tribute being paid your illustrious and distinguished brother, Senator CARTER GLASS. He is beloved by all of his colleagues. He is truly one of the great statesmen of this generation and deserving of the high honor being paid him. The principles for which he has stood and the courage he has always displayed as a public servant should ever be an inspiration to us all. I congratulate Sweet Briar College in the establishment of the CARTER GLASS professorship of government.

PAT HARRISON,  
United States Senator.

RICHMOND, VA., January 4.

DABNEY S. LANCASTER,

*Sweet Briar College:*

Owing to unpromising weather am compelled to deny myself the great pleasure of being with you and your guests tonight. Please convey to Senator GLASS my respect and admiration for his magnificent service to our country. My best wishes for the success of the evening and your good work.

JOHN M. MILLER, Jr.

RICHMOND, VA.

DABNEY S. LANCASTER,

*Sweet Briar College:*

Regret I will not be with you to honor Senator GLASS tonight.  
BUPORD SCOTT.

WASHINGTON, D. C., January 4.

Hon. HARRY FLOOD BYRD,

*Sweet Briar College, Virginia:*

Please convey to Senator GLASS my very deep appreciation for the opportunity I have had to know one of America's noblest citizens.

EDWARD R. BURKE,  
United States Senator.

RICHMOND, VA.

Dr. DAENEY S. LANCASTER,

*Sweet Briar College:*

Please convey my congratulations to Senator GLASS.  
Col. JULIEN H. HILL.

WASHINGTON, D. C., January 3.

Dean EMILY H. DUTTON,

*Sweet Briar College, Virginia:*

It is with the keenest regret that I am denied the privilege of being present at the dinner honoring Senator CARTER GLASS on the occasion of the establishment of the Carter Glass professorship of government for Sweet Briar College. Senator GLASS is a great American, an intellectual and courageous public servant, and a lovable man. He occupies a rare place among the patriots and statesmen in American history.

TOM CONNALLY,  
United States Senator.

RICHMOND, VA., January 4.

President META GLASS,

*Sweet Briar College, Virginia:*

Terribly disappointed, impossible attend celebration. Congratulations to CARTER GLASS and Sweet Briar.

BELLE BOONE BEARD.

WASHINGTON, D. C., January 4.

Dr. META GLASS,

*President, Sweet Briar College:*

It had been my intention to be present personally tonight to felicitate Senator CARTER GLASS on his birthday and to voice my hearty approval of the establishment of the Carter Glass professorship of government at Sweet Briar College. Senator GLASS is one of the great Americans of all time and we honor ourselves in honoring him. It is a source of great joy to me to see this tribute paid to a fine American while he is still able to enjoy it.

ALBERT B. CHANDLER,  
United States Senator.

WASHINGTON, D. C., January 4.

DABNEY LANCASTER,

*Sweet Briar College, Virginia:*

My warmest congratulations to Miss Glass and to you and her associates at Sweet Briar on establishing in the name of this great American a foundation for the teaching of history, which I hope will always be held in the channels of sanity, patriotism, and common sense which our great American so vividly exemplifies. Please express to Senator GLASS the great admiration and esteem which we all hold for him and congratulate him on so courageous and useful a career. I deeply regret that I cannot be present to witness this fitting tribute to one of Virginia's greatest sons.

GEORGE Y. WORTHINGTON, Jr.

WASHINGTON, D. C., January 4.

Dr. META GLASS,

*President, Sweet Briar College, Virginia:*

Regret my inability to be present. In a very imperfect way, I desire to express my personal congratulations to Senator CARTER GLASS on the occasion of his having rounded out 82 years of a very full life. I deem it more appropriate, however, to congratulate America on its being the birthplace of a good and manly man. The strength and endurance of democracy is structured by far-sighted, fearless fellows like the courageous young man who today rounds out his eighty-second year amid the praise of his native State and the plaudits of the country, to which he has rendered, as a citizen and as a Senator, so much service. History will speak more eloquently of CARTER GLASS than is possible of those who affectionately greet him tonight, of which number I am one in spirit.

Senator PAT MCCARRAN.

WASHINGTON, D. C.

DABNEY S. LANCASTER,

*Executive Secretary, Board of Overseers, Sweet Briar College, Virginia:*

Sweet Briar has endeared itself to all of us by honoring that great Virginian and great American, CARTER GLASS.

JAMES F. BYRNES.

My DEAR MR. LANCASTER: There is no man in public life whom I more admire, and my affection for the distinguished senior Senator from Virginia knows no bounds. His contributions to the welfare of our country are widely applauded at this time, as they have been for years; but, in my opinion, it will be left to historians of the future to properly and completely tell how much his presence meant to his country and his countrymen. No man in the Senate commands more respect, and there is none here who more completely compels the affection of his fellows.

May I say again that I am terribly sorry that circumstances beyond my control denied me the opportunity of sending a word to you that might be added to those being prepared for Senator GLASS. I am among the millions who hope and pray for his continuing good health and lasting happiness.

Sincerely yours,

Senator FRANCIS MALONEY.

In spite of press reports that Senator GLASS does not like to celebrate his birthday, I do not feel that I can let the occasion pass without extending my best wishes and expressing the hope that he will have many more, and that he can continue his useful and valued service to the country.

RONALD RANSOM.

I would not feel that the year had officially started if I did not write to congratulate Senator GLASS upon his birthday on the 4th of January. It is with great pleasure that I do this now, and I hope that 1940 will be a year of health, happiness, and good fortune to him. I am looking forward to our various contacts during the course of it.

With congratulations and warm good wishes for the Senator,  
HENRY MORGENTHAU, Jr.

We glory in the honor that is justly Senator GLASS'. He is deserving of the highest tributes and worthy of man's praise. Mrs. Halsey joins in many happy returns.

EDWIN A. HALSEY.

I regret that I cannot by my presence evidence my deep personal respect for Senator GLASS as a statesman and my sincere affection for him as a friend.

L. W. DOUGLAS.

Although we are separated by almost 2,000 miles, I am thinking of Senator GLASS on his eighty-second anniversary, wishing him health, happiness, and a world of every good thing throughout the year ahead.

SAM G. BRATTON.

Congratulations to Senator GLASS. I wish for him many more years of usefulness and happiness. Sorry I cannot be with him. With affection and admiration.

P. H. DREWRY.

All blessings on Senator GLASS this day and every day.

AMELIE TROUBETZKOY.

Owing to previous engagements, I find it impossible to attend the dinner given to Senator GLASS. For over a quarter century I have been privileged to enjoy the association and protection of his friendship, and like millions of others unknown to him have reaped the benefits of his wise and courageous statesmanship. Any honor or tribute will be but a small evidence of the admiration and affection in which he is held by his countrymen. May good luck, happiness, and peace be his for many years to come.

Sincerely,

BERNARD M. BARUCH.

Accept my hearty congratulations upon the splendid and well-deserved tribute paid to Senator GLASS by Sweet Briar. Certainly he has reason to be proud of the universal esteem, respect, and affection in which he is held by all of the people of this country. Mrs. Battle joins me in affectionate remembrances and warm personal regards to Senator GLASS and his sister.

GEORGE GORDON BATTLE.

### Institute of World Affairs, Riverside, Calif.

#### EXTENSION OF REMARKS

OF

HON. THEODORE G. BILBO

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Thursday, January 11, 1940

ADDRESS BY HON. ELBERT D. THOMAS, OF UTAH

Mr. BILBO. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address delivered by the junior Senator from Utah [Mr. THOMAS] before the Institute of World Affairs at Riverside, Calif., on December 15, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Dr. von KleinSmid, colleagues on the program, and members of the institute, I have a feeling, President von KleinSmid, that I am not going to give a very good talk tonight, because when I asked the good Lord to help me through with it I just offered a prayer that I might do well enough to be invited back again. By not being here for the full session I have missed the inspiration of this occasion and the meetings of the institute. I have listened tonight to the only two talks that I have heard, the splendidly optimistic talk of Dr. Martin, who last year, in describing what he had seen first hand in Europe, gave me more information right here, more real thought about what was taking place over there, than I got from the three Ambassadors who came over to tell us about it and from anyone else during the whole year. That is an extremely hopeful sign. And the deductions that Dr. Martin made last year, like those he made tonight, were true, just as true as the hunches of Dr. Rowell's Greek friend. The world lives both by study and by hunch, and that is my supplement to Dr. Rowell's definition of faith.

I cannot help but put in here a touch of the religious under the inspiration of Dr. Rowell, and say that the world must ever live by faith, and we individuals in the world must live by faith, because if we try to live by knowledge we have to deal entirely with the present and the past, living by those things we remember. The glory of man's mind is his ability to project himself into new situations; for when man learned how, after he discovered the concept of time, to seek a future, then man arrived at the present, thus justifying faith in man and in his ultimate solving of the problems of life.

Dr. Rowell left us with somewhat of a feeling that even if we do not go to see What Price Glory, we are still convinced that this is a cockeyed world. Well, that is nothing very new. I get all mixed up in my contemplation of ancient lore, but I think there was a day back in the time of Greek mythology when Diana was the goddess of directions. She was called not only Diana of the Hunt and Diana of the Crossroads, but also, by the wits of ancient times, who then represented those persons who accepted the theory of a cockeyed world, Diana of the Cross Eyes. A Chinese once said that when things were as bad as they possibly could be and then take a turn for the worse, then China is normal. I, too, have spoken in the way in which Dr. Rowell spoke, and many a time I was accused of being a pessimist. But do we want a world without problems? Do we want a passive world? Does anyone want a condition of bliss?

I remember one description of a preexistent state where the gods met together in their glory and after planning the new world they decided to people it. And one plan that was offered called for the sending of souls down and the bringing of them back perfect. Another plan was to send them down and let them work out their own and the world's destiny. I am sure that it was then that the angels shouted for joy. I should have wanted to be one of the angels who said "Give me a chance," and not a guaranty of perfection.

That is the kind of faith I have in this world. Having been a school teacher and watched boys and girls grow into manhood and womanhood, I remember the story of three little pigs experimented on at an agricultural station. The three little pigs were taken at birth. One pig was given everything a body should have, including vitamin B; another, just a little of the good; and the third was turned loose to rustle for himself. At the end of the experiment the first was completely economically worthless, although I suppose spiritually all right; the next was one that you and I would never

want; but the third little pig who rustled for himself developed into the kind of pig that made him economically and socially a going concern, a pride to himself and his owner.

Let me show you some remarkable things that have taken place in this world lately; and it is through institutions such as this one which we are now holding that some of these things have been made possible. Dr. Beard, in his latest article, makes fun of these study groups and makes fun of anyone who teaches international relations, but the fact remains that within a generation it has become extremely hard to lead a country such as ours into war, while it was very, very easy to do so in generations past. As Dr. Martin has pointed out, these wars which are going on are wars which no one wants, not even those who are fighting them. In 1916, after President Wilson delivered his preparedness address, I suppose because I had had my photograph taken in a uniform once, I was asked to help with the parade in my home city. All the citizens marched, including the professional men and the clergy, urging that America prepare for war. Thinking of the experiences of 1916 and the first part of 1917, we remember a war party in the United States which included the majority of our people—for it was the people of the United States and not the Government that urged war. We read such statements as that of Theodore Roosevelt, whom I am sure we could point out as a leader of the war party in America, describing President Wilson as being too weak to lead us into war and writing a letter to an English friend saying that probably America would never understand, under the leadership of such a man as Wilson, that we have to gain our salvation through a baptism of blood. If anyone were to say this today, the statement would be rare enough to be news, but no newspaper would play it up as being representative of the ideals of the people today.

There is—and I have just now been through more than half the States of the Union—there is absolutely nowhere in the United States any war sentiment at all, and this is not because the American people are not willing to do their part for the world; it is not because they are cynical; it is because they have learned down in their hearts the futility of war in solving any great question, and that is why, along with other things which have to do with war, nations are backward in hurling their masses of citizens into battle. Those persons who have scoffed at teachers of international relations are not responsible for the people's having learned this lesson. That credit should be given to those who have thought that if the people understood war as it actually is they would appreciate its futility and learn to hate it as a medium of settling misunderstandings. The war going on is terrible, but extremely scientific, and science and knowledge together sometimes will contribute toward preventing the futility of an experiment.

Not only are we convinced but it is a fact that America would serve no good purpose at all in entering this war, even if we could find in its complex nature that side which would be consistent with American ideals. As pointed out by Dr. Martin, the peace of 1918 and 1919 failed because it was written by scores of nations, all of them belligerents. Scores and scores of nations had gone into war and just a few had remained out. Only here and there was a nation left to temper the influence of the victors over the vanquished. And so much was that the case that constructive agencies of peace were interwoven with the destructive hates incident to the war and some of the peace treaties did not become effective even after the war. Constructive thinking was tied up with destructive action. Our hope for the future is that neutral will for a peaceful world will guide thought toward a constructive peace, a peace looking toward a better future, not looking back with vengeful hate. Peace, tempered by the will of the noncombatant world, is the promise we should like to see fulfilled.

Now, what will America's part be in this peace of tomorrow? I do not know. I frankly do not know. The American Government is such a complex one that it is hard for us to know where the last word is; yet I think that, if the will of the American people is applied, the American contribution will come from America's experience.

The technique of world organization is a very vital thing. The great stabilities of the oldest social democracy and economic democracy of the world are those that rest upon simple principles. There is a political democracy when there is an economic and social democracy, for we do not have a political democracy unless we have an economic and social one. America's contribution can, first of all, be a political contribution. The world has already seen this technique at work. Where can we find any better form for substituting reason for force than that found in courts of justice? The need, therefore, for an international court of justice is just as apparent as it ever was. That ideal is as good as it ever was. It probably has not functioned quite as well as it might have functioned. It probably has not been accepted quite as universally as it might have been accepted, but we must not lose sight of the fact that in our own Government the importance of the Supreme Court of the United States was not accepted at once.

Then we turn to the ideal of the League, the debating of questions, the settling of disputes by bringing them out before the people. The world has known that more than 60 nations have sat down around a discussion table, and that these nations will not lose that ideal in spite of present noneffectiveness of the League. If we are going to have peace in this world, what better ideal can we have for a lasting peace than the hope and aspiration of an international labor organization such as is represented by the International Labor Office, an international peace brought about by advancing social justice. Thus we have those ideals and while they are not 100 percent effective, they are habit-forming ideals,

and when once the nations of the world start to use them, they will become great and stabilizing influences.

But, you say, security through international action has failed. Just what has not failed? The only wholly successful technique that I know of is that of Ghandi, who by his utter weakness still makes Great Britain listen and act. Here there was never failure, and Ghandi is true, not only to his ideals, but also to the accomplishment of his purpose, and right now he is not the type of man to thrust a dagger into the back of his opponents. There is, then, some hope.

Armaments do not bring peace and security. One would imagine the United States might have an army of 2,000,000 people, and trust to that sort of thing. But Poland had an army of 2,000,000 people; that is, the nation that was Poland had. We cannot put our faith in arms and have it count. And what about the Russian hordes? They have men under arms. What if we see in Finland overpowering force defeated, it would not be the first time in this world that a small force, fighting for the right marshalled with right on their side, have overcome millions fighting for what they know not. If right should prevail, we would see that there was something to be extremely happy about in this world of ours.

But the best of all is that as far as this great Nation is concerned, war as an instrument of accomplishing national ends is considered utterly futile. Our new national attitude in this is a step forward. Then we realize that our own experiences have given us now what the world needs in the technique of governmental organization—the federal idea. We do not have to have a union of states to apply the federal idea. That is America's contribution to the art of government, to be sure, but all we need to do is what we have done in our own Union, temper in some way the absolute sovereignty of the entity of the larger states and emphasize the fact that those activities which are of universal concern shall be treated in a universal way, and those of local character be treated in a local way, and we have the governmental technique for a better world. This America can offer. And under that system it could be possible, and it should be possible, to receive into that community of nations states of every known ideological theory.

In the United States we are now being pressed to cut off relations with Russia. Why? Because we are indignant. But what shall we have accomplished by this? Nothing more than to cut off one more peaceful process which we must turn to again later. No; we do not want to go to the bottom again. Let us build on up. Let us not carry the banner for those who do not want to have anything to do with Hitler, Stalin, or Mussolini. Their own people and time will take care of them. Let us remember this: That one hundred and thirty-odd years ago, when a great dictator was running rampant over the world and needed gold to carry on aggression, that our own Thomas Jefferson entered into negotiations and paid him gold for Louisiana at a time when he knew this money would be used for more aggression. If we say that because we do not like our neighbor we shall not have anything to do with him, we do not do anything but make it harder to live with him. The ancients, when they taught us the truth of life, wrote of the utter futility of attempting to be social by unsocial means.

The trouble with this world is that it was a fine world as long as Adam was alone with the animals in the garden. But as soon as they turned Adam into a social being all the ills followed. And there is no greater lesson in the whole range of the Old Testament than the lesson of teaching the people to live together, though we have not succeeded fully yet. What good does it do not to talk to Hitler? What good does it do not to carry on relations with Russia? Russia will still be there; the German people will still be there. While we would consider that the world on which international law rests has been abused, and nations which theoretically were guaranteed an equality with other nations have been wiped out, one laughs exceedingly loud when, for example, a Hitler overruns and destroys an Austria, and overruns and destroys Czechoslovakia, and overruns and destroys Poland, and then protests on the grounds of the breaking of a rule of international law that Rumania is unneutral in allowing a change of the Polish Government to take place in Rumania while the Government is in retreat there. Even in a situation of that kind we see something that is hopeful, because international law still is used for an arguing point if nothing else. That means it is not dead.

So in the experience of the United States there has been enough of the political technique developed so that we can constructively offer something to the world. Now, if we can only find the other truths that are so essential, the economic one, for example. If we could recognize the economic facts of the world, much would be gained. A recognition of an actual world unity by a comparative study of national aims would follow. I do not despair. You do not despair. Dr. Rowell mentioned Germany in the good old days. I was there. This fine old Germany we dream about was not a Germany of freedom of thought and action, and it is the same with a number of things that seemed so good because they are in the past. I must say, bad and discouraging and hopeless as the world seems, in our own country, for example, more happiness is actually being enjoyed by more people in the United States today than was ever the case before.

And let me leave you with this one thought. We as members of a democracy do not like the authoritative state, realizing that it means the curbing of a man's soul, mind, property, and all that he has which makes him a man in the sense of America's freedom. Nevertheless, there is no dictator today who does not rule as a result of taking care of the common people. I do not believe that

anyone ever used the expression "Let them eat cake," but one thing that no dictator accepts today is the possibility of escaping the responsibility of feeding his people.

## Labor Problems in Oregon

### EXTENSION OF REMARKS

OF

HON. RUFUS C. HOLMAN

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, January 11, 1940

ADDRESS BY RALPH E. MOODY

Mr. HOLMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Hon. Ralph E. Moody before the Members' Forum of the Portland Chamber of Commerce on January 8, 1940, on the subject How Labor Can Cooperate in Developing Oregon.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mortal man is influenced by two inconsistent emotions—spiritual aspiration and material actuality. Neither can be considered or treated from the standpoint of the other. It is, however, that desire to mix them which affords the opportunity for the demagogue and gives him his following. Theorists who base their doctrine upon any such mixture are false prophets. Permanent or perpetual material utopia always has been, ever will be, a mere fiction, never a fact.

Our forefathers, who were Christian in profession and belief, and sometimes in practice, gave us a Constitution solely in the domain of realism, which wisely and fully provided for individual liberty and freedom of speech and action, and guaranteed protection in the possession of legally acquired property, thus stimulating and encouraging industry and thrift.

The Constitution did more—it provided for a government of laws, and not of men. The forefathers in making and ordaining this fundamental law created and established a democratic form of government, relying upon the patriotism of the people in nurturing and protecting such wonderful heritage. President Abraham Lincoln had the right conception in realizing these truths when he said that his "legs were long enough to reach the ground." Let us, therefore, not permit our feet to be lifted from the ground when considering the enactment of laws or when sitting in judgment on our chosen officials in their administration of the laws.

There is no effect without cause, and the relationship between labor and capital in Oregon has been unwholesome and certainly retarded the development of this great Commonwealth.

You are all familiar with the troubles which existed a few years ago when strong-armed squads, presumably representing labor, but in fact representing only racketeering leaders and corrupt capital which used labor to stamp out competition, ran riot in this State. To you I need not repeat the details of the labor war in Oregon. The indifference of the law-enforcement officers to act in some of the localities of the State, and the inability of those officers who were anxious and willing to act to properly and effectively cope with the then existing conditions, was made apparent to General Martin, who was then our Governor. He saw a situation which was throwing thousands of workers out of employment, stagnating and destroying business, causing irreparable loss and great inconvenience to the general public. He instantly and patriotically met the challenge to the State's welfare. Taking control, he directed the State police to aid and assist the local officers, and he appointed a coordinator in order to secure cooperation with all the law-enforcement agencies of the State. You've been told and retold the story of the prosecutions which landed leaders in jail and the penitentiary, which gave back to the worker the control of his own labor organizations, if he is not too indifferent and unpatriotic to accept the responsibility which has been placed directly on him. Right here I want to say that when the history of the labor troubles of this decade is written, General Martin and the State of Oregon will be shown to have led the way out of the morass of discord and loss which labor wars breed.

You have asked me how can Oregon labor contribute to the development of this Commonwealth.

Not alone, God knows, can labor accomplish peace. Let me use the trite old comparison which says that labor and capital is a team which must pull together. That is true. But the general public, every man and woman who enjoys the right of franchise, must sit in the driver's seat and direct that team in the way of progress.

Lead by demagogues and self-seekers who have been psychology-wise but lacking in the fundamentals of patriotism, unsound theorists, who have woven fancy and fact into alluring promises,

labor, capital, and the general public have lost sight of the American ideal of common welfare.

Indifferent, selfish, greedy, capital has—and perhaps here lay the fundamental trouble—taken advantage of the system of government which was to guarantee us our personal and property rights, to force enactment of unwise legislation which gave capital an unfair advantage over the worker. That was wrong.

With the same indifference to the welfare of this country, with the same selfish purpose and greedy emotion, labor has permitted the control of labor organizations to fall into the hands of unscrupulous racketeers. Labor has been exploited, first in some instances by capital, though the number of unfair employers have always been a small percentage. Then came the labor lord, the racketeer who saw in organized labor, blocks of votes which would yield political power and prestige, indulging in the promise of increased pay rolls to come to those workers.

Under the cloak of so-called liberalism, we saw developing in this country, class consciousness. Russia saw an opening. Agitators, who aggravated every trifling labor dispute, directed from Moscow, worked their way into labor organizations. Troubles developed. Work stopped. Pay rolls stopped. Mills and factories closed. In some instances, and here I say is one of the greatest sins, corrupt businessmen and industrialists dealt with unscrupulous labor lords, to force out of business, competition. Workers suffered. Business suffered, and labor lords waxed rich. If the rank and file of labor could speak, strikes would be few and most generally justified.

Labor in its selfishness and unwillingness to look upon itself as an integral part of the country as a whole, permitted itself to be exploited as a political force. The demagogue flourished. Men have been elected to our State legislatures and to Congress solely because they represented labor. How fundamentally wrong this is.

Until our law-making bodies are cleansed of this class-conscious group and filled with honest straight-thinking Americans whose recognized patriotic duty is to legislate for the good of all the people, bad conditions will exist.

Good government depends upon the willingness of the men and women who should be the government, to vote honestly for what they believe to be the best interest of the country. Class legislation fought over in legislative halls engenders bitterness, and drives further the wedge between capital and labor.

The self-seeker and the demagogue, who for the purpose of getting votes and retaining himself in office and who looks at every piece of legislation in the light of votes, is a traitor to the principles of American government and a traitor to the misguided majority who listened to his crooning promises and placed him in office.

Every time a so-called piece of labor legislation is approved which will further hamstringing business the so-called friends of labor are simply throwing more men and women out of work and adding to the already-overburdened relief load.

Every time a committee presumably representing labor makes demands upon an employer which weakens the financial structure of business the destruction of more jobs, with its resultant suffering and despair and destruction of our American system, is effected.

Russia is aware of this and that is the reason we find men either openly or secretly allied with bolshevism, so frequently in positions of power in labor organizations.

It is not only a sad commentary but a baneful influence to the welfare of our Nation that the present head of the Labor Department of the Federal Government is an alien in thought and action to the fundamental ideals of our Government. Labor certainly is not contributing to the development of business or to our country's welfare in insisting upon or approving the action of the Secretary of Labor in referring to a pink intellectual the fact-finding power of determining whether Harry Bridges is a Communist or not, or an otherwise undesirable alien. The sensible and patriotic American will not be lulled to sleep on this important question by the referee's 75,000 words of anesthetic.

Patriotic Americans should be aware of fellow travelers, parlor pinks, editorial and magazine writers who use every means available to spread propaganda of ideologies basically opposed to the American system of free enterprise. They are either dreamers or self-seekers, who assiduously tear away at the foundations of this Government. While on this subject, another group which is an insult to the intelligence of this country is our news commentators who clutter up the air, blasting forth on our radios to "interpret" the news of the day. They take it for granted the American mentality is so debased and degraded that from straightforward news stories people of this country are unable to form their own opinions.

The subsidized columnist and the crusading commentators are becoming the most effective means of spreading radical propaganda in this country today.

Labor should not be fooled or illusioned by any theoretical and professional uplift group, who see no good in the American system of government, but have a utopian dream which includes the destruction of capital, free enterprise, and freedom of workers, subordinating all to the spiritual dream of an ethereal society. Practical rules cannot be successfully combined with a dreamer's brain child.

Labor can aid in the development of Oregon. There must be capital to give labor that opportunity. Capital must be made to feel safe from persecution by labor groups and biased administrative officers. No man with a few thousand dollars and an idea and a good market in view is going to risk that money in development if he cannot count on the cooperation of labor. Capital has

a right to a fair return on its investment. Investment at best involves risk—market change; the future is always uncertain. But, if added to the natural chances, he also faces constant labor war; if he cannot retain friendly relationship with the men and women who must be basically important in that development, then he is not going to take a chance, and business is lost, pay rolls lost, and jobs are lacking—thus no development. When the rank and file of labor cleanses itself of racketeering leadership and is willing to cooperate with the employer in retaining business on a healthy basis, labor will then be giving a great contribution to the development of Oregon.

Labor leaders decry technology replacing men with machines. They should remember that machines don't make unjust demands; and if labor makes hand work unprofitable, then machines will replace men. Capital, on the other hand, should take into consideration that in replacing men with machines, pay roll is being reduced, and so is the buying power of the country being reduced, and so are markets being eliminated. There must be friendship and the understanding of a common cause between labor and capital, if the general public is to be protected from this evil.

Last fall, when the farmers and fruit growers of Oregon initiated the law to protect the employee, the employer, and the general public in cases of labor controversy, I spoke in its behalf. I supported this measure because I believed and now believe it to be fair and just. I have always believed that if the truth of the situation could be gotten to the voters, the result would be an approval of the truth, for I have the utmost confidence in the honesty, integrity, and patriotism of the American people, and I know that the vast majority want to do right when they know what that right thing is to do.

This statute does not in any respect hamstring the rank and file of labor; it protects them in all their fundamental rights, and it protects labor from racketeering, if the workers are willing to exercise the rights it guarantees to them. The law gives to employers no new rights, but protects them in their fundamental rights, and, most important, it protects the public from uncontrolled labor warfare, such as has caused the great loss and subsequent retarding of the development of Oregon.

The morning after the election, when I realized the rank and file of labor, the workers who are the backbone of the Commonwealth, had accepted this act which freed them from racketeers, I remarked that it would be my purpose to fight against any employer taking any improper or unfair advantage of any of the provisions of this act, and there is no evidence that he has, or has attempted to do so. I believe that the rights of the workers are just as sacred as the rights of capital, and should be protected with the same vigor.

Our forefathers bequeathed us a heritage of freedom—a freedom based on a government of laws, not of man. Every time we sit idly by and see our freedom lost through compromise, and see the administration of government placed in bureaus rather than laws, we are destroying our heritage—throwing it away for the temporary gain sometimes enjoyed.

Elections are events of every 24 months. Yet we find that 18 months out of the 24 the average American citizen drifts. He may crab about government, but he takes no more than 6 months, and generally about 3 months, of his time to be actively interested in correcting evils of government.

Twelve months of every year should be devoted to interest in government. Where an evil exists, there should be a concentrated program of education, not propaganda, to tell the general public the truth of the situation. The leaders of every community should be glad to accept this task. Taxation and regulatory measures are not matters for hasty action. It should mean study, education, truth, facts. It is unfortunately true that in recent years the "crooner," the "left-wing windjammer," the Donald Ducks, have had a grand time entertaining the American public. But I still believe in the fundamental patriotism and honesty of the majority of the voters of this country, and I believe that common sense, once we find leaders with courage to use common sense, will have the greatest appeal to our countrymen the Nation over.

Let's stop political burlesqueing. Let's stop putting on a good show for 3 months out of every 2 years as we battle for some law which should have been having a chance to be before the voters for a year for their study and judgment—yes, if possible, for 2 years.

Do not think because you vote at an election that you are a good citizen. Vote intelligently, and, as leaders of your community, make an endeavor to see that others have the facts before them so that they, too, may pass intelligent judgment upon the issues which come to them in a lawmaking and office-selecting capacity.

The pioneer statesman saw public service as an obligation of a patriot, not as a meal ticket. Perpetuating one's self in office is not public service in its highest sense. The unwillingness of sound, right-thinking practical businessmen to enter politics and sacrifice, if necessary, their personal affairs while they serve their Government has become a rare practice. The field has been left open for ambitious, self-seeking demagogues, who have landed this country in a dangerous, chaotic condition, which only practical, sound business principles applied to government can restore and correct.

Here, again, labor can help Oregon. As long as the worker listens to the man who seeks office merely for what he can do for labor, regardless of the welfare of the general public, he is traitorously using his right of franchise to help put these self-seekers into

office. It is time we had some honest, common-sense thinking on the part of workers and capital alike, and honest leadership which thinks of the welfare of the State as a whole rather than vocal and selfish minorities. Labor can be a big help by throwing off the yoke of political leadership, in the way they did in the last election, when their leaders so bitterly fought the initiative regulatory law before referred to.

Oregon—and American democracy—is safe so long as we safeguard the fundamental principles of government—strictly material principles, but based on the golden rule of conduct. But we must be ever alert—we have sat silently by while our high schools, universities, and colleges have been permeated with left-wing leaders who have insidiously instilled into the plastic and idealist youth—our leaders of the future—false ideologies, false principles, tearing away at the foundation of democracy like so many termites. We must remember that in the youth of today lies the welfare of our Nation tomorrow, and the glamorous ideologies of these traitorous intellectuals must be purged by the application, through speech and action, of old-fashioned American patriotism.

It is a favorite trick of these so-called intellectuals to preach class distinction. They pretend to be champions of labor—but in reality they are the destroyers who tear down a system which gives the worker his individual freedom and his chance to rise in this land of equal opportunity. The lachrymose intellectual may be a soul-stirring leader, but when the light of reason is turned on his antics, he becomes a hypocritical demagogue, frequently motivated by his adherence to some other government rather than our own.

Labor can help by disowning these radicals in education, these men who are undermining the foundation of private enterprise, and so denying to workers the right to jobs and freedom. A regimented labor is not a free labor, and if workers sacrifice their freedom in pique and selfishness, they will face regimentation with the industrialists of the nation.

When labor recognizes the right of capital to a fair return on its investment, when capital recognizes the right of labor to a fair share of profits, then labor and capital will have made a great stride in the path of Oregon development.

When the workers govern their own unions and accept that responsibility of self-government, rather than exploitation by racketeers, then one of the greatest evils will have been eliminated.

When wage demands are kept within the ability of industry to meet and are not destructive of business then enterprise can thrive and jobs will be open to workers.

When executive, judicial, legislative, and administrative offices are filled with patriotic Americans rather than class representatives, then general welfare will be attained and minority interests better protected, through the enactment of fairer laws, construed according to the words of the Constitution, and not by judicial amendments thereof, and such laws will be executed and administered reasonably, fairly, and impartially.

Labor must cast off the yoke of political serfdom invoked and imposed by its selfish leaders, and think and vote independently. Capital must be unselfish and keep its partisans out of office. When all these matters are given a full-time consideration, rather than a 3-month period of election hysteria, a right kind of government will be maintained.

The demagogue, the radical, the spellbinder, must not dominate politics. The vote seeker, who promises everything for the sake of a maintenance job or political power, must be eliminated.

In Oregon the direct primary placed the selection of candidates in the choice of the people. They may have been swayed by too many emotions, greed, self-pity, self-interest, hatred, to be wise in their judgment. A great power has been given to them and they must learn to use this power judiciously and well.

Oregon cannot progress without labor. Labor cannot progress without a bigger and better Oregon. Common sense, cooperation, common interest are the fundamental need.

Capital and labor must not forget that while they must pull together, the general welfare is the primary aim of the American system, and if there is continuous discord the same regulatory treatment which has been accorded business in recent years will be applied to labor. Neither business nor the workers can run wild with complete disregard of the general welfare.

The message I am endeavoring to bring to you today is that the matter of government is an individual matter—practical, not theoretical.

Labor and capital and the general public have a sacred trust. That trust is the preservation of good government ideals of democracy and free enterprise. Do not think about government only during the time of an election period. It is a full-time job to be a good American. Do not act selfishly. Think and consider first, What is good for my country? Then all of the people will be better served by the improvement of the general welfare.

Think for yourself, let not spellbinders, suave propagandists, soap-box orators, and egotistic commentators, and all the rest of the stratospheric brigade who are gnawing at the foundations of our Government, befog the real issue—Americanism.

This is your trust, this is your means of preservation of the liberties so dear to you. Arise to the situation before we are lost in the bedlam of discord which replaces freedom with the slavery of regimentation and dictatorship.

Evansville, Ind.

## EXTENSION OF REMARKS

OF

HON. SHERMAN MINTON

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Thursday, January 11, 1940

ARTICLE BY RAYMOND CLAPPER

Mr. MINTON. Mr. President, it is very gratifying to us in Indiana, and especially in southern Indiana, to have called to the attention of the Nation by one of its most astute and ablest writers, Mr. Raymond Clapper, the record that Evansville, Ind., has made during the depression years and, from the business standpoint, the healthy condition in which that city finds itself at this time. As Mr. Clapper points out, this record is a tribute to the businessmen and municipal leaders of that community. This article indicates what has been done, what is being done, and what can be done in the future where there is intelligent, forward-looking leadership. I ask unanimous consent that there may be inserted as part of my remarks the article by Mr. Clapper, which appeared in the Washington Daily News of Monday, January 8, 1940.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Daily News of January 8, 1940]

### PROSPERITY PORTRAIT

(By Raymond Clapper)

EVANSVILLE, IND., January 8.—They're not doing much worrying here. The principal anxiety of the moment is whether Evansville lands that new factory. If it does, then two medium-sized apartment houses will be built.

If Evansville doesn't land the new factory, well, it's no blow—just a little velvet that didn't come along. The bankers have more deposits and are making more loans than in 1929. One of them said he didn't know anybody in the town who wasn't better off than he was 10 years ago. There has been only one strike, and that was abortive; the employers have kept the outside unions down by fair wage policies which have kept the employees satisfied.

Thomas E. Dewey says there is defeatism in the land. These businessmen in Evansville pride themselves upon being outdone by none in their hatred of President Roosevelt. That is part of the ritual. But they are making money and planning to make more of it—and they have done it through remarkable personal enterprise which has built several new businesses here since 1929. These new businesses—refrigerators and allied products—were created by old-fashioned individual initiative, and are now the backbone of the town's healthy economy. Mr. Dewey doesn't need to worry about defeatism in Evansville.

Some of these smaller American cities are worth a look. The American small town, the small city of 100,000 or less, the rural townships, are going to be important in the next election and in determining national direction. The small-town voter and the rural voter swung back to the normal Republican allegiance in the 1938 elections, and the Democrats dropped out of the elective jobs as if a scythe had whacked them down.

Evansville happens to be a Democratic town and is likely to stay so, even though the State is on the dope sheets to go Republican next fall. Evansville's mayor, William Dress, may be the Democratic candidate for Governor. The McNutt organization has offered it, and thus persuaded the mayor to head up the McNutt Presidential campaign work in this congressional district.

But Evansville is of more interest economically than politically. It is this kind of community, largely native-born, small enough to be a neighborhood, which is the balance wheel, the backbone, the stabilizer, the core, or whatever you want to call it, of American life.

Look at Evansville in October 1929 and again in October 1939. Ten years ago, at the peak of the boom, there were 21,256 water meters in Evansville. Ten years later there were 24,305—an increase of almost 15 percent during the depression. Some 3,000 families began using running water.

Gas meters increased in these 10 years from 16,153 to 23,549. Electric meters increased from 27,058 to 40,315. These increases of some 40 percent in gas and electric meters mean that for several thousand families the standard of living went up during the depression—population growth does not account for any considerable portion of the increase.

Telephones in use have grown in the 10 years from 18,973 to 22,700. That's a growth through the depression representing partly

increased business use and partly increased residential use—again indicating quite conclusively a considerable increase in the standards of living of some families here. Bank deposits in October 1929 were \$53,800,000; 10 years later they were \$58,900,000. Building permits are larger in number, though smaller in value.

There's a striking personal-enterprise story behind these figures. Three independent enterprises, built up during the depression by three different go-getting young businessmen, competing to a large extent, have given this town life and steady employment and reasonable prosperity at a time when many large cities were wracked with depression problems. You haven't heard anything about Evansville since the flood a couple of years ago. The reason is that Evansville has been hard at work attending to business.

## Inaugural Meeting of the Inter-American Financial and Economic Advisory Committee

### EXTENSION OF REMARKS

OF

HON. SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 11, 1940

ADDRESS BY HON. SUMNER WELLES

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herein a most interesting and informative address by the Honorable Sumner Welles, Under Secretary of State, at the inaugural meeting of the Inter-American Financial and Economic Advisory Committee at the Pan American Union, city of Washington, November 15, 1939.

The address is as follows:

I regard it as a very great personal privilege to have the honor in the name of the Government of the United States to offer a most cordial and friendly welcome to the representatives of the American republics upon the Inter-American Financial and Economic Advisory Committee.

We enter upon the task entrusted to us under highly favorable auspices. Trust, understanding, and an identity of purpose unite the American Republics. The entire world knows that they are as one in their determination to safeguard their security and to preserve the peace of the Western Hemisphere. They are happily free from those rivalries and antagonisms which would put cooperative commercial and economic action in their common interest beyond the bounds of possibility. Such a condition in the relations between countries is exceptional, and we must make exceptional use of these fortunate circumstances.

This committee, appointed to deal with the economic and monetary questions confronting the American republics, was created by resolution of the consultative meeting of the ministers for foreign affairs of the American republics, held in Panama a few short weeks ago. The immediate cause was the gravity of the situation created by the outbreak of war in Europe. By the terms of the resolution which created it, the committee is called upon to study and to recommend solutions of general problems, many of which urgently require determination. But the tasks of the committee, as I see them, are composed of two somewhat different kinds, corresponding to their two different lines of origin.

The European war in many directions and in many countries has disturbed economic activities and economic balance. Some of the governments represented upon the committee, faced abruptly with difficulties and dislocations, will wish to bring these immediate problems before this body with a view to securing counsel and assistance. I feel sure we will all agree that the committee will accord to each such request prompt, helpful, and adequate consideration.

Second, the committee is called upon to make a continuous effort gradually to create conditions, or perhaps even institutions, which will enlarge and stabilize economic and financial dealings between the American peoples. Here we shall have to consider, through such subcommittees and such continued technical help as may be necessary, what can be done to increase healthy trade between us; to improve the monetary and financial mechanism by which trade and other commercial transactions are facilitated; to stimulate the employment of capital in such productive directions as may be found sound; to improve, not only immediately but permanently, the means of transport and communication between us; and to make more fully available among all of us that kind of technical ability and experience which has now become so important.

These make a vast array of potentialities. The effort to progress toward their achievement should be no less than our fullest abilities and our most earnest endeavor.

Commerce between the American republics has already reached considerable proportions. We supply, one to the other, much of what we consume, and we thereby give profitable employment to our nationals. This field of commercial exchange can, I am confident, be greatly enlarged. Trade and tariff obstacles between some of us are still in certain directions excessive and can be modified with benefit to all our national economies. The trade agreements which have been negotiated between some of our countries, or which are now in process of negotiation, constitute a long and a highly desirable step in this direction. Improvement of the standard of living which we are all seeking in our several countries could further permanently augment our commerce. New fields of complementary production within our boundaries await sufficiently capable hands and organized effort to provide new opportunities for profitable trade between us. This committee can play an important role by discriminating study and encouragement of such governmental actions as may be necessary and desirable. Achievement is possible without creating any form of discrimination against the legitimate commercial interests of nations outside of this hemisphere.

In the sphere of our monetary and banking relations I believe that our studies may show that we have similar opportunities. Monetary and credit arrangements constitute, of course, only an intermediary assistance toward more basic economic activity. Therefore, anything which we may attempt in this field must necessarily be in accord with the underlying economic facts.

With regard to questions involving temporary financial assistance to tide over immediate emergencies, or with regard to the movement or the investment of capital also, I feel that this committee can render assistance and guidance and possibly even, in some circumstances, may be enabled to play a more active part. There exists in this hemisphere a large potential amount of capital available for that kind of employment which offers a sufficiently assured reward. Undeveloped natural resources in many of our countries offer possible fields for such investment. There are also many branches of industrial production which, competently developed, would lead to the supply of goods on better terms than are now available and thereby give enhanced employment.

In summary it may be said that both within each of our republics as between them there is much opportunity to achieve vast results of general benefit provided proper human and economic arrangements and conditions can be established and maintained. That is a problem in which we are all of us vitally concerned, and I think we will all recognize that our approach to the problems which we are called upon to consider is rendered far easier by reason of the fact that there is no longer the thought in any of our minds that the citizens of any one American republic can claim to enjoy a privileged status in any other republic. The citizen of one American nation who undertakes to do business in another American country, or who invests his money in another American republic, recognizes today that his business and his investment are subject to the laws of that country. He has solely the right to expect that he will receive justice under those laws, and in accordance with the generally accepted principles of international law.

All of us also recognize that if confidence on the part of any of our nationals in the justice of the treatment which they will receive, or which their legitimate investments will receive, at the hands of the people or the authorities of a neighbor country is shaken credit is correspondingly undermined. As has been truly said, confidence is the mother of credit. Without such reciprocal confidence on the part of all of our peoples, that increase of inter-American trade and investment on a sound and mutually beneficial basis, which we all desire and from which we would all profit, will necessarily remain an unattained goal.

I have attempted in these brief words to review some of the immediate and urgent objectives which lie before the members of this committee, as well as some of the long-range problems with which I believe the committee will feel called upon to deal. I am confident that as our sessions continue many of the members of the committee will bring before you additional and valuable suggestions. Of two things I can speak with intimate conviction: First, of my confidence that if the members of this committee are afforded the opportunity by the governments they represent of solving the practical problems presented in a forthright and practical manner, the highest interests of the peoples of all of the Americas will be greatly advanced; and the second, that in such an endeavor the members of the committee can count upon the wholehearted cooperation of every branch of the Government of the United States.

It is appropriate to note, in closing, that the group here assembled is attempting a task new in the history of world affairs. This is an international committee to forward the cause of cooperative economic life in our hemisphere. It meets, not in a spirit of competition but in the desire to work out methods of common action by which 21 American peoples recognize the just right of all of the member nations to live their normal lives, and to have made available to them the means by which they may improve the condition of their people. This has come about, not through empire or conquest but through common sense and reason. If we succeed, as I feel sure we will, our success will stand as a great milestone on the road to a peaceful, a happy, and a prosperous New World.

Address at Breakfast of B'nai B'rith in Honor of  
Hon. Irving Lehman

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 11, 1940

ADDRESSES BY HENRY MONSKY, PRESIDENT OF B'NAI B'RITH,  
AND HON. IRVING LEHMAN

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Henry Monsky, president of B'nai B'rith, in honor of Hon. Irving Lehman, Chief Justice of the New York State Court of Appeals, and his reply thereto:

ADDRESS BY HENRY MONSKY, PRESIDENT OF B'NAI B'RITH

It is, indeed, a privilege to participate in this program. District Grand Lodge No. 1, the oldest of all B'nai B'rith district grand lodges, has chosen to do honor unto itself by the presentation of its ninety-sixth anniversary award for "honor, duty, and achievement" to the Honorable Irving Lehman, Chief Justice of the New York State Court of Appeals, a distinguished American and an outstanding Jew.

B'nai B'rith was founded 96 years ago in the city of New York. Its history is inseparably interwoven with the history of the Nation and with the history of the people of Israel throughout the past century. It has influenced Jewish life beyond measure. It has contributed to the cultural development of our people. It has preserved and enhanced the ability of the Jew to contribute much and effectively to the life and the progress of the larger community of which he is a part.

"B'nai B'rith," its preamble declares, "has taken upon itself the mission of uniting Israelites in the promotion of their highest interests and those of humanity." This declaration of purpose has been the guiding principle of its course and the determining factor of its destiny. B'nai B'rith has founded and now supports philanthropic and benevolent institutions. It maintains cultural and religious centers for Jewish youth at colleges and universities. It sponsors a cultural program through its junior organization, the Aleph Zadik Aleph. It has relentlessly opposed all foreign "isms." It has, through its antidefamation league and other related activities, carried on a program calculated to promote tolerance and good will among men of all creeds and nationalities. Its emergency relief fund has given aid and comfort to victims of catastrophe and calamity, man-made or natural, in every section of the world. Its broad program has ministered perhaps more effectively than any other agency in Jewish life to the diversified problems which vitally affect the Jews of the world.

The aims and purposes of B'nai B'rith, and its record resplendent with achievement, suggest the reason for the selection of the Honorable Irving Lehman as the recipient of this ninety-sixth anniversary award, an award for "honor, duty, and achievement."

Judge Lehman is the symbol of the philosophy of service and sacrifice which has characterized the activities of the B'nai B'rith. His life and career have been consecrated to the promotion of social progress and human welfare. Judge Lehman has made an immeasurable contribution to the progress and welfare of his native State. Notwithstanding extraordinary private and public responsibilities, the latter incident to one of the highest judicial positions in the State of New York, Judge Lehman has found time and energy for many and varied philanthropic, benevolent, and educational activities, calculated to enhance the status of his fellowmen.

May I recount briefly only a few of the many of these activities. He is president of the Jewish Welfare Board; vice president and member of the executive committee of the American Jewish Committee, trustee of the graduate school for Jewish Social Work, member of the board of governors of the American Friends of the Hebrew University, and vice president of the Good Will Union.

I have selected these from a large number of activities as sufficient to demonstrate his breadth of vision, his capacity for service, and his genius for achievement.

Let us discuss for a few moments the program of the B'nai B'rith, in the light of the pattern of the life of Judge Lehman.

He is vice president of the Good Will Union. He is affiliated with other organizations whose purpose it is to promote better understanding between men of all creeds and all nationalities. This is especially important in our day and generation. The world is beset with difficulties. The chaos and devastation, the human misery and horror, now tragically prevalent in Europe, are the results of philosophies wholly incompatible with our concept of the laws of humanity. The ruthless persecution of minorities, the invasion of

man's freedom of conscience, that freedom which is the birthright of all free men, the deprivation of fundamental human rights, the oppression, the destruction, the annihilation of innocent victims because of considerations of race and religion—these are incomprehensible to every liberty-loving American worthy of the name. Yet such conditions unfortunately do exist even in this enlightened day and age. Catholic, Protestant, and Jew has each in his turn suffered from the lash of the oppressors. They have suffered in varying degrees, to be sure, but this is unimportant. The significant thing is that all religion and all religious groups, according to the menacing philosophy of those who are presently making an assault upon our civilization, must be uprooted. Religion as we know it, and the spiritual qualities and values it represents, cannot co-exist with a philosophy of force and hate; cannot exist with a program of power politics and unscrupulous aggression.

If civilization is to be preserved, it is clear that all which religion symbolizes must be protected. Our Nation and the principles upon which it is founded, our ideals and institutions must be protected against these sinister forces—against these alien philosophies.

We are a nation of many different races and religious groups, each first and foremost completely loyal to the Government whose blessed protection and freedom we enjoy. Any propaganda, whether racketeer sponsored or stimulated in the attempt to spread foreign ideologies, which endeavors to drive a wedge of discord between our citizens, to set class against class, group against group, religion against religion, threatens our unity and our vitality. Such propaganda is a menace to the peace and the security of this Nation. It is the business of democracy to build up an immunity against these forces. Passion and hate, it was once well said, "are like pestilence and epidemic; they know no bounds, geographical or moral; they move as upon the winds, from land to land, and from section to section." They must be quarantined by means of the moral indignation of an ethical world, imbued with a spirit of justice.

Whenever rights, privileges, and immunities of citizens are considered in respect to racial, national, or religious affiliation we do violence to the fundamental principles of the whole concept of democracy. When this is done justice and equality are devastated; tolerance and good will become lost virtues; injustice, hatred, and persecution must ultimately follow as a consequence; civilization will then disintegrate. When the rule of force and paganism becomes the established and entrenched order, devastation of human rights, confiscation of property, and ultimate annihilation of the people living under such regime, physical and spiritual, may be expected. To defend against such eventuality, to build a bulwark that shall resist any such contagion is the task which the antidefamation league of the B'nai B'rith and our department for Americanism have undertaken in your behalf, and this task has been and is being, in my judgment, magnificently done.

When we contemplate the tragedy of other lands, then do we realize that democracy is the final protective force for civilization. An important characteristic of democracy, a characteristic unique with and peculiar to democracy is its courageous and careful regard for human personality and for the rights of free men. This is the spirit of America.

The preservation of that spirit is imperative. One way to preserve it and to keep it unsullied is to inculcate those ideals which shall immunize our people against any and every such attack. The rantings and the ravings of the demagogues, the racketeers, the hate purveyors, and bigots who threaten to destroy the very liberty, the very freedom, which they enjoy will fall on deaf ears if the American spirit prevails. I have faith in the stability of the people of America. I have faith in their loyalty to and their zeal for the American way of life. They will not be deceived. They will not be misled by the Pied Pipers of undemocratic doctrines.

Judge Lehman has placed special emphasis upon those activities which, on the basis of a long-term program, build for positive values in Jewish life. The Jewish Welfare Board, whose purpose is to promote educational and cultural activities through the medium of community centers, Young Men's Hebrew Associations, and Young Women's Hebrew Associations, and similar organizations, is making a very real contribution to the vitality of the American Jewish community. His interest in such organizations as the Teachers Institute, the American Friends of the Hebrew University, and like agencies is but another evidence of his perspective and his appreciation of the importance of positive values in the life of a people. The B'nai B'rith program, true to the same philosophy, is not one merely of defense and relief. It is constructive and positive. It builds Jewish loyalties; it preserves Jewish values; it is a program which qualifies Jewish leadership.

Through our B'nai B'rith Hillel Foundations, now established in and serving 30 universities and colleges in America, our youth are given the opportunity to become familiar with the history, the traditions, and the faith of their ancestors. They drink deeply from the fountain of inspiration represented by that history, that faith, and those traditions. They must learn not to interpret or look upon Judaism as primarily or simply philanthropy or social service or as chauvinism. They must see it as a prophetic heritage, as a religious intellectual tradition. They must become conscious of the richness and beauty of their heritage. The ideals and moral precepts which are the fundamentals of Judaism have been and may well continue to be our great contribution as Jews to the spiritual uplift of humanity.

Our glorious Republic, we remember, found inspiration in the quotation from Leviticus of the Old Testament, inscribed on the Liberty Bell, "Proclaim liberty throughout the land and to all the inhabitants thereof." The distinguished non-Jewish historian, William Edward Lecky, says, "Hebraic mortar cemented the foundations of American democracy." Not for what we receive, but for what we may be credited by way of contribution as a result of our history and our experience, may we be grateful.

It is my judgment, therefore, that the Jew who is interested in the problems of his people and guided by the teachings of his religion is more likely to make a greater contribution to the society in which he lives than the Jew who has drifted away from those teachings and who has become indifferent to those problems.

The rainbow, with its many and varied colors, presents a spectacle lovely to behold; the symphony, with its many different instruments, produces soul-stirring music; the literary classics of all ages find their great strength and their enduring quality in the broad and universal experiences of men. Our Nation is the composite of all religions, all races, and all groups and nationalities that constitute its great citizenship, and it draws upon all that is rich and beautiful in the literature, the life, the history, and the culture of each of these groups. America has thus maintained and will ever continue to maintain its supremacy among the nations of the earth as the exponent and symbol of justice and equality, the arch enemy of injustice, intolerance, and bigotry.

The Jewish college youth of today will be among the leaders of our communities tomorrow. If they are possessed of those spiritual qualities, so essential to balanced leadership in a chaotic world, they will be better equipped to assume the responsibilities of that leadership. The possession of those qualities will in part have been our contribution to the welfare of the Nation.

Judge Lehman, we have reason to believe that a leadership thus endowed will adequately cope with the realities of Jewish life. We recognize the task of building defenses against assaults, but more important, I cannot emphasize too strongly, is the building of those qualities of character symbolized in this award. It is because of your long and distinguished judicial career; because of the incalculable contribution that you have made to the welfare of your fellowmen, because you have served well and faithfully your country, your State, your community, and your people in the many ways that have already been mentioned; it is for these reasons, sir, and because you have so splendidly exemplified the principle of service, basic in the philosophy of B'nai B'rith, that you have been chosen to receive this ninety-sixth anniversary award for "honor, duty, and achievement." It is my great privilege, as President of the supreme lodge of the B'nai B'rith to present to you, Judge Irving Lehman, this plaque, made of everlasting and indestructible material, as permanent and enduring evidence of your permanent contribution to the welfare of humanity.

ADDRESS BY HON. IRVING LEHMAN

With feelings of mingled pride and humility I have listened to your words, and now I gladly receive the award which you bestow upon me. The Order of B'nai B'rith was formed almost a hundred years ago to preserve and to strengthen in this country ideals and traditions which Jews have cherished for thousands of years. To receive from you an award for duty and honor and achievement, even though I fear it is undeserved, is an honor which I value highly. Though I know that friendship has made you kindly judges and though I must register my dissent from much that you have said about me, I cannot but feel proud and happy because you have said it. I feel proud because you have told me this morning that I have achieved the things which as a youth I hoped I might achieve; because you have told me that I am the kind of man I hoped in my youth I might become. I feel humble because I know in my heart how far I have fallen short of what I should like to be and what you think I am, but I am happy because your friendship enables you with sincerity to say of me much that I have not deserved.

Thousands of years ago it was written that on the slopes of Mount Sinai the Lord entered into a covenant with our fathers—not only with those that were there that day but with all who might come thereafter. In their sacred books Jews read the commands, "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy might"; and "Thou shalt love thy neighbor as thyself." "The stranger that sojourneth with you shall be unto you as one born among you, and thou shalt love him as thyself." The commandments, "Thou shalt love the Lord thy God" and "Thou shalt love thy neighbor as thyself," heard by the Jews on Mount Sinai, were repeated for all the world to hear by Him who is worshipped by all Christendom. The founders of the Republic heard these commands and made them the cornerstone of the Nation they were building. They are embodied in the words of the Declaration of Independence: "We hold these truths to be self-evident: that all men are created equal; that they are endowed by their Creator with certain unalienable rights; that among these are life, liberty, and the pursuit of happiness." Upon the bell which rang out to this country the glad tidings of liberty they placed the words of Leviticus: "Proclaim liberty throughout the land unto all the inhabitants thereof."

In the free life of America it was inevitable that the synagogue and the minute and literal observance of the commands of the Jewish law would no longer dominate men's lives; and, too, men were beginning to doubt the literal truth of a direct Divine revelation. Jews might doubt as a historic fact that the Lord had, through Moses, spoken to their fathers on Mount Sinai, or that

their fathers had in truth entered into a covenant with the Lord and had become unto Him a nation of priests and holy people. They could not doubt the historic fact that it was belief in that tradition which had guided and sustained their fathers in good days and in evil days. They could not doubt that rather than abandon the covenant which they had been told their fathers made for them, Jews for centuries accepted hideous persecution and oppression. They might doubt whether the Jews were the chosen people of the Lord; they could not doubt that the life of Jews had been sanctified because they had accepted and followed what they believed to be God's literal commands.

"Sons of the covenant" we call ourselves, but we have no right to call ourselves by that name unless we voluntarily assume the obligation of the covenant according to its spirit if not its letter. We love America, but we can prove our worth as Americans only by obedience to the commands of God manifested by service lovingly rendered to God and our neighbors. Those who join the B'nai B'rith must accept that duty as Jews and as Americans.

The Divine commands to love God and our neighbors are the foundation of social justice, and of charity and mercy, and of righteousness. The world is torn by hatred and strife. Dictators who place might above right, whose will is law, and who recognize no other law have destroyed freedom and justice and mercy in their own countries. They rule in unrighteousness over great nations and assert the right to subject other nations to their rule.

We have learned the bitter truth that where men accept the doctrine that the world belongs to so-called races which exalt might over right and regard love of God and man as an unworthy weakness, Jews are subjected to persecution worse than that of the Middle Ages. To the glory which was Germany's, Jews have made glorious contribution. In the shame which is Germany's, they have no part. They have been cast out and deprived of their worldly goods, but their spiritual heritage of the age-old tradition of faithfulness by their fathers to the covenant of God is beyond the reach of any dictator. Those who obey God's commands can never bow to the will of a ruthless dictator who knows neither love of God nor love of neighbor. Dark though the world appears today, the light of God is still seen by those who seek it, be they Jews or Christians. In Germany itself, though synagogues are closed and rabbis exiled, the word of God is still preached by Protestant pastors and Catholic priests, yea, even by the great Prince of the Church. The word of God has gone forth from Jerusalem, and even in this time of war and hatred we can harbor no doubt that the time will come when, in accordance with the prophecy "men will beat their swords into plowshares and nations will not know war any more," when men everywhere shall dwell without fear, in peace with their neighbors. To that ideal America is pledged. The spirit of God's covenant is a living force here, and we who call ourselves sons of the covenant would fail in our duty as Americans and as Jews if we do not cherish that spirit here.

### Committee to Investigate Un-American Propaganda Activities (Known as the Dies Committee) Has Rendered Fine Service

#### EXTENSION OF REMARKS

OF

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 11, 1940

Mr. PITTENGER. Mr. Speaker, I call attention at this time to the Special Committee to Investigate Un-American Activities and Propaganda in the United States. This committee is popularly referred to as the Dies committee. No other governmental agency has attained the importance of this committee during the past months. Much has been said about the work of the committee and its methods, and so forth, and apparently a lot of misinformation is now being manufactured for the purpose of discrediting the committee and its work.

Those who are familiar with the activities of the committee should begin now to rally to its defense and make plans to continue it and to vote funds for that purpose. The enemies of democracy do not want this committee continued and hope to destroy it. They will do so unless we insist now that the House of Representatives vote additional funds.

The committee was created by resolution of this House on May 28, 1938—

For the purpose of conducting an investigation of (1) the extent, character, and objects of un-American propaganda activities in the United States; (2) the diffusion within the United States of subversive and un-American propaganda that is instigated from foreign

countries or of a domestic origin and attacks the principle of the form of government as guaranteed by our Constitution; and (3) all other questions in relation thereto that would aid Congress in any necessary remedial legislation.

I quote the exact language of the resolution, because any efforts to challenge the work of the committee question directly the purpose for which it was created. See House Resolution No. 282, Seventy-fifth Congress, third session, passed February 3, 1939.

As a Member of the Seventy-sixth Congress which convened on January 3, 1939, I voted for House Resolution No. 26, authorizing this committee to continue its work during the Seventy-sixth Congress, and I voted to appropriate additional funds so that the committee could carry on its work. See House Resolution No. 81, passed February 9, 1939.

We must, therefore, realize that the committee is no longer in existence and its work is ended unless the Members of this House by appropriate resolution vote to continue the work of the committee for another year and also by appropriate resolution vote additional funds so that it may carry on its activities.

Has the committee justified such procedure? Most emphatically I claim that we should continue the committee and vote additional funds for its use. Its work has been most valuable to the people of the United States. For the first time in recent years this committee is the only governmental agency that has uncovered the treachery and danger of communism in the United States. Testimony before the committee has revealed to the people of this country the fact that communistic Russia has financed the Communist Party in the United States and that we have people here who are either Communists or fellow travelers, who do not like our form of government, our Constitution, or the institutions which exist on this continent. The Dies committee has fearlessly uncovered the facts. Naturally the guilty were hurt. They should have been hurt. Those who fraternize with Russian communistic ideas and ideals should be looked up and exposed to the public for proper consideration. The Dies committee has done a splendid piece of work in showing to our people just what has been going on.

In the United States we still have a government of law and not of men. We still have human freedom. We still have the philosophy that people can live their own lives in their own way, limited only by the rule that they must not injure society. We have freedom of speech and freedom of worship. Russian communism is opposed to all of these things and is busy teaching its doctrine of regimentation. The Dies committee has rendered an unselfish and public service in bringing out to public view people and organizations that are distinctly un-American.

In my opinion, the work of the Dies committee is not finished. I attended on many occasions the hearings before this committee. I know that the committee is composed of splendid level-headed men, and I know, because I have attended those hearings, that the committee has been fair and has acted wisely in the conduct of those hearings. I say this because I note with much disappointment a criticism by a certain columnist in one of the papers for today. He is absolutely misinformed if he thinks that there is any Member who has supported this committee who is ashamed of its attainments. Its procedure has been correct. When a rotten mess has to be cleaned up, naturally, the ones affected by the clean-up are going to feel hurt.

Now, Mr. Speaker, this committee is an agency of the House of Representatives. I note in yesterday's newspapers a statement which indicates that another branch of government seeks to interfere with the work of this committee. This House should put its stamp of disapproval on any interference with the work of the Dies committee by any other branch of government. Further, any attempt to abolish the committee and transfer its functions to some other branch of government should not be tolerated.

Let the proper resolutions be presented to this House promptly and after the roll call no one will need have any doubts as to the question of whether or not the American people approve of the Dies committee.

William I. Sirovich

## EXTENSION OF REMARKS

OF

HON. JAMES G. SCRUGHAM

OF NEVADA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 11, 1940

TRIBUTE BY THE DEMOCRATIC STEERING COMMITTEE OF THE HOUSE

Mr. SCRUGHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following tribute to the late Representative SIROVICH by the Democratic steering committee of the House:

In the passing of WILLIAM SIROVICH, the Democratic steering committee of the House of Representatives has lost a faithful member and a conscientious officer.

His broad experience, good judgment, and wise counsel proved valuable to the work of the Democratic steering committee, and he won the respect of all with whom he was brought into contact.

Mindful of their long association with Representative SIROVICH as an official of this body, and of his constructive work on behalf of this organization, the members of the Democratic steering committee gratefully record its appreciation of him by adopting the following:

*Be it resolved*, That we attest to the inspiration and support Representative SIROVICH brought to the deliberations of this committee, and the House committees upon which he faithfully served; and be it further

*Resolved*, That a copy of this resolution be spread upon the minutes of this organization, and that a copy be sent to the family of Dr. SIROVICH as a testimonial of our sincere appreciation of his usefulness, not only as a member of the Democratic steering committee, but also as a member of the United States House of Representatives.

## America's Outlook

## EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 11, 1940

PROGRAM OF THE AMERICAN FORUM OF THE AIR

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following discussion on America's outlook, which was broadcast on the American Forum of the Air, December 31, 1939:

Announcer McCORMICK. WOL, in cooperation with WOR, presents the American Forum of the Air.

Once again we invite you to listen to another "American Forum" program emanating this evening from New York, Boston, and these broadcasting studios of the new Department of the Interior Building, in Washington, D. C.

The facilities of these studios have been extended by the Secretary of the Interior, Harold L. Ickes, in the interest of promoting educational radio programs pertaining to national problems, and treated in temperate discussion under nonpartisan and nonpolitical auspices.

Your chairman tonight, as usual, is Theodore Granik, pioneer in educational radio discussion and newspaper columnist who personally directs and arranges these broadcasts.

Chairman GRANIK. Thank you, Mr. McCormick.

We are poised on the threshold of a new year. America's 130,000,000 will greet 1940 at midnight with many wishful New Year's resolutions—to stay out of war and to face the many difficult domestic problems with courage and with hope of their solution. We query how to continue to solve the problem of our millions of jobless—about one-third of whom are youngsters. What is in store for them and for the other youths of America—our citizens of tomorrow? What about their elders, who are passing their productive years, and must look forward anxiously to some form of security and protection in old age?

Americans view with great satisfaction industry's spurt in the last few months and hope that these impressive advances in production and profits, which were matched by equally spectacular gains for the Nation's workers, will follow into the year ahead.

And will the near-record purchasing power now enjoyed by the country's employees continue into 1940?

As for other groups, the farmers received a total cash income greater than last year, and dividends disbursed to investors also registered an increase.

Can we continue these gains which have resulted in a national income paid out to the entire population rising to \$70,000,000,000?

The present European conflict and the complex structure of our social and economic life causes us to consider our national-defense program, and to ponder what magic lies ahead in the field of communications and radio, and what role the press will continue to play in our daily lives; and what is the immediate future of our educational, scientific, and cultural worlds?

And so tonight, New Year's Eve, the American Forum of the Air departs from its customary debates to present 10 leaders in various fields of American life to discuss America's outlook. Our participants are:

Frances Perkins, Secretary of Labor; W. Gibson Carey, president of the United States Chamber of Commerce; Sam A. Lewisohn, noted art and music patron; Frank Graves, commissioner of education of the State of New York and president of United Chapters of Phi Beta Kappa; Prof. Walter B. Cannon, of Harvard, president of the American Association for the Advancement of Science; James Lawrence Fly, Chairman, Federal Communications Commission; Eugene Meyer, publisher of the Washington Post; Brig. Gen. Frank M. Andrews, Chief of Operations of the War Department; Milburn L. Wilson, Under Secretary of Agriculture; and Gov. Paul McNutt, Federal Security Administrator.

We are making pick-ups from New York, Washington, and Boston. And may we express our gratitude to all of our participants, who have been kind enough to leave dinner parties and other engagements in order to join us this New Year's Eve. And now as our opening speaker, Secretary of Labor Frances Perkins, speaking on the Outlook for American Labor. We take you to our New York studios.

#### ADDRESS BY FRANCES PERKINS

Secretary PERKINS. The new year finds American industry well on its way toward higher levels of activity and with the outlook excellent for a continuation of the upward trend. Improvement in economic conditions was substantial during the past year, and wage earners, management, farmers, merchants, and investors benefited accordingly.

Total nonagricultural private employment, as of November last, was 34,703,000, an increase of more than 1,300,000 over the same period in 1938 and a rise of more than 8,600,000 over March 1933. Weekly pay rolls of factories reporting to the Department of Labor amounted to \$193,092,000 last November, an increase of nearly \$33,000,000 weekly over the previous year and a rise of the huge sum of more than \$120,000,000 weekly over March 1933.

Nonfarm residential building construction, which stimulates employment in many other lines, amounted to \$1,700,000,000 last year, an increase of \$400,000,000 over 1938 and the enormous advance of \$1,500,000,000 over 1933.

Manufacturers also enjoyed an increase in profits during 1939, the net gains of leading manufacturing corporations in the first 9 months of the year being about double the profits earned in 1938. This contrasts sharply with the losses which were being shown by most concerns in 1933.

It is estimated that American farmers received \$7,625,000,000 from marketing of their products last year. This represents an increase of 63 percent during the last 7 years. Cash farm income slumped to a low mark of \$4,682,000,000 in 1932.

Despite these significant gains, unemployment has not been eliminated. Rather, it has been reduced, mitigated, and modified. Among the programs designed to overcome unemployment which have emanated out of the Department of Labor's continuous study of this problem are the following:

First. An immediate recommendation early in 1933 that there be some quick relief in the way of Federal appropriations to assist the States and localities in meeting the primary relief needs of the people who were then unemployed and had been unemployed for a long time in the emergency of general depression.

Second. A program of straight public works. The recommendation for it and the justification for it, and the basic figures and information came out of the Labor Department. The conception of finding special work for those who could not be absorbed on straight public works also sprang from a meeting of labor leaders, Government officers, and others in the Department of Labor early in 1933.

Third. The Wagner-Peyser Act, which established well equipped, free public employment offices, also came from recommendations of this Department as a method of taking care of the effective placement of persons looking for work where there was work to be had, so reducing the loss and waste of poor placement of the job hunting.

Fourth. The labor sections of the N. I. R. A. were contributed by this Department and its advisers in an effort to offer employment opportunities and labor protection in private industry.

Fifth. The Public Contracts Act, which required not over 40 hours and a fair minimum pay on Government contracts in manufacturing. This act sprang out of the recommendations of the Department, advised by a conference committee of State labor department officials and labor leaders.

Sixth. The Wage and Hour Act, which was the first effort to establish on a Federal basis a floor to wages and a ceiling to hours.

This grew directly out of the recommendations of this Department, advised again by a conference of State labor department officials and labor representatives following the abandonment of N. I. R. A.

Seventh. Unemployment compensation, which is an adjustment for the loss of wages due to the accident of unemployment. Again this had its origin in the studies and recommendations of the Labor Department and its advisory committees.

Eighth. Contributory old-age insurance for the future and Federal assistance to the States for providing old-age assistance to aged needy persons. These programs were adopted partly to enable the elderly to leave the labor market and so offer more employment to persons at the peak load of their responsibilities.

Ninth. Limitation on the employment of young persons under 16 years in the N. I. R. A. Act and later in the Public Contracts Act and Wage and Hour Act. These provisions were aimed partly at keeping the immature workers out of the labor market and so offering more jobs to those in middle life.

Tenth. The basic information and recommendations for the development of the C. C. C. as a form of constructive educational employment for young persons. This, too, had its inception in the Department of Labor.

Chairman GRANIK. Our second speaker is Mr. W. G. Carey, President of the United States Chamber of Commerce, and as such tonight, spokesman for American commercial interests. We introduce Mr. Carey, speaking on The Outlook for American Business.

#### ADDRESS BY W. GIBSON CAREY

Mr. CAREY. Tomorrow our national greeting will be "Happy New Year." As we say it there will be gladness in our hearts. Subconsciously some of the elevation of Christmas will still be in our attitudes. Peace on earth, good will toward men!

But 1940 will have 366 days. I am supposed to say something as to how we shall fare during that period and I am supposed to say it from the business viewpoint. Truthfully, there isn't such a thing, in any definite sense. Some men in business are optimists and some are pessimists. For this reason I intend talking simply as an American citizen.

We can and we will make a lot of progress next year. I'm an optimist on America. What God did for us in location, climate, size, resources, and natural beauty can't be beaten. What our forefathers did was marvelous. What we've done of late years is a crime, not so much against ourselves as against our children. We men haven't had courage, energy, and foresight enough to keep America on a safe track. I'm sure of this because my mother-in-law told me so. Excuses don't go with one's mother-in-law. It's a good thing they don't.

In 1940 the men and women of America have a job to do, and they are going to do it together. In the first place, we're going to stop knifing one another like a bunch of Bolsheviks. Maybe the trouble is we have too many of that breed here. In the second place, we're going to work to produce goods and services so we can all have the share we earn. Trying through Government or propaganda to control the major conditions of life, including who gets what, isn't American. Worse than that, it doesn't work. A good many million unemployed know that from sad experience, and yet many of them don't really understand. They think capital is on strike, or some have too much, or business leaders are all Republicans, or some such stuff and nonsense. The truth is we've socialized and experimented ourselves into a stalemate with laws, innuendo, and bad will. We can get along very nicely from now on without the innuendo and bad will. As for the laws, some of them are splendid; some too restrictive and burdensome. We have a selective job to do.

It may amaze you to hear me say that I am not much interested in the \$80,000,000,000 national income about which some people talk so blithely. What I want to see is our entire Nation back at work. I also want to see us start toward a balanced Budget. We haven't paid our way in so long that many of us think that isn't necessary any more. This error springs from a belief in pump priming. Unfortunately, economic pumps don't work that way, at least when politicians do the priming.

If we stop telling employers and employees just how to greet one another and just what to say; if we stop scaring everyone who has a \$10 bill; if we stop talking of leisure and spending and talk rather of work and saving, this country has the greatest future in history. Then we can have \$100,000,000,000 national incomes, because we've earned them. We can at least make a start in that direction in 1940. To do this, we must, of course, stay out of any foreign war.

I have said things tonight which some people may not like hearing, but I am not blaming anyone. The truth is, we are all somewhat at fault, and I am here to take my share.

And, finally, all I have said is in the American tradition and on behalf of America's future. In my heart and mind are:

Peace on earth, good will toward men, and happy New Year. Chairman GRANIK. We turn now to American culture—the field of music and literature and fine arts. Our third speaker on this special program is Mr. Sam A. Lewisohn, who is well known as a writer, as a member of the board of the Museum of Modern Art, and as principal sponsor of the musical concerts presented annually at the stadium in New York, bearing his name, the Lewisohn Stadium. We now present Mr. Lewisohn, speaking on the Outlook for American Culture.

#### ADDRESS BY SAM A. LEWISOHN

Mr. LEWISOHN. America's zest for culture has been a natural offspring of her zest for life. Our youthful enthusiasm for every activ-

ity which we follow is one of the most attractive features of the American scene. This zest, this enthusiasm, is behind our revived interest in painting and sculpture, our revived interest in music and literature, not to forget the theater and the dance. It should be a refreshing influence on the gifted individuals who are coming to us from every part of the world. I feel confident that the creative energy of these men will be invigorated by the American environment. For zest is contagious.

Besides, of course, we possess an enormous native talent which is only just beginning to assert itself. Certainly in literature and the drama there has been some very pungent material written. In painting, for a young country, it is surprising what interesting work has been produced, as yet more by individuals than by cohesive groups. The so-called regional art, in which there is an enormous interest springing up, has promise of providing a vigorous infusion to the old forms.

When it comes to audiences, there is no question as to the intensity and breadth of the awakened interest. Never before have weekly periodicals of enormous circulation carried articles and photographs depicting the fine arts and musical personalities. Art books reproducing everything from Giotto to contemporary Americans have an unprecedented circulation. Indeed, there has never been such an interest in books on art.

In literature, best sellers are not confined to meretricious fiction, but include some of the most solid and excellent of our authors.

The attendance at the stadium concerts at the College of the City of New York last summer was one of the largest in its history, and programs of comparatively severe classical music attracted more and more listeners. What was particularly pleasing was that such an austere personality as the great Finnish composer Sibelius should have had so great an appeal.

The deep interest evinced by this city, with its broad cultural background, in the finest quality of music has been most gratifying. Of course it is not confined to this city alone. The large audiences in Philadelphia, San Francisco, and all over the country at stadiums and popular gatherings, attest to the enormous interest in the very best of music on the part of the public.

One of the most interesting developments has been the large number of visitors at art museums, particularly those which exhibit the works of recent masters. The attendance at the more sensational exhibits of the Museum of Modern Art of this city, such as those of the current Picasso, Van Gogh, and surrealist art exhibits, has been enormous. But almost more encouraging has been the attendance throughout the country at the traveling exhibits of this museum.

Another development of outstanding importance is the great interest aroused in the developments centering around the work fostered by the Procurement Division of the Treasury Department in Washington under that gallant figure, Edward Bruce. Never in the history of this country has there been such an outpouring of work in the field of murals. They range from vivid folk chronicles of deep America to profound allegorical interpretations of our underlying philosophy. Some of the results have been outstanding landmarks in the history of mural painting in this country.

Finally, I must mention the astounding work done by the radio in the cultural field, and the gratifying response. Who would have thought 30 years ago that millions of people in this country could have been provided with the very best in music and, what is more remarkable, actually listen to it with keen enjoyment and interest. To me this seems the most promising development of all. It is proof of our cultural rebirth, and it is proof that we have modern facilities to satisfy the awakened appetites for the best in culture.

Chairman GRANIK. Our next speaker in this discussion of America's Outlook is Mr. Frank P. Graves, Commissioner of Education in New York State and president of the United Chapters of Phi Beta Kappa. Mr. Graves will now examine the Outlook for American Education.

#### ADDRESS BY FRANK GRAVES

Mr. GRAVES. To many of us the war now raging in Europe finds its basis not so much in economic difficulty as in a fundamental difference in the way of life of the nations involved. To a dictator it is the immediate consideration of material well-being which is of paramount importance—or perhaps even more than that, it is the use of the moment for the aggrandizement of an individual. In times of danger and stress, however, truly democratic nations ever remember those timeless values which they have come to cherish through ascending years of cultural development. They have become actively aware, for instance, of that personal liberty and mental and spiritual freedom which they have accepted without conscious thought, for it has been of the very air they breathe and of the soil from which they gain their living.

And so it is that we are beginning to be acutely aware of powerful forces struggling for dominance in American education—and in that struggle democracy is the pawn. On the one side we have that force which since the beginning of the machine era has brought to itself increasing importance and has entered our schools and colleges through vocational and technical education. On the other, we have the formerly traditional education in the humanities with the more recent addition of pure science. In overemphasis on the technical we encourage our schools and colleges to produce dictators and its subjects for dictators. In a narrow conception of the humanities we chance a medieval separation of learned and illiterate classes. Either extreme is not without its peril for democracy, but having broken the aristocratic bonds of traditional educa-

tion, we must now seek to escape from the toils of a mechanistic and totalitarian training.

Happily both parents and advisers are today beginning to lay less stress upon educating children for the mere getting of jobs. They are seeing the forces for dictatorship crowd out the liberalizing and enlightening study of such subjects as literature and history and the pure sciences. Tomorrow they will know, through the bitter error of what has gone before, that enlightened personality, broad knowledge and sympathy, scientific processes of thought, and cultivated tastes are those attributes which must be expected of our youth and which our educational system must consciously promote.

America's outlook today is the brightest in its history. Too long have we been content with our accepted role of materialistic and mechanical supremacy. Now we have in our province the preservation and development of civilization in a world ravaged by irrational greed and violence. We must accept the torch which has thus suddenly been thrust upon us and we must train American youth not only to guard its flame but to bring it to even fuller and steadier brilliance.

Our schools and colleges are accepting the challenge. If the present international crises should lead, as we all hope, to a union of peoples which would free for education the vast resources now horribly wasted in human slaughter, our institutions could give American youth still greater educational opportunities. Our national economy should ever bear this in mind. In a democracy such as ours, every individual man and woman is called upon to help decide questions of national and international importance. Every citizen, in varying degree, is expected to be a leader in those human relationships in which he is competent. In spite of its limitations and shortcomings, our vast educational system has had incredible success in the last few decades in preparing our citizens for the greatest responsibility and opportunity with which men and women were ever entrusted. And to the morrow we look for a completely cooperative program in which forces now clashing in educational policy and practice will find their proper spheres of usefulness.

To every American, old or young, we shall hope to bring the maximum opportunity to satisfy the profoundest desire for spiritual development and intellectual power.

Chairman GRANIK. We now turn to science and introduce one of America's foremost men of medicine, Dr. Walter B. Cannon, president of the American Association for the Advancement of Science. Speaking on the Outlook for American Science, we introduce Dr. Cannon from Boston.

#### ADDRESS BY PROF. WALTER B. CANNON

Dr. CANNON. The topic assigned to me is America's Outlook for Science. The outlook for science in any country depends primarily upon whether the conditions for the activities of scientific workers are advantageous or not. In that respect no doubt the United States, compared with other countries of the world, now stands almost alone as a favored nation. In justification of that statement let us look for a moment at the conditions best suited for successful scientific effort.

First, there must be freedom of research. Experience has repeatedly proved that as a rule the most significant discoveries, those which are disruptive, which break through barriers and open new vistas, result from the individual, deep-delving interests of the truth seeker. If important consequences are expected, therefore, his attention must not be narrowly confined to immediately useful prospects, nor to a so-called "nationalistic science," nor to the support of any group of political or social ideas.

In some foreign countries freedom of research has been severely hampered. Careful observations, opposed to accepted doctrines, have been roundly denounced as not being orthodox. Creative investigators, having to their credit illustrious achievements and enjoying international renown, have been discharged from their posts, subjected to indignities, and exposed to exhausting privations. How fortunate are we in the United States to be free from such repression and injustice, to be permitted to push our inquiries without check or hindrance wherever we may wish, and to publish our results without the obnoxious intrusion of a censor.

A second favoring condition for scientific progress rests on the support which it receives, both material and moral, including respect for past achievements and a trust that its methods will assure further benefits. These propitious conditions are commonly found in universities. In foreign countries some universities have been utterly destroyed, others have been closed, and still others have lost their social value as sanctuaries for scholars where search for new knowledge is untrammelled. Again, in this country note how privileged we are. Not only in universities but also in research institutes and in the laboratories of great industrial plants the activities of scientific investigators are warmly appreciated and favored. Furthermore, among intelligent citizens is widely diffused a well-established confidence that scientific imagination, experience, and skill, if applied to problems, will bring satisfactory and helpful answers. In that confidence large funds have been set aside to meet the financial needs of scientific studies. From the foundations every year many hundreds of thousands of dollars are distributed in order to promote the interests of productive investigators. The material and moral significance of this support is incalculably stimulating.

A third condition which is to a very great degree advantageous to science in our country is our noninvolvement in war. War itself limits freedom of research. Scientists whose labors might yield new knowledge serviceable in lessening human ignorance and distress and increasing human welfare are compelled during a war to cease their free enterprise and to concentrate their attention on

problems of military importance. Also, during a war vast resources which, if applied to scientific research, would bring enlightenment, comforts, and conveniences into the lives of hosts of the less privileged are appallingly wasted in wanton destruction. In Japan and Germany, France and Finland, in former Austria and Czechoslovakia, in England and her scattered dominions, warfare has forced scientific workers away from their individual interests and occupations and mobilized them into the service of the fighting forces. In other nations bordering on the nations now at war fear and the basic impulses of self-preservation have spread widely and destroyed the possibilities of calm attention to scientific study. Counting aside most of Asia, Africa, and Latin America, where active interest in serious research has scarcely awakened, we find that the United States remains as almost the sole country in which, without fear or obstacle, the precious liberty of learning still prevails.

We should look upon our good fortune not only with deep satisfaction but also with a deep sense of responsibility. We have full freedom in our inquiries, we enjoy unsurpassed opportunities and generous grants for scientific investigation, we are not oppressed by the overwhelming demands of warfare; in laboratories throughout our land are thousands of well-trained investigators. Surely the torch of science has fallen to us Americans. In the present darkness of the world we must carry it onward for the good of all mankind.

Announcer McCORMICK. You are listening to a special New Year's Eve program titled "America's Outlook," and presenting 10 leaders in various phases of American life examining the outlook for our country's immediate future. This program, one of the regular American Forum of the Air series, is coming from Washington, New York, and Boston. We pause momentarily for station identification. This is the Mutual Broadcasting System.

Chairman GRANIK. Mutual's special New Year's Eve program, America's Outlook, continues now with the examination of American communications. Our next speaker, James Lawrence Fly, Chairman of the Federal Communications Commission, will speak to us from Washington, D. C.

ADDRESS BY JAMES LAWRENCE FLY

Chairman FLY. If the field of communications were to be characterized in a word, that word would have to be "progress." Yet even we who have lived through most of this great advance have a tendency to take the benefits of our far-flung communications system for granted. It may, therefore, be fitting to recall that it was only a quarter of a century ago that the first transcontinental telephone conversation was held. But 10 years ago the average time required to make a toll call was about 3 minutes. Today, 93 percent of all long-distance calls are completed without the caller leaving the telephone. And the advance in the telephone industry promises to continue unslackened.

Through the use of telephone wires great networks of radio stations have been set up. The first radio broadcast station, KDKA, Pittsburgh, it may be remembered, began operation in 1920. Since that time radio broadcasting has come a long way to where it now has a tremendous impact on our national life. There are more radio sets in the United States than in all the rest of the world. With rapid strides the industry moves forward. Television shows ever-increasing possibilities. Radio engineers are speculating on the improved interference-free and noise-free service possible through a different type of broadcasting known as frequency modulation. And facsimile broadcasting—a service by which one day your morning newspaper may come to you through the air—is being improved.

It was in 1844, 5 years before the gold rush, when the first telegraph line between Washington and Baltimore was constructed. The telegraph soon followed the westward trek along the lines of the land-grant railways. Of late years, this industry has suffered grievously from telephone and air-mail competition from without, and from cut-rate inducements and duplication of facilities from within. However, public expenditure of a \$133,000,000 for telegraph service in 1 year indicates its importance to the Nation. It is hoped that in the new year some way will be found to solve the telegraph problem; and to put these important members of the communications family on an equally firm basis, thereby strengthening even further the foundations of our communications system as a whole. For it is a vast and complicated machinery which must ever move forward in step with the social, economic, and defensive needs of our country. And as it progresses, its activities will always be correlated with those of the extensive international system. By means of this system, with its hundreds of channels, by radio, by telegraph, by telephone, by radio telephone and radio telegraph, or by cable, a private message or news of greatest significance is relayed to and from the far corners of the world almost instantaneously.

The important role of communications in modern warfare is all too obvious. In this country, however, we prefer to contemplate the system of communications as an instrument of peace. In the constant light it radiates, the cloak of mystery cannot long enshroud international events. The American citizen of 1940 is an alert, well-informed citizen of the world, with an independent judgment on international problems. It is therefore something more than the sincere wish of all of us that the year to come will see the world's great communications machinery allowed to do its important part in weaving more firmly the ties of understanding among the peoples of the world.

Chairman GRANIK. Thank you, Chairman Fly.

And now as our next speaker, one of America's outstanding leaders in the newspaper world, Eugene Meyer, publisher of the Washington Post, who will speak on the Outlook of the Press.

ADDRESS BY EUGENE MEYER

Mr. MEYER. I am asked, as we stand on the threshold of a new decade, to say a few words on "The Outlook for Journalism and a Free Press in the United States." Prediction is always dangerous. It is unusually so at this moment. But we can assert with some confidence that as long as the United States retains its traditional ideals the newspapers of this country will be doing their part.

No American newspaper is perfect. All are conducted by fallible human beings affected by individual outlooks; limited in their knowledge, hampered by the scant leisure for reflection which is an inevitable condition of daily publication.

Newspaper men and women, like those in other walks of life, are rising to the challenge of the times. They realize that all institutions having large powers are under scrutiny. The right to exercise power must be justified by the responsibility with which it is exercised. The safeguards with which the liberty of the press was surrounded by the Bill of Rights cannot be used as a protection against criticism where criticism is proper.

Publishers and their staffs are aware of the increasing social importance of their calling. They appreciate the educational values for good or for evil of the press. They recognize that it is up to them to justify the guaranty of a free press, which is written into the Constitution.

In the 6½ years that I have been publisher of the Washington Post I have seen many evidences of this growth of professional responsibility in what is called the fourth estate. Partly because there is still room for progress in this direction, there is every reason to anticipate such growth in the future.

I have mentioned the constitutional guaranty of a free press. It is well to remember that this guaranty does not stand alone in the Bill of Rights. It is one of a series of associated provisions in the first amendment to the Constitution. It reads as follows:

"Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech or of the press; or the right of the people peaceably to assemble and to petition the Government for a redress of grievances."

The grouping together, as essential democratic rights, of freedom of religious faith, freedom of speech, freedom of assembly, and freedom of the press was not mere accident. They are associated rights; they stand or fall together. If one were undermined, the others would all be jeopardized.

Above all things the press must endeavor to be unbiased and fair in the presentation of the news. When feelings run high, as they do today on many subjects, the press can be a great stabilizing force if it remains impartial and dispassionate in giving its readers the facts on all public questions. Such fair-mindedness can contribute to the solution of our many problems and thereby justify the role of the press in modern civilization. This desire to be fair has been steadily growing. There is every reason to expect continued growth. The basic element in impartiality is tolerance; never has the country been in greater need of this spirit of "live and let live" than it is today. By being tolerant themselves, the newspapers can exert a great moral force and help reason instead of passion to prevail.

The public desire for accurate and full information will guarantee the freedom of a press that has these two essential qualities: fairness and tolerance.

The very urgency of our problems has accentuated the national impulse of newspapermen toward self-improvement. The progress made in recent years by the press is the best guaranty of still greater progress in the future. Our press has long been the best in the world. But in the immediate future I feel certain the free American press will more than ever justify the confidence of our people, and will play an ever-increasing part in molding the future of our Nation.

Chairman GRANIK. Thank you, Mr. Meyer.

And now we present Brig. Gen. Frank M. Andrews, initial commander and organizer of the General Headquarters Air Force and the present Chief of Operations of the War Department, who will discuss national defense.

ADDRESS BY BRIG. GEN. FRANK M. ANDREWS

General ANDREWS. When Gen. Malin Craig retired last summer as Chief of Staff of the Army, he made a very significant statement. "Military planning," he said, "is one of the most serious responsibilities that can confront a people. \* \* \* The plans deal with the nation's future, with hundreds of thousands of lives and untold wealth. They must be coldly and painstakingly considered in the light of intense realism as the basis of all future military strategy and tactics. What transpires on prospective battlefields is influenced vitally years before in the councils of the staff and in the legislative halls of congress."

Our plans for national defense are based of necessity upon the establishment maintained as a result of funds annually appropriated. We have a very small Regular Army, a larger National Guard, and a group of Reserve officers to be utilized in the event of an emergency. We lack adequate modern equipment. Several years ago Congress made initial appropriations to procure for the Army some of the modern weapons it would need if called upon to take up arms once more in the defense of this Nation. The Congress at its last regular session appropriated additional sums of money to rectify many of our deficiencies in weapons, such as tanks, semi-

automatic rifles, antiaircraft guns, and airplanes. Generous as were the appropriations of the last Congress, considerable time will elapse before the appropriations will produce actual deliveries of military equipment. This unavoidable delay in translating money into material is usually ignored by the public, but it is one of our greatest problems concerned with the national defense.

Last July our Regular Establishment numbered about 165,000 men. Actually, that strength would have permitted the Army to place in the field in continental United States only 70,000 combat troops. The remainder were on duty guarding our overseas possessions and manning our arsenals, depots, warehouses, overhead, coast defenses, and the General Headquarters Air Force.

At that time the United States Army did not have as a complete organization a single infantry division, which is a basic yardstick among military men for measuring military strength. Our mobile troops were scattered among a hundred different Army posts where they secured splendid individual training and training as small units, but were denied the opportunity for team training in the normal large combat groups.

An even more serious deficiency in the welding of effective combat teams resulted from the extreme limits to which the Army was forced to go in skeletonizing its units. For example, infantry regiments were usually short one of the three essential battalions, and artillery battalions had one out of three batteries eliminated. This meant that commanders had to assume situations and organizations which did not actually exist. Our military maneuvers and war games were, therefore, played by teams in which numerous key players were missing. Naturally, the results were largely hypothetical, just as if in football practice a team would take the field with an end and several backs missing and on each play assume that the missing individuals were in the line-up. In war, or even in scrimmage practice, as in maneuvers, such assumptions are impracticable or impossible.

In 1939, actual or threatened conflicts involved a number of important European nations. These nations for years have had to consider their military defenses from the viewpoint of intense realism. Defenses had to be adequate or disaster resulted. For example, when Poland was invaded she had available to meet the enemy over 30 infantry divisions, with 750 airplanes, but they were not enough against Germany's 70 divisions, aided by 7,000 airplanes, all of which Germany did not find it necessary to use. At that time, as I said before, the United States did not have available one completely organized division. Hence, it was high time that we looked to a strengthening of our defenses. With almost unanimous public approval, the Congress made available to the Army substantial appropriations with which to improve our national defense. As a result, our Army has been enabled to depart, to a certain degree, from its highly skeletonized and hypothetical version into what we hope will be, as the Secretary of War recently pointed out, "An army in being." The Army is now embarked on an air program which will result by 1941 in practically doubling the combat strength of the Air Corps. We have organized many of our widely separated units into five infantry divisions. Four of them are now concentrated in the South for maneuvers. One is concentrating on the west coast, later to proceed to California for training. In the spring these divisions will be grouped for corps maneuvers. Opportunity will be given National Guard commanders and certain of the higher Reserve officers to witness and participate in this training. The National Guard has been given additional drills each week and additional days of field training.

New equipment is being procured, both for our Regular troops and for the National Guard. Steps are being taken to build up stocks of strategic raw materials for which we are largely dependent on foreign sources.

All of these preparations are being made, not to meet any immediate or specific threat of war but rather to place our Army in a position of readiness to perform its duty of defending the Nation. The present international situation focuses public attention on everything pertaining to our security or defense, but let us hope that this interest will not lapse into the indifferent antagonistic attitude of the past, resulting in an emasculation of our Military Establishment and arrangements, and the same old story of refusing to spend ten million to provide what fifty million cannot procure in a crisis of our international affairs.

With all Americans the members of the United States Army join in the hope that during 1940 our country will continue to enjoy the blessings of peace. I know that all good citizens are grateful to know that our peace is being made more secure because we are building a more adequate defense.

In behalf of the Army, may I wish every one of you a happy and a peaceful new year.

Chairman GRANIK. Thank you, General Andrews.

And now the outlook for the American farmer will be discussed by our able Under Secretary of Agriculture, Milburn L. Wilson.

ADDRESS BY MILBURN L. WILSON

Under Secretary WILSON. These last few hours of a decade are a time for long thoughts, and this night no Americans will be thinking longer thoughts than the farm people. The 1930's have marked a turning point for American agriculture.

In the 1920's the foundations of rural life were crumbling, though the rest of the Nation was on a short-lived spree of prosperity. In the first years of the thirties all the people joined the farmers in despair. The foundations of economic life and the security of soci-

ety were going to pieces under our whole civilization in those dark days. We ate the bitter bread of our past mistakes.

Farm people and city people came to understand that things were different now from what they had been when we had an open frontier of good free land—when the world was eager to get our goods. In no branch of American society were the changes more profound than in agriculture.

The farmers had been trying through the twenties to obtain national action that would help them adjust to the new conditions and overcome some of the disadvantages they were under because the rest of the Nation refused to face the new facts. In the late twenties the representatives of all the people in Congress conceded that national action was necessary in justice and in wisdom, but the Executive head of the Government at that time refused to grant approval. In the thirties both legislative and Executive acted on behalf of the whole people and in the interest of the general welfare to bring a variety of assistance to help farm people in overcoming the evil results of past mistakes. There was help in adjusting production, balancing income as between farm and city, conserving the soil and water resources which are the fundamental basis of all our living, and conserving our rich human resources of rural people which were going to waste because of rural poverty.

Now, as we start into the fifth decade of the twentieth century, the 1940's, farm people are learning to use democratically and efficiently new methods of working together to achieve these purposes. It is a new situation for American agriculture—and a promising situation, on the whole.

Slowly, and with set-backs here and there, the farm income has climbed upward from the rock-bottom depths of 1932. With the exception of 1937, farm income this year stands at the high point of the decade. Farm production is abundant for all the needs of our own people and for all the markets that are open overseas. More than 4,000,000 farm families are taking part in the local and national programs to conserve soil and water and trees and grass and farm in a way that will make this a permanent country; not one of the vanishing lands which have washed or blown away from under great civilizations of the past. What other nations war over, we have—rich resources, skilled people, abundance potentially for all. Farm and city are sharing farm abundance through a food-stamp plan and surplus distribution.

Looking into the new year, farm people see as through a glass darkly. "What will the effects of war be on our trade with the world in farm products?" they ask. What will the weather bring in the way of crop yields? They have found already that the trade controls being used now by the fighting nations work against exports of our farm products. The blockade shuts our products out of central Europe. Belligerents want to save their dollars to buy military goods; in their buying, they want to favor their own colonial possessions, and the neutrals whose goods may go to enemies.

Farmers know that the weather situation is disturbing over wide areas. The most intense fall drought in history has prevailed in many parts of the wheat country. The condition of winter wheat is very low on this last day of the old year. But the growers are protected against total loss of income by crop insurance—more than 300,000 of them; and they have been able to hold last year's crop through the loans of the ever-normal granary, and this time to realize for themselves the profits from price increases that speculators used to realize in such situations.

So the outlook as to production and markets abroad is clouded. But we have ample reserves in the ever-normal granary; we have a better prospective home market as employment and wage earnings pick up. And the general prospect is for higher prices and better incomes for farmers. However, they will not be getting the parity of income that is the declared policy of the Congress and the people, and the legislative branch will be considering ways and means of bringing farm income to a fair share of the national income during the coming session.

Even so, the prospect of the new decade in its first months is dismaying to the farm people, though economically it may turn out to be on the side of improvement. For farm people and all our people are sick at heart that the tragedy of war has come again to the world. And on this New Year's Eve, farm prayers join with city prayers that the human spirit may soon be spared the indignities of war and rejoice in the freedoms of peace.

Chairman GRANIK. Thank you Secretary Wilson.

And now as our concluding speaker is tonight's American Forum of the Air presentation on American Outlook, we present Gov. Paul McNutt, Federal Security Administrator, who will discuss Youth and Social Security.

ADDRESS BY GOV. PAUL M'NUTT

Governor McNUTT. One generation, having completed its task, relaxes its hold and leaves the Nation's work to others. At the other end, a new generation slips imperceptibly into the ranks. In the meantime, those of us in the middle of life carry on. We momentarily bear the load. But those generations at the extremes are vitally important. The country must look to its youth if it is to retain its physical vigor. It must look after its aged if it is to maintain its spiritual strength. Democracy cannot afford to let hope die in the first group. Humanity will not let it die in the second. There are 4,000,000 unemployed under 25, old enough to work. There are 8,000,000 unemployable past 65, too old to work. What prospect does the new year hold for those 12,000,000 special wards of the Nation?

The National Youth Administration and the Civilian Conservation Corps will keep about a million young people occupied on important work projects. This will keep them healthy with exercise and decent food. It will afford an opportunity to acquire work habits and skill. It will fortify them in mind and spirit with the knowledge that they are performing useful services and contributing to the support of their loved ones. Moreover, they are coming to know and to love their country, because, on the many projects of conservation and public works, these boys are helping to build and remake America. In doing so they become better Americans.

But what of the 3,000,000 young people for whom no provision has yet been made? I am happy to report that important forces are coming to the assistance of the Government in this problem. The recent report of the Youth Commission, representing wide business and industrial interests, is reassuring. It recognizes the necessity, at any cost, of adequate opportunity for the oncoming generation. Two weeks ago, a youth conference in this city, also representing far-flung business interests, agreed that private enterprise must mobilize its forces to close the gaps in the youth program. It will be a great day for America when business and Government complete a cooperative program to conserve the most valuable asset of both—the Nation's youth.

The Federal Security Agency, on its part, pledges unrelenting attention to the plight of young men and women without jobs. Throughout 1940, a heavy accent will be placed on youth. It will require time, thought, and money, but the investment is in capital goods. It is important that there be a balanced Budget, but it is equally important that there be a balanced diet for those who must champion democracy in the ensuing years.

For the aged, too, the outlook is brighter. At midnight the 1939 amendments to the Social Security Act become effective. Thirty million workers will have the satisfaction of knowing that the initial monthly benefits are payable under the law designed to afford them security for the remainder of their lives. It is expected that more than \$100,000,000 will be disbursed during 1940 on about 900,000 claims. It is estimated that these claims will be received at the rate of about 2,000 a day during the month of January. Both the number of beneficiaries and the size of benefits will increase vastly as wage credits are accumulated in the future years; 1940, however, will always be remembered as a significant milestone along the path which leads to independence and security for the aged.

The whole is no greater than its parts. Our collective social security is the sum of the security of each individual citizen. For both youth and old age the prospects are brighter than on the last New Year's Eve. We can expect them to be brighter still on the eve of 1941.

Announcer McCORMICK. Thank you, Governor McNutt.

Mutual has presented a special New Year's Eve program, titled "America's Outlook." You have heard 10 leaders in various phases of American life, discussing the immediate outlook for our country's future. Those on the program included United States Secretary of Labor Frances Perkins; Federal Security Administrator Paul V. McNutt; James Lawrence Fly, Chairman of the Federal Communications Commission; M. L. Wilson, Under Secretary of Agriculture; Frank P. Graves, New York State Commissioner of Education; W. G. Carey, president of the United States Chamber of Commerce; Eugene Meyer, publisher of the Washington Post; Dr. Walter B. Cannon, president of the American Association for the Advancement of Science; Brig. Gen. Frank M. Andrews, present Chief of Operations of the United States War Department; and Sam A. Lewisohn, noted patron of the fine arts. This program was one in the regular series of the American Forum of the Air, arranged and directed by Theodore Granik, nationally known radio and newspaper commentator. In tonight's special broadcast Mr. Granik was assisted by Alvin M. Josephy, Jr. Tickets to these broadcasts may be had by sending your request to Station WOR, New York, or WOL, Washington.

In the interest of education, there are printed and distributed, free of charge, a limited number of copies of the entire proceedings of these broadcasts.

Address your requests and comments to Mr. Granik, care of WOL. Stephen McCormick speaking.

This is the Mutual Broadcasting System.

### Landis Vindicates Bridges

#### EXTENSION OF REMARKS

OF

HON. J. PARNELL THOMAS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 10, 1940

EDITORIALS AND NEWS COMMENTS OF REPRESENTATIVE NEWSPAPERS

Mr. THOMAS of New Jersey. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following

editorials and news comments by representative newspapers of the United States on the report and recommendations of Dean James M. Landis to Secretary of Labor Perkins, concerning the deportation of Harry Bridges.

I respectfully urge my associates in the Congress to carefully read and consider these excerpts:

[From the Reno (Nev.) Gazette of December 30, 1939]

#### LANDIS VINDICATES BRIDGES

Harry Bridges whose violent career as a labor agitator and promoter of strikes on the west coast from which have resulted millions in losses to employees and employers as well as bloodshed and deaths, is not a Communist according to Prof. James M. Landis of Harvard University and so is not liable to deportation on that ground. Thus this Harvard teacher named by Secretary Frances Perkins to conduct the hearing into the deportation proceedings against Bridges paves the way for their dismissal.

Probably as Professor Landis finds, Mr. Bridges was not really a member of the Communist Party and did not agitate at meetings. However, testimony was submitted that he was a member and that he met with Communists in a party capacity. Landis, however, says these witnesses lied.

Also, still Landis finds that while "Bridges' aims are energetically radical . . . the proof fails to establish that the methods he seeks to employ . . . are other than those that the framework of democratic and constitutional government permits."

Thus also this distinguished professor, who holds a chair at Harvard and who was handpicked by Mme. Perkins to inquire into the methods and affiliations of her friend Mr. Bridges, finds that his violent and bloody course on the water front of California square perfectly with American conceptions of a constitutional and democratic government. This conclusion by Professor Landis demonstrates unmistakably where his sympathies lie. By his own words he is condemned as being anything but a fair and impartial examiner.

Thus the sweet and saintly Bridges is duly whitewashed by the examiner chosen by Mme. Perkins' Labor Department. He does not find that Bridges belonged to the Communist Party. That conclusion may be true. Perhaps he was while soliciting and welcoming its aid most careful not to join—and the specific charge against him was that he was one of its members—he consorted with Communists, adopted their methods, invited their support, behaved like one, and as an alien here by the sufferance of the American people outraged their hospitality by fomenting violence and flouted the laws. However, he has been given a New Deal bath. No doubt there is rejoicing in the Labor Department and in the White House. Professor Landis did his work well for those who selected him.

[From the San Francisco Examiner of December 30, 1939]

#### BRIDGES HAPPY TO LEARN RULING

Harry Bridges was eating his spaghetti course in a dark corner of a Broadway restaurant last night when he first received the report that he'll not be deported.

"Naturally," he said, "I am very happy to learn that after a fair hearing this constant charge of membership in the Communist Party has been cleared up; that Dean Landis has not recommended deportation from the country I happen to want to live in just as much as these luckily already here."

"I hope that now this 'red herring' has been worn out by its frequent dragging across the trail."

The restaurant telephone was deluged with calls for Bridges, but he refused to answer them, meanwhile carrying on an animated conversation with his dinner companions, Louis Goldblatt, Congress of Industrial Organizations executive; Mrs. Goldblatt; and Miss Eleanor Kahn.

Notified of the news at home, Mrs. Bridges said she was "happy" and "relieved." Their daughter Jacqueline was attending a movie. Mrs. Bridges said she knew Jacqueline would be greatly thrilled.

#### LANDIS LATER SHOWS LITTLE CREDENCE IN UNITED STATES EVIDENCE

Certain of the Government testimony in the Harry Bridges deportation case apparently was not given much credence by Trial Examiner James M. Landis. This was seen here by local observers in a close review of the letter of transmittal which accompanied Landis' finding to Secretary of Labor Perkins.

In Landis' phrase "painstaking and minute analysis of their testimony . . . which permits a fleeting doubt to be dismissed," observers saw that much of the testimony had gone out the window. There was considerable interest, however, in what Landis had reported on Bridges' "cooperation" with Communist members and party officials. This was not available last night.

Considerable evidence had been produced along that line, and Bridges himself has admitted receiving and welcoming support of the Communist Party in water-front strikes here.

Incidentally, it was learned here that Landis had made a number of visits to Washington for discussion before the final report was given.

[From the San Francisco Chronicle of December 30, 1939]

. . . The decision of Dean Landis was placed in the hands of Secretary of Labor Perkins yesterday. When she released it Secretary Perkins notified wire services throughout the country that

she would place the decision in their possession for release to the public in editions of Monday morning newspapers.

The Chronicle was one of the newspapers serviced by the news syndicates supplied with a copy of the decision. The Chronicle, possessed of the information, kept the confidence imposed upon it by the Department of Labor.

Another morning newspaper did not keep the confidence.

It appeared on the street with the ruling.

When it did so it violated the confidence imposed upon all ethical newspapers.

The information regarding the decision was in the possession of the Chronicle at the same time it was in the possession of the other morning newspaper but the Chronicle refused to do so much as to speculate about it until it had been formally released in accordance with the instructions given by Secretary Perkins.

When the other newspaper had printed what should have been held inviolate in its possession until its Monday morning editions the Chronicle could do nothing more than apprise its own readers of the facts.

In doing so the Chronicle notified those who had imposed the confidence of the position it was placed in. Permission was then given to "print the news."

[From the Oregonian, Portland, Oreg., of December 30, 1939]

#### CHARGES ALMOST IGNORED

The Bridges defense—operating on some \$28,000 contributed by C. I. O. and A. F. of L. unions, virtually ignored except by denial the Government's showing that Bridges had a party card and had a party name Rossi allegedly after San Francisco's bald conservative mayor. The showing stated no time or place of affiliation and was unsupported by documentary evidence. \* \* \* Defense attorneys Richard Gladstein and Aubrey Grossman, assisted by Carol King, of New York, made the defense mainly an effort to discredit Government witnesses and to show that the deportation arrest warrant issued in March 1938 was inspired by an employer-police conspiracy.

The conspiracy that was contended resorted to "improper methods" of obtaining affidavits and witnesses and placing them in the hands of a receptive Pacific Northwest immigration official. \* \* \*

[From the Christian Science Monitor of January 2, 1940]

#### RULING BY LANDIS FAILS TO CLOSE BRIDGES CASE

WASHINGTON, January 2.—Far from closing Harry Bridges' deportation case the finding of Dean James M. Landis of the Harvard Law School that the alien west coast labor organizer is radical but not a Communist tosses another controversial issue right into the lap of the returning Congress. It is already apparent that congressional opinion is not ready to accept without further questioning on its own part the conclusion that Harry Bridges is not liable to deportation under the law, and before the issue is finally disposed of there will be steps looking toward clarifying or tightening the deportation laws. \* \* \*

#### UP TO CONGRESS

Congress will be asked to provide that procedure early in the coming session. In the meantime there is already some questioning of the validity of the Bridges decision and Congress may make independent investigations before accepting the Landis finding.

The active role which Communists have played in industrial disputes on the Pacific coast is brought into focus in the trial examiner's voluminous record, and Dean Landis makes it clear that while in his judgment Mr. Bridges did not affiliate with the Communists the Communists affiliated with Mr. Bridges. "Communists were undoubtedly to be found in the membership or on the executive boards of one or more of these (Bridges') organizations," Dean Landis writes; that the general policies pursued had the support of these Communists and the officials of the Communist Party seems more than likely, for Communist policy tends to support, even agitate, for any industrial unrest.

[From the Chicago Tribune of January 2, 1940]

#### THE BRIDGES AFFAIR

James M. Landis, dean of the Harvard Law School, informs Secretary of Labor Perkins that the evidence does not permit a finding that Harry Bridges, alien C. I. O. Pacific-coast agitator, is affiliated with the Communists. Mr. Landis was appointed special Labor Department examiner to investigate the status of the Australian-born dictator of the Pacific-coast shipping and advise the court if he were subject to deportation because of his political ideas and activities. Mr. Landis heard a great many witnesses, some of whom said that Bridges was connected with the Communist Party, and (he) examined Bridges himself at length. Bridges denied that he was a Communist.

Active membership in the Communist Party is a matter of paying dues and being registered. Many of its sympathizers, followers, and supporters are not in this sense members of the party. They may shade even from the true "red" to "light pink." It might be difficult to determine legally that a person not a party member was a Communist unless he was willing to admit it. The party itself has revised its constitution to obtain legal immunity, and it pretends that no one advocating violent overthrow of Government is eligible to membership.

Mr. Landis commented on Bridges' views and said that they were energetically radical but that proof failed to establish that the methods he seeks to employ are hostile to democratic and constitutional government. For almost in any other country in the world the case of Bridges would have been a very simple one. He has dominated a turbulent labor scene on the west coast whose purpose was political, not economic, and it has done about as much damage to American shipping as could be done by a hostile fleet. Under his direction boats have been tied up to the docks, food shortages have been caused, and great property loss occasioned.

An alien would not have been permitted to create such disorder in another country. The foreigner would have been sent away as an undesirable alien. An alien resides in these other countries by the tolerance of the government, and if for gross and even trivial reasons his behavior is found objectionable out he goes. Bridges has been in this country over a period of years and that has not changed his status, and he is not a citizen. American hospitality has stretched a long way when it must protect an alien who undertakes to conduct a civil war against America.

Mrs. Perkins has sheltered and stopped the attempts of the immigration officers on the west coast to deport him. It will be the general opinion that Mr. Landis was selected as the Department's examiner because he was a man who would make a plausible finding upon which Mrs. Perkins could carry out her determination to give Government encouragement to a man who has acted with the most destructive communistic principles and practices with or without membership in that party.

The administration has of late professed to be shocked by the brutalities of the Stalinites in Russia. It shows no signs of being shocked by the activities of the Communists in the United States. It pretends to be anti-Communist in the conflict abroad but it is still pro-Communist in America. Not only the sympathies but the ideas of the new dealers run in the same groove with these "reds." That is why Harry Bridges is able to remain in this country and make war on it.

The Washington Post of December 31, 1939, in reporting on the decision of Dean James M. Landis in its news column, says:

"The trial examiner rejected the testimony of most of the 31 witnesses who appeared against Bridges.

"These included American Legion leaders, city and State police, and numerous others, who said they had seen Bridges at meetings restricted to Communist Party members, had heard him tell of his membership, and testified that Bridges used a party name 'Rossi,' allegedly after San Francisco's conservative mayor.

"Landis described one witness as a 'self-confessed liar.' One he said was 'neither a candid nor a forthright witness.' Of another's testimony he declared, 'in evasion, qualification, and contradiction, it is almost unique.' Commenting on witness-stand story of a police officer, he added, 'The conclusion is inescapable that his testimony is far from reliable.' \* \* \*

"Among the principal witnesses for the Government were Maj. Laurence A. Milner, Portland, Oreg., a National Guard officer; John L. Leech, a Los Angeles painter; Harper Knowles, who headed the California American Legion's radical research committee; and Capt. John J. Keegan, of the Portland (Oreg.) police department. \* \* \*

"The trial examiner made clear that he gave great weight, when reaching his decision, to Bridges' own statement of his political beliefs.

"It was given not only without reserve," the statement said, "but vigorously as dogma and faiths of which the man was proud and which represented in his mind the aims of his existence."

"It was a fighting apologia that refused to temper itself to the winds of caution. It was an avowal of sympathy with many of the objectives that the Communist Party at times has embraced, an expression of disbelief that the methods they wished to employ were as revolutionary as they generally seem, but it was unequivocal in its distrust of tactics other than those that are generally included within the concepts of democratic methods."

The New York Herald Tribune on January 1, 1940, commenting editorially on the report of Dean James M. Landis to Secretary of Labor Perkins concerning the deportation of Harry Bridges, said:

"It is a verdict which, considering its author, must be accepted as the product of a splendid legal scholarship and conscience. Nevertheless, it is disappointing. In the first place, if an alien like Bridges, notoriously allied with Communists, if not one of them, can thus escape being considered in the Communist category, even an approach to enforcement of the deportation law becomes something of a joke. In the second place, what most of us hoped for from the hearing has not been forthcoming, and that is a settlement of the question whether the Communist Party is a subversive organization in the definition of the statute.

"Dean Landis, no doubt with full propriety, has avoided this question, as did the Supreme Court in turning Strecker loose. He does note that Federal courts in the past have assumed the subversive character of the party and acted accordingly in deportation proceedings, but he suggests that the assumption needs review 'in the light of changing economic and political conditions.' Then, since he finds that Bridges is not a Communist, he dismisses the subject as irrelevant and leaves the public and the Communist Party, for that matter, groping in the dark. This is a pity, for the very obvious reason that in the absence of an authoritative appraisal of Communist aims and advocacy the country must remain the prey of a controversy already prolific of prodigious name calling and bitterness."

## John Black's Body

## EXTENSION OF REMARKS

OF

HON. WILLIAM P. LAMBERTSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 11, 1940

ARTICLE BY ZULA BENNINGTON GREENE

Mr. LAMBERTSON. Mr. Speaker, under leave to extend my remarks, I want to place in the RECORD the comment on the book, John Black, as made by Zula Bennington Greene, of Topeka, Kans., one of the leading columnists of my State:

JOHN BLACK'S BODY  
(By Zula Bennington Greene)

In common with other parents I have fussed and fumed and complained that children take more pleasure in the colored comic books than in proper orthodox printed stories. We parents get together, cluck and shake our heads, and tell each other self-righteously that our children's taste in literature is only another sign of the mental inertia and decadence of the times.

But all we have ever proved is that we are ourselves old-fashioned. This is the picture age, on screen, in textbook, story-book, newspaper, and magazine, and the young are availing themselves of its opportunities.

Never again shall I be critical of the pictured story, not since I have seen John Black's Body, a book of 48 pictures and 403 words by Ben Martin, that can be read in 3 minutes, but which says more than a hundred solemn, long-winded, trite essays on the futility of war.

The pictures, done in bold economical strokes in black and white, are deliciously ironic. They hit you between the eyes with their sweeping satire and impudent caricature—the rotund businessman, the droopy-jowled college professor, the minister in his lace-trimmed pinafore vestments, the scowling general, and meek little John Black himself.

The book is about John Black's body, in which is tied up a lot of money for various miscellany from toothpaste to tonsillectomies. John got an education, but couldn't get a job.

The businessman, the college professors, the ministers didn't know what to do, but the politician did. He started a "nice little war."

It's a fine, patriotic war for democracy and civilization, of course. Stocks are going up, the 4-minute men are having a peck of fun. Everybody cheers. That is, everybody but John Black. You see, he had to fight the war and he is too cold and hungry and scared and tired and lousy to cheer.

A shell whizzes down and they pick up John Black's body in a bucket, and bury him under a 98-cent cross with his name spelled wrong.

Later the politicians and businessmen and ministers lay a pretty wreath on his grave and make nice speeches about his sacrifices for democracy, and everybody else "spends the rest of his life working to pay back" the \$1,244,151.16 invested in John Black's body.

Here I have written no telling how many words and still haven't told you nearly as much as the 48 drawings and 403 words do. I guess I'll have to learn to make pictures.

## Americanism

## EXTENSION OF REMARKS

OF

HON. SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 11, 1940

ARTICLE BY THE RIGHT REVEREND JAMES E. FREEMAN,  
D. D., LL. D.

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herein a timely and most inspiring definition of the term "Americanism" by the Right Reverend James E. Freeman, D. D., LL. D., bishop of Washington:

## AMERICANISM

Americanism is complete and unequalled loyalty to the ideals of government set forth in the Bill of Rights, the Declaration of Inde-

pendence, and the Constitution of the United States. It is respect for and ready obedience to duly constituted authority and the laws of the land. It is freedom without license, religion without bigotry, respect for all nations without entangling alliances, Christian charity without bias or race hatred, love of flag and a readiness to defend that for which it stands against every alien and subversive influence from without or within. This, I believe, is Americanism.

## Reciprocal-Trade Agreements

## EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Friday, January 12, 1940

STATEMENT BY HON. CORDELL HULL, SECRETARY OF STATE

Mr. RANKIN. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I am inserting a statement made by Hon. Cordell Hull, Secretary of State, before the Committee on Ways and Means of the House of Representatives on yesterday.

Secretary Hull is one of the outstanding leaders of the world today and is probably doing more to restore the trade, as well as the peace, of the world than all the other great premiers combined.

I hope every Member of the House will take the time to read this statement, for it is one of the most convincing arguments yet to be found on this subject.

The matter referred to follows:

Mr. Chairman, members of the committee, it is always a pleasure for me to appear before the Ways and Means Committee, of which I was myself a member for 18 years. I particularly appreciate the opportunity thus afforded me to discuss with my old friends on the committee and with its newer members important problems of economic policy, the successful solution of which is essential in promoting the welfare of our Nation and the well-being of our people.

Outstanding among these problems is that of foreign trade and of its essential relationship both to our domestic prosperity and to world peace. This is something with which we are all deeply concerned. This is something which requires the best cooperative and foresighted efforts of both the legislative and the executive branches of the Government, if the interests of our people are to be properly served. In a matter which is so vital to the Nation, political considerations and partisanship should have no place.

I

In 1934 our Nation embarked upon the reciprocal trade agreements program as an emergency means of meeting grave emergency conditions. In inaugurating that program the Congress and the Executive were grappling with the pressing needs and deplorable conditions, here and abroad, with which the Nation was confronted.

Our country and the world were still facing the difficulties and distress resulting from the worst economic depression of modern times. That great disaster had resulted from many causes, chief among which were the economic policies pursued by the nations of the world, including our own, since the end of the World War.

The 4-year war had taken a frightful toll of suffering and destruction. It had left in its wake profound maladjustments and dislocations. Post-war reconstruction required the fullest possible utilization of the natural resources of the world and of the marvelous achievements of science and technology for the purpose of repairing the ravages of the war and of laying the foundations of economic progress and stable peace. This could have been accomplished only through vigorous and mutually advantageous trade among nations, the only practicable method of bringing within the reach of all nations the advantages of natural resources and of human skills, so unevenly distributed over the face of the earth. Instead, the nations of the world, including our own, entered upon the road of narrow economic nationalism. They built up a constantly extending network of disruptive trade restrictions and, in this manner, piled new and even more painful dislocations upon the profound maladjustments produced by the war.

## Precarious structure bound to collapse

For a time the true nature of the situation was obscured by the reckless international borrowing and lending which characterized the first decade after the war. But the unhealthy structure, built on these precarious foundations, was bound to collapse sooner or later and to spread ruin to all phases of economic life everywhere.

The signs of approaching disaster were plainly visible for some time before the collapse actually came at the end of the twenties. In the face of this terrifying prospect, and even after the calamity

was already upon us, the statesmen of the world, including our own, made the fatal blunder of resorting to the very thing that lay at the root of the disaster—a still more exaggerated protectionism. Trade barriers of every kind, old and new, multiplied. Unsalable surpluses became dammed up everywhere. Combined with other factors, the drastic decline of international trade in both volume and value caused the great depression to spread in extent and intensity, with results in terms of widespread human suffering and sacrifice that none of us can ever forget.

Contrary to all theories of autarchy and economic self-containment, the fact is that the domestic prosperity of every country is tied in with the condition of its foreign trade. A collapse of foreign markets inevitably brings with it disorganization and disruption of the domestic economy, as we discovered to our sorrow in the period following the enactment of the Hawley-Smoot tariff. In this country the ill effects of the collapse of export outlets for the great surplus-producing branches of both agriculture and industry rapidly permeated all branches of our economic life. Even those very industries which thought they were saving themselves by means of embargo tariffs soon discovered that, instead, they merely helped to ruin their own markets right here in the United States.

In those tragic days, when the avalanche of economic dislocations threatened to plunge into chaos our entire economic life, vigorous and bold action was desperately needed in a number of directions. Many measures of a purely domestic character had to be taken to restore employment, to rebuild prices and values, to return to solvency our farms, our factories, our banks, our means of transportation, and all the other phases of our national life. But it was also clear that the hope of attaining full and stable prosperity was utterly futile unless we could at the same time restore our shriveled foreign commerce. At the bottom of the depression our foreign trade—exports and imports combined—amounted to less than \$3,000,000,000 a year as compared with the predepression level of more than nine billions. Billions of dollars of lost business activity had to be regained if recovery was to be attained and economic progress resumed.

## II

The disruption of international trade, which brought on the collapse of our domestic economy as well, resulted primarily from the rise of excessive and unreasonable trade barriers. These were of two types: First, higher tariffs, embargoes, quotas, import licenses, exchange controls, and numerous other devices for preventing imports from abroad; and, second, various types of discrimination, which caused a diversion of much of what remained of international commerce into unnatural and abnormal channels. Our exports had suffered heavily from both of these types of trade obstructions. Our sales abroad fell from five and two-tenths billion dollars in 1929 to one and six-tenths billions in 1932. The exports of other countries to us had suffered heavily from the excess of our protectionism. Our foreign trade could be restored only through a reduction of these excessive barriers here and abroad.

To accomplish this end, three courses of action were open to us: (1) We could attempt to secure agreement among a large number of nations for a reduction of trade barriers; (2) we could lower our own tariff in the hope that other countries would do likewise; or (3) we could negotiate mutually beneficial trade agreements with individual countries, based upon a reciprocal reduction of excessive trade barriers.

The first of these methods, under the conditions which prevailed, was impracticable. The second held no certainty of effectiveness, since it offered no assurance that other countries would also move in the direction of reducing trade barriers or trade discrimination. The third was the only practicable method of securing these results. It was the method we adopted, the method embodied in the trade-agreements program.

The action of the Seventy-third Congress in enacting the trade-agreements program was based on the following line of reasoning: Exports and imports are interdependent; nations cannot sell without buying. The promotion of our exports cannot be divorced from the treatment we accord to our imports, and vice versa. To induce other nations to mitigate their excessive obstructions to our exports we must, of necessity, stand ready to adjust our own excessive trade restrictions. In a world caught in a net of complex and complicated trade barriers, in a world in which other governments possess means of swift action for dealing with these restrictions, it was obviously necessary for the legislative and the executive branches of our Government likewise to cooperate in order to provide the means of dealing with the emergency.

These basic ideas were translated into the Trade Agreements Act. By empowering the Executive to proclaim modifications of tariff rates and of other methods of regulating imports through the negotiation of Executive agreements which provide for improved treatment of our exports by other countries, the Congress recognized the necessity for an emergency agency to deal with a grave emergency condition and created an instrumentality of swift and effective action on our part for the promotion of our foreign trade admirably suited to the special needs of a disturbed world. In doing this the Congress carefully defined the policy, the methods, and the limitations of the reciprocal trade agreements program and then entrusted to the Executive the duty and responsibility of administering and carrying into effect the provisions of the Trade Agreements Act. These instructions of the Congress were so faithfully carried out and subsequent events so fully vindicated the eminently practical and constructive nature of this method of solving a pressing and difficult problem that the Seventy-fifth Congress

in 1937 extended this authority and responsibility for another 3-year period.

We are now approaching the end of this second period. Your committee begins today the consideration of the next step. That next step should, obviously, be examined in the light of past experience, as well as of the outlook for the future. I should like, if I may, to place before you my thoughts with regard to both of these aspects of the problem.

## III

The trade-agreements program was enacted for the express purpose of expanding our exports through the reduction of trade barriers in other countries. I submit that it has done so.

We have concluded 22 reciprocal-trade agreements. The countries with which agreements are now in effect represent about 60 percent of our total foreign trade. In these agreements valuable concessions have been obtained for literally hundreds of our agricultural and nonagricultural products. Important foreign markets have been kept open or expanded for our producers of cotton, wheat, corn, hog products, fruits, vegetables, tobacco, lumber, iron and steel semimanufactures, automobiles and trucks, electrical apparatus, machinery of various types, rubber products, textiles, chemicals, paints, hides and leather products, and a host of American specialties.

In the face of grave hindrances growing out of fears of war and preparations for war, the operation of the reciprocal trade agreements program had the effect of inducing many important nations to halt their runaway races in the erection of excessive economic barriers to trade and gradually to move in the opposite direction, while still other nations were induced to slow down their efforts to attain economic self-containment. Furthermore, the program was an important factor in bringing about a development of closer general relationships with and among many nations while it was making its important contribution to income and employment in the United States.

In considering the actual trade results of the program, let me emphasize this fundamental fact: When we secure a reduction of obstructive trade barriers, as we have done in hundreds of instances, we make it easier for our trade to flow. This self-evident fact is studiously ignored by many persons who are constantly seeking to confuse and mislead the public.

Taking the average figures for the years 1934 and 1935 and similar figures for the years 1937 and 1938, we find that our exports to all foreign countries increased by \$1,000,000,000, or 46 percent. This increase was obviously caused by several factors, but the role played in it by the trade-agreements program is suggested by the following figures: Our exports to trade-agreement countries rose, during this period, by 61 percent, while our exports to nonagreement countries increased by only 38 percent.

The effectiveness of the trade-agreements program as an agency for expanding our exports may be measured in another way. The countries with which we have concluded trade agreements have generally increased their purchases of American products more than they have increased their purchases of the products of other countries. For example, in the years 1936-38, the period of the operation of our first trade agreement with Canada, that country's imports from the United States were 42 percent greater than in 1934-35, while its imports from other countries than the United States increased by only 22 percent.

These substantial and welcome increases in our exports resulted, in large measure, from the mitigation of the other countries' trade barriers, to which I have already referred. They were also the result of an undertaking on the part of some countries, which had previously discriminated against our goods, to accord our products nondiscriminatory treatment under the operation of the most-favored-nation principle in its unconditional form, better known as the principle of equality of treatment.

The application of that principle is the only effective means of insuring for our producers a position of equality of treatment in foreign markets. In trade agreements which they conclude with us the other countries agree to extend to our products, immediately and automatically, concessions granted to third countries. The most-favored-nation clause, inscribed in our agreements, is thus an invaluable insurance policy for our exporters against one of the most injurious obstructions to trade—discrimination in favor of their competitors in other supplying countries.

Under modern trading conditions, when the producers of many countries usually compete in the same markets, such assurance of nondiscriminatory treatment is obviously of the greatest importance to our exporters. This fact has long been recognized in our country, as well as the obvious fact that we cannot secure this type of treatment abroad unless we are prepared to extend it to other countries.

It was because of this that in 1923 President Harding and Secretary of State Hughes formally incorporated the principle of equal treatment, or most-favored-nation policy in its unconditional form, into the structure of our commercial relations with other nations. Since then numerous commercial treaties embodying this principle were negotiated and were approved by the Senate. It was for precisely the same reason that the principle was retained in the Trade Agreements Act and has been applied in connection with the trade-agreements program.

Congress has repeatedly insisted that we demand unconditional equality of treatment from all other countries, empowering the Executive, if necessary, to impose penalty duties on the goods of countries refusing to accord us equality. I cite as typical instances

of this the provisions of the Payne-Aldrich bill, section 317 of the Tariff Act of 1922, passed in the Harding administration, and section 338 of the Tariff Act of 1930, passed in the Hoover administration. Of necessity, if our Government is to insist on equal treatment, it must be prepared to accord it to others. That is all that there is to the generalization of concessions under the most-favored-nation policy in its unconditional form, which, as stated, is simply the principle of equality.

When we extend to other countries which do not discriminate against our goods the benefit of concessions granted in individual trade agreements, we thereby insure equality of treatment for our exports over an area far larger than that covered by the trade agreements themselves. This is not a case of giving away something for nothing. So far we have safeguarded in this manner a volume of exports several times greater than the value of trade on which we have granted generalization of concessions to non-agreement countries. The policy of equal treatment is not only an indispensable means of defending our trade against the blight of discriminatory practices in other countries, but one of the most powerful instruments for placing international trade relations upon a basis of fair dealing and friendliness, without which commerce cannot prosper.

## IV

By enacting the trade-agreements program, the Congress authorized limited adjustments of our tariff rates as a means of promoting our foreign trade through securing similar adjustments of excessive trade barriers in other countries. It was obviously the intent of the Congress that, in the process of negotiating trade agreements, our own domestic producers should be helped rather than hurt. I submit that, in carrying out the program, the executive branch of the Government has willingly and scrupulously complied with this intent of the Congress.

We have reduced duties only in those cases in which, after a most careful examination of all relevant factors, it was found that existing duties were unnecessarily and unduly burdensome, and we have done so only in those cases in which other countries have agreed to accord better treatment to our exports in return for tariff adjustments on our part. We have reduced duties only to the extent to which, after an equally careful examination, it was found that such adjustments would not be prejudicial to any established branch of production in agriculture, in mining, or in manufacturing industry. Where necessary, as an additional safeguard, we have limited the amount of imports which would be permitted to come in at the reduced rate of duty.

In adjusting tariff rates we have kept well within the limits prescribed by the Congress. We have gone about the matter as objectively and as scientifically as possible, always keeping in mind both the position of the particular branches of production affected and the interests of the Nation as a whole.

No evidence of serious injury has been adduced in the assertions and allegations which have been put forward by the opponents and critics of the trade-agreements program. Naturally, in some individual cases, producers have had to make adjustments to the new rates. Generally speaking, because of the moderate, painstakingly considered, and carefully safeguarded nature of the duty reduction made in the trade agreements, such adjustments have not occasioned serious difficulty. They have been helped by the general improvement of domestic conditions and expansion of domestic markets, resulting in part from the increase of our exports.

In an overwhelming number of cases allegations of injury in connection with each of the agreements we have negotiated have been made before the particular agreement was concluded—at a time when no one, not even those who were engaged in the negotiations, knew whether the duty on a particular commodity would be reduced; and if reduced, to what extent. Frequently allegations of injury are made with respect to commodities on which existing duties have not been reduced, or with respect to commodities which were left on the free list even by the authors of the Hawley-Smoot tariff. In my entire experience I do not recall a more flagrant and unscrupulous suppression and misuse of material facts on an issue which is of vital significance to every citizen, every home, every farm, and every factory.

The loudest assertions of injury have been made in connection with agriculture. What are the facts?

Farmers, as all other producers, reckon their well-being basically in terms of the income which they receive. By the end of 1932, after 2½ years of Hawley-Smoot tariff embargoes, farm cash income had declined from 11.2 billion dollars to 4.7 billion dollars. By 1938, after 4 years of the trade-agreements program, it had risen to 7.6 billions, excluding benefit payments. Does this indicate injury?

The most reckless claims have been made in connection with the cattle and the dairy industries. The income of the cattle industry, which had fallen from \$1,495,000,000 in 1929 to \$621,000,000 in 1932, rose to \$1,144,000,000 in 1938. The income of the dairy industry, which had fallen from \$1,844,000,000 in 1929 to \$991,000,000 in 1932, rose to \$1,398,000,000 in 1938. Does this indicate ruin?

It is sometimes asserted that such increases in income do not take into account the devaluation of the dollar. But changes in the purchasing power of the dollar are, of course, measured by prices. Making due allowance for price changes, the farm income in 1938 represented at least 40 percent more purchasing power than did the farm income in 1932.

I do not claim that the recovery of farm income or the rise of the national income in general from forty billions in 1932 to sixty-four

billions in 1938 and sixty-eight and five-tenths billions in 1939 was wholly attributable to improvement in our foreign trade which has occurred under the trade-agreements program; numerous influences combined to bring this about. But I do maintain that the increase of our exports has been a factor of great importance in this connection, just as the catastrophic decline of trade under the Hawley-Smoot tariff had unquestionably contributed powerfully to the general economic collapse of the early thirties.

Some light is shed on the present situation by the fact that many of those who are now insisting upon advising American agriculture in opposition to the reciprocal-trade policy, which has demonstrated its benefits to agriculture, were among the identical persons who advised the farmers in 1930 that the Smoot-Hawley Act would bring them permanent prosperity, whereas under such advice the farmers of this Nation were piloted straight into unprecedented bankruptcy. I dare say that the farmers will think twice before accepting a second time such reckless advice, supported by still more reckless statistics.

## V

The reason why no evidence of material injury to our farmers or to any other group of producers, resulting from the operation of the trade-agreements program, can be adduced is that no such injury has, in fact, occurred.

During the period of operation of the trade-agreements program, increases have occurred in both our exports and our imports. Taking the average figures for the years 1934 and 1935 and the years 1937 and 1938, we find that while our exports rose by \$1,000,000,000, our imports increased by six hundred and seventy-one millions. In 1937 and 1938 the excess of exports over imports averaged \$700,000,000. In 1939 the picture has been approximately the same.

The trade-agreements program has expanded markets at home and abroad for all groups of producers. This result has been due primarily to the method employed in carrying out the program.

I am sure that I do not need to describe that method in detail. It has been in operation for 5½ years. Its results are embodied in the reciprocal-trade agreements negotiated to date. Let me recall to your minds its main features.

An interdepartmental organization, consisting of experienced and well-informed practical experts of the Departments of State, Agriculture, Treasury, and Commerce, and of the Tariff Commission handles the preparation and negotiation of the trade agreements. All interested parties are given ample opportunity to present their views, orally or in writing, with respect to every phase of the program. No decision is reached with regard to action on any particular customs duty without an extended and profound study of all pertinent data, both those assembled by the interdepartmental organization itself and those presented to the organization by the interested parties—the producers, the consumers, and the merchandizers of the commodity involved, and anyone else who feels that he or she has an interest in the proceedings. The results are reviewed by the responsible heads of the departments of Government participating in the work and, finally, by the President.

The work of the interdepartmental organization in connection with a particular agreement does not cease with the proclamation of the agreement. The operation of the agreement is under constant review in every phase. The interdepartmental organization is always ready to receive representations from the interested parties regarding any aspect of the agreement. It is prepared to act whenever new circumstances warrant.

I invite any person to show a single instance of general tariff readjustment either upward or downward, in the entire fiscal history of the Nation, wherein there has been exercised as much impartiality, care, and accuracy as to facts as has uniformly characterized the negotiation of our 22 trade agreements—or any more solicitude for the welfare of agriculture, labor, business, and the population of the country in its entirety.

The method under which we have been negotiating trade agreements is democratic in every sense of the word. It is a method under which no interested party is denied a full hearing and under which all representations are given the most careful study. It is a method under which the immensely difficult and complex task of promoting general prosperity through stimulation of foreign trade without material injury to any domestic producers—a technical task which can be performed only by impartial and qualified experts—is handled by such experts, within definite limitations laid down by the Congress. It is a method under which the Congress reserves its basic prerogatives, while putting into operation temporarily the most effective means that can be devised to meet a grave emergency situation through cooperation of the legislative and executive branches of the Government. The powers given to the Executive are strictly limited in both scope and duration. I am glad at this time to report on the manner in which we, who have been entrusted by the Congress with a difficult and responsible task, have sought to perform it.

## VI

I should now like to turn to another aspect of the problem. There are some who claim that we have gone too far in tariff adjustment in our efforts to expand trade. There are others who think that we have not gone far enough. To all such critics I would say that they have failed to take into consideration all the various and complicated aspects of the problem. There is nothing paradoxical in my statement that the duty adjustments we have made have not been such as to prejudice the interests of our domestic producers and yet have been sufficiently attractive to other countries to enable them to grant us valuable concessions for

our exports. Many of the commodities with respect to which duty adjustments have been made are of a type of which we do not produce quantities sufficient for our needs, notwithstanding that we have long imposed extremely high tariffs on most of them. Again, many imported commodities are so different in grade, quality, price, or marketing season from commodities produced in this country that reasonable reductions of existing duties on them help foreign producers and benefit our consumers without hurting our producers. All of these imports, while being useful and beneficial to our people, provide our foreign customers with the means of paying for our burdensome surpluses.

This situation is frequently confused by the use of misleading slogans designed to deceive us into a disastrous policy of complete embargoes which would destroy both our foreign and our domestic markets. The size of the American market depends upon the Nation's purchasing power, which, in turn, depends upon the volume of business activity—that is to say, farm production, factory production, employment, and all the other factors which create the Nation's purchasing power. There is a direct and unmistakable connection between business activity and the volume of exports. Our cotton belt, our tobacco belt, our wheat belt, our corn-hog industry, our fruit and vegetable growers, our lumber producers, our machine manufacturers, and many other branches of our production cannot prosper unless they have adequate foreign markets for their surplus output. Deprive them of such markets and their purchasing power shrinks and with it the whole Nation's purchasing power declines.

Let me cite again the cases of dairy products and of cattle. The dairy industry supplies over 99 percent of the domestic market. The cattle industry supplies from 95 to 98 percent of the domestic market. Under a system of complete embargoes, these two industries would have 100 percent of the home market, but it would be a vastly reduced market, disorganized and shrunken as a result of the destruction of purchasing power in the hands of the exporting industries and the consequent curtailment of the Nation's purchasing power.

Under a system of complete embargoes, we would take out of cultivation four times as many acres as we could put into cultivation by attempting to produce the agricultural commodities we now import. That, as Secretary Wallace once said, would be like trading dollars for quarters.

To be sure, there would be no sense at all in our going to the other extreme and throwing our domestic market open to foreign competition without any regard to the effects of such action upon our domestic producers. There is a middle ground between these two extremes. There is a way of clearing the underbrush of excessive protectionism and, in the process, stimulating rather than impairing the healthy growth of our national economic activity for the good of all of its parts.

That is the crux of our effort. It requires caution and infinite care. Our task is to correct the errors of the past without producing new dislocations. Our aim is to pave the way for expansion and progress, not to tear down what must be preserved if expansion and progress are to be made possible.

VII

It is necessarily a slow process. In a world headed steadily in the direction of narrow nationalism, with all its attendant disasters for the well-being of our country and of all countries, we have taken a position of leadership in an effort to reverse this fatal trend. Our work has borne tangible fruit during the 5½ years of the operation of the trade-agreements program. But the stupendous task involved was only partly completed when a widespread war again broke out. That calamity has imposed upon us new tasks and new responsibilities.

While hostilities are in progress it is necessary for us to defend our export trade from the inroads of wartime controls and dislocations. For this purpose the trade agreements now in effect are of inestimable value. The scope for going forward with the program during the war is naturally restricted. But the need for facilitating trade and for keeping alive the principles which underlie the trade-agreements program is of crucial importance. For our actions now will have an enormous influence upon the problems of economic reconstruction when hostilities have ceased.

The experience of the two decades which elapsed between the end of the World War and the outbreak of a new war in Europe has brought out in sharp relief the validity of two basic propositions. The first of these is that our Nation, and every nation, can enjoy sustained prosperity only in a world which is at peace. The second is that a peaceful world is possible only when there exists for it a solid economic foundation, an indispensable part of which is active and mutually beneficial trade among the nations. The creation of such a foundation is the second of the two primary objectives of the trade-agreements program, which seeks the advancement of our domestic prosperity and the promotion of world peace.

The establishment of sound international trade relations will be an essential problem of post-war reconstruction. What role will our country play in this process?

In the years following the World War we led the procession of destructive protectionism. Are we to play this same role again?

That would be the case if we were now to abandon the trade-agreements program. For it would be the equivalent of destroying the only policy which stood in the recent past and can stand in the immediate future as a bulwark against a complete reversion to policies under which the channels of trade will become more and more blocked and the nations of the world will continue their disastrous march toward increasing economic nationalism, regimentation, eco-

nomic distress, the dole on an ever-growing scale, social instability, and recurrent warfare. Under such conditions there can be no enduring peace and no sustained prosperity for our Nation.

The trade-agreements program has served us well during a period of national emergency. It has enabled us to expand our foreign trade without introducing far-reaching governmental controls, such as have been employed in many other countries.

The world needs today and will need increasingly tomorrow the surplus production of our agriculture and industry, just as our farmers and our workmen and our businessmen need foreign markets for the maintenance of their prosperity. The choice before us is whether we shall throw away these precious opportunities by abandoning the trade-agreements program or whether we shall keep ready for use, whenever possible, the necessary means of prompt and effective action provided by the program. The choice before us is whether we shall lead the way toward the slough of despair and ruin for ourselves and for others, or toward the heights of economic progress, sustained prosperity, and enduring peace for our Nation and for the world.

VIII

Before I finish I should like to say this: If there were any suspicion in my mind that the trade-agreements program hurts rather than benefits our people, I would be the first to abandon it. I have searched diligently and painstakingly the mass of evidence on all phases of this vital question, and I am firmly convinced that it proves overwhelmingly the beneficial nature of the trade-agreements program and points unmistakably to the dangers inherent in an abandonment or weakening of that program.

I have sought to place before you some of this evidence. My associates in the Department of State and the representatives of the other departments and agencies participating in the trade-agreements work are ready to supply you with any further information you may desire.

## Veterans' Benefits

### EXTENSION OF REMARKS

OF

HON. GEORGE M. GRANT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Friday, January 12, 1940

ARTICLE BY HON. JOHN E. RANKIN, OF MISSISSIPPI

Mr. GRANT of Alabama. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by the gentleman from Mississippi [Mr. RANKIN], which appeared in the Alabama Legionnaire:

[From the Alabama Legionnaire]

REPRESENTATIVE RANKIN WILL LEAD VETS' FIGHT BEFORE CONGRESS—  
BENEFITS NOT TO BE CUT FOR NATIONAL DEFENSE

(By JOHN E. RANKIN, of Mississippi, chairman, Committee on World War Veterans' Legislation)

It is being suggested in various quarters that veterans' benefits be reduced at the present session of Congress in order to meet the expense of strengthening our national defenses, or raising money to finance the war in case we should get into the present European conflict.

This is the same old argument that has usually been advanced by the enemies of veterans' benefits, who, as a rule, have opposed taxing the profiteers who got rich out of the last war.

In the first place, it is not necessary for us to get into these European wars. They are not our wars, and we should keep out of them by all means.

But if we should get into one of them, we should not tax the disabled veterans to pay for it.

As chairman of the Committee on World War Veterans' Legislation, I want to serve notice now that we are not going to penalize the disabled veterans and their widows and orphans in order to protect the fortunes of these war profiteers, or of those multimillionaires who got rich out of the World War.

If we should go to war, we should see to it that all profits are taken out of the sale of munitions, as well as out of the usury charges of the money changers. Then we should go back and tax the profits of the last war to the same extent.

In that way we could raise money to finance the war and at the same time stop these selfish interests from continuously trying to drag us into another one. They are beginning to realize that the service men in the House and Senate are not going to let them get away with their blood money again; and for that reason the propaganda in favor of our going into another European war is dying out.

The service men are being heard from. Another reason for their starting this barrage was to kill off proposed legislation for compensating widows and orphans of World War veterans. These selfish interests pretend that the passage of such a measure would impose

an enormous burden upon the Federal Treasury. As a matter of fact, it probably would not cost any more to compensate those widows and orphans through the Veterans' Administration than it would to employ them through the W. P. A. or to place them on relief, and it would not take half as much to administer it.

Besides, the widows and orphans of men who offered their lives in defense of their country in times of war should not be compelled to go on relief; and I, for one, do not propose to sit idly by and see them forced onto the relief roll or compelled to beg their bread from door to door so long as we have the swollen fortunes of those war profiteers practically untaxed and entirely undiminished.

Besides, the money that is paid out to the disabled veterans and their widows and orphans is the most equitably distributed of any funds spent by the Federal Government and does the most good for the amount of it.

It all goes to Americans, and it does not discriminate against the farmers and other independent laborers.

#### FARMERS LEFT OUT

Social security entirely leaves out the farmers, except that he has to help pay for it in added prices of the articles he buys.

The old-age pension violently discriminates against the old people in the agricultural States, because the people of those States, who are penalized with exorbitant freight rates, burdened with tariff charges, loaded down with interest rates, and forced to sell their produce in an open market in competition with the poorly paid laborers of every other nation on earth, see their old people turned aside with a small pittance of \$6, \$8 or \$10 a month, while in the rich industrial and commercial States the old people are paid the full amount, the Federal Government paying half of it and these farmers being compelled to pay their part of that half in indirect taxes.

The Federal wage-and-hour law fixes a minimum wage of something like 32 cents an hour for industrial workers, while the average farmer works for about 10 cents an hour, or less.

The Social Security guarantees protection to the industrial worker when he becomes old or disabled, but the farmer is invariably turned aside to eke out a miserable existence on \$6, \$8, or \$10 a month old-age pension—if he gets that.

No such discriminations are found in veterans' legislation. The veteran in the back alleys of our congested cities, or in the remotest cabin on the most isolated farm, is treated just the same as if he lived on Fifth Avenue or came from the blue bloods in other sections of the country. His widow and orphans are treated with the same degree of equality, and are not shoved aside by the alien hordes who have poured in upon our shores in recent years in violation of our immigration laws.

These veterans' benefits are equitably distributed to every nook and corner of the United States, and, as I said, do more good for the amount involved than any other fund paid out by the Federal Government. And instead of stimulating resistance to constituted authority and antagonism to our form of government, or disloyalty to American institutions, they are encouraging and perpetuating American patriotism by letting the world know that this great country of ours does not neglect the man who bared his breast to the enemy in time of war, or compel his widow and orphans to seek the cover of the poorhouse or beg their bread from door to door when he is gone.

If anyone else raises the question as to whether or not we are going to reduce veterans' benefits in order to balance the Budget or raise funds to fight another war, they should be told that the answer is most emphatically no.

We are not going to balance the Budget on the disabled veterans.

### Apportionment of Representatives in Congress

#### EXTENSION OF REMARKS

OF

HON. MATTHEW A. DUNN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, January 12, 1940

#### LETTER FROM THE PRESIDENT

Mr. DUNN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from the President of the United States:

THE WHITE HOUSE,  
Washington, January 4, 1940.

MY DEAR MR. CHAIRMAN: I desire to call your attention to the bill (S. 2505) entitled "An act to amend an act to provide for the fifteenth and subsequent decennial censuses, and to provide for apportionment of Representatives in Congress, approved June 18, 1929, so as to change the date of subsequent apportionments."

This bill has passed the Senate and is now pending before your committee. It proposes a suitable amendment to those provisions of the Census Act which relate to apportionment of the number of Representatives as between the several States. The necessity of legislation on the subject arises because of the change in the date of the opening of regular sessions of the Congress, brought about by the twentieth amendment to the Constitution.

By the act of August 8, 1911 (37 Stat. 13; U. S. C., title 2, sec. 2), the number of Members of the House of Representatives was fixed at 433, with a provision that if the Territories of Arizona and New Mexico should become States they should each have 1 Representative.

The act of June 18, 1929 (46 Stat. 21), which provided for the taking of the fifteenth and subsequent decennial censuses, directs that the census be taken as of April 1, 1930, and every 10 years thereafter (sec. 1 and sec. 6; U. S. C., title 13, secs. 201 and 206). The tabulation of population by States as required for the apportionment of Representatives must be completed within 8 months from the beginning of the enumeration (sec. 2; U. S. C., title 13, sec. 202). Consequently, the Sixteenth Decennial Census must be taken as of April 1, 1940, and the tabulation of population completed in November 1940.

Section 22 (a) of the act of June 18, 1929 (U. S. C., title 2, sec. 2 (a)), requires the President to transmit to the Congress on the first day or within 1 week thereafter of the second regular session of the Seventy-first Congress and of each fifth Congress thereafter a statement showing the whole number of persons in each State, excluding Indians not taxed, as ascertained by the census, and the number of Representatives to which each State would be entitled under an apportionment of the existing number of Representatives, made according to each of three formulas named in the act.

As the second regular session of the Seventy-first Congress commenced in December 1930, it was contemplated that the tabulation of population made in the Fifteenth Decennial Census should be transmitted to the Congress at that time. It was also contemplated that the second regular session of the Seventy-sixth Congress would commence in December 1940, by which time the tabulation prepared under the Sixteenth Decennial Census would be ready for transmission to the Congress.

As a result of the twentieth amendment to the Constitution, however, the second regular session of the Seventy-sixth Congress commences in January 1940, instead of December 1940. Consequently, it will be impossible to comply with the direction of the 1929 act that the tabulation of population be transmitted to the second regular session of the Seventy-sixth Congress, because such tabulation will not even be begun until after the commencement of the session.

Subsection (b) of section 22 of the 1929 act provides that if the Congress to which the statement mentioned above is transmitted by the President fails to enact a law apportioning Representatives among the several States, then each State shall be entitled to the number of Representatives shown in the statement, apportioned in accordance with the method used in the last preceding apportionment.

Subsection (c) provides that this section shall have no force and effect in respect of such apportionment unless the statement required by subdivision (a) was transmitted to the Congress within the time prescribed in subdivision (a).

Since the twentieth amendment makes it impossible to transmit the statement of population within the time prescribed by the 1929 act, it would appear to be debatable as to whether or not the apportionment provisions of that law are any longer operative. Some action by the Congress would seem to be desirable in order to clarify this matter.

The bill (S. 2505) to which I have referred above proposes to eliminate the difficulty by striking out the words "second regular session of the Seventy-first Congress" and substituting therefor "first regular session of the Seventy-seventh Congress." The result of this amendment would be to direct the President to submit the statement of population to the Congress at the regular session fixed for January 1941, instead of at the session fixed for January 1940.

I suggest favorable consideration of the legislation.

Very sincerely yours,

FRANKLIN D. ROOSEVELT.

HON. MATTHEW A. DUNN,  
Chairman, Committee on the Census,  
House of Representatives, Washington, D. C.

### Resolutions for an American in 1940

#### EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 10, 1940

Mr. BENDER. Mr. Speaker, let us be tolerant. Every American, reading his daily newspaper, must be impressed by

the constant stream of hatred which pours into the world from every foreign capital. The lip service paid to high ideals and their complete repudiation in daily practice are taken almost as a matter of course, and from this repetition of hypocrisy there rise new generations of cynics who laugh at principles of human conduct and mock the sanctity of life itself. From the cradle, boys and girls across the oceans are impregnated with theories of racial and religious intolerance. Worship of one's own nation, coupled with a complete refusal to recognize the worth of others, has made civilization synonymous with brick buildings and stone hearts. It has made peace no more than the brief intervals between savage wars. The ideal of human tolerance has become nothing but a sign of weakness in the bitter ideologies of Europe and Asia.

America thus far has escaped this mortal illness. We have sought constantly to purge our system of the germs which breed this deadly spirit of intolerance. Our great universities still teach the glories of German poetry, the beauty of Goethe and Schiller, the intellectual purity of Immanuel Kant. Our orchestras have not forgotten Beethoven and Bach in the midst of warfare. Nor do we seek to blot out the memories of Dostoevski and Tolstoi because we despise the contemporary activities of the Russia which gave them birth. Here in America we have discovered that hatred is a pestilence which spreads to epidemic proportions from the most insignificant beginnings.

We must be tolerant. And our tolerance must not be the inactive, passive tolerance which comes from indifference rather than from conviction. The organizations within our land which seek to breed friendship between Protestant and Catholic and Jew, between white man and black, must strengthen their hands. Our children must be led to understand the beauty of alien cultures. They must learn to love, rather than to hate. This is the kind of Americanism our fathers built. It was an Americanism which could find place for the peoples who could find no place anywhere else, an Americanism which stretched forth its hand to the Puritan and the Catholic, the revolutionary and the exiled nobleman, the rich and the poor, with equal magnanimity.

Let us be wise. In a world gone mad with fear and hatred, we must keep level heads in the bitter conflict raging everywhere about us. There is a war of weapons ravaging whole nations in Europe and Asia. Bombs are hurling cargoes of death and destruction upon the heads of innocent women, children, and men no less innocent. Cities are being burnt. Nor is the war confined to those areas which are being afflicted with physical destruction alone. A war of ideas is encompassing the world. New conceptions of the state, with an emphasis upon the political rulers of our generation and a corresponding refusal to accord the individual a place in the sun, have swept from nation to nation. Even in our own land the influence of this novel spirit has extended its sway.

This theory has dominated men's minds before, but it is new to our generation. Louis XIV proudly proclaimed to his courtiers, "The state, I am the state." It took more than 150 years to overthrow the state supremacy which he so boldly announced. It took the lives of thousands of men and women in the era of the French Revolution to reverse the principle and to establish the supremacy of individual life over the claims of the kings. We in America are fortunate; for we are products of the individual rebirth. Our Constitution was built upon the theories of those who overthrew the doctrine of the divinity of kings. Here the state exists for the benefit of the individuals who live within it. We do not exist for the benefit or the glory of the state. We have not adopted the theory of Benito Mussolini, "Multiply and be productive, for Italy has need of your sons." America wants no youth for cannon fodder.

We must not succumb to the lures which the state dangles before our eyes—the lure which leads to complete dependency for our livelihoods and our futures upon the bounty of the state; the lure of submission of the human will to the domi-

neering influence of a far-off bureaucracy. Wisdom requires strength, restraint, a refusal to yield to the easiest course open to us.

Tolerance and wisdom can travel far together. They can make America a citadel of life and civilization which will preserve the good things men have so laboriously created against the day when reason returns to a war-torn world. If we lose our balance, if we grow intolerant; if we are stampeded into the folly of forgetting American self-reliance and independence, yielding up our rights to the state, we shall repeat the follies of Europe and the Orient. Then truly civilization, as we have known it—honor, idealism, kindness, and the spirit of brotherly love—will vanish completely from the earth, and we shall be as savages living in marble halls.

These must be our resolves for the year 1940. Let us be tolerant of our fellow men; Christian, Mohammedan, and Jew; white or black or yellow; German, Russian, Italian, French, or British; rich and poor. True tolerance demands sympathy and an effort to understand even if we do not agree. To know all is to forgive all. And in this tolerance lies the beginning of wisdom. With it we survive. Without it men must perish from the earth. Let us resolve in America to assure our survival and the survival of what is good in our world. Tolerance and wisdom will guide us safely ahead.

### Study of Nation's Military Installations

#### EXTENSION OF REMARKS

OF

#### HON. LUTHER PATRICK

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Friday, January 12, 1940

ARTICLE BY HON. JOHN J. SPARKMAN OF ALABAMA

Mr. PATRICK. Mr. Speaker, let me add to the Appendix of the CONGRESSIONAL RECORD by contributing an information-giving article by the Honorable JOHN SPARKMAN, Member of Congress from the Eighth District of Alabama.

It appeared in the January issue of the Alabama Legionnaire and develops better than anything I have run into how the palings were falling off of our national defense, our guns growing rusty, and our equipment being dwarfed by modernity.

The article is as follows:

[From the Alabama Legionnaire]

STUDY MADE OF NATION'S MILITARY INSTALLATIONS—SPARKMAN TELLS OF OBSERVATIONS BY COMMITTEE

(By JOHN J. SPARKMAN, Member of Congress)

I have just returned from a trip of approximately 20,000 miles, made at the request of the War Department and as a member of the Military Affairs Committee of the House of Representatives, for the purpose of inspecting the multiple and far-flung military installations of the United States. It is, of course, impossible to give anything like a full report in the limited space available. I shall therefore hold myself to some general statements and observations regarding our present defense status.

For nearly 20 years we had let our national-defense system run down. Our guns were old, often outmoded, and badly mounted; our equipment was incomplete, our transportation inadequate, our regiments skeletonized and often inactivated—all this in the name of economy and disarmament. And for the last decade this was in the face of the fact that certain other nations were arming "to the teeth" and apparently for aggressive purposes.

In the enactment of the National Defense Act of 1939 a great step was taken in the correction of this condition. Following the authority given by that act, with more generous appropriations, and under liberalizing Executive orders issued by the President, the War Department has set itself diligently to the task of providing for our country an adequate national defense. Our Air Corps has been given new life through a great augmentation program increasing our first-class fighting ships to a reasonable number, increasing the Air Corps personnel, both commissioned and enlisted, and providing the world's best and most comprehensive training program for efficient Air Corps operation. Our troops are being equipped

with a semiautomatic rifle, thereby having the fire power tremendously increased.

We are fast completing the building of 338 new antiaircraft guns. As fast as the arsenals can turn them out, the new 37-millimeter antiaircraft guns for defense against low-flying planes are being manufactured. The new streamlined divisions have been concentrated in southern training centers where intensive training can be given throughout the winter months without interruption and with the division as the unit. The National Guard has had its training doubled, with more frequent and intensified field work. Inactive regiments have been brought to life and skeleton outfits have been filled out. A great housing program to put our soldiers in permanent and comfortable quarters is under way. Temporary quarters reminding of World War cantonment buildings have been built in practically every post to house the young men coming in ever-increasing numbers into the American Army under the authorized increase.

At this point it may be of interest to know that everywhere we went on the recent inspection trip commanding officers commented on the high type recruits coming to their respective commands and of the resulting high morale. They are young, eager, ambitious, for the most part high-school graduates—many of them former college students—clean, clear-cut, and of fine appearance. Such praise was not exceptional; it was the same story everywhere.

Another great advance, and one of the most badly needed, has been in connection with our defenses in the Canal Zone. The uninterrupted operation of the Panama Canal constitutes the most vital link in our defenses. It is imperative that it be kept open at all times in order to allow our Navy to pass quickly from one ocean into the other. Our defenses had not kept pace with the development of attack methods, particularly the growth of bombing technique. The locks were vulnerable; we had no first-class air base from which our defending planes could operate; our antiaircraft was inadequate, and the personnel strength was far below that necessary to man the guns. It was gratifying to see the progress that has been made within the last year in correcting these conditions. We have authorized the building of a third set of locks at a safe distance from the others. These are to be as nearly bomb-proof as possible, and their use will be restricted in order to insure ever-ready passage for our naval vessels. Plans have been made, and the sites have been selected. It is expected that work will get under way in the near future.

There is under construction on the Pacific side one of our finest air bases. Ample space and long runways will afford safe operations to a great number of fighting planes. Many more planes have been based in the Canal Zone and others will go there as the facilities are increased. New, modern, long-range antiaircraft guns are being emplaced and the personnel has been increased sufficiently to man the defenses. When the present program is completed, the Canal will be, in my opinion, just about as impregnable as human ingenuity can make it.

We visited many fields, air bases, training schools, and airplane-manufacturing plants. We viewed many demonstrations of the performance of both planes and personnel. All of these serve to make us proud of the developments in the field of air defense. Personally I believe that we have the best airplanes in the world and the best-trained personnel to man them.

In short, we are fast approaching that point at which we can say that we now have an adequate national defense. Our Army is not the largest in the world—we would not have it so. Our Navy is not the biggest in the world—we do not need it so. But we do need and I believe the country wants us to have the best Army in the world and the best Navy in the world.

There are certain needs that should be provided and must be provided if we are to be secure. I list them as they occur to me and not in order of their relative importance—they are all highly essential:

- (1) Procurement of needed material—guns, trucks, motors, semi-automatic rifles, etc.—for the initial protective forces.
  - (2) Adequate equipment and housing for the permanent personnel and assurances of adequate procurement of additional equipment, clothing, services, and supplies if and when war comes.
  - (3) Completion of our air bases strategically located and of our airplane procurement program authorized by the last Congress providing also the training of personnel in this augmentation program.
  - (4) Building up of our antiaircraft defenses now wholly inadequate.
  - (5) Pushing the defenses of the Panama Canal to the point that this vital link may be absolutely impregnable.
  - (6) Coastal defenses and antiaircraft on the Atlantic seaboard.
  - (7) Decentralization of our munitions plants and strategic war industries from the present restricted areas near the seacoast and removal to the protected interior.
  - (8) A program to insure no break-down in industrial production, transportation, and the generation of electric power in case of war.
- The completion of such a program will give to us a fine Army—a great defensive force. It will constitute not an aggressive force but will be of sufficient striking force to serve notice on all nations of the world that we stand ready not to make war on anyone but to defend against everyone our land, our homes, our institutions, and the principles and ideals that have made America great.

## Construction of Locks at Falls of St. Anthony, Minn., and Savings in Water Transportation

### REMARKS

OF

HON. JOHN G. ALEXANDER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, January 12, 1940

Mr. ALEXANDER. Mr. Speaker, very shortly I anticipate the House will be asked to consider the appropriation for the United States Army engineers. In that appropriation, I understand, they are going to put an item which will be used for starting the construction of the locks in the Mississippi River through the Falls of St. Anthony at Minneapolis, so as to provide us with a harbor that our industries can use there and access to the Nation's river waterways.

This morning I received a letter, which I have here, from one of our industries in Minnesota, which shows that they are saving this year, on their coal shipments alone, \$7,000 as a result of using water transportation which has been provided for them via the St. Croix River. They have already shown a saving of \$154,671.21 on another item of raw material which they ship in to their factory for use in making up articles they sell to farmers and other users in Minnesota and the northwestern area generally, including the Dakotas, Wisconsin, and Michigan. These are real savings that are passed on to the consumers or the users of the products manufactured in this one industry, and this is only one illustration of what can be done in most of our industries if we can get this upper river development through the falls of St. Anthony, and can then build some docks and use the waterway at the great city of Minneapolis.

I hope you will all vote in favor of the Army engineers' request for this appropriation for the extension of the 9-foot channel through St. Anthony Falls at Minneapolis, because, without that improvement and extension of the waterway, the facility is practically useless to us.

Read the following letter and charts showing the marked savings in one industry alone:

MINNESOTA STATE PRISON INDUSTRIES,  
Stillwater, Minn., January 9, 1940.

HON. JOHN G. ALEXANDER,  
Congressman from Minnesota,  
House of Representatives, Washington, D. C.

DEAR CONGRESSMAN ALEXANDER: We are enclosing herewith a copy of statement covering the tonnage received by this institution through the Stillwater River Terminal for the 1939 season via the St. Croix River.

In referring to this statement you will note we had a saving of \$13,216.63 on last season's sisal shipments moving barge-water route against the all-rail route, and that this saving was \$154,671.21 since the terminal was completed in 1929. In addition to this we had an additional saving in transportation costs on agricultural implement wheels and burlap which moved through the terminal.

The United Electric Coal Co. obtained the contract to furnish the coal for this institution for this season, and last fall they placed a storage supply on the Stillwater River Terminal property to take care of our season's requirements. Since the first barge load of coal was docked in October we received 2,864.95 tons to take care of our requirements to January 1. This coal was loaded into gondola rail cars at the storage pile and switched to our plant, and we had a saving in transportation charges against the all-rail rate of \$2,320.61. We will require approximately another 6,000 tons for the balance of the season which will bring our saving to approximately \$7,000 on this season's fuel. This coal is fine bituminous coal and originated at Pyatts, Ill., moving rail to Alton, Ill., thence barge-water to Stillwater.

We manufacture binder and cordage twines, ropes, agricultural implements, and parts thereof, therefore any saving in transportation cost is passed directly to the consumers of our products through lower prices.

We are opposed to all proposed legislation, purpose of which is the regulation of port-to-port rates or the charging of tolls for the use of our waterways. Such proposals are decidedly not in the public's interest and would add tremendously to the cost and would seriously interfere with the development of industry in the Mississippi and St. Croix Valleys.

We are also opposed to the proposed fixing of prices and regulations which interferes with the rights of the public to the benefit of savings that may be accomplished by the use of waterways on bituminous coal, and ask that you voice our objections at any hearings now in progress and take such other action as in your judgment the importance of this matter may require.

Your cooperation in this matter will be greatly appreciated.

Very truly yours,

MINNESOTA STATE PRISON,  
A. W. KLEINSCHNITZ,  
Manager, Traffic Department.

*Savings in transportation cost on fiber tonnage received by the Minnesota State Prison through the Stillwater River Terminal via the Federal barge lines all-water route New Orleans to Stillwater, against rates applicable via the Federal barge lines New Orleans to St. Paul and rail beyond to Stillwater*

Season	Weight	Stillwater rate	Rate via St. Paul	Saving
1929-38.....	Pounds 98,954,489			\$26,452.47
1939.....	8,260,393	\$0.48	\$0.52	3,304.16
Total.....	107,214,882			29,756.63

*Savings in transportation cost on fiber tonnage received by the Minnesota State Prison through the Stillwater River Terminal via the Federal barge lines all-water route New Orleans to Stillwater, against rates applicable via all-rail routes New Orleans to Stillwater*

Season	Weight	Rail rate	Water rate	Saving
1929-38.....	Pounds 98,954,489			\$141,454.58
1939.....	8,260,393	\$0.64	\$0.48	13,216.63
Total.....	107,214,882			154,671.21

*Tonnage received by the Minnesota State Prison via inland water routes since operation of the Stillwater River Terminal, also terminal and switching charges paid to the Stillwater River Terminal Co.*

Season	Commodity	Weight	Terminal and switching charges paid to Stillwater River Terminal Co.	
			Rate (per hundred-weight)	Amount
1929-38.....	Fiber.....	Pounds 98,952,107		\$45,193.70
1929-38.....	Burlap.....	1,185,455		296.38
1929-38.....	Wheels.....	3,842,063		2,567.93
Total.....		103,979,625		48,058.01
1939.....	Fiber.....	8,260,393	\$0.05	4,130.22
1939.....	Burlap.....	94,297	.025	23.58
Total.....		8,354,690		4,153.80
Total, 1929-39.....		112,334,315		52,211.81

NOTE.—1939 tonnage was received at the Stillwater River Terminal in: 9 barges, transferred to 172 boxcars and consisted of 18,317 bales of fiber and 99 bales of burlap.

*Coal tonnage received by the Stillwater River Terminal Co. via rail to Alton, Ill., and barge water route beyond to Stillwater, Minn., for domestic and commercial storage supply, season 1939*

Barge No.—	Pounds
CB-3.....	1,747,500
CB-6.....	1,739,300
FBL-285.....	3,076,100
FBL-209.....	3,153,600
FBL-281.....	3,134,000
FBL-203.....	3,185,000
FBL-210.....	3,227,000
Total (9,631.85 tons).....	19,263,700

*Coal tonnage delivered from the Stillwater River Terminal Co. storage supply to the Minnesota State Prison as required, 1939*

October.....	1,926,100 pounds or 963.05 tons.
November.....	1,711,900 pounds or 855.95 tons.
December.....	2,091,900 pounds or 1,045.95 tons.

*Saving in transportation cost on coal tonnage delivered to the Minnesota State Prison by the Stillwater River Terminal Co., rail-water rate against the all-rail rate, season 1939*

Weight.....	tons.....	2,864.95
Rail rate.....		\$3.61
Water rate.....		\$2.80
Saving.....		\$2,320.61

Much of our struggling industry and trade in Minnesota would profit similarly if we could develop our greatest harbor, the one above St. Anthony Falls at Minneapolis, where much of the State's industry is centered.

## Republican Press Lauds Federal Housing Administration

### EXTENSION OF REMARKS

OF

HON. JOHN M. HOUSTON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, January 12, 1940

EDITORIAL FROM THE NEW YORK HERALD TRIBUNE OF JANUARY 8, 1940

Mr. HOUSTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Herald Tribune of January 8, 1940:

[From the New York Herald Tribune of January 8, 1940]

#### BUILDING ACTIVITY AND THE F. H. A.

The Federal Housing Administration, according to an announcement by its head, Stewart McDonald, ended the year 1939 with more than \$3,000,000,000 of home-financing insurance on its books. Of this total, approximately \$960,000,000 was written during 1939, establishing a new F. H. A. record.

One of the outstanding features of last year, it is emphasized in the financial and business reviews now appearing, was the continuance of the recovery in residential construction. At the bottom of the 1929-33 depression, home building fell off to an annual rate of only slightly more than \$250,000,000, and this area was among the last to feel the recovery urge. Residential building continued well below the \$500,000,000 level until 1936, but its rise to \$801,000,000 that year and to \$915,000,000 in 1937 had much to do with the approach to prosperity in those 2 years. Moreover, where so many series in the business indexes turned sharply downward in 1938, residential building enjoyed an even better year than in 1937, with contracts totaling \$984,000,000. And now, with only about 10 days' figures missing, it is clear that last year has not only far surpassed 1938, but that it has been easily the best year since 1929. With total building contracts of \$1,340,000,000, it has run some \$200,000,000 ahead of 1930, previously the best 12 months of the last decade. (The \$1,340,000,000 figure lags, of course, far behind those of the twenties, when the annual average was well above the \$2,000,000,000 level and when 1928 produced a peak of \$2,788,000,000.)

There is no question that the F. H. A., which substituted the long-term amortized mortgage for the old short-term first- and second-mortgage set-up so widely used in the twenties, deserves much of the credit for the revival of residential building in the last 2 or 3 years. And if such construction has not yet soared to the high levels of 10 and 15 years ago, there are some aspects in which the present situation is distinctly preferable to that one. In the first place, it is quite probable that so far as actual home ownership is concerned the country is closer to the position reached in the twenties than the mere totals for building contracts suggest. Of the F. H. A. insurance, only \$112,500,000 has been issued in connection with large-scale projects. Small home mortgages have accounted for \$1,975,000,000 of the \$3,000,000,000 total, with property-improvement loans accounting for the remainder. Final figures for the year may show that the number of single-family dwellings erected during 1939 actually exceeded that of 1929, which was featured to a substantial extent by large-scale building operations. Again, the F. H. A. has measurably raised the standards of building construction, and, although its specifications and inspection service may not be foolproof, there is little doubt that there is less shoddy construction today than there was before this agency was created. And, finally, speaking generally, it may be said that little of the construction of 1939 was attributable to such boom phenomena as we witnessed in Florida and other widely scattered sections of the country at various times between 1925 and 1929.

All this is not to say that the F. H. A. is the perfect instrument for the financing of residential building. Being a political creation, it has the faults that stem from that fact. The most conspicuous

example is the overly attractive terms offered, particularly in the case of small dwellings, which require a down payment of only 10 percent of the purchase price. A serious depression in the near future might conceivably result in a demoralizing volume of repossession. With this and certain other minor reservations, however, it will, we believe, be generally agreed that the Federal Housing Administration is one New Deal agency that has abundantly justified itself.

### The Dies Committee

#### EXTENSION OF REMARKS

OF

HON. CARL T. CURTIS

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Friday, January 12, 1940

ARTICLE BY WESTBROOK PEGLER

Mr. CURTIS. Mr. Speaker, much has been said concerning the continuation of the Dies committee on un-American activities.

In submitting for the RECORD an article entitled "Fair Enough," by Westbrook Pegler, which appeared in the Washington Post on January 12, 1940, I offer this not as my own opinions, but, rather, to show the opinion of an able columnist who has frequently upheld the New Deal and its policies.

[From the Washington Post of January 12, 1940]

FAIR ENOUGH  
(By Westbrook Pegler)  
DIES' FOES CONFOUNDED

The report of the Dies committee has received much approval, rising in some cases to the pitch of cheers, but some of the standard New Deal package goods dispatches out of Washington have taken a peculiar attitude in their embarrassment. Dies and his committee were expected to turn out in their report a masterpiece of clumsy absurdity, but he crossed up the propagandists of the administration by delivering something that was distinctly major league.

DIES was heckled in his own hearings and harassed constantly in print by a campaign of ridicule, for most of which, it may readily be admitted, he furnished plenty of raw material. But when he unexpectedly delivered a good report he was attacked with fresh vigor, obviously inspired by chagrin, on the ground that he had not prepared the report himself alone. It was also reported—and with such similarity of detail as to suggest a propaganda pipe line—that the more liberal members of the committee made a chump of Mr. DIES one day by proposing that now was the time to name the Communists in the New Deal and that DIES, thus confronted, could not make good.

NEW DEAL CLAQUE LIKES GHOST WRITERS

It is immaterial whether DIES himself prepared the report or employed a ghost, and the New Deal propaganda corps should be the last to criticize any man on such grounds in view of the admitted fact that President Roosevelt himself often obtains several drafts of a speech or state paper from members of his political household and selects one or a combination of several as the version for which he will take the credit or the blame. This is a practice which has been defended by the New Deal claque with such enthusiasm and skill that it has received public approval. Therefore, DIES was only following distinguished precedent, and the merits of the report cannot be used against him.

As to his inability to name any Communists in the New Deal, there is more to be said than merely that he wouldn't or couldn't name names when and if he was challenged or put on the spot. He could no doubt have named many individuals who have all the characteristics of Communists and who, up to the invasion of Poland and Finland by the Russian Army, had nothing but praise and excuses for the Stalin government and little else but abuse and contempt for the American system. He could have pointed out that when Harold Ickes found occasion to deliver speeches he turned up as the guest of the Lawyers' Guild and the Newspaper Guild, both of which organizations have been strongly influenced and imposed upon by Communist agents.

TOLERANCE SHOWN UNTIL NAZI PACT

DIES might have developed the fact that, although this administration has been opposed to Hitlerism from the very beginning, there had always been, until the Russian alliance with Germany, a generous tolerance for communism and Communists. Communism, although indistinguishable from Hitlerism, was a meritorious experiment, but Hitlerism was a vile thing. No Nazi, imported or domestic, was welcome in the administration, either socially or politically,

but individuals who lacked only Communist Party cards to confirm their identity were welcome.

It will be recalled that when DIES was investigating Nazi activities he was congratulated by the same press that was to slash at him a little later for using the same methods on the Communist conspiracy. And it may be pointed out that on a previous occasion the same propaganda vigorously defended a 100-percent New Dealer whose methods of investigation had been even more dangerous to civil liberties than most of the Dies committee. That one would be Senator Black, of Alabama. But Senator Black was not run out of public life or even reproved for his ethics and methods. On the contrary, amid cheers from the New Deal claque, this late backslid member of a night-riding and lynching organization was appointed to the United States Supreme Court. As one who would "liberalize" the Court.

DIES was guilty of much awkward foolishness, but to those who condoned Black's methods of investigation and the deliberate degradation of the Supreme Court intended and achieved by his appointment, he owes not even the courtesy of a contemptuous reply. Look at their hands.

### Stream-Pollution Bill

#### EXTENSION OF REMARKS

OF

HON. FRANCIS D. CULKIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, January 12, 1940

SUPPLEMENTAL LIST OF PUBLIC HEALTH ASSOCIATIONS, HEALTH OFFICIALS, AND OTHERS WHO ENDORSE THE BARKLEY-SPENCE ANTIPOLLUTION BILL

Mr. CULKIN. Mr. Speaker, an extension appearing in the Appendix of the RECORD, volume 84, p. 3767, called attention to the overwhelming number of State and Federal health associations and officials who endorsed the purposes and scope of the Barkley-Spence bills (S. 685 and H. R. 922). The list of these endorsements published at that time seemed to me to establish the fact that this legislation had the universal backing of all those who have a technical knowledge of the subject and wished to approach it in a practical fashion, free from hysteria. The Barkley-Spence bills were twice reported by the Rivers and Harbors Committee after intensive hearings on the subject matter involved. It is a rational bill and promises a solution of a problem that has become very acute in America. Pollution is a Federal problem because most of our great rivers flow interstate and the problem must be approached from that angle.

The following supplemental list of groups and health officials who endorse this bill, taken in conjunction with those endorsing it in my extension of August 2, 1939, represent an almost complete Who's Who of those who are prominent and active in health work throughout all of the United States. I suggest a reading of these comments by all who are interested in this grave national problem.

The following is the list of supplemental endorsements:

American Paper and Pulp Association, Association of Newsprint Manufacturers, National Paper Board Association (1939 House hearings, p. 47): "What the industry does believe is that the problem can be solved most quickly and less expensively by a common-sense, stepwise program. \* \* \* Both the public and industry are inexorably involved. These interests dictate the need for cooperative action; and that is exactly what H. R. 922 provides."

Cincinnati, Ohio (Clarence O. Sherrill, city manager, 1939 House hearings, p. 53): "I am interested in getting rid of this pollution. \* \* \* the legislation covered by some of these bills \* \* \* insofar as they have the principle of working with the State and urging State-through-State compacts \* \* \* are sound. The cooperation of States and groups of States in this matter, it seems to me, is vital."

National Petroleum Association, Pennsylvania Grade Crude Oil Association, Western Petroleum Refiners Association (1939 House hearings, p. 127): "We are not opposed to any legislation on this subject, which is of the general character of the Barkley-Vinson bill."

National Association of Boat Manufacturers (Ira Hand, secretary, 1939 Senate hearings, p. 95): "We are intensely interested in the purification of navigable waters. It is my personal belief, Senator,

that the cooperation of the Federal Government with the States might serve the best purpose."

National Coal Association (1939 Senate hearings, pp. 175-176): "A statute designed to bring about closer cooperation of all the agencies involved through surveys, investigations, recommendations, and mutual help in the actual work of abatement is the type of legislation which will stand the test of time and bring about maximum effectiveness."

Louisville, Ky. (Hon. Joseph Scholtz, mayor, Senate hearing, 1939, p. 51): "I say again, as a city official and one who is interested in the health of approximately 400,000 people who drink water which is taken from the Ohio River and purified by the city of Louisville, \* \* \* that my association with the Public Health Service and with the State health service of the State of Kentucky has convinced me that they are fully capable of handling any problem which may arise."

Kentucky State Department of Health (Dr. A. T. McCormack, commissioner, Senate hearing, 1939, p. 51): "Kentucky is most vitally interested in the Barkley bill which will enable the cleaning up of the Ohio River and its tributaries. \* \* \* I cannot too strongly urge that Congress pass the Barkley bill providing the necessary aid and assistance in remedying these most insanitary conditions."

American Public Health Association (Abel Wolman, president, Senate hearings, 1939, p. 53): "Regulation appears to be, on the surface, a simple device for curing all the problems of the United States. We do not share that view. The State governments exist and we feel should continue to play a part in the game."

Treasury Department, Public Health Service (Asst. Surg. Gen. W. F. Draper, Senate hearing, 1939, p. 83): "Reporting on S. 3958 and S. 13. Both of these reports by the Treasury Department recommended against enactment of legislation having regulation features for the reasons which are again stated in subsequent paragraphs of this letter."

President of the United States (Hon. Franklin D. Roosevelt, quoted from veto message, Senate hearing, p. 84): "I appreciate the importance of the results sought to be accomplished by legislation (Barkley bill) and I fully approve the establishment of a division of water-pollution control in the Public Health Service."

President of the United States (Hon. Franklin D. Roosevelt, message of February 15, 1939, to the Congress): "It is my opinion that pending further experimentation with interstate and State-enforcement activities, Federal participation in pollution abatement should take the general form of establishing a central technical agency to promote and coordinate education, research, and enforcement."

United States Senate Committee on Commerce (Rept. No. 1199, 75th Cong.): "Your committee decided, as the public health is the main object to be considered in connection with this legislation (H. R. 2711), that the Bureau of the Public Health Service is the logical division in which to place the administration of this legislation."

Senator BARKLEY (Senate hearing, 1939, p. 89): "There ought to be a period, at least an effort, made to bring about relief of these conditions by cooperation. \* \* \* Now, to clamp down on them (industries and municipalities) the first thing by some compulsory injunction process, without giving them an opportunity to clean up themselves through cooperation, it seems to me to be a mistake in the first step."

New York State Department of Health (C. A. Holmquist, director, division of sanitation, Senate hearing, 1939, p. 96): "Of the Senate bills, we desire to be recorded strongly in favor of S. 685, introduced by Senator BARKLEY, as being the most satisfactory for accomplishing the desired results in water-pollution control. \* \* \* This department is opposed to any Federal legislation on this subject which would vest control over pollution in the War Department or give the Federal Government authority to enforce pollution abatement through injunction proceedings."

United States Chamber of Commerce (George H. Davis, president, Senate hearings, 1939): "The chamber again urges the adoption of the principle of cooperative action rather than Federal control in any legislation dealing with stream-pollution abatement."

United States Public Health Service (Dr. Thomas Parran, Surgeon General, House hearings, 1939, p. 37): "I am of the opinion that the principles contained in H. R. 4314 should be a good working basis for the deliberations of this committee in order to report legislation that will be acceptable to the various interested parties."

Hon. S. O. BLAND (Representative in Congress from Virginia, House hearings, 1939, p. 67): "I believe that the Mansfield bill (H. R. 4314) more nearly meets with the wishes of the administration than my second bill (H. R. 2890). Therefore I am advocating the Mansfield bill. \* \* \* I cannot too strongly urge the importance of reaching an early solution in order to preserve the fisheries of the limited States."

Tanners Council Laboratories (Fred O'Flaherty, director) (House hearings, 1939, p. 92): "We feel that compulsory regulatory national legislation would be as unsuccessful as prohibition was, and that were it attempted it would tend to defeat the admirable purpose of the legislative intent."

American Mining Congress (J. D. Conover, House hearings, 1939, p. 118): "We believe that the general principle of the Barkley-Vinson bill, which passed both Houses of Congress and was vetoed by the President last year \* \* \* affords a workable and practical plan for meeting the problems of stream pollution. \* \* \*

We have cooperated along these lines, and we would expect to continue to do so under such a law."

Hon. BRENT SPENCE (Member of Congress from Kentucky; House hearings, 1939, p. 122): "I am not in favor of a drastic law that would, by processes of abatement or injunction processes, attempt to prevent the manufacturers and industrial concerns from continuing their operations as they are now carrying them on. \* \* \* I believe, if you pass any one of these bills \* \* \* that does not have any stringent provisions in it, we \* \* \* will attain the good that we are seeking."

Hon. CHARLES H. ELSTON (Member of Congress from Ohio, House hearings, 1939, p. 123): "I believe that any one of those bills, except possibly the Mundt bill, will serve the purpose. \* \* \* We were very joyous when the Barkley-Vinson bill passed, and very much disappointed when it was vetoed."

Camp Fire Club of America (Marshall McLean, House hearings, 1939, p. 87): "We are in favor of the study type of bill as exemplified by the Mansfield bill (H. R. 4314) and by the Spence bill and by the Barkley bill (S. 685). We believe primarily that this is a matter of public health and, therefore, should be in the health department and should not be in the engineer department or in the Army."

## President Roosevelt Unfairly Denounces President Green, of the American Federation of Labor

### EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, January 12, 1940

Mr. MUNDT. Mr. Speaker, as one who has followed the record of the American Federation of Labor for many years and who feels that both under President Samuel Gompers and its present president, William Green, this organization has done much to help better living and working conditions among American workers, I was seriously disturbed in reading the issue of Liberty magazine for January 20 to learn that President Franklin D. Roosevelt denounces President Green as a "reactionary." It is neither necessary to defend nor to condemn the C. I. O. in saying that I think it is rendering the cause of labor generally a distinct disservice when the President of the United States projects himself into a controversy between two labor groups to the extent of criticizing and denouncing the leader of one of them. This is especially true when this criticism is as baseless as it is when directed against President Green in decrying him as a "reactionary," because in President Green's efforts to resist the New Deal drive for centralizing all political and economic power in Washington—possibly in the hands of an executive to be perpetuated in office three, four, or even more terms—he is definitely pursuing a course of genuine liberalism which has always revolved around the philosophy that men should be free alike from the tyranny of both economic and political monopoly.

#### WHY DOES ROOSEVELT OPPOSE THE DIES COMMITTEE?

I commend to all Americans the reading of the article *More Snakes Than I Can Kill*, written by the gentleman from Texas, Congressman MARTIN DIES, and appearing in Liberty magazine in the issues of January 13 and January 20 and continuing for several more weekly issues. Under leave granted me by this House, I shall follow this statement with an excerpt from Mr. DIES' article in the Liberty magazine for January 20; but to know all the cold, hard facts as revealed by the gentleman from Texas, Congressman DIES, one should read this series of articles in full. The excerpt I am appending hereto contains the startling statement by the gentleman from Texas [Mr. DIES] that President Roosevelt is apparently the source of most of the opposition being frantically inspired against continuing the investigation of communism, nazi-ism, and fascism by the committee headed by the gentleman from Texas [Mr. DIES]. Why this opposition on the part of President Roosevelt? A careful reading of the articles by our colleague, the gentleman from Texas, MARTIN DIES, supplies its own answer to that very natural inquiry.

## IN SUPPORT OF THE DIES COMMITTEE

I believe the gentleman from Texas [Mr. Dies] has the respect of every Member of this House. He has rendered heroic service to the American public in his expose of un-American activities in this country; he and his hard-working and courageous committee have been subjected to insult and injury by this administration, but they have patriotically refused to give up the fight. I join with what I am confident will be the great majority of my colleagues in assuring this committee that this House will vote it what funds are needed so that this investigation may be completed. The unfair and unfounded attacks of such job-hungry administration Cabinet members as Secretary Harold Ickes and Mme. Frances Perkins will not, in my opinion, divert one vote in this House from supporting the work of the Dies committee. Even the continued active opposition of the President himself will not deter this body from insisting that a task so nobly begun be carried out to conclusion, even though the toes of additional powerful friends of the administration must be stepped upon as this conscientious committee follows the trail of facts and lets them lead where they will, even though occasionally the path points perilously close to certain executive agencies of this Government. More Snakes Than I Can Kill is a clear-cut revelation by one of the most clean-cut Members of this House. It is my hope that the excerpt will lead you all to read this series of articles in full.

Following are excerpts from More Snakes Than I Can Kill, by Congressman MARTIN DIES, and appearing in Liberty magazine in issues of January 13, January 20, and ensuing numbers.

If I had needed any further confirmation of my belief that the administration was opposed to the investigation of communism, that confirmation was supplied by the President himself, as I shall here relate.

Our investigation began on August 12, 1933, in the city of Washington. On August 13, John P. Frey, president of the Metal Trades Department of the American Federation of Labor, appeared before the committee to give us the benefit of information which he had gathered. I had gone over his material in advance and had satisfied myself that his sources of information were reliable and his material substantially accurate and authentic. In his first day's testimony he gave the names of Communists who were and are organizers and officials of the C. I. O. His testimony was carried on the front pages of most of the newspapers in America.

On the second day of his testimony I went to the White House with Senator MORRIS SHEPPARD to confer with the President in regard to the Rockland Dam project, in which my district was deeply interested and which had been pending for a long time. This project involved the expenditure of approximately \$12,000,000 and had been previously approved by the Public Works Administration, but funds had not been allocated for it. I had a letter from the President, written before the new appropriation for public works, stating that the project was meritorious but that nothing could be done until additional funds were appropriated. Upon the occasion of the visit of Senator SHEPPARD and myself to the President's office, which was after the new public works appropriation, I showed the President his letter, and he promised to give the matter careful consideration.

At the conclusion of our conference on the Rockland Dam, Senator SHEPPARD withdrew, and the President brought up the subject of the investigation and asked me what I thought of John Frey's testimony. I told him that I thought Mr. Frey was substantially correct in his statements and that I was convinced that the Communists exercised considerable control over the C. I. O.

This did not please Mr. Roosevelt and he entered into a denunciation of the American Federation of Labor leadership and a defense of the C. I. O. He said that he had known Mr. Green, Mr. Frey, and some of the other leaders for many years and that as far back as he remembered they had been reactionary. He said that while some Communists might have gotten in the C. I. O. ranks, due to its rapid growth, it was unimportant and insignificant, and that the charge of communism that was hurled at the C. I. O. was inspired by selfish interests. In substance, he said that the thing I should investigate was fascism and nazism.

There was but one construction that I could place upon the President's conversation and that was that he expected me to lay off the C. I. O. and to devote most of the investigation to fascism and nazism. Let me make it plain that I am not accusing the President of being sympathetic with communism; I am merely relating the facts to show that the administration did not appreciate the seriousness of the Communist threat to this country. After I got back to the Capitol I told John Frey exactly what the President had told me.

## ADMINISTRATION OPPOSITION

It was now clear to me that if I persisted in my determination to expose communism, especially as it existed in the C. I. O. and

certain so-called liberal organizations, I would incur the wrath and displeasure of my own administration.

This was not long in manifesting itself. Administration spokesmen, such as Mme. Secretary Perkins and Harold Ickes, began to ridicule the committee as "witch hunters" and "red baiters." Newspaper columnists in Washington who are known to be close to the administration took the hint and joined in the campaign of ridicule and abuse which was largely directed at me. The whole radical press broke out in what appeared to be a concerted drive to destroy the investigation in the very beginning.

Because of the known opposition of the administration and the so-called liberal press and groups, we were unable at first to get many witnesses with first-hand information to testify. The Communists and their sympathizers, as well as certain public officials, had succeeded in discrediting the committee in the eyes of many liberals. This frightened off many witnesses who would have testified but who were afraid that they would suffer a similar fate.

By sheer luck the committee succeeded in getting J. B. Matthews to appear before it. In my judgment, Mr. Matthews is one of the best informed men in America on the theories and practices of the Communists. He had prepared for the committee a statement which was accurate, but which was purposely conservative because he realized, as I did, that the country was not prepared to receive the whole truth. However, he did mention the fact, in illustrating the manner in which the Communist Party exploits the names of prominent people, that the Communists had succeeded in getting certain prominent movie stars, including Shirley Temple, to send congratulatory messages to the Communist newspaper, *Ce Soir*, in Paris.

## THE SHIRLEY TEMPLE FIASCO

The mention of Shirley Temple's name was the break which Communists and their sympathizers and dupes had been impatiently waiting for. Many of the newspaper reporters fell over themselves with ill-concealed glee. The cry went out from all the radical camps that the Dies committee had accused Shirley Temple of being a Communist. As a matter of fact, Matthews had carefully stated that he was not accusing any of the movie stars who signed the greetings to *Ce Soir* of being Communists, but a large section of the press was against the committee. This was due, in my judgment, to the fact that so many reporters and writers were affiliated with the Newspaper Guild, which is affiliated with the Congress for Industrial Organizations.

As was discovered later by many editors, the Shirley Temple episode, as reported by some columnists and newspapermen, was a pure fabrication, but at the time it deceived many people and caused the committee a great deal of damage. What was so exasperating and unfair was the fact that administration spokesmen, like Mme. Perkins and Ickes, repeated this distortion and thereby gave respectability to it.

What was very obvious to me was the fact that many so-called liberals were being led blindly by Communist leaders. It was a Communist who laid down the campaign strategy in every instance, and it became more and more obvious to me that the liberal movement in the United States, which is essential to orderly government and to a proper balance, was falling into the hands of members of the Communist Party.

I must frankly admit that the Shirley Temple episode knocked the breath out of me. For a time I thought that the situation was hopeless, but the thought came to me that it might be wise to speak to the people on the radio and to explain the facts. This I did, with the result that many people had their eyes opened for the first time to the clever strategy of the Communists in the United States.

While this investigation has disclosed many startling facts, which no one suspected and which appeared fantastic a year ago, nevertheless, there are many facts which I know to be true, but which, unfortunately, we have been unable to prove to this date. There are many people who are in a position to tell some necessary facts, but who for various reasons decline to do so.

## THE BRIDGES CASE

For instance, a high official in the Labor Department came to my office at the time we were investigating the Harry Bridges case. He told me that he was troubled about the whole matter, but that if his name were mentioned in connection with what he was going to tell me it would mean that he would lose his job, which he could not afford to do. He got me to promise that I would not divulge his name. He then told me that the whole Harry Bridges deportation case was a disgraceful situation. He said that the Labor Department had no intention of deporting Bridges and that every aid and assistance were being rendered Bridges. He said that Lee Pressman, acting as Bridges' attorney, was in constant conference with officials in the Labor Department.

I have even had Government employees come to my home at night and tell me of communistic activities in the Government. But in only a few of these cases have I been able to persuade the employee to testify before the committee.

Every effort was made by Fascist representatives and organizations to confine this investigation to communism. From time to time leaders of these so-called patriotic organizations, which were Fascist in spirit and underlying principle, would undertake to confer with me with regard to Communist activities in the United States. I saw through their purposes, and I declined to hold conferences with most of them, and those I saw I met in the presence of an associate. It was very apparent to me that they were merely using the Communist issue to promote their own Fascist activities

and propaganda and to spread racial hatred under the guise of anticommunism.

Some of these Fascist organizations undertook to get their stooges employed by the committee as investigators. They would send to the committee unsupported charges and allegations with reference to communism, but in no instance did they ever send any information regarding Fascist activities. They should have known from the very beginning of the investigation that I was determined to expose Fascist and Nazi activities, the same as Communist activities. I made this very plain in radio speeches and public announcements, and their efforts to shield themselves from exposure only strengthened my determination to give the public an accurate and thorough picture of fascism and nazi-ism in the United States.

What deceived so many people was that fact that these Fascist and Nazi organizations masqueraded under laudable objectives and high-sounding titles, the same as the Communist organizations did. Many people did not seem to understand that American fascism would be patterned along different lines than European fascism. Manifestly, American Fascists would not adopt the swastika and the external forms of fascism as it exists in Europe. This very fact made the situation more serious because, under the guise of patriotism and nationalism, American Fascists would be able to make much greater progress in this country in the direction of a dictatorship.

What alarmed me was that some of our people were beginning to choose sides between communism and fascism. I regarded this as a false issue. The important task, as I saw it, was to convince the people of this country that fascism and communism were fundamentally alike and that the real issue was between Americanism on the one hand and alienism on the other. I saw also that it was necessary to publicize the fact that Americanism had nothing to do with racism or extreme nationalism, and that every person, regardless of race, religion, or economic condition, is an American if he loves this country and the principles for which it stands.

### A Theory Sustained

#### EXTENSION OF REMARKS

OF

HON. EDWIN A. HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, January 12, 1940

EDITORIAL FROM THE BINGHAMTON PRESS OF JANUARY 10, 1940

Mr. EDWIN A. HALL. Mr. Speaker, under leave to extend my own remarks in the RECORD, I include the following editorial by Mr. Tom R. Hutton from the Binghamton Press of January 10, 1940, entitled "A Theory Sustained":

[From the Binghamton Press of January 10, 1940]

A THEORY SUSTAINED  
(By Tom R. Hutton)

Over the years George F. Johnson has held to the reasonable theory that when labor is not exploited; when it is well treated; more than that, when employers go a little out of their way to aid and assist in the establishment and the maintenance of comfortable homes—to provide formulas for recreation, hospitalization, and medical attention at the lowest possible cost to the workman and his family—then employees in the mass and individually neither need nor desire unionization for their protection and advancement.

That, generally speaking, is the old American idea, with a great deal of logic on its side. But is it an idea which in recent years has been discounted by trends toward mass organization of employee groups in various industries which previously had not been organized. That trend, it may be noted parenthetically, was made possible, not only by new laws but by the fact that over a great many years many employers, through circumstance or lack of appreciation, or actual lack of technique in the matter, had neglected some rather obvious things. American industrialization had expanded so swiftly and so hugely that great masses of people from many races and with imperfectly formed ideas of cooperative citizenship had been drawn by the centripetal forces of expansion to centers which, in the first instance, were not adequate in terms of housing, living, recreation, and medication, and which, more than that, were not prepared in terms of industrial and social absorption.

The results were almost inevitable. A point had been reached and passed where the old natural balances were upset. Channels of contact such as existed in the early industrial development of the United States between employer and employee were clogged and choked off by the very multitudinous detail involved in relationships between employer and so many employees. In too many instances no new channels were provided and out of it all misunderstandings grew and multiplied.

This condition was not wholly prevalent in the United States when the national labor relations law was established. The author of the law, Senator ROBERT F. WAGNER, of New York, knew out of personal experience and observation that at least one great industry in his own constituency, the Endicott-Johnson Corporation, had been sufficiently foresighted to provide a formula which year in and year out was meeting the requirements of employer and employee.

And the chances are that Senator WAGNER today is well satisfied with the result of the second largest vote taken by the National Labor Relations Board since it was established. His law has demonstrated in its outworkings that in circumstances such as those created by the Endicott-Johnson Corporation, the provisions of the law may be applied and its formula carried out with results reflective of actual conditions.

For, at the polls in their factories yesterday, the workers of the Endicott-Johnson Corporation sustained and vindicated George F. Johnson's theory about industrial relations and, perhaps more importantly from his standpoint, sustained his faith in human nature. The vote by which his employees in the shops and factories of the corporation announced that they desired no union affiliation for collective bargaining was in a ratio of 5 to 1. Ninety-two percent of the eligible 17,000 workers voted; and 81 percent declared by their ballots that they wanted neither the A. F. of L. nor C. I. O. affiliation.

They cast that vote after 2 years of missionary work by organizers from the C. I. O. and the A. F. of L. They cast it under the same N. L. R. B. formula which in so many cases has resulted in unionization of one sort or another for masses in industry. They cast it after a full and free discussion of the questions involved in printed type and over the air. Yet their answer to organization was negative; their answer to Mr. Johnson was affirmative; they reaffirmed their faith in "George F." and his theory which has worked so well. When they did that those men of the beam house and tannery, those men and women of the cutting and lasting and stitching and finishing departments, machine shops and shipping divisions of the Endicott-Johnson Corporation, wrote a new and encouraging page in the story of American democracy at work.

Some of them may not have realized it, but when they marked their ballots they were writing history; they were setting up a living event which will be the subject of almost endless comment in contemporaneous print and to which the economists, the sociologists, and the historians will turn as a safe and unquestionable mooring, for the figures were so overwhelming as to leave no doubt. Yes; the Endicott-Johnson workers made some history yesterday. They nailed down something rather important. They kept faith with an American idea.

Today most of them are celebrating. And what are they celebrating? They are celebrating their victory. Not a victory of employee over employer; certainly not a victory of employer over employee, but a victory of employer and employee over doubt, cynicism, suspicion, hypothesis, and formula which they demonstrated had nothing at all to do with their lives, their work, and their relationships.

And they are celebrating also a victory of the American idea which still, through the foresight of Mr. Johnson and his associates, and their good faith over the years, predominates in this valley of opportunity.

### War and Peace

#### EXTENSION OF REMARKS

OF

HON. J. THORKELSON

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Friday, January 12, 1940

LETTER FROM PUBLISHER OF FORTUNE MAGAZINE AND  
REPLY THERETO

Mr. THORKELSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter written to me by the publisher of the Fortune magazine, and my reply thereto:

NOVEMBER 29, 1939.

The Honorable J. THORKELSON,  
Member of Congress, Butte, Mont.

DEAR CONGRESSMAN THORKELSON: Because I am almost sure you will be interested in seeing the War and Peace editorial which Fortune is publishing in its December issue, I am enclosing with this letter a special proof.

In some ways this is the most important editorial Fortune has ever published. And certainly it is the most controversial.

For in it our editors study what America might gain by joining other democracies in a great Federal union to achieve lasting peace and to create a vast domestic market for international trade.

I hope very much you will find time to read this editorial in full.

And it would give me great pleasure if after reading it you would care to send me your comments and reactions to the material presented and the conclusions drawn.

Cordially,

ERIC HODGINS, *Publisher.*

HOUSE OF REPRESENTATIVES,  
Washington, D. C., December 13, 1939.

Mr. ERIC HODGINS,  
*Publisher, Fortune,*  
*Time and Life Building, Rockefeller Center, New York.*

DEAR MR. HODGINS: Enclosed with this letter you will find my reply to your article on War and Peace.

You may publish my remarks if you want to. Otherwise, I am asking you to return them to me, and to defray cost I am enclosing stamps. All I ask is that you publish nothing, or all of it, as you think best.

I am,

Sincerely yours,

HOUSE OF REPRESENTATIVES,  
Washington, D. C., December 11, 1939.

Mr. ERIC HODGINS,  
*Publisher, Fortune,*  
*Time and Life Building, New York City.*

DEAR MR. HODGINS: Acting upon your letter of November 29, 1939, in which you ask for my comments and reactions to an article on War and Peace, I reply with the same candor I assume you had in mind in making your request.

It is my opinion that your article, War and Peace, is based upon false premises and erroneous conclusions, and is written to favor an international government, such as the League of Nations.

Even the heading of the article, The People of the United States Must Now Choose Among Retreat, Isolation, and International Leadership, is erroneous, for we are not compelled to choose either retreat or isolation, and certainly not international leadership, as we are well capable of taking care of ourselves without foreign or international advice or aid. As a matter of fact, internationalism is responsible for the present world turmoil, and it is from that that each country must rid itself or else be destroyed by it.

#### WAR AND PEACE

There never has been nor will there ever be peace on earth until life is no more. Constant war and destruction rage between and among microscopic and other animal life. In this maze of natural destruction, the most vindictive and insidious war is that which is created by "intelligent" human beings, for they show no pity or compassion when they begin to destroy. Man's intelligence is employed, not to promote peace, but instead to construct implements of war and instruments of torture to bring about more complete destruction. The promoters of wars may be found in governments that capitulate to internationalism and accept direction from the unseen hand of the "invisible government."

The "invisible government," being international in scope, is, of course, composed of internationalists who are not in sympathy with the nationalism of any country. It operates instead according to a code of its own, under which it levies tribute on world production. Being imbued with this strange philosophy of international ownership, it operates most successfully in such countries as are sound and prosperous.

The planners in the "invisible government" are Socialists, and the countries affected by this planning are Russia, England, France, and the United States. In order that the "invisible government" may continue and maintain itself in power, it is necessary that the military forces of all nations in which it operates be under its control, and to consummate this fiendish plan for world domination the League of Nations was created. To enhance the success of world planning the same international racketeers organized the League of Nations Bank for International Settlements and the League of Nations International Agricultural Mortgage Credit Co.

The League of Nations was to police the world under the direction of the "invisible government."

The Bank for International Settlements was to control gold and credit.

The International Agricultural Mortgage Credit Co. was to—I quote page 9 of their charter:

1. "To make long-term loans with amortization, or medium-term loans with or without amortizations, to mortgage or agricultural credit companies or institutions which, either directly or through other companies having their registered offices in the same country, make loans upon first mortgages on immovable property which is the subject of agricultural cultivation or used for the purposes of such cultivation.

2. "To create and negotiate bonds the sums repayable on which may not exceed the amount of the debts due from the national companies to the International Co. and secured by first mortgages registered in the name of the national companies, belonging to them or held by them as security."

This international supergovernment symbolized in the League of Nations was a wonderful scheme, indeed, for it was to operate tax-free and for the sole benefit of the membership. No special gift is required to visualize the far-reaching power of these organizations when operating in close harmony with national financial institutions, and national export and import banks, including our own Federal Reserve System. It is this group that I have chosen to label

"the invisible government," and within this organization we will find the producers of ammunition, war supplies, and the promoters of war. In these same organizations we find those who control and direct the publicity that is so helpful in shaping public opinion through press communications, the press, the cinema, the radio—the entire propaganda machine.

Comparing the egotism and ambition of this group of self-elected international rulers with the now popular dictators of Europe, the latter appear insignificant in their international ambitions. One thing, however, is significant: The plot to establish a world government was well planned, but, like other plans, the best sometimes goes astray, for it was the nationalism of Germany and Italy that opened the eyes of the world to this insidious attempt at world domination by the "invisible government" through instrumentalities of its own creation.

The present war in Europe is promoted by this "invisible government" in order to subdue those who have selected to remain free of its power. It was the international financiers, ammunition and armament manufacturers who brought about the World War, and it is the same group, including those who dictated the 1919 treaty of peace, that is now active in promoting the present war. It is from these international troublemakers that we must free ourselves in order again to enjoy tranquility.

It is my firm opinion that the world is awakening to the pernicious influence of the internationalist, for what right has anyone to monopolize world gold and credit at the expense of those who have earned such wealth? Is it possible that the people will forever allow themselves to be bludgeoned into submission by this obnoxious group of international pirates? Will agriculture and industry forever be willing to accept the crumbs that fall from the international family table? I think not. The American people, if I know them, will not submit to such injustice. Will the American people aid in the upkeep and in the manning of an international police force to club into submission nations that choose to be independent, when such forces may in turn be used to deprive us of those ideals that we have cherished since the creation of this Republic? Is it conceivable that the American people will be so stupid as to engage in a war to enthrone these international exploiters in the "invisible government," and so create an international power that may end in the destruction and confiscation of those liberties and rights we have enjoyed for 152 years? I do not think so.

I now quote from your article:

"This is exactly why the United States must on no account enter the war. We could not in all conscience send soldiers over there to fight for nothing."

I agree that we must on no account enter the present European war, and in principle I also agree that to fight for the "invisible government" is to fight for nothing; but, unfortunately, should we allow ourselves to be influenced by foreign propaganda, as we did in the World War, and fly to the rescue of the "invisible government," we would in such foolish procedure fight to bring about our own destruction.

#### THE POLICY OF RETREAT

There is no question of retreat. If the present European unrest would bring about cancellation of our trade pacts and trade treaties, it would be a blessing to agriculture and to our producers, for we could then at least supply our own markets with commodities raised and manufactured in the United States.

I realize that we cannot continue to import farm products and merchandise and balance such imports by the export of arms and ammunition, for such policy will bring about collapse of our economic structure when war material is no longer required.

I am one of those who believe in a first-class Navy and an independent merchant marine operated by private industry, free from graft and intrigue. A neutral can have no better argument than an efficient navy. We may also maintain neutral trade if we insist upon such rights with equal fairness to all belligerents; for example, if a cargo of contraband is consigned to a neutral state, such as the Irish Free State, it may be reasonably assumed that such cargo is for transshipment to England. If a similar cargo of contraband is consigned to Holland, it may be reasonably assumed that such cargo is for transshipment to Germany. Both cargoes are carried in our own ships bound to two neutral nations. If the English Navy intercepts and confiscates cargo consigned to Holland, we should as a neutral nation say: "Mr. England, if you confiscate cargoes in our ships bound to the neutral country of Holland, we shall not allow similar cargoes to proceed to the neutral Irish Free State; or, vice versa if a German submarine intercepts and sinks a ship with a cargo consigned to the Irish Free State." It is therefore not a question of retreat, but it is instead a case of demanding our rights as a neutral nation to trade with all nations not at war.

Our difficulty lies in the fact that we are not neutral. We were not neutral in the World War, a fact that is well known today; and we are not neutral in the present European war, a fact that is equally well known. The "invisible government" is using American credit and resources to finance the present war on an even greater scale than they were used in 1914 to finance the war for Great Britain and France. We are therefore instrumental in prolonging the war now raging in Europe and for attacks upon other nations, such as Finland. Had we, instead of repealing the arms embargo, said, "The United States will remain neutral in fact," peace would, in my opinion, prevail today, because the English and French people have as little desire to die in defense of the international financiers as we have.

## THE POLICY OF EXCLUSION

I shall now quote a section from this paragraph, because it is an indefensible conclusion drawn for no other purpose except to frighten the public and shape sympathy for Great Britain and France:

"If we do not like this policy, the next possibility is total isolation. By this means we shall be sure of avoiding war, since it is inconceivable that anyone would be foolhardy enough to attack us directly. We would be required to shut off all international trade, sell our ships, develop practically all of our own supplies, and reduce our defense strategy to the absolute minimum necessary to protect our continental area. We might be able to sell the Panama Canal, which inevitably involves us in world commerce, and fall back on our transcontinental railroads."

In the first place, a policy of exclusion or isolation is not "sure of avoiding war," any more than a person remaining in his office is sure to avoid a fight when everyone in the building is fighting. However, he would not be required to shut off all trade, sell his equipment, and reduce himself to poverty because of this, any more than our Nation would be required to shut off international trade, sell our ships, and reduce our defenses. For the contrary is true. He would provide for his own protection, and so should we as a Nation provide for national defense.

I realize, of course, that complete isolation is impossible, but in the event that other nations persist in mutual destruction, we may, to insure our own security, refrain from trading with them. As a measure of safety we should strengthen our Navy and merchant marine. We should develop our defenses and fortify all colonies as a measure of strategy for the protection of our Navy and merchant marine and as an aid to national defense. We should, instead of selling the Panama Canal as your article suggests, build another canal through Nicaragua to be used for military purposes in the event of war. We should in addition prepare to protect and consolidate the North American Continent, including all adjacent islands, in the common defense and for the general welfare of the United States.

It would have been enlightening had your article stated to whom the Panama Canal should be sold, for it is, I believe, one of the few Federal business investments that is actually paying cost of operation, for which geographical location and usefulness are solely responsible.

I recall how this part of Central America was acquired and that we later paid Colombia \$25,000,000 balm for an act that we condemn today. It is, however, difficult to understand why we are paying \$250,000 a year rent for the Panama Canal to the Panamanian Government, in view of the fact that we paid Colombia for all of this territory. I saw an item in the paper some time ago in which Panama refused the yearly rent on the new valuation of the dollar, insisting that their contract was made when the dollar contained 25.8 grains of fine gold. I believe the United States is now paying a 40-percent increase in rent as a result of the devaluated dollar, or \$350,000, which in reality should be an added profit to the operation of the Canal and therefore a help to the taxpayers of the United States.

This article on War and Peace is rather difficult to understand. For instance, this paragraph:

"Leaving aside the grave question of economic growth, we could only avoid absolute Government regimentation of our production by relaxing our isolationism in order to permit a freer flow of goods. But relaxation would again involve us in the risk of clashing with other powers and hence in the risk of war. Isolation in the modern interoceanic world means isolation."

What this little paragraph has to do with the issues discussed in a "modern interoceanic world"—which is, by the way, the same world we have always had since the creation of the earth—may be written into an article at some future date.

## THE POLICY OF THE NEW ORDER

I have discussed the policy of retreat and the policy of exclusion. I shall now discuss the third—the policy of the new order.

These "new order boys" should be discussed, for in my opinion they are anti-American, which it will not be difficult to prove. I quote:

"There remains, finally, the possibility of leadership. If the United States should take this third course it would have to participate in formulating an entirely new order of peace to replace the old one that has broken down. \* \* \* To provide such leadership, the United States would have to take her place among the nations as a force for peace."

Peace by force is not a new order of peace but is instead an old and recognized method to enforce domination. Peace by force has been employed by England to subjugate her Empire, even to keeping Ireland under her dominant heel. It was the same enforced peace that sent innocent men and women to penal colonies in English prison ships. France is not free of enforced peace, because it has been employed over her colonies, exemplified in Napoleon, and vividly set forth in the French Revolution.

Russia, under the leadership of Lenin and Trotsky, also attempted to enforce this new order of peace in Hungary, which cost that country 30,000 lives, and it is that philosophy that is now leading Russia in her attack upon Finland, a country which has given no offense to anyone.

So enforced peace is not a new order, but is, as a matter of fact, the customary method which the "invisible government" employs in the countries it rules.

It is also well to bear in mind the intimate relationship among the rulers of Russia, England, France, and even the United States. Nor should we forget that bolshevism was financed in New York through the Rhein-Westphalian Syndicate and other European banks, even after the United States was at war with Germany in 1917.

Let us at this point review the preamble to our Constitution: "We, the people of the United States, in order to form a more perfect union, establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity, do ordain and establish this Constitution for the United States of America."

This quotation from the Constitution is very important because it sets forth the very basic principles upon which our Government is founded. It is to establish justice and to insure domestic tranquillity, and this cannot be attained by engaging in a war of international subjugation, for that is neither just, nor will it establish peace at home. The preamble further declares that all acts must be in the common defense and for the general welfare of our own Nation and our people, so that we may secure the blessings of liberty to ourselves and our children. We cannot in any sense add to our defense or the general welfare of our people by joining other nationals or internationals in destruction, for the blessings of liberty cannot be enjoyed either by ourselves or our children if we deliberately destroy rights and liberties of other people. Your article leads me to believe that you are antiracial, particularly when you advocate forcible subjugation of other races.

## EMPIRE; LEAGUE; UNION

The least radical line that can be taken with regard to peace is a kind of renovated and modernized imperialism. This new system would be based upon the wishes of the totalitarian powers, on the one hand, and the Monroe Doctrine on the other. The idea is that the major powers should divide up the world into spheres of influence.

I do not understand how you can countenance imperialism and at the same time advocate League of Nations world control, unless it is your idea that the League of Nations should be an imperial government. If that is your idea, who should crown the king? You say, "Even so, regional imperialism ought not to be dismissed with discussion," which is my reason for even mentioning it.

I quote:

"The second category of peace has its cornerstone at Geneva, the League of Nations. Clinically, the League is not dead; it is merely in a state of suspended animation."

The League has already been discussed in this article; but when you state that it is not dead, I claim that it cannot be resuscitated, because its purpose is now revealed.

"This possibility—of a further development of the League idea—leads directly to the third category of peace. It may be that the League is to the history of nations what the Articles of Confederation were to United States history: a bad flop, which, nevertheless, prepared the way for the eventual solution."

The Articles of Confederation were not a "bad flop," as your article declares, but were, instead, too much on the "left," or the side which is now called "democracy." The founders of this Republic recognized that, and for that reason formulated the Constitution of the United States, which established balance in our republican form of government by establishing State representation in the Senate of the United States.

Clarence Streit's proposal for a gigantic union of democracies deserves no discussion, so I shall proceed.

## THE MEANING OF UNION

"Most peace has been negative—that is, not war. But every so often a group of separate political units, discovering a community of interests, integrate themselves into a new area, called a nation; an area in which peace becomes the rule rather than the exception; an area of positive peace, in that by the consolidation of resources, manpower, traditions, and laws, the whole becomes greater than the sum of its parts. Most modern nations are compositions of this kind."

It is not my intention to discuss negative or positive peace, for it is merely an expression often used to confuse the issue. Our trouble lies in the fact that we have been discovered by too many political units which are now attempting to enforce their peculiar philosophies at the expense of our traditions.

"From a remote abstraction encountered only in books and state papers, the foreign policy of the United States has been a personal problem for each of the 80,000,000 adults in the land. It is for these people to choose whether they are prepared to create a new world as their forefathers did, or whether they will be more content to live as best they may among the ruins of the old."

I cannot conceive that anyone but an anti-American would have the effrontery to insinuate that we are now living among the ruins of our Republic. It is high time that the loyal citizens of this country take note of the happenings to this Government. What is needed in the United States is a return to the fundamental principles, upon which this country was created, and ejection of all of those who cannot subscribe to such principles, including those who advocate a "new order of world control."

The foreign policy of the United States has never been a matter that 80,000,000 people should need to consider, and it is my firm opinion that Congress will not fail the people by allowing dictation of our foreign policy by agents of the "invisible government."

In concluding this review I shall quote the end of your article: "For it is by no means an exaggeration to say that the destiny of mankind is in our hands."

I have always been under the impression that the destiny of mankind is in the hands of God. But taking you at your word, when you make this statement, may I ask that you establish the identity of the author, for he must be a supreme egotist to believe that he has power over the destiny of man.

### Interparliamentary Union

#### EXTENSION OF REMARKS

OF

#### HON. HAMILTON FISH

OF NEW YORK

#### IN THE HOUSE OF REPRESENTATIVES

Friday, January 12, 1940

#### PROCEEDINGS OF THE THIRTY-SIXTH ANNUAL MEETING OF THE UNITED STATES GROUP OF THE INTERPARLIAMENTARY UNION

Mr. FISH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the proceedings of the Thirty-sixth Annual Meeting of the United States of America Group of the Interparliamentary Union, as follows:

#### INTERPARLIAMENTARY UNION—PROCEEDINGS AT THE THIRTY-SIXTH ANNUAL MEETING OF THE UNITED STATES OF AMERICA GROUP, JANUARY 17, 1939

The United States of America Group of the Interparliamentary Union met for its thirty-sixth annual meeting in the room of the Committee on the Library, United States Senate, Tuesday, January 17, 1939, at 10:30 a. m.

Among those present were:

Senators: Alben W. Barkley, of Kentucky, president; Edward R. Burke, of Nebraska; Ernest W. Gibson, of Vermont; Theodore F. Green, of Rhode Island; Claude Pepper, of Florida; Elmer Thomas, of Oklahoma; Wallace H. White, Jr., of Maine. Representatives: H. Carl Andersen, of Minnesota; John Z. Anderson, of California; Homer D. Angell, of Oregon; Thomas R. Ball, of Connecticut; William W. Blackney, of Michigan; Stephen Bolles, of Wisconsin; Millard F. Caldwell, of Florida; Frank Carlson, of Kansas; Albert C. Carter, of California; Ralph E. Church, of Illinois; Cliff Clevenger, of Ohio; Carl T. Curtis, of Nebraska; Charles A. Eaton, of New Jersey; Charles H. Elston, of Ohio; Hamilton Fish, of New York; Aaron Lane Ford, of Mississippi; Charles A. Halleck, of Indiana; Pehr G. Holmes, of Massachusetts; Arthur B. Jenks, of New Hampshire; Ben F. Jensen, of Iowa; Noble J. Johnson, of Indiana; Robert F. Jones, of Ohio; Harold Knutson, of Minnesota; Gerald W. Landis, of Indiana; Earl R. Lewis, of Ohio; Thomas E. Martin, of Iowa; Noah M. Mason, of Illinois; Charles A. Plumley, of Vermont; Daniel A. Reed, of New York; Harry Sandager, of Rhode Island; Joseph B. Shannon, of Missouri; Dewey Short, of Missouri; Frederick C. Smith, of Ohio; Foster Stearns, of New Hampshire; Karl Stefan, of Nebraska; George S. Williams, of Delaware.

Present also: Dr. Arthur Deerin Call, permanent executive secretary.

President BARKLEY. The group will please come to order.

I want to say at the outset that I appreciate the large attendance here this morning of our American group. I see a good many members who never before have attended these group meetings of the Interparliamentary Union, and I am certainly glad to see so many of you interested in this program and in this organization.

This is the thirty-sixth annual meeting of the American group of the Interparliamentary Union. For the benefit of those who have not heretofore attended either the group meetings or the conferences held at various places in the world, I might say that the Interparliamentary Union was organized 50 years ago.

It plans to celebrate the fiftieth anniversary at the next conference, to be held in Oslo next August. The reason this is the thirty-sixth instead of the fiftieth meeting is that our group was not organized until some years after the founding of the Union in 1888.

The Union was organized originally in order that the legislative representatives of the people in the various countries might have a forum for the discussion of international problems, for better understanding among the legislative representatives of the different nations, and for the forming of contacts enabling the parliaments of each country to understand world problems and world opinion and get the viewpoint of representatives of different nations who meet from year to year to discuss political, social, economic, and military problems, with a view of creating a body of world opinion in a semiofficial way.

Although the delegates are always members of parliaments, they have made no binding commitments either with respect to themselves or their countries. By these annual meetings and the forming of these more or less unofficial legislative contacts with the

various parliaments of the world, a material contribution could be made to arbitration, and the settlement of disputes that frequently lead to war, and the settlement of a lot of problems by discussion and the dissemination of information.

I might say it was largely, if not altogether, because of the initiative of the Interparliamentary Union that the First and Second Hague Conferences were held prior to the World War. The Interparliamentary Union, at a meeting in St. Louis in 1904, passed a resolution requesting President Roosevelt to initiate a movement for mediation in the war between Japan and Russia. I believe the Interparliamentary Union can claim to have started the movement that made the President of the United States the initiator of the efforts to bring about peace between these two nations, which, as you all know, resulted in a peace conference in Portsmouth, N. H.

The conference met every year until the World War broke out in 1914, with one or two exceptions. During that war no conferences were held, because practically all the countries were at war.

Following the World War the conferences were resumed. The first I attended was in Stockholm in 1921, when we had a large representation from both Houses. From that time the conferences have been held in various capitals. In 1925 the conference met here in Washington. I attended that. I attended one in Copenhagen in 1923, one in Bucharest in 1931, one in Paris in 1937, and the one last year, 1938, at The Hague.

I have myself, by reason of repeated attendance at these conferences, made contacts that I could not have had in any other way. I believe it is unfortunate that more of our delegates have not kept up a sustained interest in the Interparliamentary Union and in the conferences held from time to time. In order to get a picture of world affairs, it is necessary to attend more than 1 week's conference, because at some of the conferences discussions are necessarily limited to subjects in which we have only an academic interest. It is true that at the last conference, and at the one in Paris, so many acute problems existed in the world—in Europe and Asia—that many delicate questions that should have been discussed were banned because of the presence of representatives from quarrelling and fighting nations, and, in order not to create a lot of discord in the conference, many of the subjects which were most in the hearts of the delegates had to be shunned. That was particularly true at The Hague.

When I first attended these meetings, Germany always sent a very large and intelligent delegation. I remember when Mr. Loeb was a regular attendant, and Walter Schücking a very learned German professor. During the existence of the German Republic, the German Reichstag always had a large and worthy representation. This year they had none.

Italy has had strong delegations, but now, as we know, the Italian Parliament is quite subordinate to its Duce.

The result is, that the creation of dictatorships in certain countries in Europe has brought about such delicacy in the discussion of subjects that, I will say frankly, the last year or two the programs have been a little academic to us, and in some cases not as interesting as they might be, although the program taken up at The Hague Conference last year contained as a part of its agenda some matters of interest to the United States.

We discussed the development of colonial resources. We are not a colonial nation, but the development of natural colonial resources affects the markets of the world in which we trade.

There was one subject discussed which was peculiarly pertinent to our program of trade agreements, and that was the question of whether, in the negotiation of these trade agreements, the most-favored-nation clause should be preserved or abandoned. There was quite a discussion on that subject, in which some of the American delegates participated. The action taken by resolution was not entirely satisfactory to the American delegation, but there was a healthy, stimulating discussion, and, of course, as I said—May we ask for order in the other room.

Representative EATON. Would it be possible to go to a room where we could all have seats? There are as many out there as there are in here.

Representative CHURCH. I move that we do that. There are more out there than there are in here.

President BARKLEY. Where is there a room available?

Senator WHITE. Before you adjourn to another place, may I say I came here this morning because I wanted to be recorded, but I have another meeting at 11 o'clock which I must attend. If there is any vote, I am willing to leave my vote with the chairman. I would not do that on all occasions, but I will do it on this occasion.

President BARKLEY. Thank you.

Representative CHURCH. I made the motion that we adjourn to another room. I have attended these meetings every year, and there are quite a number here today. I would like to see them have the benefit of the meeting.

President BARKLEY. I am gratified to see so many present. We will adjourn to the District of Columbia Committee room.

(Whereupon, at 11 o'clock a. m., the meeting adjourned to the room of the Committee on the District of Columbia, United States Senate, where the proceedings continued as follows:)

President BARKLEY. We will again come to order. The necessity for finding larger quarters for this meeting is very gratifying. I can say that this is the largest attendance of the American Group that I think it has been my pleasure to witness.

When we recessed down there I was giving you some of the subjects that were discussed at The Hague Conference. I think I was commenting on the question of the most-favored-nation clause as applicable to our trade agreements. The trade-agreement

situation, regardless of what anybody may think of it—and I will not discuss its merits—is a matter being considered by many countries besides our own. The discussion was whether in the negotiation of these trade agreements it was desirable to retain what we have retained in all of them—the preservation of the most-favored-nation clause—or to let each bilateral agreement stand without regard to the most-favored-nation clause.

The conference adopted a resolution, the substance of which was that, to a certain extent, they favored freedom from requirements of the most-favored-nation clause in the negotiation of trade agreements. The discussion was very interesting and enlightening. Most of the speeches had been prepared in advance, except those made by us. Whatever we had to say, we said extemporaneously. We offered some amendments, some of which were agreed to, and one or two rejected.

Another subject was the international unification of legislation on copyright. The copyright laws of all nations affect the writers of all other nations to some extent, and there was a comprehensive discussion on the subject of whether it would be advisable to harmonize copyright laws throughout the world. It was somewhat along the lines of the discussions on uniform divorce laws which have been going on in this country for many years. Anyhow, it is a subject in which every country is interested.

Then there was a discussion of the initiative and framing of laws, not a new subject to us, that showed most careful preparation on the part of many delegates.

I give you these to illustrate the types of subjects discussed at these conferences. You will observe that these subjects are far removed from any war-like discussions, because some of the countries represented were themselves involved in warfare. That was unfortunate in a way, but you understand that the council which arranges the program in advance has to take into consideration avoidance of subjects embarrassing to countries involved in war, or to countries, wherein civil wars are in progress. But I believe that such a discussion—even if it should bring on a cat fight—might now and then be a good thing.

We have two members of the council, but the council meets regularly in April, when it has been impossible for the American members to go to Europe to help arrange the program and then go back and attend the conference. As a result, the American members of the council have not attended the council meetings in April, and the programs have been made up largely by the European delegations.

You will find in the World Affairs magazine of December 1933, published by the American Peace Society, Dr. Arthur Deering Call, editor, a copy of which you have all received; a very comprehensive discussion of the thirty-fourth conference of the Interparliamentary Union at The Hague, August 22-27, 1933.

With these preliminary remarks, which I felt that I ought to make for the benefit of those who have not participated in these meetings heretofore, we will proceed with the regular order of business.

Because of the congressional elections, it was impossible for many of our delegates to go to the last conference. I had, myself, quite a tussle in Kentucky, which occupied my attention until the middle of August, and because of that I was late in getting to The Hague.

Question. Did you have a campaign?

President BARKLEY. I went through the motions.

The elections of the House prevented our having as large a representation as I had hoped for. Some were unable to attend and one or two whose names were suggested at the last minute were named too late to enable them to make arrangements to go. I caught the last boat. One or two Members of the Senate who were appointed could not attend. I have always, since I have been president of the group, sought to divide the delegation equitably between the political parties. I appointed three Republican Senators who could not attend, and as a result the delegation at the last conference was a little lopsided politically, but we did have one Senator in attendance who was not a Democrat. We will try to keep the balance as nearly equitable as possible, but it depends on who can attend. We have to wait until the last minute to see who can go. Sometimes we have to revise the list within a week of the time the ship sails. Somebody will say he can go, and wants to go, and at the last minute finds that he cannot go.

Men have come to me and said they want to go to the next conference. Of course, I can't make any commitments now, but they will all be considered. When, at the last minute, a Member finds he cannot go, it makes it difficult, when we are all scattered over the United States and not in Washington, to complete the delegation. As a result, we have to wait and see who can go.

Representative EATON. I have been asked how these trips are financed.

President BARKLEY. I will explain that.

For years Congress has been appropriating \$10,000 a year as a contribution to the Interparliamentary Union. That goes to Geneva. There is a permanent secretary at Geneva. The president of the Interparliamentary Union lives abroad; he is a member of a European parliament.

Before that the American Peace Society had made a contribution of \$5,000 to help pay the expenses of the American delegates. The Union hawked around among other generous people in the country to secure enough money to make it possible to send a representative delegation.

We concluded it was rather cheap and undignified for the American Congress to go, hat in hand, and beg money for representatives to go to these conferences, although it must be admitted that the

Carnegie endowment, as well as the American Peace Society, have been most generous. I secured the passage of a permanent law authorizing the appropriation of \$10,000 to help pay the expenses of delegates. Whether that pays the whole expenses depends on how many go. If 10 go, it would be \$1,000 apiece; if 15 go, it would be less, whatever the proportion is. There is an annual appropriation of \$10,000 which goes into the Budget, and I suppose it will be continued as a matter of routine, and that is divided among those who go, after deducting certain expenses for printing and our secretary. It always results in the delegates going down in their pockets to pay part of the expenses, but we have been able to pay enough of the expenses to induce delegates to go. If any delegate takes members of his family, that is paid privately.

Representative CHURCH. Can you name the members who went to The Hague last year?

Dr. CALL. There were six Members of the Senate and two Members of the House. The United States delegation consisted of Senator ALBEN W. BARKLEY, president of the group; Senator JOSEPH F. GUFFEY, of Pennsylvania; Senator CLAUDE PEPPER, of Florida; Senator HENRIK SHIPSTEAD, of Minnesota; Senator EDWARD R. BURKE, of Nebraska; Senator LEWIS B. SCHWELLENBACH, of Washington; Representative MILLARD F. CALDWELL, of Florida; and Representative AARON L. FORD, of Mississippi.

President BARKLEY. I will say that Senator WHITE, of Maine, and Senator LODGE, of Massachusetts, whom I have asked on two occasions to go as delegates of the Senate, could not go at the last minute. Anyhow, that is the delegation that went last year.

In Paris in 1927 Senator LA FOLLETTE was a delegate. Senator WHITE was appointed a delegate, but he could not attend. There has been no uniformity in the delegation. We hold a curbstone nominating convention and pick those who want to go or who are able to go. We have steered away from appointing delegates who just want a trip. Of course, we can't always tell to what extent they are motivated by that desire. I think it desirable that, in the varying delegations from year to year, a certain panel should go so as to become interested in these international questions.

We will now proceed with the regular order of business. The first thing on the agenda is reading of the minutes of the meeting of a year ago. If there is no objection, these minutes having been printed in the Appendix to the CONGRESSIONAL RECORD, volume 84, page 83, we might dispense with that reading.

Is there any objection? I hear none, and it is so ordered.

My attention is called to the fact that we want to make reference to the death of one of our active members. Dr. Call, will you make the announcement?

Dr. CALL. Robert Low Bacon, born July 23, 1883, at Jamaica Plain, Boston, Mass., a graduate of Groton School, Harvard College, and the Harvard Law School, served as a Member of the Sixty-eighth, Sixty-ninth, Seventieth, Seventy-first, Seventy-second, Seventy-third, Seventy-fourth, and Seventy-fifth Congresses. He received the Distinguished Service Medal, holding at the time of his death the rank of colonel of field artillery. In the House of Representatives he served on the Merchant Marine and Fisheries, Radio, Claims, Immigration and Naturalization, Insular Affairs, Census, War Claims, Education, Library, and Appropriations Committees. He died September 12, 1933.

President BARKLEY. The Chair will entertain a motion to appoint a committee to draft suitable resolutions on the death of Congressman Bacon.

(The motion was made, seconded, and agreed to.)

President BARKLEY. I will appoint the committee later.

Dr. CALL. Dr. Christian L. Lange died on December 11, 1933, near Oslo, Norway.

Christian Lange was born in 1869 and dedicated his life to the cause of international peace. In 1899, while he was still a teacher at the High School of Christiania, he organized the Ninth Interparliamentary Conference, which was held in that city. The abilities which he showed on that occasion brought him to the notice of the Nobel committee of the Norwegian Parliament, of which he became secretary in the following year. In 1909 Christian Lange was appointed secretary general of the Interparliamentary Union. From then on and until 1933, when he retired, he labored unsparingly for the development of the cause to which he was ardently devoted. It may be added he received the Nobel peace prize.

I will say that upon the receipt of the notice of the death of Dr. Lange in the papers I took the liberty of writing to Mme. Lange as follows:

"Members of the United States of America group of the Interparliamentary Union, familiar with the long and invaluable services of Dr. Christian L. Lange to the upbuilding of more intelligent international relationships, grieve to learn of the death on December 11 of their distinguished leader and source of inspiration through the many years.

"They would have you know of their sorrow because of his passing and of their deep sympathy for you and yours."

President BARKLEY. The Chair would think it would be appropriate for this group to authorize the secretary to communicate the deep regret of this American group to Mme. Lange on account of the death of her husband, and to appoint a committee to draft suitable resolutions on the death of Dr. Lange.

(The motion was made, seconded, and agreed to.)

President BARKLEY. I will appoint the committee later.

There are certain commissions of the Interparliamentary Union on which we have members. Dr. Call will read the commissions of the Interparliamentary Union and the American members of these commissions.

Dr. CALL. The United States members of Permanent Study Commissions, of which there are seven, are as follows:

The first is the Commission on Political and Organization Questions. Those appointed to serve on that Commission to date are Senators JAMES F. BYRNES, EDWARD R. BURKE, JOSEPH F. GUFFEY; Representative B. CARROLL REECE.

The second is the Commission on Juridical Questions. Those appointed to serve on that Commission to date are Senators Sherman Minton, Ernest W. Gibson, Lewis B. Schwellenbach; Representatives Sam D. McReynolds and James A. Shanley.

The third is the Commission on Economic and Financial Questions, and the members are Senator Alva B. Adams; Representatives Thomas S. McMillan, Richard B. Wigglesworth, Henry B. Steagall, and Millard F. Caldwell.

The fourth is the Commission on Ethnic and Colonial Questions, the members of which are Senator HENRIK SHIPSTEAD; Representatives CAROLINE O'DAY, AARON LANE FORD, CHARLES A. EATON, and SOL BLOOM.

The fifth is the Commission on Reduction of Armaments: Senators TOM CONNALLY, KENNETH MCKELLAR, WALLACE H. WHITE, JR.; Representative ALBERT E. CARTER.

The sixth is the Commission on Social and Humanitarian Questions: Senators ROBERT M. LA FOLLETTE, MILLARD TYDINGS; Representative JED JOHNSON.

And the seventh is the Commission on Intellectual Cooperation: Senators ELBERT D. THOMAS, CLAUDE PEPPER, ARTHUR H. VANDENBERG; Representative FRITZ G. LANHAM.

President BARKLEY. The record of these Commission appointments has been made a part of the minutes of this meeting.

At the last meeting of this group a motion was adopted and a committee appointed to draft a resolution relative to the death of Senator Robinson. I will ask the secretary to report that resolution.

Dr. CALL. "On July 14, 1937, the United States group of the Interparliamentary Union learned with sorrow of the death of Joseph Taylor Robinson, long a member of its executive committee, attendant upon conferences of the Interparliamentary Union in Stockholm, 1921; in Copenhagen, 1923; and in Bucharest, 1931, always the helpful counselor, gifted as a leader in the Congress, beloved by all as lawyer, statesman, friend."

"The group incorporates this expression of affection in its permanent records and extends to the relatives of the deceased its very deep sympathy."

"Senator ELMER THOMAS, Chairman.  
"Senator EDWARD R. BURKE,  
"Representative B. CARROLL REECE."

(The resolution was adopted.)

Senator BARKLEY. Are there any other reports?

Dr. CALL. The treasurer of this group is the Honorable SOL BLOOM. He is in New York today. He called on the telephone yesterday and asked me to make his report to you to this effect, namely, that there is in the treasury of the group \$106.65.

Senator BARKLEY. I will say to the members of this group that that is not in any way a part of the appropriation which Congress makes to defray expenses of delegates and to make its contribution to the union itself. That is what is left from contributions made privately before Congress began to make its appropriations.

The next order of business is the election of officers. Dr. Call, will you give a list of the officers to be elected?

Dr. CALL. Mr. President, according to our bylaws and constitution, there should be elected today a president, three vice presidents, a treasurer, a secretary, and an executive committee. The executive committee is made up of 10 persons including the president, who serves as ex officio chairman. It is also customary to vote on the permanent executive secretary.

(Senator PEPPER nominated the existing president, Senator BARKLEY, for reelection; Senator THOMAS moved that the nominations be closed; Representative JOHNSON of Indiana nominated Representative HAMILTON FISH, which nomination was seconded and the nominations closed. Whereupon, at the request of President BARKLEY, Senator PEPPER took the chair and presided during the election of the president.)

(The vote for president was taken by show of hands. Senator BARKLEY said it was obvious that Mr. FISH was elected, and he moved that the election be made unanimous, which motion was seconded and agreed to.)

Whereupon President FISH took the chair.

The following additional officers were then elected:

Vice presidents: Senator EDWARD R. BURKE, of Nebraska; Representative SAM D. McREYNOLDS, of Tennessee; and Senator WALLACE H. WHITE, of Maine.

Treasurer: Representative FRITZ G. LANHAM, of Texas.

Secretary: Representative CHARLES A. EATON, of New Jersey.

Executive committee: Representative MILLARD F. CALDWELL, of Florida; Representative ALBERT E. CARTER, of California; Representative HAROLD KNUTSON, of Minnesota; Senator ALBEN W. BARKLEY, of Kentucky; Senator TOM CONNALLY, of Texas; Senator MILLARD E. TYDINGS, of Maryland; Senator ARTHUR H. VANDENBERG, of Michigan; Representative THOMAS S. McMILLAN, of South Carolina; Representative DEWEY SHORT, of Missouri.

President FISH. I just want to take this occasion to thank the members for electing me to this office as successor to the very distinguished Senator from Kentucky [Mr. BARKLEY], who has for so many years given his time and his ability to make a success of this union.

It is true that some Members of the House felt there should be a rotation every few years. Whatever the vote was it is certainly no reflection on the great ability of the Senator from Kentucky.

The next in order is unfinished business.

Mr. CALDWELL. I believe it is the custom of this group to take into consideration the selection of a permanent executive secretary, is it not?

Senator BARKLEY. I want to say in that connection that for the last 20 years the group has chosen Dr. Arthur Deerin Call as permanent executive secretary. That is different from the secretary you have elected. The truth is the permanent executive secretary does most of the work and goes to the conferences with the delegates and helps to arrange the program carried out at these conferences.

In view of Dr. Call's excellent service in the past, I nominate him for reelection as permanent executive secretary of this group.

Representative EATON. I second the motion, and say that our efficient secretary has done magnificent work in this connection and will perform valuable services in the future, and I wish him long years of service and even an increase in salary, if that is possible.

(Whereupon Dr. Arthur Deerin Call was unanimously reelected as permanent executive secretary.)

President FISH. Dr. Call you have been unanimously reelected, and if you have any remarks to make we will be glad to hear from you.

Dr. CALL. Gentlemen, you will wish me to call your attention to some of the publications of the Interparliamentary Union.

The work of the Interparliamentary Union expresses itself in its publications. Here [indicating] is the report of The Hague Conference. It contains the speeches made; if made in English, they are reported in English; if in French, they are reported in French; if in German, they are reported in German.

The Interparliamentary Union publishes eight times a year what is known as the Interparliamentary Bulletin. This Bulletin keeps one in touch with the work at the headquarters. It also contains every month—in French only, I am sorry to say—constitutional and documentary information of value. This can be had by paying 3 Swiss francs, that is, about 60 cents. The publication, known as the *Compte-Rendu*, can be had by paying about \$2.

Then in addition to that the Interparliamentary Union gets out every year what is known as the Interparliamentary Annual.

Question. Do any of these reports cover bilateral treaties?

Dr. CALL. Yes. The *Compte-Rendu* covers it. Only the English features are in English; but all the resolutions are in English. But here are the resolutions without price [indicating].

The Interparliamentary Union is an honest piece of goods. It publishes documents of value. After 20 very pleasant years with Members of the Congress, I find that they get out of the Union about in proportion to what they put into it. If they become interested and really take part in these commissions and attend the conferences, they almost always find that the meetings are invaluable. I thank you gentlemen for your unvarying friendly cooperation and now once again for this evidence of your confidence.

President FISH. The next in order is new business. Is there any new business?

Dr. CALL. I don't know of any.

President FISH. Senator BARKLEY, do you know of any new business?

Senator BARKLEY. I do not.

President FISH. I will say this in conclusion, although it is hardly necessary, as all Members of Congress realize it: Our parliamentary or representative form of government is more under attack today than ever before. If there was ever any need for the Interparliamentary Union, it is today. The Congress has realized that, and some 3 years ago began making an appropriation of \$20,000—\$10,000 of which goes to maintain the Interparliamentary Union at Geneva and the other \$10,000 to send delegates to the conferences.

The next Conference will be at Oslo, Norway, beginning August 15 or 22, and delegates will be appointed. There will be only \$10,000 to cover their expenses, but I think that can be divided into \$500 lots, and we can send 20 delegates instead of 10.

These meetings seek to promote arbitration and peace throughout the world, and to substitute arbitration for war. That raises one of the vital issues before the world.

I cannot be successful in this post unless we all cooperate and work together. I will make just one pledge and that is to conduct this organization as fairly as I am able.

I shall give representation to Democrats and Republicans alike. Those who want to go to Oslo, let me know.

I thank you for the election and will do all I can to make this organization a success.

(Thereupon, at 5 minutes past 12 o'clock noon, the meeting adjourned.)

ARTHUR DEERIN CALL,  
Permanent Executive Secretary.

MEETING OF THE EXECUTIVE COMMITTEE UNITED STATES OF AMERICA GROUP, MARCH 1, 1939

At a special meeting of the Executive Committee of the United States of America Group, the Interparliamentary Union, held in the Foreign Affairs Committee rooms of the House of Representatives on Wednesday, March 1, 1939, at 11 a. m., the following were present:

Representative HAMILTON FISH, president, Senator TOM CONNALLY, Senator WALLACE H. WHITE, JR., Senator EDWARD R. BURKE, Representative HAROLD KNUTSON, Representative MILLARD F. CALDWELL, Representative CHARLES A. EATON, Representative DEWEY SHORT.

Arthur Deerlin Call, permanent executive secretary, was also present. Senator ALBEN W. BARKLEY, Representative FRITZ G. LANHAM, and Representative THOMAS S. McMILLAN notified the president that they were unable to attend due to circumstances beyond their control.

The president submitted to the meeting a tentative list of appointments to permanent study commissions, and was authorized to set up such commissions and announce the appointments as soon as completed.

Representative KNUTSON moved that the president be authorized to appoint an advisory committee to the United States of America group, composed of outstanding authorities on international affairs, to consider and make recommendations to the group and to invite them to attend the conference at Oslo, Norway, in August, in an advisory capacity if they desired. The motion was duly seconded and adopted, and the president was authorized to select and appoint such a committee at his discretion.

A motion was made by Senator BURKE to authorize the president to invite the Interparliamentary Union to hold the International Conference in the United States, in 1940, in connection with the New York World's Fair, with a proviso that he should confer in advance with the President of the United States and the Secretary of State, and with congressional leaders as to their attitude in regard to the authorization of the necessary appropriations for such a conference, estimated at \$50,000. The motion was duly seconded and adopted.

There being no further business before the committee, the meeting was adjourned.

Signed by

ARTHUR DEERLIN CALL,  
Permanent Executive Secretary.

### Jackson Day Address

#### EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Monday, January 15, 1940

ADDRESS BY THE PRESIDENT

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the RECORD the address delivered by the President of the United States at the Jackson Day dinner held in Washington, D. C., on the evening of January 8, 1940.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Once upon a time there was a school teacher, who, after describing heaven in alluring and golden terms, asked her class of small boys how many of them wanted to go to heaven. With eyes that sparkled at the thought every small boy in the class held up his hand—except one. Teacher said, "CHARLIE, CHARLIE McNARY, you don't want to go to heaven? Why not?" "Teacher—sure I want to go to heaven, but" he said, pointing to the rest of the boys in the room—"not with that bunch."

A week ago three distinguished leaders of the opposition were invited to this great banquet—a \$10 dinner with all the fixin's free—no cover charge—no \$100 check—no tips—"nothin' to sign and nothin' to jine"—and a ringside seat at a nonpolitical plate-side chat. Believe-it-or-not—they sent polite regrets. Why?

There are a lot of riddles in the National Capital. I, myself, am supposed to be a self-made riddle—in fact a cross between a riddle and a Santa Claus. Most of the riddles in this town, however, are the ones posed for you in some solemn column. Like crossword puzzles and hypothetical bridge hands, they come to you morning or evening as a synthetic daily amusement feature, like fairy tales or bedtime stories calculated to keep unsuspecting children awake all night. But occasionally we get a real riddle like this one about the three empty chairs.

Why didn't our guests come? I guess the real reason is that, like the small boy, they did not want to go to heaven with this bunch.

But maybe there were other reasons. Maybe it was because they figured that we just wanted to fatten up the ducks, and that we were putting on a closed season in January merely to get better sport next fall.

Maybe they were holding out for an old-fashioned Jackson dinner. Someone called my attention the other day to a magazine article setting forth a report of a dinner in February 1834 in Andrew Jackson's White House, as made by a guest at the dinner. I quote:

"The first course was soup in the French style; then beef bouillé, next wild turkey boned and dressed with brains; after that fish; then chicken cold and dressed white, interlarded with slices of

tongue and garnished with dressed salad; then canvassback ducks and celery; afterwards partridges with sweet breads and last pheasants and old Virginia ham. The dishes were placed in succession on the table, so as to give full effect to the appearance, then removed and carved on a side table by the servants. The first dessert was jelly and small tarts in the Turkish style, then blanché mode and kisses with dried fruits in them. Then preserves of various kinds, after them ice cream and lastly grapes and oranges."

Such a dinner today would cost the full \$100 we have each and all of us paid; there would have been nothing left for Jim Farley; and the Democratic committee would have had to borrow money to provide bicarbonate of soda for all.

I had hoped our invited guests would come because I had intended to tell them not only about Andrew Jackson but about Abraham Lincoln as well; to tell them how much alike all our great leaders have been—even to give them free—though unsolicited—advice on how to reconstitute the Republican Party successfully along the lines on which Abraham Lincoln created it. As the leader of the Democratic Party I felt no reluctance to give them good advice for I was sure that they would not use it—they of little faith.

Seriously, the more I have studied American history and the more clearly I have seen what the problems are, I do believe that the common denominator of our great men in public life has not been mere allegiance to one political party, but the disinterested devotion with which they have tried to serve the whole country, and the relative unimportance they have ascribed to politics, compared with the paramount importance of government.

By their motives may ye know them.

The relative importance of politics and government is something not always easy to see when you are in the front-line trenches of political organization.

In a period of 30 years, during which I have been more or less in public life—in my home county, in Albany, in Washington, in Europe during the World War, in New York City, in national conventions, back in Albany, and finally again in Washington—I have come to the conclusion that the closer people are to what may be called the front lines of government of all kinds—local and State and Federal—the easier it is to see the immediate underbrush, the individual tree trunks of the moment and to forget the nobility, the usefulness, and the wide extent of the forest itself.

It is because party people in county courthouses, or city halls, or State capitals, or the District of Columbia are, most of them, so close to the picture of party or factional warfare that they are apt to acquire a false perspective of what the "motives" and purposes of both parties and their leaders should be for the common good today.

They forget that politics is only an instrument through which to achieve government. They forget that back of the jockeying for party position—back of the party generals—hundreds of thousands of men and women, officers and privates, foremen and workmen, have to get a job done, have to put in day after day of honest, sincere work in carrying out the multitudinous functions that the policy makers in modern democracy assign to administrators in modern democracy.

People tell me that I hold to party ties less tenaciously than most of my predecessors in the Presidency, that I have too many people in my administration who are not active party Democrats. I admit the soft impeachment. My answer is that I do believe in party organization, but only in proportion to its proper place in government. I believe party organization—the existence of at least two effectively opposing parties—is a sound and necessary part of our American system; and that, effectively organized nationally and by States and by localities, parties are good instruments for the purpose of presenting and explaining issues, of drumming up interest in elections, and of improving the breed of candidates for public office.

But the future lies with those wise political leaders who realize that the great public is interested more in government than in politics; that the independent vote in this country has been steadily on the increase, at least for the past generation; that vast numbers of people consider themselves normally adherents of one party and still feel perfectly free to vote for one or more candidates of another party, come election day, and, on the other hand, sometimes uphold party principles even when precinct captains decide "to take a walk."

The growing independence of voters, after all, has been proved by the votes in every Presidential election since my childhood—and the tendency is on the increase. I am too modest, of course, to refer to the most recent example—the election of 1936. Party regulars who want to win must hold their allies and supporters among those independent voters.

There are, of course, some citizens—I hope a decreasing number—with whom I find it difficult to talk rationally on this subject of strict party voting. I have in mind, for example, some of my close friends in the South who are under the impression that they would be ostracized in society and in business if it were to appear publicly that they had ever voted for a Republican. I also have in mind some very close friends in northern villages who tell me, quite frankly, that though they would give anything to be able to vote for me, a Democrat, it would hurt their influence and their social position in their own home town.

I have in mind the predicament of one of the ablest editors of today who some time ago said to me very frankly:

"I am really in complete sympathy with your program, but cannot say so publicly, because, Mr. President, the readers and advertisers of my paper are 90 percent Republicans, and I simply cannot afford to change its unalterable policy of traditional opposition to anything and everything that comes from Democratic sources. Of course, you understand."

Millions of unnecessary words and explanations and solemn comments are uttered and written year after year about the great men of American history—with ample quotations—to prove what Jefferson or Hamilton, Jackson or Clay, Lincoln or Douglas, Cleveland or Blaine, Theodore Roosevelt, or Bryan would have said or would have done about some specific modern problems of government if they were alive today. The purpose of all these comments is either to induce the party leaders of today blindly to follow the words of leaders of yesterday or to justify public acts or policies of today by the utterances of the past, often tortured out of context. The devil can quote past statesmen as well as Scripture to prove his purpose.

But most people who are not on the actual firing line of the moment have come to attach major importance only to the motives behind the leaders of the past. To them it matters, on the whole, very little what party label American statesmen bore, or what mistakes they made in smaller things, so long as they did the big job that their times demanded be done.

Alexander Hamilton is a hero to me in spite of his position that the Nation would be safer if our leaders were chosen exclusively from persons of higher education and of substantial property ownership; he is a hero because he did the job which then had to be done—to bring stability out of a chaos of currency and banking difficulties.

Thomas Jefferson is a hero to me despite the fact that the theories of the French revolutionists at times overexcited his practical judgment. He is a hero because, in his many-sided genius, he, too, did the big job which then had to be done—to establish the new Republic as a real democracy based on universal suffrage and the inalienable rights of man, instead of a restricted suffrage in the hands of a small oligarchy. Jefferson realized that if the people were free to get and discuss all the facts, their composite judgment would be better than the judgment of a self-perpetuating few. That is why I think of Jefferson as belonging to the rank and file of both major political parties today.

I do not know which party Lincoln would belong to if he were alive in 1940—and I am not even concerned to speculate on it; a new party had to be created before he could be elected President. I am more interested in the fact that he did the big job which then had to be done—to preserve the Union and make possible, at a later time, a united country. His sympathies and his motives of championship of humanity itself have made him for all centuries to come the legitimate property of all parties—of every man, woman, and child in every part of our land.

I feel very much the same way about Jackson—not Jackson the Democrat but Jackson the American—who did the big job of his day, to save the economic democracy of the Union for its westward expansion into a great nation, strengthened in the ideals and practice of popular government.

I have always thought it a magnificent illustration of the public's instinct for the quality of a leader, that the people triumphantly reelected Jackson in spite of the fact that in the meantime, in his fight for economic democracy, Biddle and the bank had sought to create an economic depression in order to ruin him.

Of all of these great American figures, I like to think—and I know I am right—that their purposes, their objectives, their motives placed the good of the Nation always ahead of the good of the party; that while they used the mechanics of party organization in many ways, they dropped mere partisanship when they considered it against the national interest.

I saw a good deal of the governorship of New York before I became Governor of the State, and I saw a good deal of the inside of the White House for many years before I occupied it. Many years ago it had become clear to me that, properly availed of, the governorship and the Presidency, instead of being merely a party headquarters, could become the most important clearing house for exchange of information and ideas and facts and ideals affecting the general public welfare.

In practice, as you know, I have tried to follow out that concept. In the White House today we have built up a great mosaic of the state of the Union from thousands of bits of information; from one man or woman this thought; from another, data on some event; a scrap here, perhaps, and a scrap there; from every congressional district in the Union; from rich and poor; from enthusiast and complainant; from liberal and conservative; from Republican and Democrat.

I like to think that most American Governors or Presidents have seen the same opportunity in their office and that their motives have been primarily of service rather than of party or personal aggrandizement.

Doubtless they have all been irked by the commentators of the day who ascribed other motives to them. Doubtless after much experience in the public life of America, with its free speech and press, the irksomeness wore off. Doubtless all of them wore hair shirts when they started, but if they matured in public life most of them discarded those shirts in their earlier days. They had to drop their hair shirt or else lose their political shirt.

And when you have learned not to worry about all these things there is really a lot of fun in this job.

For when you reach that point of understanding there is deep satisfaction in pursuing the truth through the medley of information that reaches the White House, the overstatement, the half-truth, the glittering generality, the viewing with alarm, and the pointing with pride. There is practical satisfaction in sifting a tiny particle of truth from the mass of irrelevancies in which it is hidden. And there is the philosopher's satisfaction of fitting that particle of truth into the general scheme of things that are good and things that are bad for the people of the Nation as a whole.

I said a moment ago that the measure of greatness of any party leadership of a country is the measure in which it gets done in its time the big job that has to be done. By this test I do not think anyone can say that the many people in these last 7 years who have given composite leadership have failed in their obligation. Most of those who call for a wholly different type of leadership must admit the fairly constant progress of these years. Most of those who complain now were the shouting optimists of 1929.

I do not believe that the American people who swallowed that canned optimism in 1929 will swallow canned pessimism in 1940—particularly out of the same can.

The people of the United States recognize two facts today: The first is that the world outside our hemisphere is in really bad shape. This is a matter not for pessimism or optimism; it is a matter for realism. It is a fact—a fact so big that few people have grasped its meaning—a fact so big in its effect on the future of the world that all our little partisan squabbles are shameful in the light of it.

The second is that we have made great gains at home in our own economic prosperity and in the security of our individual citizens. These gains must not be chipped away; they must be only a foundation on which to build further gains.

Behind us lies accomplished a really big job. It was the creation out of the funk of the early thirties of a new spirit with which we can now face the forties.

A realistic historian of our party has wisely concluded, "We have the intelligence to define our troubles and the physical means with which to meet them. In the end, whether we make America a good or a bad country will depend on what we make, individually, of ourselves. A selfish and greedy people cannot be free."

The enormous task which the Democratic Party has already performed in this generation has been to provide the energy and the confidence to steer government in the interest and under the direction of those of our people who do not want to be selfish and who do not want to be greedy.

And I am convinced that most people in the United States do have a sense—with a real feeling of pleasure in the moralities involved—that we have been moving forward these later years in the right direction.

They are really glad that on the whole the farmer is no longer an economic outcast and is getting better prices for his crops.

They are glad that we are slowly working out for labor greater privileges with greater responsibilities.

They are glad that gamblers and speculators are no longer the most honored element in our economic life.

They are glad that certain opportunities for security, once only available to the rich, like old-age insurance, are becoming available to the poor.

They are glad that we are beginning to conserve the natural resources of our soil, our rivers, and our trees for the good of our children; that we have improved our roads and added to our parks and built hundreds of schools; that we are bringing to every housewife cheap electricity's relief from drudgery; that we have made our banks safe and brought our courts up to date; that we have kept millions of people out of the breadlines.

They are glad that government is daily becoming more honest and more decent.

And one of the manifestations of that new spirit is that there are fewer Americans who view with alarm. There are, of course, some people—in addition to the professional politic viewers-with-alarm—who always look on the dark side of life, complain that things are not as they were once and who firmly believe that everybody who disagrees with them is a moron or a crook. They belong to the type of unfortunate individual of whom it is said "he is enjoying bad health."

Sometimes when I listen and listen to people like that I understand old Uncle Jed.

"Uncle Jed," said Ezra, one day, "Ben't you gittin' a little hard of hearin'?" "Yes," said Uncle Jed, "I'm afeared I'm gittin' a mite deaf."

Whereupon Ezra made Uncle Jed go down to Boston to an ear doctor.

Uncle Jed returned. Ezra asked what happened. "Well," said Uncle Jed, "that doctor asked me if I had been drinkin' any. I said 'Yes; a mite.'"

"Then that doctor said, 'Well, Jed, I might just as well tell you now, if you don't want to lose your hearin', you've got to give up drinkin'.'"

"Well, I thought it all over, and then I said, 'Doc, I like what I've been drinkin' so much better than what I've been hearin', that I reckon I'll just keep on gettin' deaf.'"

So you see I have talked with you tonight in a vein of old-fashioned philosophy, with little or no partisanship mixed up with it—just as I promised my three Republican leader friends who ought to have been here tonight. They are grand fellows, liked by me and by every Democrat in the Congress. Nowadays most everybody in the country knows that sometimes when two

Congressmen or two Senators engage in a terrific battle of words, a forensic philippic, a 15-round heavyweight championship bout, the two contestants, 5 minutes later, will be found sitting in the cloakroom with their arms about each other laughing and joking while they catch their breath.

There are, of course, a few exceptions of men who, stretching political disagreements into personal invective, prove the general rule—but why bring up unpleasant subjects at this dinner at which we are all having such a good time. I am genuinely sorry for those exceptions to the rule. They must find it hard to live with themselves—and with their families and friends as well.

Motive in the long run is what counts—motive accompanied by good manners. If leaders have good motives and good manners and, at the same time, knowledge of the different parts of the country and plenty of experience, you can be fairly safe in assuming that they won't wreck your government.

But remember that they must have other qualities—the willingness to pay \$100 for a \$10 dinner, the fortitude to eat the whole of it, and the courage to make a half-hour plate-side chat at the end of it.

## National Conference of United Palestine Appeal

### EXTENSION OF REMARKS

OF

HON. KEY PITTMAN

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Monday, January 15, 1940

ADDRESS BY HON. WILLIAM H. KING, OF UTAH

Mr. PITTMAN. Mr. President, I have in my hand a very able address delivered by our colleague, the senior Senator from Utah [Mr. KING], before the National Conference of the United Palestine Appeals at the Hotel Mayflower, Washington, D. C., on January 7 of this year. The address relates to a matter of great interest, and I ask leave that it be published in the CONGRESSIONAL RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Dr. Wise, His Excellency the Ambassador of the French Republic, members of the National Palestine Appeals, and distinguished guests, first may I express appreciation for the complimentary reference made by Dr. Wise to my activities in behalf of oppressed peoples in various parts of the world. I pay tribute to the splendid work which has been performed by the various Jewish organizations in meeting serious and indeed tragic conditions resulting from the oppressive policies of a number of European countries.

Particularly in Germany a ruthless, brutal, and barbarous course has been pursued, having for its object not only the oppression but, indeed, the destruction of persons of the Jewish race, and most cruel and inhuman practices have been resorted to in the execution of oppressive and indeed vindictive policies. Thousands, and indeed hundreds of thousands of individuals of the Jewish race have been despoiled of their property and driven from their homes to become wanderers and refugees seeking an asylum anywhere and everywhere. Many have found refuge in Palestine. The Palestine Foundation and various organizations have done much to succor the oppressed and to aid them in rebuilding the Holy Land—the land of their fathers.

This great conference has been considering ways and means to mitigate the sufferings of oppressed peoples and to adopt measures for the further development of Palestine as the natural and inevitable haven for hundreds of thousands of oppressed refugees.

The pages of history are blurred with the records of oppression and cruelty; of attempts to destroy minorities and the rights and dignity of human beings. As I have indicated, that struggle exists today. I repeat when I say that throughout the ages there has been a struggle in behalf of the preservation of human liberty, and today the struggle is identified with the contest of minorities for survival.

The year 1939 witnessed the dismemberment of nations and the destruction of important small peoples. If the sweep of brute force is not halted, the year 1940 may bring the complete disappearance of many small nations from the face of the earth. With each blow struck against small nations the rights of all peoples have been attacked and the principles of justice and liberty assailed. A world that is not safe for minorities is a world that is not safe for democracy. When Austria fell, when Czechoslovakia was mutilated and brought under the iron heel of Hitlerism, when Poland was overrun and subjected to the barbarous rule of Naziism and communism, the concepts of right and wrong, of liberty and justice were shaken. In the midst of this confusion the aggressor nations laid down a barrage of words designed to cloak bloody conquest in the robes of liberation. Success in brutal and unprovoked attack was paraded as vindication and justification for crimes

against civilization. Today, as in the case of Finland, we are again compelled to witness the immoral and rapacious onslaughts upon a valiant and patriotic people, and we are asked to regard might as the only basis for right. Because a small nation like Czechoslovakia or Poland or Finland is hopelessly outnumbered in manpower or fighting equipment, we are therefore to consider it as unfit to retain its freedom or identity. This inhuman and barbarous attack upon Finland is part of an organized attempt at the assassination of the character and integrity of all minority peoples. The whole conception of self-determination for minorities is being completely undermined. This is a process with profound implications for all countries and peoples. The road to the destruction of the rights of majorities begins in the footpath of the annihilation of minorities. The rights of majorities are guaranteed only when the rights of minorities remain inviolate.

Minority peoples may be weak in terms of numerical strength, but ethnically and intellectually they possess the strength only the constant struggle for survival can produce. The physical and cultural hardships which they have had to face through the centuries have endowed them with unusual attributes for survival. Within a small nation or people the individual is never submerged in the mass. What small peoples lack in numbers they must supply in endurance and resourcefulness. The existence of a minority is a constant challenge which evokes the most creative and productive forces.

Let us take the case of the Jewish people, the world's oldest living minority. The Jews were scattered throughout the world many centuries ago by the superior force of arms. When the temple in Jerusalem was destroyed, the roots of their national and religious life were torn up and there followed a tragic history of wandering and persecution. The odyssey of the Jews in Europe is, for the most part, a black page on the record of civilization. The Jews were made a convenient scapegoat of those who sought power or glory. Oppression narrowed their opportunities. Proscription tested their endurance to the breaking point, but the will to live that was forged on the anvil of persecution imbued the Jewish people with qualities of intellect and character that made the greatest contributions to the very civilization which sought to destroy them. It is sad indeed that in the twentieth century some nations have not yet learned that it is a grievous injustice to harass and oppress a people which has made such outstanding contributions to the progress of mankind. When Germany drove from her borders scientists, artists, and writers of Jewish blood, she was committing a grave crime not merely against the Jews, but against the entire German people. We are the richer today for the mistakes and cruelties of the Nazi regime, but the German people and German culture have suffered an irreparable loss.

Although the Jews have been severely buffeted by the storms of upheaval, they have maintained throughout an unflinching adherence to their mission of peace and good will. They have devoted themselves to the preservation of democracy, not merely because it has brought them freedom together with all minorities, but because it represents a philosophy of life which embodies the principles of tolerance and brotherhood that have long been hallowed traditions among the Jews.

In 1919, the nations of the world, moved by the suffering which the Jews had endured during the war, and for many years before that, sought to make restitution to this much wronged people. Into the peace treaties was written a pledge to restore the Jewish National Home in Palestine. In accordance with the Balfour declaration issued by Great Britain in November 1917, the League of Nations granted the mandate over Palestine to the British Government, which was entrusted with the task of facilitating the rebuilding of Palestine by the Jewish people. Our own Government endorsed the Balfour declaration by a joint resolution of Congress and by subsequent expressions of support from the Presidents of the United States from Woodrow Wilson to Franklin D. Roosevelt.

Twenty historic years have gone by. The world is now on the threshold of another and perhaps more sweeping catastrophe. In the interval between the two world conflicts minorities have risen to high levels of freedom and self-development, only to be swallowed up in the return of the martial spirit. We who enjoy peace are dedicated to maintaining our security at any cost. We are desirous of being neutral in the present conflict, but we cannot be neutral in our anticipation of the outcome. It is the sincere hope of all liberal-thinking men that the end of this war will bring the reconstitution of the small states that have been sacrificed on the altar of greed and hate. All of us are deeply concerned that Czechoslovakia, Austria, and Poland regain their independence and take their place once again in the council of nations as free and productive partners in the forward tasks of world progress.

But there is one minority which deserves at least equal recognition. I refer to the Jewish people. I refer to the Jews who were uprooted in Germany, to the Jews who were brutally attacked in Poland. I refer to the Jews who were cruelly driven out of Czechoslovakia. I refer to the Jewish people who for the past decade have been mercilessly persecuted as a means of bringing about the destruction of religious liberty and democracy throughout the world. The liberal world must surely be cognizant of the fact that the Jews were the first to feel the blows of the aggressors. When peace comes the Jews must not be the last to regain their rights. When peace comes the Jews must not be a forgotten people. The Jews have demonstrated in the most unmistakable terms that they were never meant to be a refugee people of wanderers. In the two decades in which they have been engaged in the reconstruction of the Jewish national home, they have demonstrated a capacity for creative

pioneering which has no parallel in modern times. No oppression and no despair has been permitted to stay the hands of those courageous souls who went to Palestine to plant once again the seeds of Jewish national and cultural endeavor. There are today, I understand, some 500,000 Jews in Palestine. In 1919 there were but 55,000. Though the Jews were dispersed in many parts of the world for many centuries, a remnant always remained in the Holy Land as the residue of the Jewish homeland that was and as the nucleus of the Jewish homeland that was to rise again. Today that nucleus has become a flourishing community of farmers, peasants, workers, and businessmen.

I have seen with my own eyes the remarkable achievements of the Jewish pioneers in Palestine. There is perhaps no more inspiring sight than the panorama of Jewish colonies that have risen in Palestine on land that was rocky and arid only 20 years ago. The genius, the resourcefulness, the sacrifice, and the idealism of the Jewish people have established a homeland that has brought invaluable benefits to every element of the population in Palestine. During the period from 1932 to 1939 a total of 240,000 Jews entered Palestine from Germany, Poland, Austria, and other lands where they were denied the elementary rights of existence. These same men and women who were branded and humiliated by the Nazi philosophy of hate and racism discarded their past of suffering for a future of revival and reconstruction. They built so well that the Palestine that is associated in our minds with the forgotten world of yesterday is today one of the most hopeful outposts of the world of tomorrow.

The Jews have demonstrated their talents for colonization beyond any shadow of doubt. Moreover, they have rebuilt their ancient homeland on the solid foundations of economic and agricultural planning that have greatly revolutionized its possibilities for the future. Throughout the past 7 years of violent anti-Semitism in central Europe, Palestine has been the foremost haven for refugees. Today when the Jews are faced with the grave tragedy of the destruction of their homes in Poland, today when hundreds of thousands have been herded into a reservation which is no more than one huge concentration camp of pain and torture, today when hundreds of thousands of Jews are wandering over the face of the earth in search of a home, Palestine must continue to provide a homeland for tens of thousands to whom the doors of other lands are closed. I believe that it is the solemn responsibility of Great Britain and the rest of the civilized world to think in terms of enlarging the horizon of refugee settlement in Palestine so that when peace comes the refugees of war and oppression may find immediate opportunity for rehabilitation. And so I say to you that though your people may be tasting the bitter dregs of privation and tragedy at this moment, you have in Palestine a great foundation for a project of nation building that will redound to the glory and benefit of all men of good will throughout the entire world.

### Reciprocal-Trade Agreements

### EXTENSION OF REMARKS

OF

HON. SCOTT W. LUCAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Monday, January 15, 1940

CORRESPONDENCE BETWEEN HON. ARTHUR H. VANDENBERG,  
OF MICHIGAN, AND HON. CORDELL HULL

Mr. LUCAS. Mr. President, I ask unanimous consent to have placed in the Appendix of the RECORD a letter written by the distinguished Senator from Michigan [Mr. VANDENBERG] to Hon. Cordell Hull, Secretary of State, on December 15, 1939. I also ask unanimous consent to have placed in the RECORD, following the letter of the Senator from Michigan, the reply of Hon. Cordell Hull.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

NOVEMBER 24, 1939.

Hon. CORDELL HULL,  
Secretary of State,  
Washington, D. C.

MY DEAR MR. SECRETARY: I enclose herewith additional petitions from Michigan protesting any reduction in the bean tariff in connection with the approaching trade agreement with Chile.

As I have repeatedly indicated before, I believe these Michigan farmers are on firm ground. It is needless for me to appear personally as a witness at your public hearings because the facts involved will all be adequately submitted by experts. Furthermore, I have repeatedly registered my own feeling about the matter. Michigan has a deeply serious interest because we produce approximately 80 percent of the Nation's navy or pea beans. It is the united judgment of our 50,000 bean growers and our 43 farmers'

cooperative elevators and our 118 independent elevators that any reduction in the bean tariff at the present time is a direct, serious, and indefensible threat to the agricultural economy of our State. If any consideration shall be given to "the difference in cost of production at home and abroad"—and this rule ought to be in control of the situation—the bean tariff will not be reduced. It seems to me particularly illogical to contemplate such a thing at the present time because the Federal Surplus Commodities Corporation has found it necessary to buy domestic beans in order to ameliorate a serious domestic surplus problem. I respectfully submit that it is scarcely tenable for one branch of the Government to be spending public funds to relieve a surplus crisis and then for another branch of the same Government to be inviting and encouraging imports which will help rebuild the surplus.

I have also repeatedly submitted my protest against any reduction in the excise tax on copper and it is needless for me to renew my petition in detail. But I want to say again that if the copper-excise tax is reduced in the Chilean agreement, and this reduction is then generalized to the world, you will seriously cripple the great mining section of upper Michigan, which has already stood just about all the calamity it can hope to survive. Again the "cost-of-production rule" clearly requires the 4 cents excise tax (which actually ought to be increased, if changed at all) if we are to hope to maintain a domestic copper industry much longer. The maintenance of the industry is essential, not only to life and livelihood in many sections of America (upper Michigan distinctly included) but it is also essential to any self-contained national defense. I respectfully submit that it would, indeed, be a paradox for one branch of our Government to ask new billions to build further national defense (including a frank mobilization of war materials) if another branch of the Government is directly and deliberately undermining the national defense in at least one essential particular.

I again make the further point that your Department is not entitled to take jurisdiction over the copper excise tax because any reduction in this tax would violate the direct and specific assurance given to Congress when the Trade Agreements Act was passed that there would be no such reductions in these excise taxes, and the tax on copper was specifically identified in this connection. The assurance was given in the written report of the House Ways and Means Committee when the Reciprocal Trade Agreements Act was passed by Congress. The same assurance in the same connection was repeatedly given by Chairman HARRISON of the Senate Finance Committee in the debates upon the bill.

I greatly hope that Michigan will not suffer the double hazard of an attack upon its mining industry and an attack upon one of its most important agricultural commodities in connection with the pending Chilean negotiations.

I should like to add this general comment. Protests against tariff reductions through reciprocal-trade treaties are often met and conveniently dismissed on the general theory that those of us who voice these protests want to return to the old log-rolling tariff process in the Congress. At least, in my own case this is not true. I hope I shall never see another general congressional tariff revision, although I cling tenaciously to the fundamental constitutional theory that Congress must control tariff-making through the specific tariff instructions which it gives its agents when it delegates any tariff control to others. I think the essential basic American rule must be that our tariffs shall measure "the difference in cost of production at home and abroad." I think the wise process of altering tariffs from time to time is through the action of the United States Tariff Commission under the existing provisions of the "elastic section" of the existing tariff law so that as nearly as it may be possible to deal with tariffs on a scientific basis we shall be constantly endeavoring through this ministerial agency to keep our tariffs at whatever point measures the difference in cost of production at home and abroad. The only change in the existing "elastic tariff" which would be necessary to fully implement this view would be to bring the "free list" within its jurisdiction. I respectfully submit that if a protection-minded President were to apply himself as earnestly and as constructively to the use of the "elastic tariff" as the present administration has devoted itself to the "reciprocal tariff" we should most closely approach a scientific tariff. Meanwhile, within the limitations of this rule there would be no reason why reciprocal-trade agreements should not be pursued on a realistic basis in essentially noncompetitive commodities.

With sentiments of great respect and with warm personal regards and best wishes, I beg to remain,  
Cordially and faithfully,

ARTHUR H. VANDENBERG.

DECEMBER 15, 1939.

The Honorable ARTHUR H. VANDENBERG,  
United States Senate.

MY DEAR SENATOR VANDENBERG: I have received your letter of November 24, 1939, in which you express your concern over possible reduction of the duty on beans and of the excise tax on copper in pending trade negotiations with Chile, and in which you express the view that all of our tariffs should be fixed so as to measure "the difference in cost of production at home and abroad."

I am, of course, always glad to have the benefit of your views, whether upon specific tariff items or upon more general aspects of the tariff question.

With reference to the two particular items which you mention, I am sure you will appreciate that it would be improper for me, while negotiations are still in progress, to attempt to anticipate

the results of the careful study that will be given to these and other items by the best practical experts of the various departments which are collaborating in the administration of the Trade Agreements Act. Your representations in regard to these items will, of course, be carefully considered by the interdepartmental trade-agreements organization.

I do desire, however, to comment upon that part of your letter in which you state, in substance, that you do not wish to return to the "old logrolling tariff process in Congress," but instead would like to have all tariffs adjusted administratively, under a general formula laid down by Congress, so as to equal "the difference in cost of production at home and abroad."

The method which you suggest in no wise differs from that which was in effect from 1922 until the Trade Agreements Act was passed in 1934. In the Tariff Act of 1922 Congress inserted a provision whereby, within certain prescribed limits, tariff rates could thereafter be adjusted upward or downward by administrative action, predicated solely upon the rule that the adjustment would be such as to make rates of duty equal to the ascertained difference in cost of production here and abroad. This provision was inserted primarily on the ground that the rates fixed by statute during a period of rapidly changing world conditions following the World War would soon get out of line with actual conditions and would therefore require adjustment either upward or downward. At the same time there were many sincere persons who had high hopes that the introduction of this formula into our tariff-making procedure would mark the end of the logrolling method of tariff making and the beginning of a scientific method of tariff adjustment by administrative action.

The history of what happened during the years which followed shows conclusively, however, that such a formula, as the exclusive basis for tariff adjustment, is wholly unsound and impracticable. During the entire period of nearly 8 years in which the act of 1922 was in force, out of the several thousands of items in the tariff schedules, there was a total of 37 tariff adjustments under this provision, of which 32 were upward revisions and only 5—including such things as paint-brush handles and live bobwhite quail—were downward revisions. In 15 additional cases there were investigations and reports to the President, and in the most important of these cases—that on sugar—the recommendation made by the Tariff Commission for a duty reduction was set aside by the Executive.

Such was our record of futility in the realm of administrative tariff adjustment under the cost rule during the decade following the World War, in a period when rising trade barriers were increasingly undermining the foundations of prosperity, both in this country and abroad.

Then, in 1930 (after announcement in 1928 of our intention of still further raising our tariffs), came the Hawley-Smoot embargo tariff, enacted without heed to the cost formula or any other formula except that of allowing a combination of pressure groups to log-roll through Congress the most ill-timed and costly piece of tariff legislation in the entire history of this Nation. Having first increased tariffs all along the line to virtually embargo levels, the sponsors of this unfortunate legislation thereupon proceeded to incorporate into the new law substantially the same cost provision that had accomplished so little under the previous act. If their purpose in so doing was to conceal the excesses of the Hawley-Smoot Act, it was soon discredited by the rapid descent of the entire country into the worst depression in the Nation's history.

The grave objections to the use of the cost formula as the exclusive basis for tariff adjustment are recognized by practically all authorities and experts in this field. The late Thomas Walker Page, for many years a member and onetime Chairman of the Tariff Commission, and a world authority on the tariff, condemned the formula unreservedly in his well-known book on tariff making, published by the Brookings Institution. In his testimony before the Ways and Means Committee and the Senate committee in 1934, the Honorable Robert Lincoln O'Brien, at that time Chairman of the Tariff Commission, was unreservedly critical of the whole formula. Many other experts have condemned it no less vigorously.

Experience has shown that, under relatively ideal conditions for cost comparison—that is, where the comparison of foreign and domestic costs is for strictly comparable goods, with well-established industries both at home and abroad, and with ample cost data available—the cost formula is one that can sometimes be used to advantage in measuring, within broad limits, the competitive strength of the foreign industry. But neither in principle nor from the standpoint of practical administration is it suitable for general use as the exclusive basis for tariff adjustment.

Seldom can full cost data be obtained; and even when obtained, there is a wide variation of costs as among different producers. There is no such thing as "the" cost. Even if it were administratively feasible to obtain adequate cost data for the vast range of items embraced in the tariff—which it is not—there are so many variables in the whole process of calculation that, in spite of its outward appearance of exactness, this so-called rule for flexible tariff adjustment is in reality no standard at all. "To use as the basis of a general tariff act a thing so fleeting, evasive, and shadowy"—to quote Dr. Page—"would be neither right nor possible."

Former Chairman O'Brien, in his testimony before the Senate Finance Committee in 1934, touched the heart of this matter when he said:

"... the notion that tariffs between countries should rest upon differences in cost of production even if omniscience should give us the power to determine them is all wrong. The tariff is a

question of a national policy; on some things you ought to have a tariff greater than the difference in cost of production; on other things less than the difference in cost of production."

In the adjustment of tariff rates under the Trade Agreements Act, cost-of-production data, whenever practicable, are taken into full consideration, along with all other factors entering into the competitive situation. But they cannot and should not be taken as the sole guide. Other factors must be considered—the size of the imports in relation to domestic production, comparability of the imported and domestic products as to type and quality, seasonal factors, and a great many others.

If we are to get away from the old logrolling process of tariff making to which you say you are opposed, and if we are to substitute for it a more flexible and scientific method of tariff adjustment, we should adopt a system that serves the real needs of our Nation. We cannot do that by adopting a formula which is neither sound in principle nor, in its very nature, capable of scientific administration. Experience has demonstrated the failure of the type of tariff adjustment which you are advocating.

What the interests of this Nation demand, under existing abnormal conditions, is an emergency method of adjusting our tariff structure with a view to obtaining, through a reciprocal reduction of trade barriers in foreign countries, better market outlets abroad for our great exportable surpluses of farm and factory products. This means that we must have a method by which we can adjust our tariff rates below the embargo levels of the Hawley-Smoot Act, while at the same time exercising the utmost care to make sure that the branches of production immediately concerned, in agriculture and in industry, are amply safeguarded.

The existing law—the Trade Agreements Act—provides the best method of attaining precisely these objectives, and has successfully stood the test of practical application in the 22 agreements already negotiated. To abandon the trade-agreement method in the present emergency and to adopt your formula would, in effect, be a return, under the guise of "scientific" tariff adjustment, to Hawley-Smoot embargoes, or their equivalent. If experience counts for anything at all, it surely shows that such a course would be a tragic one for the future of this Nation.

Sincerely yours,

CORDELL HULL.

## Jackson Day Address

### EXTENSION OF REMARKS

OF

HON. CLYDE L. HERRING

OF IOWA

IN THE SENATE OF THE UNITED STATES

Monday, January 15, 1940

ADDRESS BY HON. HENRY A. WALLACE

Mr. HERRING. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the able address delivered by the Secretary of Agriculture at Des Moines, Iowa, on the occasion of the Jackson Day dinner.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Jackson Day dinners usually have in them the joyous anticipation of a righteous fight. Their tone was set when General Jackson won the battle of New Orleans. The record of Jackson as one of the most fiery Presidents to represent the common people in the White House has given these dinners a deeper substance.

Within a few months we shall be convening in a great national convention. Fundamentally, there will be only one issue at that convention. Will the delegates unite in rededicating our party to the great human principles of Jefferson, Jackson, Wilson, and Roosevelt? Each of the four was the greatest liberal of his day. Personally, I hope that the nominee in 1940 will be President Roosevelt. Certainly, circumstances may develop in which his renomination would be imperative. But if Roosevelt cannot be induced to run again, can a man be chosen who has deeply rooted in him the fundamental attitudes of a Jefferson, a Jackson, a Wilson, or a Roosevelt? By choosing such a man and uniting vigorously behind him, we can, even if the President refuses to run for a third term, preserve the great Democratic tradition. We can keep the people with us at the polls. We can avoid the disaster of a return to Republican reaction. We can go on in the productive service of the general welfare.

As Democrats we can be proud of what we have helped President Roosevelt to do during the past 7 years. Eight years ago, when the Nation was faced with one of the worst crises in all its history, the Republican leadership was frightened but bewildered. The people called for action and results. We gave them action and produced results. In no other 7-year period of our history has so much been done. Mistakes have been made, but, on the whole, we have served the Nation honestly and well.

I am proud to have had a part, and I know you are proud to have had a part in this great constructive effort of the past 7 years. As you know, I was not born a Democrat. Nor was I born a Republican in anything like the sense in which the term has now come to be used. My grandfather and my father were both Republicans of their day. They were held in the Republican Party by the humanitarian leadership of Lincoln and Theodore Roosevelt. For many years my father and others who believed with him tried to restore the Republican Party to the principles of those men. They failed in this aim, and so did Norris and La Follette and all the other progressive Republicans who tried to reform the national leadership of their party.

No man ever strove with greater earnestness of ability to serve agriculture than did my father. I knew exactly what he was up against and sympathized with him to the utmost.

And so, in the fall of 1924, with many thousands of other independent-minded voters, I left the Republican Party. I haven't been with that party from that day to this on any vital national issue. In '28 and '32 and '36 millions of us who 10 or 15 years before had looked on ourselves as progressive Republicans—Lincoln Republicans, Roosevelt Republicans, Cummins Republicans, La Follette Republicans, or Norris Republicans—decisively repudiated national Republican leadership and definitely joined up with the Democrats. The Democratic Party ceased to be, as it had been for a while, a sectional party, and became a national party. To continue to be a national party, capable of winning national elections, and carrying national responsibilities, it must continue to appeal to those who formerly were progressive Republicans. It must keep its standing with the people of the South and at the same time appeal to the farmers of the North and West and to the workers and forward-looking businessmen in the cities.

On a great party occasion like tonight, it is our duty to tell these former progressive Republicans—these farmers, these workers, these businessmen, and these housewives—more precisely what it is we intend to stand for in the year 1940. They have a right to compare our body of faith and our probability of constructive action with that of the Republicans. My purpose tonight is to tell what I think we stand for, with special emphasis on the agricultural part.

First. The Democratic Party must go on doing everything possible to keep the Nation at peace. We are against aggression and we have amended our Neutrality Act so as not to help aggressors. All nonaggression policy is in keeping with the wishes of the 95 percent of the people of the United States who want to keep out of the quarrels of the Old World—the people who believe our job is to build a richer, finer civilization right here in the New World. That does not mean we are going nationalistic in any narrow sense. We ought to stand ready at all times to cooperate with the countries of the world in a way that is truly helpful to the cause of world peace and order. We believe in orderly international trade and we have led the way in sponsoring reciprocal-trade agreements for that purpose. It is not for us to attempt to compose all the differences and all the disputes that split the Old World into warring camps. But when and if peace comes, we must do our part to see that it does not lay the economic groundwork for a fresh batch of dictators.

Second. The Democratic Party must not relax its far-flung efforts for the conservation of natural resources—for the conservation of soil, water, grass, timber, oil, recreational areas, and wildlife.

Conservation is of tremendous value to the Nation right now and it must be continued. One hundred years—perhaps 500 years—hence those who come after us will still owe a debt to Franklin D. Roosevelt, the greatest conservation President our Nation has ever had.

Third. The Democratic Party must continue to fight for equality of opportunity and security for everyone.

It must keep on with its efforts to assure equality of bargaining power to groups which, like agriculture and labor, have lacked equality of bargaining power in the past. That duty to the separate groups is inevitably joined with another duty to the public as a whole. If government is to assure equality of bargaining power to any separate groups, then it must also see to it that that bargaining power is not abused, that that bargaining power is used for the ultimate enhancement of the general welfare.

Our people want equality of opportunity, and they also want security. They consider the social-security program a splendid start, but they want to see it broadened and strengthened and simplified. Undoubtedly that program can be improved and strengthened so as to guarantee to all our people that minimum of security which ought to be their right.

We must have equality of opportunity, we must have social security, if our democracy is to survive in this machine age. These are the foundations of our freedom.

Fourth. The Democratic Party must make our national abundance into what it should be—a real blessing for the American people.

We must find ways to get the goods which our factories and farms can produce into the hands of the people who need them. We must never again have the spectacle of great want in the midst of unusual abundance. We must never again permit such misery as that which afflicted so many million American homes in 1932.

The Department of Agriculture has started a practical attack on this problem of want in the midst of plenty with the food stamp plan now being placed in effect. The blue stamps are bringing the surpluses of our farms to be needy families in the cities. Also the school lunch program of the Department is helping to give more adequate nourishment to millions of needy children.

Such measures must be continued until the time when capital provides jobs and good wages for all our workers. The goods of idle factories are just as desperately needed on the farm as the health-giving foods are needed in the cities. We must and shall find ways to make our abundance a blessing and not a curse.

Fifth. The Democratic Party must continue to fight unemployment. Agriculture, labor, industry, and government, by pulling together, can increase our national income to \$100,000,000,000 a year. To get a \$100,000,000,000 income either private capital or Government capital must flow in increased quantities. We hope that private capital will flow. But if the times are so seriously out of joint as to prevent that, we trust there will be such a cooperative effort between Government, agriculture, labor, and industry in the use of Government capital as best to promote and expand the national income.

Very few people realize that today the interest charges on private and Government debts combined are less than in 1929 and they take no larger share of the national income than in 1929. With a \$100,000,000,000 national income, both our unemployment and the national deficit can be wiped out.

Sixth. The Democratic Party must continue to stand for common honesty—honesty in business and honesty in public affairs.

Investors the country over have had more confidence in the financial and commodity markets because of the Government's watchful eye. They want that watchfulness maintained. They want to be sure that the financial and banking system operates, not to line some marauder's pockets but to give the ordinary citizen a square deal. They want continued the present security of bank deposits, so comforting to the person of limited means.

Consumers the country over, in 30,000,000 American households, have gained new safeguards to health and pocketbook in the past 6 years. These safeguards must be continued and strengthened with the aid of consumers and honest business.

The vast majority of businessmen are honest. Government should, so far as possible, encourage them in their legitimate endeavors. They are the men who pay a large part of the Federal income taxes and who pride themselves on furnishing jobs for laboring men and markets for farm products.

And voters the country over want to be sure that corruption in public office will continue to be exposed and swept away. They want no let-up in the drive against alliances of politics and crime. They want no more Teapot Domes in this country.

Seventh. The Democratic Party must make clear that it is against all kinds of radicalism, whether it be of the Communist left, the Nazi right, or the conservative stick-in-the-mud radicalism of the Tory standpatter. All these forms of radicalism belong to Europe. They have no part in our America.

Eighth. The Democratic Party must find ways of enabling the businessman to play a bigger part in building these United States. The stamp plan worked out by the Department of Agriculture is one of the moves we have made in this direction. I hope we can find others.

Ninth. The Democratic Party must continue to work with labor and make the welfare of labor an integral part of the general welfare.

Tenth. The Democratic Party must continue to keep faith with the farmer.

Jefferson built his party on agriculture. So did Jackson. And now Roosevelt, more than any other man who has ever sat in the White House, has made agriculture his keystone. More than any other man who has ever sat in the White House, he has been willing to move to help the farmer. More than any other Congresses, those of the last 7 years have been willing to help agriculture. When I think of what my father had to go through in the early twenties in working with unwilling Congressmen, unwilling colleagues, and an unwilling President, I give thanks to the Democratic Congress and the Democratic President. And I give thanks to the Supreme Court—now reconstituted as a great tribunal of the people. When the people rule in all three branches of our Government, it is easier to do something for the farmer.

Fifteen years ago the causes of the chronic post-war farm trouble became clearly apparent. I am going to list six of these causes and ask what the Republicans did about them.

1. War-time plowing up of the grass lands and expansion of cultivated crops.
2. Change of the United States from a debtor to a creditor position and the consequent loss of foreign markets.
3. The displacement of the horse by automotive power.
4. The movement of the European nations toward self-sufficiency in food as a war measure.
5. The new farm competition in pioneer countries and colonies.
6. Growth of monopoly and price-fixing by corporations.

For 19 years the Republicans have proved by their record that they intend to do nothing about these six causes of farm trouble. In the decade of the twenties when they had responsibility, they not only refused to do anything to remedy these causes, but they actually moved in the opposite direction. They erected higher and higher industrial tariffs and made it more and more difficult for other countries to buy our farm products. By means of their industrial tariff they forced other countries to go into farm production to compete with us. They talked about "the American market for the American farmer," even though they knew or should have known that the American farmer needs much more than the American market. Here at home they fostered monopoly

and price-fixing and special privilege—but not for the farmers. For a few years they postponed the day of reckoning by making \$5,000,000,000 of new foreign loans and by piling up new private debts of \$33,000,000,000 in the United States. But that Republican house founded on sand came tumbling down, and the farmers in the years from 1930 to 1933 were crushed under the ruins.

Since 1933, when the Democrats have had the responsibility, the Republicans—with the exception of a small minority—have given no cooperation and have actually obstructed.

For 7 years the Democrats have steadily directed themselves toward building programs which would take into account the causes of the farm trouble. We have tried to recover foreign markets while at the same time we have taken positive action to adjust domestic production to the fact that only a part of the foreign markets could ever be recovered. Our farm program, while not yet perfect, has been steadily strengthened. It has been approved by the farmers themselves. Eighty percent of the farmers are cooperating and, in actual voting in the South last month, 90 percent of the cotton and tobacco farmers approved. Our program has survived two of the worst droughts in the Nation's history. It has survived adverse court decision and 3 years of bumper crops and surplus. And now that we have had the worst fall drought in the history of the country, the program is giving hundreds of thousands of farmers protection. The ever-normal granary and crop insurance, both of which I myself had suggested and stood for since the middle twenties, are both working. The wheat export subsidy plan worked when we needed it. We don't need it today, but we can throw it into gear again if conditions justify.

To cooperate with millions of farmers we had to learn more and more every year about decentralization of administration. This was hard to do, because there was necessity for a new program almost every spring until the spring of 1939. Now, with decentralized farmer cooperation, we hope to settle down for the long pull to do the job that ought to be done for the farmer's sake, the soil's sake, and the Nation's sake. We have the best farm program this year we have ever had—an all-weather ever-normal granary program which lacks only one thing—an assured and continuing source of revenue. You and I both know that farmers are more likely to get that assured and continuing source of revenue under Democrats than they are under Republicans.

Cotton growers know that for several years the program has been all that stood between them and 5-cent cotton. Corn Belt farmers know, or should know, that the 15,000,000 acres taken out of cotton by the program represent, in terms of cottonseed-oil competition, the lard in 15,000,000 hogs. With the lard market in Germany lost and the lard market in England greatly reduced, this matter of reduced cottonseed competition is one of great interest to Corn Belt farmers. Those who try to scare Corn Belt farmers with visions of tremendously increased supplies of southern hogs conveniently forget how much more lard substitute would be on the market if the South were growing its customary 40,000,000 acres of cotton now instead of less than 25,000,000 acres.

Everywhere over the Nation the farm program has done wonders for the farmers and for the workers and businessmen who depend on them. Farm income was only 34 percent of parity in 1932. It was 75 percent last year. Iowa's cash farm income was \$280,000,000 in 1932. It was \$650,000,000, or two and one-half times as much, last year. All of us here in the Corn Belt—whether we are businessmen, professional men, wage earners, or housewives—are a lot better off because corn, wheat, and cotton prices have been prevented from falling into the 1932 cellar again. Looking toward the unsettled world of the future, we know that the farm program, come peace or war, will have a great burden to carry. But the program will be equal to the load, provided the farmers and the Government continue to work together as they did in 1939.

Our results were achieved only after we had triumphed over the bitterest kind of opposition from the Republicans in Congress. The vast majority of Republicans have nothing to propose themselves, and voted again and again in opposition to all measures intended to give income equality to farmers. In November of 1938 I offered to meet with the newly elected Republican Members of Congress from the Middle West to see if they had any ideas as to a different farm program which would deal more effectively with the six fundamental causes of agricultural maladjustment. No one met the challenge at that time. No one has met it since. About as far as they go is to talk about increasing farm income by higher tariffs on farm products—the same old snare, delusion, and false promise.

The Republican enemies of agriculture in Congress outnumber the Republican friends 4 to 1. Most of this friendly minority has been serving on the Republican congressional committee which has been going around the country recently digging for bait to catch farm votes. These farm-belt Republicans, some of whom would be much happier with a Democratic label, know just as well as you and I that the Republican bosses would never let them do anything substantial to help agriculture. The best work they have ever done for agriculture is to vote for Democratic farm measures. Of course, we are anxious for the farm program to be improved in every way, and we welcome the help of all who are really friendly to agriculture. Some of these men have given farmers valuable between-election help. And now as a reward for their service to agriculture, the Republican leaders are trying to use them like collie dogs in an effort to drive the farmers back into the Republican fold once

more. Aside from a few sheep killers, most of these collies are gentle and kindly. But what a master they must serve. Perhaps that master will discover some day that farmers are not sheep after all, and that collie dogs can't herd them.

The safety of the Nation—and that applies to agriculture particularly—is in having Representatives in Congress who are both Democrats and friends of the farmer. The next best thing is to have in Congress a friend of the farmer regardless of his party affiliations. But if he be a Republican, you have to keep in mind that in any crucial matter where the leadership of his party is deeply concerned and the party whip is cracked, he will be expected to desert you for that leadership. There is no hope for agriculture in the Republican Party, as a party on a national basis, until such time as the men in control of that party are themselves convinced that their own welfare is dependent on justice to agriculture and they are willing to give the time to study all phases of the agricultural problem. Never in the past has the Republican Party approached the farm problem in that spirit; and, judging from their present leadership, we may be sure that it will be utterly impossible for them really to change their attitude at any time in the near future.

The true attitude of the dominant element in the Republican Party was expressed by Senator TAFT, one of the leading candidates for the Republican Presidential nomination, when, during his recent swing through the Farm Belt, he ridiculed the corn and wheat loans and the storage program which protects farmers and the public against a crop failure. We honor Senator TAFT for his frankness. We hope the other Republican candidates will be equally frank. But somehow I have the feeling, so far as the farm program is concerned, that most of the Republican candidates will be traipsing around the place dressed like Little Red Riding Hood's grandma. We shall have to look closely to see the long teeth.

The Republicans whom Senator TAFT represents do not realize that the absence of the corn and wheat loans, with the world in its present condition, could easily mean 15-cent corn and 20-cent wheat in years of good crops. Every farmer who took out a wheat loan this summer knows that the loan gave him the benefit of the rise in the price of wheat which took place during the last 2 or 3 months. These Republicans apparently believe the speculator should profit from the old-fashioned speculative type of granary instead of the farmers profiting from our modern ever-normal granary. The Democratic Party wants the farmers—not the speculators—to make any profit that may result from crop disaster and improved demand.

Perhaps Senator TAFT doesn't speak for the Republicans on the farm program. If not, who does? Not the members of the Republican farm committee, surely, because they have invariably been slapped in the face by their Republican colleagues whenever they have tried to do anything real for agriculture. Of course, it may be that after voting 4 to 1 against all the farm programs the Republicans have really changed their hearts. Perhaps they are really for the present program after all. If they are, why don't they say so? If they are not for the present program, why don't they say so? For more than a year I have been trying to smoke them out but their substitute program, if any, is still a deep secret. On the farm question the motto of the Republican Party is "duck, wiggle, and dodge." All the Republicans are looking for is a fancy plank that will hold together long enough to catch some votes.

No wonder the farmers are skeptical when they look at the record of the Republican Congressmen on agricultural legislation. No wonder their confidence in Democratic Congressmen is increasing. The Democratic majority in Congress again and again has done its best to serve agriculture. This winter it will have an opportunity to see what can be done to make the farm program more permanent. Next summer the Democratic Party must and will write a farm plank at the party convention which will be representative of the best interests of American agriculture. Next summer the Democratic Party must and will nominate a ticket headed by forward-looking men who will continue to help farmers to meet the fundamental causes of agricultural trouble. And next fall the voters will determine whether the farm program will be improved by its friends or scuttled by its enemies.

We are entering one of the most important political campaigns in the history of the United States. In it the Democratic Party will define its principles anew and present its leadership to the electorate for a vote of confidence.

We shall win because of our record of achievement in the interests of the people. We shall win because we deal with vital issues straightforwardly and without evasion. We must tell the voters not merely of our past results but our plans for serving the general welfare in the future.

We shall stand upon the great humanitarian principles upon which the party was founded. We shall stand upon the Jacksonian principles that Franklin D. Roosevelt has so courageously maintained. Those principles, we trust, will permeate the 1940 campaign with enthusiasm and confidence. Once again our party will be the progressive party. Our platform will be the one which points to the future. Our candidates will have the vision. Our minds, our wills, and our hearts will combine to battle for the rights of the American people. The fight has begun and we shall not stop until we have repeated in 1940 the glorious victories of 1932 and 1936. The humanitarian principles of Roosevelt must live, joyously, creatively, effectively in the decade of the forties.

## Proposed Fortification of Guam

## EXTENSION OF REMARKS

OF

HON. WILLIAM E. BORAH

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Monday, January 15, 1940

EDITORIAL FROM THE WASHINGTON TIMES-HERALD OF  
JANUARY 15, 1940

Mr. BORAH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial appearing in the Washington Times-Herald of today on the subject of Guam.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Times-Herald of January 15, 1940]

## MAKE GUAM A SALIENT?

From some remarks dropped recently by high naval officers before the House Naval Affairs Committee we judge that the proposal to make the island of Guam a big naval station, if not a first-class naval base, is still dear to a lot of naval hearts.

A few moments' scrutiny of the map of the Pacific Ocean ought, we think, to convince any realistic American of the dangers that lurk in this proposal like the wad of explosive in a handsomely streamlined and expensively aromatic trick cigar.

To build big fortifications on Guam and propose to defend it against all comers would be to push a salient about 3,850 miles out into the Pacific from our natural Alaska-Hawaii-Panama Pacific defense line.

A salient on sea is fully as dangerous as a salient on land. Either one of them means lengthening your lines of communication and exposing the flanks of the salient to attack. If the enemy can pinch off the salient, your losses in men and material are customarily serious.

The defense of a salient is extremely difficult and expensive, both in men and money as a rule. Verdun was a salient in the World War, and the French defense of Verdun against the German efforts to pinch it off was probably the bloodiest single military operation in world history.

By setting too much store by Guam, and planting too many military and naval stores on Guam, we would be leading with our chin against the Japanese, and it would be a glass chin at that.

## DEFENSE OF THE PHILIPPINES

Of course, the plan to fortify Guam is part of a plan to defend the Philippines from the Japanese, who want them.

There are people who read into the Philippine Independence Act an obligation on our part to defend the islands until 1946, when the act takes effect as now written. There are others—and among them are the Philippines' leading politicians—who say we should rewrite the Philippine Independence Act so as to obligate ourselves to defend the islands through time and eternity.

Here again the objection to sticking a salient out into the Pacific comes up, only more so—1,730 miles more so—that being the distance from Guam to the Philippines.

What the final cost of an attempt to defend the Philippines would be, it is hard to estimate.

But the initial cost of making up our minds to defend the Philippines and buying the naval equipment necessary to undertake that defense has been estimated. It was estimated the other day by Col. Frederick Palmer, the noted war correspondent and military expert, who said that if we expect to fight in Far East waters—"In view of loss of power in ratio to distance, we should double our proposed naval appropriations to make sure of mastering Japan in her own seas."

That means that if we wanted to fight Japan in her own waters we'd have to appropriate \$2,600,000,000 for new naval construction instead of the \$1,300,000,000 asked for in the Vinson big-navy bill.

## CUT LOOSE THE PHILIPPINES

It would be the height of folly and asking for catastrophe for us to plan on fighting Japan in Japan's own seas.

If we ever have to fight Japan, the place to do it is somewhere near our logical and defensible Pacific line—a line swinging down from the Aleutian Islands, through Hawaii, to Panama.

Abandoning the idea of holding the Guam-Philippine salient means abandoning the Philippines to whatever fate may have in store for them. Well, that is exactly what we should do, and we shouldn't wait till 1946 to do it either. They're a liability to us, and they've consistently hated what we've tried to do for them, and they always wanted out from under our wing until the Japa-

nese shadow loomed up over their shoulder a few years ago. It's too late now for regrets, remorse, and revisions of the Independence Act—except a revision moving that time limit from 1946 to, say, 1940.

Two ships for one.

## Export of Agricultural Products

## EXTENSION OF REMARKS

OF

HON. CLARENCE J. BROWN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, January 15, 1940

Mr. BROWN of Ohio. Mr. Speaker, the dirt farmers of America—those who actually till the soil—are vitally interested in markets for the raw agricultural products which they produce. They know, in a general way, that our surplus foodstuffs must find sale in foreign markets if those who work the land in the United States are to be prosperous. They also know that foreign demands for their products have been declining rapidly under the administration's reciprocal trade agreements program. However, it is doubtful if any farmer realizes just how greatly our export trade in crude foodstuffs has decreased in recent months. Here are the official Department of Commerce figures on the United States exports of crude foodstuffs for the first 10 months of 1939 in comparison with 1938, by principal classes and countries:

United States exports of crude foodstuffs, 10 months, 1938 and 1939.  
by principal classes and countries

Export items and countries	10 months ending October—		Decrease (—) increase (+)
	1938	1939	
Total crude foodstuffs.....	\$225,822,000	\$97,586,000	-\$128,236,000
Wheat.....	72,136,000	35,514,000	-36,622,000
Corn.....	89,127,000	15,475,000	-73,652,000
Vegetables (fresh and dried).....	6,682,000	8,636,000	+1,954,000
Fruits (fresh).....	38,214,000	29,235,000	-8,979,000
Other products.....	19,663,000	8,726,000	-10,937,000
Principal export markets:			
Belgium.....	16,076,000	8,684,000	-7,392,000
Canada.....	60,301,000	22,222,000	-38,079,000
China.....	73,000	2,415,000	+2,342,000
Cuba.....	1,834,000	2,369,000	+535,000
Denmark.....	4,167,000	229,000	-3,938,000
France.....	3,600,000	3,235,000	-365,000
Germany.....	12,288,000	768,000	-11,520,000
Greece.....	2,272,000	36,000	-2,236,000
Ireland.....	17,166,000	2,778,000	-14,388,000
Italy.....	1,266,000	64,000	-1,202,000
Mexico.....	3,825,000	3,364,000	-461,000
Netherlands.....	23,292,000	9,458,000	-13,834,000
Norway.....	2,651,000	1,075,000	-1,576,000
Portugal.....	2,030,000		-2,030,000
Sweden.....	2,109,000	1,058,000	-1,051,000
United Kingdom (England, Scot- land, Wales).....	64,312,000	30,660,000	-33,652,000
Total, all countries.....	225,822,000	97,586,000	-128,236,000

Source: U. S. Department of Commerce figures.

It must be kept in mind that the above figures are for crude foodstuffs only, as produced on the farm, and do not include the value of processed or manufactured foodstuffs. It will be noted that there has been a decline in such exports to every country listed with the exception of Cuba and China; and it must be remembered that the administration made an Export Bank loan to China not long ago, thus enabling the Chinese to purchase such foodstuffs in the United States with American taxpayers' money.

The above figures give another reason why American agriculture is not prosperous, and added proof that the American farmer is discriminated against under the present administration's foreign-trade program.

## Ohio and W. P. A.

## EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, January 12, 1940

Mr. COCHRAN. Mr. Speaker, last Thursday the gentleman from Ohio [Mr. JENKINS] made considerable reference in his speech to the activities of the Work Projects Administration in his State, saying—

The only thing in the relief situation in Ohio is Democratic politics. That is the whole story.

Following his remarks, the gentleman from Ohio [Mr. BENDER], a Congressman at large, took the floor, referred to his State and his home city, Cleveland, quoting the Governor of Ohio at length in his extension of remarks, including statements made by the Governor in his vicious attack upon the Roosevelt administration in his speech before the Ohio Society in New York.

During the speech of the gentleman from Ohio [Mr. BENDER] I asked him if it was a fact that President Roosevelt personally ordered the W. P. A. to increase the quota in Cleveland during the acute period there which was within the last 2 months. The gentleman from Ohio [Mr. BENDER] replied the President did not. I then talked over the telephone with Mr. Emerson Ross, Director, Division of Statistics, of the W. P. A., and he advised me the President had taken this action. When I took the floor to answer the gentleman from Ohio [Mr. BENDER], I quoted the statement of the Republican mayor of Cleveland made before a House committee and later over the radio that there were no politics in W. P. A. nor in any form of relief in Cleveland.

Mr. Speaker, in order to keep the record straight, I have secured copies of letters written by W. P. A. officials, as well as a brief article from the Cleveland News. The letters and article tell the real story, and, therefore, under permission granted me by the House, I include them as part of my remarks. They follow:

WORK PROJECTS ADMINISTRATION,  
Washington, D. C., December 18, 1939.

The Honorable JOHN W. BRICKER,  
Governor of Ohio.

MY DEAR GOVERNOR BRICKER: I have read the speech which you delivered before the Ohio Society of New York in New York City on December 16. Insofar as it represents an attempt to repair your battered political fortunes, it neither interests nor concerns me. However, insofar as it is a vicious attack upon my integrity as a public official, I cannot ignore it.

You charge that the present relief situation in Ohio has been brought about by political manipulation on the part of the Work Projects Administration and, more specifically, that W. P. A. employment in Ohio has been reduced to its present level as a punishment because of Republican victories in the elections of November 1938.

I took charge of the W. P. A. on December 24, 1938. The establishment of W. P. A. employment quotas since that time has been subject to my personal approval and has been made entirely upon my own initiative. I accept full responsibility for the quotas which have been allotted to Ohio. Incidentally, it would be refreshing if you would accept like responsibility for Ohio's proper share in the relief problem.

Employment quotas in Ohio, as elsewhere, have been based upon two primary considerations; first, the amount of the funds made available by the Congress; and, second, the unemployment situation which has existed in various localities. I have previously informed you that the Federal funds available for work relief in the fiscal year which included November 1938 were 50 percent greater than those available for the current fiscal year. Furthermore, I presume that you will not deny that the industrial situation in Ohio has greatly improved over that of a year ago.

For the month of December the employment authorization for the State of Ohio is 156,000, of which the allocation to Cuyahoga County is 37,000. Actual employment is below that authorized, due principally to lack of suitable projects. This in turn is caused in large part by the complete failure of the State of Ohio to facilitate the sponsorship of such projects.

The present Ohio employment authorization represents 6.8 percent of the total national employment authorized by the W. P. A., whereas the population of Ohio is 5.4 percent of the national population.

The charge made in your speech that employment quotas in Ohio were increased subsequent to the time that the relief situation there came into national prominence is entirely unfounded. The present employment authorizations for Ohio for December were approved on November 20, 1939, as the official records of this office will show.

I challenge you to produce any scrap of evidence in support of the ridiculous charge made in your speech. You have evidently adopted the ancient and shop-worn device of attempting to divert attention from the real issue, that of State relief in Ohio, by wholly unsupported and absurd statements on another topic. Perhaps this was the only method you could devise of attempting to escape from the unfortunate dilemma in which you have placed yourself by your inept handling of Ohio's relief problem.

The unwarranted attack of political manipulation which you made on me is the only one that has come from any responsible public official since I have assumed charge of this administration. I assure you, however, that your unfairness will not influence me in any way in attempting to carry out the responsibilities of the position which I hold, namely of using the appropriations made by the Congress for providing work relief for the needy unemployed in the fairest and most equitable manner possible. In other words, the unfortunate people in Ohio who need the assistance which can be rendered by the W. P. A. will continue to get it in spite of the vicious partisan political utterances of the chief executive of the State.

Yours very truly,

F. C. HARRINGTON,  
Commissioner.

WORK PROJECTS ADMINISTRATION,  
Washington, D. C., January 5, 1940.

The Honorable JOHN W. BRICKER,  
Governor of Ohio, Columbus.

DEAR GOVERNOR BRICKER: This is to acknowledge receipt of your letter of January 2 which reads as follows:

"A copy of your letter to Mr. A. T. Burns, executive vice president of Community Chest and Councils, Inc., has been forwarded to me.

"I want a definite statement from you as to what the incorrect statements made by me that you refer to in your letter were. You are a public servant and I presume responsible for what you say and I also presume that you have the facts to back up your statement."

In my letter to Mr. Burns to which you refer I simply asked whether or not the National Community Chest Association endorsed your proposed relief program as was implied in your speech before the Ohio Society in New York City on December 16, a mimeographed copy of which was furnished me by the Republican National Committee.

You are correct in your presumptions that I am responsible as a public servant for what I say and you are also correct in presuming that I have facts to back up these statements. The same facts are easily available to you.

Your request for information as to what incorrect statements were made by you seems to me quite adequately answered by W. P. A. Commissioner Harrington's letter to you of December 18.

I will take the liberty, however, of adding to and emphasizing the answer to the main charge in your speech, which was that the W. P. A. employment quotas in the State of Ohio were manipulated in 1938 for political purposes and were again manipulated in 1939 in the other direction as a punishment to the State because of Republican victories in the 1938 elections.

Commissioner Harrington has adequately answered the charge of political manipulation in the W. P. A. in Ohio during 1939.

It happens that in 1938, as regional director of the W. P. A. in the Midwest, I had the full and complete responsibility for establishing employment quotas for those States. Any charge that the employment on the W. P. A. in Ohio was in the slightest degree manipulated for political considerations is completely untrue.

I am taking the liberty of attaching a copy of a letter written by me to the New York Times following the Times report on your New York City speech.

Sincerely yours,

HOWARD O. HUNTER,  
Deputy Commissioner.

WORK PROJECTS ADMINISTRATION,  
Washington, D. C., December 20, 1939.

CHARLES MERZ,  
Editor, The New York Times,  
New York, N. Y.

DEAR MR. MERZ: In his speech to the Ohio Society of New York last Saturday, as reported in the New York Times, Governor Bricker accused the national administration of playing politics with relief and of discriminating against Ohio in its W. P. A. policy.

Until last January I was regional director of the Midwestern States, so that I am personally acquainted with the history of relief and

W. P. A. in Ohio. I can say from my own knowledge of the situation that the Governor's charges are completely untrue.

Governor Bricker bases his charges against the W. P. A. on the fact that W. P. A. employment in Ohio has been reduced some 53 percent from the peak reached last year and that this is somewhat more than the average reduction for the country as a whole. He fails completely, however, to mention the fact that W. P. A. employment in Ohio had previously increased considerably more than in the country as a whole. He fails also to mention that the current W. P. A. quota for Ohio is 7.2 percent of the national total, whereas Ohio has but 5.4 percent of the total population of the United States.

The increase in 1938 was, as everyone knows, the result of the severe slump in business activity and employment which took place in late 1937 and early 1938 and which hit Ohio and other heavy industry States particularly hard. The decline in manufacturing employment was more than 40 percent greater for Ohio than for the country as a whole.

In the spring of 1938 Congress recognized the serious relief situation which the recession of the preceding months had produced and passed a large additional appropriation for W. P. A. Following its established policy of serving as a flexible instrument to meet actual needs where they are greatest, the W. P. A. increased its rolls most in those States which had been hardest hit. Ohio was one of these.

In the business recovery of the past year, Ohio has been fortunate as compared with many other States. This is particularly true of recent months, when the machine and metal industries of Ohio have benefited strikingly from the war boom. During the last year the increase in manufacturing employment was more than 30 percent greater for Ohio than for the country as a whole.

Ohio has been notably deficient in meeting its relief responsibilities. Its contribution for general relief has been below the average for the whole country and less than half that of neighboring industrial States. With business conditions in Ohio favorable, relative to those in the country as a whole, the W. P. A. would have been unjustified in continuing the favored treatment for Ohio which had been necessary to meet the emergency created by the depression of early 1938.

Governor Bricker charges that the W. P. A. in Cleveland has large numbers of people on its rolls who are not in need. This allegation is without the slightest basis in fact. W. P. A. is required by law to take 95 percent of its employment from those certified as in need. In Cleveland 97.3 percent of all people employed by W. P. A. have been certified as in need by the Cuyahoga County Relief Agency, under a Republican administration. Thus, far from padding the rolls with people who do not require relief, the W. P. A. in Ohio is actually under the quota of nonrelief workers established by Congress.

I challenge Governor Bricker to produce the names and addresses of those W. P. A. workers in Cleveland who have been certified as in need but who are not in need. I challenge him to produce the name and address of even one such worker.

What Governor Bricker really wants is to return relief to the States. He implies that this in some magical way will both reduce total costs of the program and improve the situation of the needy unemployed. Unfortunately he does not tell us how the miracle is going to be worked. If he is acquainted with the disposition of the Federal W. P. A. dollar he undoubtedly thinks a discrete silence on the details of his scheme—whatever it may be—the better part of valor.

Of total Federal W. P. A. expenditure, 3.4 percent goes to administrative costs. This is the lowest percentage of administrative cost that has ever been recorded by any relief agency—in fact it is only one-half to one-third of what most State and local relief agencies spend on administration. In its study of W. P. A., Fortune magazine states that the W. P. A. "functions with an efficiency of which any industrialist would be proud."

The next largest slice of Federal W. P. A. expenditures, 8.6 percent, goes for materials. Any cutting of material costs results in poorer projects. If material costs are cut far enough it means a return to leaf raking or the dole. Overwhelming opinion of people in this country, as expressed in Gallup polls and otherwise, is against either of these alternatives. The people definitely feel that those who are unemployed should be given a chance to work on worth-while jobs.

The other 88 percent of the money spent by W. P. A. goes to the project workers themselves. Here obviously is where any savings that are going to be effected must come. Governor Bricker wants cheaper relief. He can get it only by taking it out of the hides of the needy unemployed who work on W. P. A. projects. The average monthly wage on W. P. A. is about \$54—this, it must be remembered, for family heads. Perhaps Governor Bricker thinks that \$54 a month is too much for an American family to get. I doubt if the majority of his countrymen will agree with him. A saving which requires American families to try to get along on less than W. P. A. wages is a very poor form of economy.

Governor Bricker is fond of accusing others of playing politics with human misery. As far as the W. P. A. is concerned it is worthy of note that the Republican mayor of Cleveland, in an

open hearing before a congressional committee in the spring of 1939, stated, without reservation, the W. P. A. in Cleveland has not been politically active in any fashion.

It is ironic to note that in 1938 it was the Democratic candidates for Congress who complained that we were favoring the Republicans and that the Republicans in Cleveland were using the W. P. A. to their advantage. Not one single complaint was made by the Republicans of Cleveland that the W. P. A. was being used by the Democrats.

To the credit of the Republican mayor of Cleveland it should be noted that investigation showed convincingly that Mayor Harold Burton at no time showed the slightest desire to use the W. P. A. for political purposes. Mayor Burton, in the midst of a recession that hit his city harder than any other in the Union, conducted his relations with the Federal Government and the W. P. A. on the highest plane.

Governor Bricker knows also that in the 3 weeks before the election of 1938, the W. P. A. rolls in Ohio were cut by some 5,000. If the W. P. A. were playing politics in Ohio it would certainly have waited until after the election to cut its rolls.

It looks as though Governor Bricker himself were the only one who is interested in turning the severe crisis of Ohio's needy unemployed into a political issue. By accusing others he seeks to divert attention from the inadequacy of the direct relief provided by his own administration. In talking loudly about politics he hopes to delude people into accepting a cheaper relief set-up which in actuality will only mean a lowering of the subsistence standard of hundreds of thousands of already hard-pressed families.

Sincerely yours,

HOWARD O. HUNTER,  
Deputy Commissioner.

[From the Cleveland News of December 25, 1939]

W. P. A. WAS WILLING TO SUPPLY THE JOBS BUT THE CITY COULD NOT FINANCE THE WORK, OFFICIAL SAYS

TO THE EDITOR OF THE NEWS.

Sir: In your issue of December 18 you make the statement that: "Washington's W. P. A. juggling before and after the 1933 elections, in which the Cleveland cut of 75,000 to 30,000 jobs was the most severe slash in the country."

On May 12, 1938, Mayor Harold H. Burton, of Cleveland, broadcast the following statements:

"About one-third of the workers in greater Cleveland are out of work. This number has doubled since October (of 1937). There were then 90,000 out of work. There are now 185,000. This means 370,000 people, or nearly one-third of greater Cleveland's population, today are unemployed or dependent on an unemployed worker."

"The Federal Government has thoroughly examined Cleveland's finances and relief policies. Based on this study, its officials in Washington, Chicago, Columbus, and Cleveland are cooperating completely with us in meeting the crisis."

"The administration of relief in Cleveland, whether under Federal, State, county, or city control has been strictly nonpartisan."

Does your comment on juggling mean that Mayor Burton was wrong—that Cleveland did not need the W. P. A. jobs?

The day following Mayor Burton's broadcast, you said in an editorial headed Facts, Figures, and Famine:

"The common sense of these statements of fact seems to us so powerful and conclusive that we cannot imagine any honest citizen of Ohio who could hear them and remain unmoved, nor any legislator who could hear them and remain blindly hostile."

Has The News changed its mind about the need in Cleveland in 1938? As to the reduction, the true picture of that is that the reduction was accomplished gradually. The peak of W. P. A. employment, 79,848 was reached on October 5—a month before election. By election day it had decreased by 2,000 workers. It decreased thereafter as follows: December, 74,563; January, 71,343; February, 67,956; March, 67,789; April, 64,113; May, 58,257; June, 52,317; July, 51,454; August, 38,960; September, 29,762; October, 30,646; November, 30,205. The News' remark about juggling before and after the 1938 election implies that W. P. A. withheld employment quota from Cleveland. On the contrary, Cleveland has for weeks had 7,000 more quota than it took advantage of. The inability of the city and other sponsoring units to provide their share of the cost of the projects kept those vacancies unfilled. And I am sure that The News would not advocate greater Federal financing of W. P. A. projects. As to the helpfulness of W. P. A. in Cleveland, Mayor Burton, in his letter of December 16, advised Governor Bricker as follows:

"Throughout the year, and particularly during this period of emergency . . . the Federal Government through its W. P. A. and its Federal Surplus Commodities Corporation, has cooperated quickly and effectively to meet the emergency. This action has been of great value to Cleveland and will continue to be of the utmost importance."

EARL MINDERMAN,  
Special Assistant, Federal Works Agency.

## Basis for a Prosperous Agriculture

## EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 15, 1940

ADDRESS BY JOHN LEE COULTER, PH. D., LL. D., FORMER PRESIDENT, NORTH DAKOTA STATE COLLEGE, AND MEMBER OF UNITED STATES TARIFF COMMISSION

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Dr. John Lee Coulter, former president of North Dakota State College and member of the United States Tariff Commission, before the members of the American Livestock Association, on January 12, 1940, at Denver, Colo.:

Members of the American National Livestock Association, guests, and friends, I came here directly from Washington, our National Capital, where the subject of leading importance today is the movement to extend for another period of 3 years the act of Congress providing for the negotiation of reciprocal-trade agreements. So important is the subject that the President in his annual address to the Congress on the state of the Nation, after devoting one-third of his time to a discussion of foreign affairs devoted about one-third of his time to consideration of the reciprocal trade agreements program. Only one-third of his time was left for the consideration of other topics. Because of the importance of the subject and its direct bearing upon the prosperity of agriculture—and especially the prosperity of livestock growers—it seems appropriate that I should center my address today around that subject. I had, in fact, already drafted a much more general address in which discussion centered around all of the various elements which enter into national prosperity. Now, however, it seems to me appropriate that I limit myself very largely to a discussion of this one subject.

A trade agreement, as you know, is a special kind of treaty; perhaps I should say "a special type of commercial treaty." The dictionary says that "a treaty is an agreement between two or more nations." Presumably all treaties are reciprocal in the sense that each country makes certain pledges and concessions in exchange for equivalent pledges and concessions from the other or others as the case may be. It would seem perfectly proper, therefore, to briefly refer to "reciprocal-trade agreements" as "trade treaties" since they are agreements, reciprocal in nature, and deal with trade.

I believe it is true that in every country treaties are negotiated by the President and members of his Cabinet—with the assistance of ministers or specially appointed delegates to conferences—or by the king, emperor, dictator, or corresponding chief executive. In other words, treaties are negotiated under the immediate direction of the chief executive officer. I believe it is also true that in every country—except those run by dictators—treaties are then submitted to the Parliament or Congress or other representative body elected by the people for their approval. In our own country provision is made in the Constitution for the negotiation of treaties by the President and for their approval by the Senate before they become binding documents.

## EMERGENCY

In 1933-34 it was believed by the President and Congress that an emergency existed which justified a departure from the usual—and constitutional—procedure. And an amendment was adopted to the Tariff Act of 1930 providing for these special trade treaties—June 12, 1934. This act authorized the President to both negotiate and proclaim these, by calling them agreements rather than treaties, without Senate approval. But the period during which agreements might be made was limited to 3 years, and the agreements were to be effective for a base period of 3 years. Three years after, however—1936-37—it was believed that the emergency still existed or that a new one had arisen. Few agreements had been negotiated; there was little evidence of harm as a result of those negotiated; most countries were advancing more or less definitely out of the world-wide depression, so that at the request of the President the act was extended for another period of 3 years—from June 12, 1937, to June 12, 1940.

Now it is said that the emergency still exists, or that a new one has arisen, and a resolution has been introduced to extend the act for another period of 3 years, to June 12, 1943. In the meantime, revolutions and wars have spread over many nations—in spite of

the claim that trade treaties would save the world from new outbreaks of armed conflict. In the meantime, too, those engaged in agriculture, industry, and labor in the United States have found that little or no benefit has come from the trade agreements while, on the other hand, they detect much harm. Under the circumstances there are many who believe that since the Senators are employed for full-time duty and paid by the year, as are members of the Senate staff, these special treaties should be made subject to Senate approval before they are made effective, just as other treaties must have Senate approval, as provided by the Constitution, and just as treaties in other countries must first meet with parliamentary approval. If the Senate is not in session when one of these trade treaties is completed, and if it seems desirable to make it effective at a very early date, the Senate can be called into session; or the Senate can be held in session without holding Congress. This is not an uncommon procedure.

I am disposed to accept the view that if the act providing for these trade treaties is to be extended for a period of 3 years they should be made subject to Senate approval (1) unless or until the scope of these treaties is adequately delimited, (2) unless or until a measuring stick is prescribed to define concessions to be granted and to be secured, and (3) unless or until a foreign-trade board has been created with detailed instructions as to the method, scope, character, etc., of carrying out the will of the people as expressed by Congress—corresponding to the Federal Reserve Board with its jurisdiction over our monetary, banking, and credit system or the Interstate Commerce Commission over our transportation system, etc.

## RECIPROCAL-TRADE AGREEMENTS AS PEACE TREATIES

Much has been said during recent years as to the merit of trade treaties as, in fact, peace treaties. First, it was said that these trade treaties would definitely serve to maintain peace or prevent wars not only between the United States and foreign countries, but even among foreign countries, because of their unconditional most-favored-nation characteristics. But since the passage of the act, June 12, 1934, there have been more revolutions and wars—declared and undeclared—among foreign countries than during any recent comparable period. Certainly the United States ran the risk of becoming definitely involved in these revolutions and wars by launching trade-treaty negotiations with Spain and Italy and then failing to continue to a successful conclusion; also by stepping into the very center of the European confusion by negotiating trade treaties with Czechoslovakia, Finland, and Sweden; not to mention agreements with Belgium, Netherlands, Switzerland, France, and Great Britain. It does not appear that trade treaties served to maintain world peace.

Second, much has been said to the effect that a continuation of the trade-treaty program would help to restore world peace among warring countries. Just how this is to be done, for instance, in the case of Japan, Manchukuo, and China; or in the case of Germany, Austria, Czechoslovakia, and Poland; or in the case of Italy, Ethiopia, and Albania; and now in the case of Russia and Finland; or, finally, in the case of Germany, which is at war with France and members of the British Empire, has not been disclosed. There are many who are not able to comprehend how these trade treaties can do otherwise than increase the confusion and chaos.

Third, it is argued that the trade-treaty program should be carried on in order to bring order out of chaos after world peace has come. It is admitted by all that economic chaos does exist and will exist whether an early peace is restored or whether war continues until many nations have collapsed in exhaustion. But no concrete statement has been made to indicate how these trade treaties are to bring order out of chaos.

Thoughtful and conscientious national leaders, both among statesmen, educators, business leaders, and others are disposed to believe that the trade-treaty program serves no useful purpose, and is, in fact, dangerous while, on the other hand, they believe (a) that treaties between the United States and foreign countries should be subject to Senate approval, (b) that rules governing our foreign trade should be acted upon by Congress just as the Neutrality Act recently was passed by Congress, and (c) that peace and order must be restored at the world peace table.

## TRADE TREATIES IN LIEU OF TARIFF REVISION BY CONGRESS

Since the emergency feature of these trade treaties is no longer tenable and since, in fact, they are not peace treaties, did not prevent wars, cannot stop wars, and cannot take the place of a world peace treaty after wars have ceased, we may look at them for what they really are.

These trade treaties are, in fact, a piecemeal revision of the tariff by executive action. The whole program was and is a device to take tariff making away from the legislative body (the Congress of the United States) and center it in not a foreign trade board or a bipartisan commission but in the hands of the President and a member of his cabinet, particularly concerned with international diplomacy. Thus, the new program becomes, in fact, a new type of dollar diplomacy. Foreign countries are promised all manner of special advantages in the markets of the United States in return for agreeing to suggestions from the United States as to how these foreign countries should conduct their own affairs. It is a form of

interference in the conduct of foreign business which may very well in the long run involve the United States in all manner of difficulty.

#### A FEW TARIFF FACTS

Embargo versus free trade. There are no isolationists in the United States and no free traders—or at least they are as few in each group as Communists on the one hand and Fascists on the other. Of course, these few extreme isolationists and free traders are noisy and must be watched. But probably more than 90 percent of us are for something far less than embargo on the one hand, but far more than free trade on the other. That we are not isolationists is shown by the fact that whereas 100 years ago only 5 percent of our imports were on the free list, 90 years ago 15 percent were on the free list, 65 years ago 25 percent of our imports were on the free list, 40 years ago (1900) about 50 percent was on the free list, and now from 60 to 70 percent of our imports are on the free list. Our goal is not isolation but the highest possible standards of living and the greatest possible prosperity for all—producer and consumer, city and country, North, South, East, and West.

High tariff did not cause depression and low tariff will not restore prosperity. The tariff acts since the World War (acts of 1921, 1922, and 1930) averaged considerably lower than the average rates of duty in tariff acts for 50 years before the World War. I refer you to the table on page 443 of the last "Statistical Abstract of the United States," issued May 1, 1939, by the United States Department of Commerce. In other words, recent protective tariff acts did not set a new high level of tariff rates. They revised the low Tariff Act of 1913 by restoring a tariff level somewhat lower than the average of tariff acts maintained for a period of 50 years before the outbreak of the World War.

#### COLLAPSE IN FOREIGN TRADE 1929-32 WAS NOT RELATED TO TARIFF ACTS IN THIS COUNTRY OR FOREIGN COUNTRIES

We in the United States are all familiar with the fact that the value of imports into the United States decreased fully two-thirds (66 2/3 percent) between 1929 and the bottom of the world depression. Since this decrease took place at about the same time as the passage of the Tariff Act of 1930, it is not surprising that many uninformed persons (or others with special motives to promote) should place the blame squarely upon the passage of the tariff act. But closer analysis discloses, first, that two-thirds of our imports were already on the free list and were left on the free list; and second, that the decrease in value of imports on the free list was exactly at the same rate as decrease in value of dutiable imports. Third, it should be added that value of exports to all foreign countries fell to exactly the same rate, and yet we do not immediately blame that upon tariff acts by all foreign countries.

Frequent reference is made to the fact that the recent depression was world-wide in its extent. But here we usually stop. Let us, however, examine world foreign-trade figures. Imports into all nations in the world (109 countries) averaged slightly more than \$33,000,000,000 annually during the 5-year period 1925-29. Then world imports started down (in response to a world-wide collapse in prices, especially of raw materials such as rubber, sugar, coffee, milk, tin, and many others). By 1930 (before the passage of our tariff act) world imports had fallen below \$29,000,000,000, a decrease of nearly \$7,000,000,000. By 1931 world imports had fallen to \$21,000,000,000, another decrease of nearly \$8,000,000,000. By 1932 world imports had fallen to less than \$14,000,000,000, another decrease of about \$7,000,000,000. World imports decreased slightly again in 1933 and 1934. The combined reduction in value of world imports into 109 countries represents a decrease of about 66 2/3 percent between 1929 and 1932. In other words, the decrease in the world as a whole was almost exactly the same as the decrease in the United States.

What has been said with reference to the falling off in value of imports applies equally with reference to value of exports.

Just as the Tariff Act of 1930 had no measurable relationship to the world-wide decline in imports and exports, so, too, the so-called Reciprocal Trade Agreements Act had no relationship to the recovery. Imports into the United States had fallen to \$1,323,000,000 by 1932, but again had increased to \$2,047,000,000 by 1935. This was an increase of \$725,000,000, or considerably more than 50 percent before any important trade agreements had been negotiated. Indeed, the only agreements completed before January 1, 1936, were those with Cuba, Belgium, Haiti, and Sweden. Without going into detail, it is enough to add that the value of exports likewise increased almost \$700,000,000 between 1932 and 1935. Also, without going into detail, it is enough to note that world imports and exports had likewise definitely started to increase before the passage of the Trade Agreements Act in the United States.

#### PRESENT EXPANSION OF EXPORTS NOT DUE TO FOREIGN CONCESSIONS IN RECIPROCAL-TRADE AGREEMENTS

But it is pointed out by proponents of the trade-agreements program that actually exports from the United States have increased from \$2,133,414,000 in 1934 when the Trade Treaty Act was passed to \$3,094,095,000 in 1938 and that preliminary estimates of exports for 1939 are almost exactly the same. In other words, the dollar value of exports has actually increased about 45 percent since 1934. This they wish to attribute to the Trade Treaty Act. It does seem, therefore, desirable to examine the claim. First, it seems desirable to exclude exports to the countries engaged in wars and revolutions during the 5-year period in question. Japan and China (including Manchukuo, Hong Kong, and Shantung) have been in a chaotic condition. The same applies to Italy, including Ethiopia and Albania. The same also applies to Spain and Germany, in-

cluding Austria and Czechoslovakia. Our exports to these unfortunate countries have actually fallen off since 1934 a total of \$26,037,000. When exports to these countries are excluded, it appears that exports to all other countries actually increased 60 percent rather than 45 percent already noted. We may now properly divide these exports between "exports to trade-agreement countries" and "exports to other non-trade-agreement countries." I shall not burden you with detailed figures, but shall be glad to furnish them to anyone on request, taken from the official Government reports. Strangely enough, they show that the increase in exports to trade-agreement countries was 61 percent and to the other non-trade-agreement countries likewise it was almost exactly 60 percent. Thus, from the Government statistics it appears that, first, the increase in our exports only took place before any important trade agreements were negotiated as a part of world-wide recovery, preparation for war, etc., but, second, that our export trade increased as much to the non-trade-agreement countries (excluding those at war) as to the trade-agreement countries. Incidentally, the third point may be made to the effect that world imports and exports among all of the 109 other countries likewise gained at approximately the same rate.

#### TRADE AGREEMENTS DOING ACTUAL DAMAGE TO AGRICULTURE

There would be little value in this discussion merely in showing that trade agreements have accomplished no useful purpose. By far the more important subject is with reference to possible harm that may have been done. On this point it is enough to say that a recent investigation disclosed that whereas the quantity of all imports into the United States increased as a part of the general recovery extending between 1934 and 1937 by 52 percent, the increase in quantity of commodities on which tariff reductions were made in reciprocal-trade agreements increased 123 percent. From this it would appear very definitely that concessions granted in trade agreements greatly stimulated the volume of imports. The same investigation disclosed that whereas prices in general advanced about 20 percent between 1934 and 1937, prices of commodities on which tariff reductions were made decreased about 10 percent (9.9 percent). Thus, it appears that concessions made by the United States have had the following general results:

(1) They have served to force farm prices down or to prevent them from rising, or at least to slow down the advance which was taking place. On this point, they have gone directly contrary to efforts being made to improve the price level.

(2) They have displaced farm products in the American market by encouraging an increase in the quantity of imports.

(3) They have displaced factory products in many cases, thus causing unemployment and hurting the farm market by lowering the purchasing power of factory wage earners.

(4) They have been a factor in holding down factory pay rolls because of the more severe competition from foreign products, thus lowering labor's purchasing power and interfering with development of a profitable market in the United States for the products of the farm.

If time permitted, I could cite you great numbers of individual cases where these different injurious effects are clearly evident. I shall be glad to do so by correspondence if any of you desire more in detail.

#### EXTENT OF TARIFF REVISION

I am asked day after day to give facts and figures concerning the extent to which tariff revision has been carried through thus far. Permit me to cite just a few facts. A report just released by the Tariff Commission indicates that in 1937 imports of all commodities subject to duty were valued at \$1,442,000,000. Rates of duty have been reduced on commodities whose import value was \$815,000,000. Thus, rates of duty have been reduced on 42 percent of all dutiable imports. Perhaps I should say in passing that this applies equally to agricultural and nonagricultural items. In fact rates of duty have been lowered on 47 percent of all dutiable agricultural imports (including articles made from agricultural raw materials), while reductions have been made on only 30 percent of strictly nonagricultural dutiable imports. There are about 2,500 commodities subject to tariff duties. Already reductions have been made on about 1,100 of these items, or again, about 42 percent of all import commodities. On the other hand, although the law authorizes increase or decrease not to exceed 50 percent in any case, it is significant that thus far no increases have been granted. In other words, this is a broad general downward revision of the Tariff Act by the executive department charged primarily with the responsibility of maintaining friendly relations with foreign countries and not especially concerned with "keeping the home fires burning." As already noted, the law permits increases or reductions not to exceed 50 percent. The question arises as to the extent to which reductions have been carried. A recent official report from the Tariff Commission discloses that up to date reductions have averaged 38 percent. In other words, the average rate of duty has been cut considerably more than one-third. As already noted, reductions in the case of agricultural commodities have been equal to or greater than in the case of non-agricultural. While the reduction on all items has averaged 38 percent, the reduction on agricultural items has averaged 40 percent, while the reduction on nonagricultural items has averaged only 35 percent.

#### RECIPROCAL TRADE AGREEMENT PROPONENTS CLAIM THAT "SMALL REDUCTIONS WITH LIMITED TARIFF QUOTAS HURT ONLY A LITTLE"

In defending reductions, especially on agricultural products, proponents of trade-agreements program have made much of the fact

that rate reductions have been relatively small and that in many cases tariff quotas have been established. Many addresses have been made claiming that the increase in imports amounts to only a trickle. This goes directly contrary to the well-known fact that "just a little bit less than enough rain is a drought and spells disaster," or again, "just a little bit more than enough rain is a flood and spells disaster." It was because the Mississippi River gets 1 foot or 2 feet out of its banks that hundreds of millions of dollars of public money have been spent to control the flow. Scores of other illustrations could be given. The National Government under A. A. moves into a community and buys just a little to give away for relief in order to raise the price to farmers. It would seem that if taking just a little out of the bucket will keep it from overflowing, then adding just a little to the bucket will make it overflow. And so it is that the tariff program has lowered or held down prices to farmers and displaced farmers in the American market; thus leaving more natural resources idle and lowering the purchasing power of agriculture for industrial products; thus leading to more unemployment.

#### METHODS OF CONDUCTING NEGOTIATIONS

Much is said during the current debate with reference to methods of negotiating reciprocal-trade agreements compared with methods of tariff revision by Congress. Proponents of trade treaties stress the fact that "they provide for public hearings." Having presided at a dozen of these public hearings, I can bring witness to the fact that they do not compare with public hearings conducted by the Ways and Means Committee of the House of Representatives or the Finance Committee of the Senate. But far more important than this is the fact that after the public hearings, when Congress revises the tariff, there is open and extended public debate. All of this is secret under the trade-treaty program. The public is kept absolutely in the dark. If there is logrolling as claimed in either the House of Representatives or the Senate, it is in public view and in response to the demand of the people who make up the total citizenship of America. The logrolling which is carried on by those negotiating trade agreements, such as the public decision to withdraw copper in connection with the agreement with Chile or the decision to discontinue negotiations with Argentina (until after the Trade Agreements Act has been extended and after the elections have been held) is far more undesirable than logrolling before the public gaze.

Perhaps the greatest difference between tariff revision by Congress and by the President with the aid of the State Department is the fact that Congress attempts to arrive at "difference in cost of production in the case of competing commodities between the United States and the principal foreign supplier." Decision is based upon the judgment of 500 Members of Congress elected by the people of the country. In the case of trade treaties the President and Secretary of State make the decision influenced by their desire "to appease foreign countries" or "to demonstrate that we are good neighbors" or "in an attempt to influence foreign countries in the method which they have chosen to pursue in regulating their own foreign trade."

#### NEW TITLE TO TRADE TREATY ACT

If the act authorizing reciprocal-trade agreements is extended for another 3 years, there are many who believe that the title should be changed to read: "An act to bring about longer hours of labor in the United States, to force a lowering of wages, to bring about lower prices for farm products, to retire farm land from production, to increase the dependence of the people of this country upon foreign sources for their everyday requirements, to make it impossible for farmers to pay their interest, mortgages, taxes, freight rates, and other overhead burdens, and for other purposes."

#### REVENUE

The Tariff Act is a revenue measure as well as a measure to regulate the foreign trade of the United States. In 1929 the Tariff Act produced \$580,976,000—more than half a billion dollars of revenue. By 1938 this was down to only \$293,070,000—a decrease of almost \$300,000,000. It is true that part of this decrease is due to the fact that prices of imports are much lower than they were in 1929. Thus, if a given commodity was valued at \$100 in 1929 and if the tariff rate were 40 percent, the revenue would be \$40. If the same commodity at the present time is valued at \$60 and the rate of duty remains the same, or 40 percent, the revenue is only \$24. In this case the mere falling off in price of imported commodities called for a loss of \$16 in revenue. Then, too, a small part of the decrease is due to the fact that the quantity of imports is slightly lower, although it is well to note here that the quantity of imports in 1937 was exactly the same as the quantity in 1929. In other words, the number of tons, pounds, bushels, bales, barrels, gallons, etc., imported in 1937 added up to exactly the same as the number imported in 1929 so that quantity of imports is not the important factor in the lowering of Government revenue. The big factor in lowering Government revenue has been the reduction in rates of duty on imported commodities under the reciprocal trade agreements program. A recent study by the United States Tariff Commission discloses that the lower rates of duty on trade agreements thus far negotiated would produce \$113,000,000 less of revenue than the rates in effect before the passage of the act. Here then we have the National Government deliberately sacrificing an important source of revenue at the same time that other serious effects upon domestic agriculture, industry, and labor result.

#### CONCLUSIONS

This brief address would not be complete without at least some indication of what recommendations might be made in view of the present move to extend the trade-agreements program for another period of 3 years. Very briefly, I believe that the facts already presented justify the following suggestions: Trade treaties are, of course, a special form of commercial treaties, and the President and his Cabinet must necessarily be authorized to negotiate both general and special trade treaties. But, first, all of these trade treaties should be subject to Senate approval. I also firmly believe that since the whole question of revenue and of protection to domestic economic life is involved these should be subject to approval by the House of Representatives as well, even though they do deal quite directly with foreign relations. My next suggestion is that these trade treaties should be bilateral in character in the sense that they should be "conditional most-favored-nation treaties" rather than "unconditional." In other words, concessions granted in trade treaties to a given country with which negotiations are carried on should not be extended to all other countries unconditionally unless they, in turn, enter into agreements carrying equivalent concessions to the United States.

A third suggestion is that the greatest need at the present time is to establish a measuring stick or a rule setting forth the basis for changes in rates of duty, etc. The rule of Congress which attempts to measure difference in cost in production and difference in living standards seems to me to be far more preferable than the present point of view, which is largely to appease foreign countries by making concessions which are damaging to our own economic life.

My fourth suggestion is that, insofar as trade concessions are provided for under authority granted by Congress, they should be subject to a Federal foreign-trade board rather than to any one member of the Cabinet or other official.

Perhaps this is far enough to indicate the character of the problem which is receiving such widespread consideration in Congress and throughout the country. I appreciate the opportunity to visit with your organization and to discuss this subject with you. All figures which I have used in this address are taken from Government reports and are the very latest and most accurate available. There are many phases of the subject which time did not permit me to discuss, such as currency depreciation, gold movements, international exchange, foreign quota-controlling systems, foreign exchange-control arrangements, etc. I shall be glad to supplement this address by further correspondence with any who may desire to go into the subject more in detail.

### The Antilynching Bill

#### EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 15, 1940

Mr. GEYER of California. Mr. Speaker, this Congress has before it for consideration a bill to curb lynching in the United States. While occasionally members of other races fall victim to the crime of lynching, it is chiefly the colored race that suffers. These 13,000,000 fine American citizens, one-tenth of our population, are denied the rights guaranteed by the Constitution.

#### GLAD TO SUPPORT THE MEASURE

While I am the author of a similar bill, I am glad to lend my support, along with others, to the bill now before the Congress. I am happy to state that my name appears among the first on the discharge petition.

#### LYNCING—A CRIME AGAINST GOD

The Scriptures are filled with passages that forbid the taking of a life, and the best known, perhaps, is the commandment which says, "Thou shalt not kill." Again, they are very plain as to our duty to respect constituted civil authority. In Matthew xxii: 21 we find Christ telling the Pharisees: "Render therefore unto Caesar the things which are Caesar's; and unto God the things that are God's."

Thus we see that the two elements that underlie the crime of lynching—that is, taking of a life, and the refusal to allow the law to take its course—are both forbidden by the Good Book.

## THIS BILL IS REAL AMERICANISM

We have heard much said recently on the floor of this House about Americanism. We all loudly proclaim at every opportunity that we are 100-percent American; that we abhor foreign "isms"; or that we believe in American democracy. Do we really mean these things when we say them? Here is our chance to show by supporting this measure, as it goes through the Congress, whether our Americanism is working all the time or is used only when it suits our convenience.

## LYNCHING IS CONTRARY TO THE DECLARATION OF INDEPENDENCE

I know of but one way to test an issue to determine whether or not it is American or un-American; that is by comparing it to the principles laid down in our fundamental documents. This bill is to correct practices forbidden by the Declaration of Independence.

This document states that "all men are created equal," and again that "all men have certain inalienable rights—life, liberty, and the pursuit of happiness."

Can anyone doubt that a law designed to protect one class of people against another class is according to the American way of life?

## THE CONSTITUTION FORBIDS LYNCHING

Read again the preamble to the Constitution that we have all sworn to uphold. Do the expressions "establish justice, promote the general welfare, or secure the blessings of liberty" mean anything to us?

Again, does the expression "due process of law" have any application to this subject? Reread the thirteenth, fourteenth, and fifteenth amendments, those passed at the close of the War between the States. Do these not give our colored people the same rights as any other people?

My colleagues, we must admit that if we are going to be consistent in our Americanism we must support this measure.

## LYNCHING AND THE POLL TAX

It is interesting to note that most of the opposition to this measure, both within and without this Congress, comes from the 11 States that still cling to the poll tax, a tax that keeps from the polls the very persons that are to be protected by this proposed measure.

I believe the two are very closely tied together; for whenever the victims of lynch law are able to express themselves by the ballot, then, and not until then, will they get the consideration they deserve.

I have introduced a bill hitting at the poll-tax evil. I hope it may have the support of a majority of this Congress. If we are going to talk Americanism, let us go all the way, and discriminate in no way against any because of race, creed, or economic status.

I hope the antilynch bill will soon become a law and that the poll-tax bill will soon follow.

## Trade Agreements and Shipping in Foreign Commerce

## EXTENSION OF REMARKS

OF

HON. CLAUDE V. PARSONS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 15, 1940

ADDRESS BY HON. MAX O'RELL TRUITT

Mr. PARSONS. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address delivered by Commissioner Max O'Rell Truitt, of the Maritime Commission, at the executive luncheon of the American Merchant Marine Institute held at the Whitehall Club, New York City, on Thursday, January 11, 1940:

I am pleased to appear before this executive meeting of the American Merchant Marine Institute. The problems confronting

American shipping are many and varied. Our success in solving those problems depends upon the clarity with which we are able to view them, the energy with which we attack them, and, above all, the degree of cooperation which those of you who represent private initiative, and we, who represent the Government, are able to achieve.

There is another reason why I am glad to be with you today: That is the opportunity which the occasion affords for discussion of a matter that is of great interest to the American people and particularly to the shipping industry. I refer to the Hull trade-agreements program. The continuation of the program is of importance to all segments of the national economy. It is of special importance to those who make their living from shipping in foreign commerce.

The program was inaugurated, as you know, in 1934. It ran originally for a period of 3 years. It was reaffirmed by Congress in 1937. Agreements have been negotiated with 21 countries which normally account for three-fifths of our foreign trade. The enabling act is again before Congress. It is the earnest hope of those interested in the foreign trade of the United States that the program may be extended for another 3 years. No industry has a greater stake in the outcome than the industry represented by this institute.

Secretary Hull, more than any other person, is responsible for the trade-agreements program. During his more than a quarter of a century of public service, Mr. Hull had a good opportunity to observe the evil effects of the logrolling method of tariff adjustment. He became convinced that the right way to handle tariffs was by executive treatment, administered by experts on a national and nonpolitical basis. Accordingly one of his first acts as Secretary of State was to seek authority to negotiate trade agreements with other nations, looking toward a reciprocal reduction of trade barriers and a mutually profitable increase in our trade with other nations of the world.

There has been great controversy about the program. Some of its proponents have envisioned trade agreements as a solution for all of our difficulties. Critics, on the other hand, have predicted dire things as a result of each agreement and nothing less than national disaster if the program were continued. Actually, the issue is not, in my opinion, that important. Trade agreements are not a cure-all. They will not solve the many vexing problems with which we are confronted. They do, however, offer a great contribution, a step in the direction of trade and peace, and the prosperity upon which, when all is said and done, peace is likely to depend.

The excitement that has been generated by this program has given many people the idea that there is something abstruse, something mysterious, something occult about trade agreements. Actually, the thesis of the program is as plain as A B C. It is based upon the simple fact that a lasting trade between nations, like a lasting trade between individuals and between firms, must benefit both parties. Foreign trade, in its fundamentals, is just like any other trade. I have never understood why there should be so much mystery about it. Of course, speculation has been refined, and the mechanics of exchange have become more complicated with time, but the underlying principle, so it seems to me, is exactly the same as that which motivates trade between individuals or between two sections of the same country.

There was a time when man did not trade; he practiced self-sufficiency, and his standard of living was low. Today, even nations find it difficult, if not impossible, to get along without the products of other lands. And it is significant, I believe, that the more highly developed the nation the greater is likely to be the volume of its commerce with other nations.

Any of us, if we wished, could retire to a piece of land and produce everything required to sustain life in the human body. That is about all we could do. We certainly couldn't produce all of the foods we are accustomed to eat, the clothes we are accustomed to wear, and the amusements we are accustomed to enjoy. We couldn't have automobiles, radios, refrigerators, and the many other things which we have come to associate with modern civilization. The chances are we wouldn't have much in the way of culture, either, because culture depends to a great extent upon our association and interchange of ideas and goods with others. A nation could, of course, do a better job of self-sufficiency than could an individual, but the influence upon the standard of living would be the same. That is—bad.

Modern industry, which depends upon trade for its existence, has increased the standard of living manifold. It might be argued, of course, that we would be better off if we didn't have so many material possessions. I won't attempt to debate that point. Most of us, however, like to eat good food, live in good houses, send our children to good schools, drive automobiles, and enjoy generally as many of the good things of life as we can. We are able to have what we do have principally because of one factor—trade. And the term "trade" includes foreign trade.

It has been estimated that the industrial revolution increased man's productivity by four times. There is no way of computing the degree to which our well-being has been enhanced by trading with other nations. The degree, of course, varies for different countries. I venture to say, however, that for the people of some countries, foreign trade represents the difference between savagery and civilization. Certainly it means, to others, the difference between poverty and prosperity. I have attempted to make a rough guess of the extent to which foreign commerce increases the national income of the United States; conversely the degree by which our standard of being would be lowered if we were to attempt to produce for ourselves everything which we now import, and were ready to accept the inevitable concomitant, loss of our export trade.

My guess is that this figure would be in the neighborhood of 25 percent. In other words, those who now make \$6 a day would be reduced in their ability to buy to perhaps \$4.50 a day. This is something that those who are responsible for the welfare of the American worker should keep in mind. Moreover, the consequences of such an attempt would be the first certain step down the road which leads to autarchy, totalitarianism, and the horrible struggles which inevitably follow in the wake of state-controlled economies.

In making these observations I do not wish to give the impression that I am making a plea for free trade. Free trade, regardless of its theoretical aspects, could not possibly be applied in the world of today. There are certain segments of the national economy which, for military or other reasons, must be preserved. There are, moreover, some products which it might not be expedient to export. This is no reason, however, for abandoning all foreign trade; rather, it is but an added reason for stimulating trade in those commodities which, without injury to the national security and economy, we still find it advantageous to buy and sell.

Trade agreements are based upon the principle of unconditional most-favored-nation treatment. A lot of heavy things have been said and written about this precept. Like the fundamentals of foreign trade itself, the most-favored-nation principle is really very simple. It involves nothing more or less than an undertaking on our part to treat all comers alike. That means that when we give concessions to one country in a trade agreement we automatically extend them to all other countries which do not discriminate against us. This might look like giving something for nothing. In reality, it is the only fair way to do business, either domestically or internationally, and it is, to boot, the most profitable method in the end.

Critics of the trade-agreements program are very active at this time. Those who advocate outright abandonment are fewer now than when the program was begun. However, there have been advanced various proposals which, while ostensibly concerned with procedure, would in fact destroy the program.

One of these proposals demands senatorial ratification of each individual agreement. This has been determined by the Supreme Court as not being a legal requirement to a valid agreement. The American people are overwhelmingly dedicated to the democratic principle, to the democratic way of life. There are, however, some things which just cannot be done by caucus. One of them is tariff adjustment. Experience has shown that the only way tariffs can be adjusted in Congress is upward. Necessity sometimes dictates that they be adjusted downward. In either case, to get anywhere, the job must be done somewhere else than in the lobbies and Halls of Congress. In pointing out this indubitable historical fact I do not mean to reflect upon the integrity of any Congressman. Each Congressman does his best, I am sure, to represent the locality from which he comes. That is the essence of representative government. Unfortunately, tariff pressure, on a national basis, is almost invariably upward. In a changing world it has been found necessary to employ a more flexible procedure to maintain our place among the great trading nations. A century and a half of logrolling culminated in the disastrous Hawley-Smoot Tariff Act of 1930. Since 1934 our Government has been attempting in a patient, cautious, scientific, and orderly fashion to adjust some of the excesses of that act and by so doing to stimulate a healthy two-way trade—a reciprocal trade—with the rest of the world.

Congress, if it so desires, can insist that the Senate ratify each agreement. Insistence upon that right would undoubtedly kill the program. The executive branch of the American Government has asked Congress to approve a broad policy and then leave the mechanics of negotiation to those who are expert in such matters and who have no ax to grind except the interest of the country as a whole. This, it seems to me, is a reasonable compromise for us to make with conditions as they are. There are some who regard this procedure as a sacrifice of democratic principle. Actually, it is one of the best safeguards which we have against that regimentation of all kinds of business, particularly of foreign trade, which we have seen come about in so many other countries. If we are to have freedom of enterprise, let's have some of it in our foreign trade.

Another proposal which has gained considerable support is that we endeavor to ascertain the difference between the cost of producing articles in the United States and what it costs to produce them abroad and then make the tariff in each case equal to this difference. There are two very potent answers to this proposal. One is that you can't determine the cost of production; the other is that, even if you could, it wouldn't mean anything—there would be no business.

The most eminent tariff authorities in America, including two former chairmen of the Tariff Commission, have ridiculed the idea that you can obtain with any degree of exactitude the cost of producing things in foreign countries. One of our greatest tariff authorities once challenged any economist to give him the cost of producing a tomato in Canada. Those of us who are in the shipping business certainly know how difficult it is to ascertain the cost of building vessels abroad and operating them under foreign flags. We have a research division at the Maritime Commission employing more than a hundred people; we send men abroad to make intensive studies, yet we find it very difficult to determine the difference in the cost of constructing vessels in America, and the cost of constructing them in foreign yards as well as the difference in the cost of operating them under American and foreign flags. And ship costs, I am told by those who know, are child's play compared to some that the Tariff Commission has had to work on.

I don't know whether those who propose the cost-of-production formula know it or not, but this procedure, if actually applied, would mean the end of our foreign trade.

Suppose, for example, it were possible to grow rubber on a commercial scale in the United States; suppose further that we should ascertain the cost of growing rubber abroad, the cost of growing rubber here, and should then levy a tariff exactly equal to the difference. Wouldn't the result be that we would stop buying rubber from abroad? The only reason for buying from a foreign producer is to get a better product or one which we cannot produce economically. If you equalize the price, and if the quality is the same, it stands to reason that the consumer will buy from a domestic source. That may look like good business. The catch is that it might cost a dollar a pound to produce the rubber here, while we can get it from the East Indies for 20 cents a pound. So long as the East Indian producer is willing to sell it for that price, and to buy automobiles and other products from us, and thus develop a reciprocal trade, it seems to me that the present system is the right one.

Along with this cost-of-production discussion there has been a lot of talk about the low standards of living in foreign countries. Some of our people claim to see a great danger to the American standard of living in the fact that foreign workers are paid lower wages than our workers. I have never been able to see what that has to do with the matter. We buy a foreign-made product because it is produced more economically, because it is better, or for both reasons. The foreigner buys from us for the same reasons. Each side benefits, both the seller and the buyer. If each one didn't benefit, there wouldn't be any business. That's the thing to keep in mind. This is business under the capitalistic system, and I think we want to keep it for a while.

It may seem a bit inconsistent for me, as a member of the Maritime Commission, to discuss the liberalization of trade. One of our principal activities, as you know, has to do with ship subsidies. Subsidies are nothing more or less than a tariff in reverse, which makes them, I suppose, a form of trade barrier. Unfortunately this particular form of trade barrier is believed to be necessary if we are to have a merchant marine in foreign trade.

It costs from about one-third more to over twice as much in some instances to build vessels in the United States as it does in some foreign yards, and to run them under the American flag the percentages are about the same. That means that, if we expect to have any shipping in foreign trade, we have got to be prepared to pay subsidies sufficient to cover the higher costs of the American operator. We have found a merchant marine of some proportions desirable for the proper development of our foreign commerce and vital as an auxiliary to our defense forces. Hence subsidies in overseas shipping.

The higher costs of American operation, shipping people contend, are caused by the development of America as a protectionist country. It does not seem to be illogical, therefore, for the shipping industry to ask for some form of assistance sufficient to cover the higher costs resulting from the protection of other industries. It is not feasible to levy a straight tariff on foreign-flag shipping. We achieve the same result by paying subsidies to American operators engaged in foreign trade.

It should be pointed out while we are on this subject that the subsidies now being paid under the Merchant Marine Act of 1936 amount to approximately 13 percent of the earnings of the lines involved. That means that they are equivalent to a tariff of 13 percent. As tariffs go, this is a very reasonable degree of protection. Tariffs of 30, 40, and 50 percent are very common in the American schedule and there are some that run as high as 200 and even 300 percent.

It should also be pointed out that American operators engaged in foreign trade carry only about a third of the goods which enter and leave our shores. Here again shipping people contend that their aspirations are very modest. Some of the industries which have been most vocative in opposing the Hull program enjoy 90, 95, and even 98 percent of the domestic market. One industry which has been very critical has 99.5 percent. I have yet to find any shipping men objecting because a foreign-flag operator was able to participate in our trade to the extent of one-half of 1 percent.

There are many reasons why the shipping industry should be interested in the continuation of the Hull trade-agreements program. Some of them are common to all industries; others are peculiar to shipping in foreign commerce.

The most important reason, of course, is that the program aims at, and has achieved, an increase in foreign trade. The value of our business with other nations has increased several billion dollars during the period that the program has been in force. No one will contend that trade agreements are responsible for all of this increase; no one familiar with the situation will deny that they have helped.

The influence of the program is shown by the fact that trade with countries with which we have agreements has increased more rapidly than has trade with those countries with which we do not have agreements. It could be said, I suppose, that this is a purely accidental circumstance. That it is not accidental, however, is indicated by the further fact that most of the countries with which we have negotiated agreements have increased their trade with us more than they have with other countries.

Canada, in the 3 years of our first agreement with her, increased her purchases from us 42 percent, while her purchases from other countries increased only 22 percent. Cuban purchases from the United States have more than doubled since the trade agreement went into effect in September 1934. During the first 3 years of the agreement, Cuba increased her imports from us 193, 292, and

231 percent. The imports from other countries, meanwhile, increased only 87, 107, and 57 percent. These figures show, first, that the expansion of our foreign commerce which has taken place during the past 6 years was not accidental; secondly, that it was a sustained recovery and not a flash in the pan.

The Hull program has increased trade. A fact that is of special importance to the shipping industry is that trade has been increased both ways.

The program has also been of direct benefit in another way. Trade agreements, by their very nature, tend to stabilize foreign commerce. Security in the shipping industry is likely to depend, in final analysis, upon a reasonably steady flow of goods between nations. This is especially true of American shipping. Tramp owners are able to adapt themselves to, and even benefit by, violent fluctuations in the flow of goods. The American merchant marine, which consists almost exclusively of liner services, cannot help but be injured by such fluctuations. The program, by encouraging a healthy two-way trade, and thus encouraging stability in our foreign commerce, has contributed much to prosperity and employment in American shipping.

The indirect benefits of the program are no less important. Shipping, like many other industries, is extremely sensitive to the general health of the national economy. When the country as a whole prospers, shipping prospers; if the country goes into a decline, shipping also goes into a decline.

There is one more angle that is of interest to all of us. I refer to sane commercial relationships as a factor for peace. Trade certainly won't keep nations from fighting with each other—at least it never has—but they are less likely to fight if they do business on a mutually advantageous basis. Most of us have come to realize during the past 20 years that, although political events occupy the stage, the destiny of nations generally is decided in the cold, hard realm of economics. Anything that contributes to the well-being of the peoples of the earth is an influence for peace. Foreign trade, by enabling the people of one nation to sell what they can produce to advantage and to buy from the people of another nation that which they can produce to advantage, increases the standard of living of everyone concerned and, for that reason, makes nations less likely to resort to the cruel arbitrament of war.

The trade-agreements program attacks this problem two ways. In the first place, by increasing trade on a reciprocal basis, it contributes to the welfare not only of our own people but also of those with whom we do business. Secondly, by repudiating the idea of economic aggression, we have endeavored to create an atmosphere favorable to the solution of the impasse which has developed in foreign affairs during the past decade. War is now raging in several parts of the globe. Military warfare was preceded by years of economic warfare. I do not know which kind of warfare is responsible for the other, but there is certainly a connection. Each is the expression of an approach to international affairs that we, by means of the Hull program, have sought to temper through the application of a reasonable and equitable commercial policy. The fact that a good share of the earth's peoples are at war should not cause us to abandon our program; rather, it should, in my opinion, cause us to stress more than ever before those principles which we believe to be essential to the maintenance of progress and peace.

## Agriculture and Foreign Trade

### EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 15, 1940

ADDRESS BY GEORGE N. PEEK

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by George N. Peek, Moline, Ill., delivered before the members of the American National Live Stock Association, January 12, 1940, Denver, Colo.:

My subject, Agriculture and Foreign Trade, involves the fundamentals of American prosperity and well-being. The subject assumes particular significance in view of the fact that this is an election year. The American people will be asked to approve or disapprove the policies followed by the present administration.

You are seeking my views, I presume, because you feel that from my long association with the effort to secure farm equality, and from my experience in Washington with this administration, I may be able to throw some light on some of the things that have been happening that have puzzled you as they have me. I shall try to do this: First, by telling you something of the past and present situation in respect to the administration's activities in agriculture

and foreign trade, then by outlining some points a constructive program must embrace.

Secretary Wallace summed up the farmers' present economic position in Chicago last month before the convention of the American Farm Bureau Federation when he said that the farmers' share of the national income "is about equal to the share they received in the 5 years before the great depression." Secretary Hull, at the same convention, said farm income in 1939 would be \$3,600,000,000 less than in 1929.

This situation requires some analysis after 7 years of supervision and expenditure of the taxpayers' money. The 5 years preceding the depression long will be remembered by farmers and livestock producers as years of great difficulties, particularly in the grain and livestock sections of the country.

Agriculture and foreign trade are so closely tied together that it is impossible to consider one without the other. Nevertheless, this is precisely what the administration has tried to do. In practice it has treated them as though they were totally separate and unrelated problems. On the one side in its domestic legislation it has attempted, however unsuccessfully, to raise domestic price levels independent of world price levels, and on the other side in its foreign-trade activities, it has pursued a policy of low tariffs, free trade, and internationalism, disregarding wage, price, and living conditions in this country compared with those in the world at large. It is like trying to ride two horses going in opposite directions at the same time. It cannot be done, and the attempt does not make sense. We must either exert our main effort to improve and maintain and protect our American standards and our national economic security, or we must move in the direction of lowering them to approximate those of the rest of the world, where peasantry, serfdom, and forced labor are too often the rule.

Most of us think that American traditions are worth preserving. Administration spokesmen protest that that is what they are trying to do. But how can you reconcile the attempt to control and regiment the individual producer and individual production at home with the concurrent attempt to expose our producers to increased competition from abroad in the form of increased imports at cut-rate prices? And how can you reconcile either policy with the goal of protecting and maintaining American traditions and American standards?

This is the dilemma with which the country has been faced for the past 6 years, but the administration has refused to recognize it. In its efforts to avoid this dilemma, of its own making, the administration has jumped to one hot spot after another. No one has jumped further and faster than Secretary Wallace. He has tried crop restriction, with and without the processing tax. He has tried soil conservation, so-called, but he makes the payments provided the farmers take the dose of acreage restriction which he prescribes. He first opposed the idea of marketing agreements, in 1933 preventing the conclusion of more than 100 agricultural marketing agreements and codes; he then later switched over to favor them on occasion. He has alternately opposed and supported the idea of export subsidies on major export crops. He has alternately opposed with violence and supported with enthusiasm benefit payments on export crops. He has favored a policy of crop loans above market levels, but at the same time he has opposed any thought of a two-price system for export crops. He has supported the administration's low-tariff program on every possible occasion, in spite of the fact that in numerous respects it is in clear opposition to the agricultural interests he is supposed to protect. Indeed, his economic adviser, Mordecai Ezekiel, is on record against the development of certain industrial uses for farm products on the ground, if you please, that they would compete with imports. Mr. Wallace seemingly has been oblivious to the fact that his policies and Mr. Hull's, combined, have cost us some of our best foreign markets for farm products and have led to a revival, in camouflaged form, of the discredited Farm Board theory of storing up surpluses without making adequate provision for disposing of them.

This is an interesting record, if not a consistent one. In two things, however, Mr. Wallace has been consistent. He has steadfastly clung to the idea of centralized political control from Washington of the individual farmer's production, with the huge appropriations and the vast bureaucracy which that places at his disposal. And, too, he has steadfastly refused to take a stand for the farmer against the Hull program with its constant undermining effect on farm prices and farm prosperity. Always he has subordinated the farmer to Mr. Hull's doctrinaire low-tariff ideals. In fact, he even sought to justify the Argentine agreement as a measure of "war insurance," although on what possible theory and against what possible war it is a little difficult to see.

Now let me turn to foreign trade. In 1932 foreign trade hit an all-time low, but even lower than our foreign-trade indexes were the indexes of farm prices and farm income. In the following 2 years some marked improvements were noted in respect to these, even though they still were far short of what was desired and necessary to recovery. In 1934 it was felt that special measures were desirable in connection with our foreign trade to supplement the domestic effort toward recovery; accordingly, the so-called Reciprocal Trade Agreements Act of 1934 was passed. Ostensibly it was, to quote from the act:

"For the purpose of expanding foreign markets for the products of the United States (as a means of assisting in the present emergency in restoring the American standard of living, in overcoming domestic unemployment and the present economic depression, in increasing the purchasing power of the American public, and in establishing and maintaining a better relationship among various

branches of American agriculture, industry, mining, and commerce.)"

This was to be accomplished "by regulating the admission of foreign goods into the United States in accordance with the characteristics and needs of various branches of American production so that foreign markets will be made available to those branches of American production which require and are capable of developing such outlets by affording corresponding market opportunities for foreign products in the United States." Such was the purpose expressed by Congress.

The bill goes on to authorize the President "whenever he finds that any existing duties or other import restrictions of the United States or any foreign country are unduly burdening and restricting the foreign trade of the United States and that the purpose above declared will be promoted by the means hereinafter specified," to enter into agreements with foreign governments and to proclaim modification of existing duties and other import restrictions. It limits his authority, however, to increase or decrease any charges by more than 50 percent. It prohibits transferring any article between the dutiable and free lists. It specifies that the proclaimed duties and other restrictions shall apply to all foreign countries; provided, that the President may suspend the application of the bill to any country because of its discriminatory treatment of American commerce or because of other acts or policies which in his opinion tend to defeat the purpose of the bill.

The changes were to become effective from and after the time specified in the proclamation. The President, however, may terminate any proclamation in whole or in part at any time.

Every agreement is subject to termination, upon notice to the foreign government at the end of not more than 3 years from the date it becomes effective, and thereafter upon not more than 6 months' notice.

The bill became effective in June 1934 for 3 years, and in March 1937 was extended by Congress for a further 3 years. Unless again renewed it will lapse on June 12 of this year, although the agreements made under it will continue unless denounced or otherwise terminated.

At the time of its first passage in 1934 I favored the act. I saw in it a bargaining weapon of great potential power, which I thought would be used primarily to move oppressive surpluses of our great exports. But what happened? Desirable trades were rejected. Instead of being used to bargain on behalf of our export crops, it was used as a means of effecting a general tariff reduction without congressional sanction. This was done by use of the so-called unconditional most-favored-nation policy, under which any concession granted to any one nation was straightaway granted to every other nation in the world, without requiring any concession in return. To make these tariff reductions as general as possible, the administration carefully declined to take note of the several hundred bilateral agreements existing among other nations of the world from the benefits of which the United States was and is excluded. It also declined to take note of many other trade agreements and trade practices among foreign nations which were and are, in fact, discriminating against the United States. Official reports of the United States Tariff Commission on this point were ignored, for to have noted them would have defeated the undisclosed purpose of general tariff reduction without congressional sanction. Only Germany was excluded from the list of the administration's tariff beneficiaries, and that for reasons which were personal and political rather than commercial or economic in nature. Even Russia and Japan were allowed to sit in on the feast, and they are still in their seats.

The administration throughout 1934 and 1935 had vigorously denied that any attempt to bring about a general reduction in tariffs was contemplated. Even President Roosevelt himself, as late as November 1935, said in a letter to me:

"Nobody is asking *laissez faire* or unconditional most-favored-nation general reduction in tariffs."

The truth is that, whether or not other nations were asking for generalization of concessions, our international altruists gratuitously gave it to all countries except Germany. Half a dozen of these agreements already had been completed when the President wrote that letter and the rest followed. The Cuban agreement is the only one where the concessions were not generalized.

Later in the same winter Assistant Secretary of State Grady, either more frank or less blind, in a magazine article, disclosed the objective and the method employed. Mr. Grady said:

"Our objective is the general amelioration of the world situation."

"We have already lowered many rates, which have been generalized to other countries. When we shall have gone the rounds of most of the important countries of the world, reducing in each case the duties on commodities of which it is the principal source, we shall have lowered our tariffs on a great many items where the case for lowering is justified. As a result of extending these reductions to virtually all countries, we will obtain, it would seem, what the proponents of unilateral tariff reduction desire; but we will do it more carefully and scientifically than is possible by legislative action."

Of course, he referred to a general reduction in the tariff.

Later in a speech at Riverside, Calif., he said:

"This new policy is of an importance that can hardly be exaggerated. We are to a greater degree than ever before meshing our domestic economy into world economy."

The fraud was apparent. The purpose now is no longer concealed. In fact, Mr. Hull in a recent speech at Chicago not only

admitted it, but boasted of the trade-agreements program as "a general tariff readjustment," which, incidentally, he claims he effected more wisely and efficiently than Congress could have done, which should be interesting news for Congress, but its main significance lies in its revelation of the extent to which Mr. Hull has departed from thinking in terms of democratic government.

He attempts to justify this usurpation of authority by blaming all the ills of the world on the Smoot-Hawley Tariff Act of 1930. He ignores the fact that the world depression set in more than a year before the Tariff Act of 1930 became effective, and that the Tariff Act of 1930 was merely a belated effort to protect our domestic economy from the world-wide collapse of commodity prices. Actually the depression resulted primarily from the impoverishment of nations, the dislocations of trade, and the destruction of international exchanges caused by the World War. In the effort to recoup the huge economic losses of the war, the various nations vastly over-expanded the production of commodities far beyond the power of the weakened world market to absorb them—coffee, sugar, rubber, copper, wheat, are prime examples—with the inevitable result in the late twenties of a general world-wide collapse of all commodity prices, and a consequent collapse of world-purchasing power and of international exchanges which contributed progressively to the confusion which followed. At the same time, however, that Mr. Hull assails the Tariff Act of 1930, he attempts to credit the Trade Agreements Act of 1934 with all the improvement since 1932. This is fancy skating on thin ice for a man who has said "figures don't lie, but liars figure," or words to that effect.

The administration program has now been in operation for more than 5 years. The claims of its advocates have been ardent but shifting. Facts have been unkind to them. For example:

(1) They have said that trade agreements are definitely helping American farmers to win back vital foreign markets. Unfortunately, the fact is that under these policies our cotton exports have been cut in half, and our wheat exports well nigh disappeared until the wartime demand from Europe developed.

(2) They have said that concessions have been granted only where imports were needed to supplement our own production. But compare this statement with the practically all-inclusive list of American farm products selling below parity (i. e., the domestic supply out-running the demand) on which, nevertheless, the administration has seen fit to lower tariffs and encourage cut-rate imports, thus inflicting further blows on an already weak structure of farm prices.

(3) They have said that unless we lower tariffs, foreigners will not be able to get the money to buy American farm products. Contrast with that the fact that from 1934 to 1938, inclusive, foreigners, through sales of gold and silver, had obtained nearly \$7,000,000,000 more than was necessary to pay for all their purchases in this country. They used it not to buy farm or other products, or to pay their debts to us, but to buy securities, to increase their liquid holdings here, and to buy elsewhere war materials and other supplies. There is more than enough dollar exchange available to foreigners now to buy American goods without our feeling we must open our markets to foreigners at the expense of our own producers.

(4) They have claimed that we needed triangular trade and the only way to get it was through general tariff reduction. But triangular trade long ago ceased to be a significant factor in our foreign trade, and it went out the window almost entirely when the present European war was declared.

(5) A final argument to obscure the real nature of the program was for a long time given great prominence, namely, that the agreements were a means of preserving the peace of the world. That argument has not been heard much since September 1, until the President revived it in his message to Congress last week, but if the opposite had been claimed, it would have forecast events more clearly.

As a matter of fact, the outbreak of war has revealed the administration policy as obsolete and ineffective an economic weapon as the bow and arrow would be on a modern battlefield. The only world in which this program would work is a world wholly at peace, a world of stabilized exchanges, a world of uniform wage and price levels—standards of living. Instead of that, we have war with its violent dislocations of trade, a fresh collapse of currencies, destruction of living standards in the belligerent and near-belligerent countries, and no indication of the outcome save that it will be tragic. This is the world economy to which the administration spokesmen have boasted of linking us—in which they seek to enmesh us further. We want none of it, and the stronger the wall we can build between us and it, the better for us and ours.

In the agreements which have been made there have been approximately 1,100 tariff rates reduced, 100 items bound on the free list, 50 bound against increase and not 1 tariff rate raised. About 200 agricultural tariffs have been reduced, although in the campaign of 1932 said Mr. Roosevelt:

"I do not intend that such duties shall be lowered."

Before leaving the subject of the trade agreements let me give you a few figures from official data—just a few high spots:

For the years 1935-38, inclusive, the Trade Agreements Act was in operation. Comparing the yearly average of exports and imports in this period with 1934, when the act was not in operation, official figures disclose that:

All merchandise: Exports increased \$654,000,000, or 31 percent; imports increased \$720,000,000, or 44 percent.

Agricultural: Exports increased \$62,000,000, or 7 percent; imports increased \$495,000,000, or 45 percent.

Industrial: Exports increased \$591,000,000, or 49 percent; imports increased \$225,000,000, or 41 percent.

For the first 8 months of 1939, which was prior to the European war, compared with the first 8 months of 1934:

Agricultural: Exports declined \$60,000,000, or -11 percent; imports increased \$203,000,000, or 29 percent.

Industrial: Exports increased \$586,000,000, or 73 percent; imports increased \$507,000,000, or 41 percent.

This increase of \$200,000,000 of agricultural imports in 8 months is at the rate of \$300,000,000 a year. Seventy-five percent of these commodities are directly competitive with our own production. They represent the production from 11,000,000 acres of good farm land figured at \$20 an acre.

The quantity imports of all commodities upon which tariff rates were reduced increased 123 percent between 1934 and 1937, the last year for which I have this data.

Competitive agricultural imports increased 61 percent in 1938 compared with 1932, while noncompetitive ones increased 28.8 percent.

In the first 10 months of 1934 cattle imports were 53,566 head; in 1939, 664,339. Canned beef imports, 35,000,000 pounds in 1934 and 78,000,000 pounds in 1939.

The figures speak for themselves and demonstrate that, so far as finding increased markets for American farm products is concerned, the program has failed. Administration theorists assert that the quantity imported is such a small proportion of our total requirements that it has no bad effect on the income of our producers. But every informed producer knows that it is the continued offering at lower prices that bears down the market rather than the quantity really imported. Income depends upon volume of sales and unit price. Imports of competitive commodities help neither for the American producer.

Does the administration claim that reduced tariffs on agricultural products increase the prices to American farmers? I for one would like to have them be specific on that.

In conclusion I shall summarize now my views of the problem and state what I think a constructive program for agriculture and foreign trade must embrace. It is essential, however, that this program, or for that matter any farm and foreign-trade program, must be administered by a competent and efficient administration in Washington. Much of it could have been realized under existing law with an administration sympathetic with its objectives, instead of one whose intent seemed to be to pervert its purposes.

The principal problem is maladjustment between industry and agriculture and between foreign and domestic prices and wage levels—living standards. So long as we keep agricultural prices on export crops tied to world price levels this problem will be with us, unless we submerge the farmer and industrial worker to the wage levels and living standards of foreign countries. This should not, and cannot, be done. This condition can be obviated in large part, I think, if we are willing to change the emphasis from production control, as promoted by the national administration, and which only nature can control, to marketing, which man can and does control.

To accomplish this (1) we should restrict and regulate to our domestic needs imports of foreign products, both agricultural and industrial, whenever prices are below decent American prices as represented by parity prices or cost of average American production, whichever is higher and more workable. The objective is to give the full benefit of the American market to our producers, agricultural and industrial, to the fullest extent of their ability to supply it. We should act in this direction at once, in the present session of Congress; when the trade agreements act is presented for renewal. Congress should reassert its constitutional control over tariff questions by requiring that all trade agreements present and future, be submitted to specific congressional approval. Failing such approval Congress should terminate them as provided in the termination clauses of the agreements themselves, usually a matter of 6 months' notice. At the same time Congress should provide that whenever specific commodities are selling below parity in the American market all importations of such commodities should be suspended until parity or American cost of production on the commodities in question has been reestablished. As to agriculture, a bill to effect this (H. R. 7590) was introduced in Congress on October 19, 1939, by the Honorable Roy O. Woodruff of Michigan, and I commend it to your attention. These are necessary first steps to the formulation of a long-range program in the interest of American agriculture. They should be taken without delay.

Once the principle of full protection of the American market is established:

(2) We should encourage the production in this country of products now imported and stimulate industrial uses for these products and for products now being produced here.

(3) We should limit, as far as possible, the operation of the Commodity Exchanges to domestic transactions at domestic price levels, thus insulating our markets against the lower prices quoted in other countries where wage levels and living standards are lower than ours. (If separate exchanges are required to serve foreign markets, let them be created. The sugar exchange may supply a pattern.)

(4) We should, if necessary, compel the payment to farmers by handlers or processors of an American price for American consumption of our principal export crops, such as cotton and wheat,

disposing of the balance after all domestic requirements are filled, through negotiations with foreign nations country by country.

To accomplish this we have several methods from which to choose.

Most, if not all the nations of the world, except the United States, have accepted this principle, although their methods differ. Their experience has demonstrated its necessity for their self-preservation. On the other hand, this administration has refused to consider such procedure even when highly desirable opportunities were presented.

How can we control the economic or political policies of the rest of the world? The answer is, we cannot. But we can attend to our own affairs and mend our own fences, economic and political.

(5) We should encourage soil conservation for its own sake, as distinguished from its use as a device to attempt to control production and administer it through the land-grant colleges or other suitable State agencies with the Federal Government's cooperation and financial assistance.

(6) We should encourage the development of cooperative marketing to the full. It is not a cure all, but your own experience shows how helpful it can be.

(7) We should reorganize the Tariff Commission into a real foreign trade board and make it responsible, under direction from Congress and the President, for policies of foreign trade and financial transactions, as distinguished from diplomatic activities, and we should compel bookkeeping records with each country. (The activities of the State Department should be confined to diplomatic and political matters, its traditional sphere.)

(8) We should keep what is good of existing legislation, amending it where necessary to include the foregoing, and improve other provisions which may be improved. For example, cooperative insurance, commodity loans, financing for farmers, purchases for relief, and in other respects.

The result, I think, would be a vast saving in the appropriations by Congress, not only for the farmer but for relief and for other purposes.

If our farmers had such a program and an administration which would aggressively administer it, I believe they would be able and willing to absorb a large part of the Government cost of removing excess supplies, which is for their benefit. They have always questioned the wisdom of the extravagant expenditure of money by this administration. They know what taxes mean to them.

I still say that my interest in politics is for agriculture—not in agriculture for politics.

The welfare of agriculture is of more importance to the Nation than that of any political party or of any administration.

Give the country the truth, and then we can see whether or not the country wants to "mesh our domestic economy into world economy," thus submerging our producers, agricultural and industrial, into the peasantry and serfdom of much of the world.

This administration has had its chance. The record speaks for itself.

We must replace theorists with realists, inconsistency with consistency, incompetency with ability, fiction with truth; and the time is now.

## The Years of the Locust

### EXTENSION OF REMARKS

OF

HON. CLARENCE J. BROWN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, January 15, 1940

EDITORIAL FROM THE JEFFERSONVILLE (OHIO) CITIZEN

Mr. BROWN of Ohio. Mr. Speaker, the real strength of America has always been in the rural communities and small towns. Perhaps it is the pure air of the countryside that permits the citizens of the agricultural sections to have such a clear vision and to perceive a true outline of national and international affairs.

From the pen of S. C. Fuels, editor of the Jeffersonville (Ohio) Citizen, perhaps the smallest newspaper published in my district, under the title of "The Years of the Locust," comes an editorial summation worthy of the attention of every American citizen. I quote:

[From the Jeffersonville (Ohio) Citizen]

THE YEARS OF THE LOCUST

One of the most eventful decades in modern history has ended. And this Nation enters a new decade which, unless all signs are wrong, its people must face and grapple with problems, issues, and responsibilities of the most far-reaching character.

The 1930's will be known to the historians of the future as the years of one of the greatest and longest depressions this or any other nation ever experienced. They will be known as years of experiment, of trial and error, of the weighing of our old values and our old traditions. And they will be known too as years in which the democratic process was consistently attacked by some of those who called themselves its friends, as well as by those who were its frankly avowed enemies.

From the international point of view, the tragic thirties came to a cynically fitting end in that most ghastly and unnecessary of events—a war which embraces much of the world. In nation after nation the arts of peace have of necessity been put aside, to the end that war may be prosecuted to the utmost. And war destroys more than men and materials and machines and economies and states. It destroys those essential liberties for which men have fought and died in holy causes ever since the world we know began. It destroys those spiritual values which are at the root of all artistic, cultural, and humanitarian achievement. It has been truly said that in modern war there can be no victors—there are only the vanquished. It is an ironic commentary on the times in which we live that those nations which are fighting this war in the name of threatened democracy, have been forced to use the methods of the dictators in order to meet the enemy on its own totalitarian terms.

The greatest blessing which this Nation possesses today is its physical remoteness from the conflict abroad. That is a position enjoyed by no other of the world's major powers. There is profound wisdom in the attitude of the great majority of the American people who say in effect, "We can keep out of war, and we will keep out of war." There is no war party in this country; no responsible statesman urges our participation. We can all feel a deep and abiding thankfulness that this is so. Never before was it so important that we Americans keep our heads in order that we may also keep our liberties. For should this country become involved in war democracy would vanish here as swiftly and as surely as it has vanished abroad.

Turning to our own internal problems our task is great. The gratifying improvement that has recently taken place throughout our economic structure must not be allowed to blind us to the unpleasant truth that not one of those issues which we were forced to face at the start of depression has been solved. Most of them have become more complicated and difficult. The national debt, despite the heaviest tax load in our peacetime history, has nearly trebled in the past decade and will soon reach the present legal limit of \$45,000,000,000. The immense expenditures for relief continue, even though business has much improved and unemployment has consequently been reduced. The agricultural situation, in spite of a long series of extremely expensive farm relief measures, remains tangled and unsatisfactory.

On top of that there is still a strong clique high in government whose attitude toward business can be described only as strongly inimical. This is the group which backs any and all measures designed to put government into tax-subsidized competition with heavily taxed private enterprise, which stays awake nights thinking up new ways of saddling business with restrictive laws and punitive class taxes, which encourages labor excesses to the full, and which does all in its power to prevent stability and to keep chaos and uncertainty in the saddle. It is a remarkable tribute to the courage and staying power of American business that it has managed to progress as much as it has when confronted with such handicaps.

Summing up, we have plenty to do at home during the years that stretch ahead. The current Congress and those which follow have their work cut out for them, but satisfactory results will be secured only if the people as a whole are awake and watchful, are conscious of their needs, are deeply aware of their American heritage and way of life. For, in spite of the unproven claims of extremists, our only real progress has come from productive, employing industry, working under the American system of free enterprise, which brought us from a minor power to a world power in a century and a half.

Here in America we have all that is needed to bring a greater prosperity than we have ever known—the industries, the men, the resources. But unless we maintain our basic liberties, material blessings mean nothing.

### Traffic Safety Record of Providence, R. I.

#### EXTENSION OF REMARKS

OF

HON. HARRY SANDAGER

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, January 15, 1940

#### EDITORIAL FROM THE CHRISTIAN SCIENCE MONITOR

Mr. SANDAGER. Mr. Speaker, there is an old saying that "self-praise is no praise at all." So Rhode Islanders ordinarily are not inclined to call attention to the remarkable safety record of Providence, Cranston, and other cities of our

State, but simply to continue the good work and to extend to officials entrusted with the task of maintaining public safety every cooperation against the slaughter of that modern juggernaut, the automobile, which since 1933 has annually caused the death of upward of 30,000 people in the United States.

But when the record of Providence attracts favorable attention elsewhere, I believe we can be entitled to justifiable pride. In the issue last Saturday of the Christian Science Monitor, of Boston, appeared an editorial entitled "The Example of Providence." It points out the remarkably low Providence record of 14 fatalities for 1939, or an estimated record of 5.5 per 100,000 population, as compared with a national average which has ranged since 1933 from 24 to 30 per 100,000.

At a time when Washington is gravely concerned with the problem of traffic safety, particularly since three persons have already lost their lives since the first of the year, I ask leave to have the editorial from the Christian Science Monitor printed in the CONGRESSIONAL RECORD in the hope that this and other cities can learn from the record of Providence that "It can be done." The editorial follows:

[From the Christian Science Monitor]

#### THE EXAMPLE OF PROVIDENCE

The lesson that Providence, R. I., has given the Nation is simply that accidents are avoidable, if one drives slowly. Although impressive records were made last year by both Kansas City, Mo., and Atlanta, Ga., in reducing their fatalities by 60 and 50 percent, respectively, the New England city of Providence, despite its narrow winding streets and frequently adverse weather, has again topped them all, holding fatalities to 14, or 5.5 per 100,000 population.

The Providence campaign has many fronts. One is educational, police working with the schools, so that not a child of school age has been killed in 13 months. Another is the development by press and public officials of a lively civic pride. This has been stimulated by such things as the granting of the National Safety Council grand award.

But it is the firm conviction of police that success in Providence lies in the strict, impartial enforcement of a 25-mile-an-hour speed limit.

This is a conclusion some may find difficult to accept; but actual police records over a number of years, detailing the factor of speed in specific accidents, was so conclusive that when the superintendent of police asked permission to enforce the 25-mile limit no great objections were heard.

Byproducts of this slowing down are interesting. After driving a few blocks in Providence traffic, one begins to feel a certain measured rhythm in the movement of cars. Tension is relaxed and replaced with calm assurance. There is time for courtesy. These are doubtless contributing causes to the fact that safety-conscious people throughout the country are considering the example of Providence.

Daniel W. Bell

#### EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, January 15, 1940

#### ARTICLE BY RAYMOND P. BRANDT

Mr. COCHRAN. Mr. Speaker, the appointment of Hon. Daniel W. Bell to the position of Under Secretary of the Treasury should serve as an inspiration to the Government civil-service employees.

Twenty-eight years ago he came to Washington as a \$700 clerk. Today he is the ranking officer of the Treasury Department, receiving \$10,000 a year. His advancement, year by year, was due solely to the services he rendered. His promotions came unsolicited, and as a civil-service employee he never sought political influence, although I am sure the scores of Members of the Senate and House with whom he has come in contact in an official way would have endorsed him for any position he desired had he made the request.

Had Mr. Bell been willing to leave the civil service no doubt he could have been Director of the Budget. He served

as Acting Director, and it was at his own request he was finally returned to his old position.

Under permission granted me, I include an article by Mr. Raymond P. Brandt, of the St. Louis Post-Dispatch, printed January 14, 1940, concerning Mr. Bell. The article follows:

[From the St. Louis Post Dispatch of Jan. 14, 1940]

**CAREER MAN RISES TO HIGH POST WITHOUT BENEFIT OF POLITICS—D. W. BELL, NO. 1 IN CIVIL SERVICE—NEW UNDER SECRETARY OF TREASURY CAME UP FROM \$700 UNITED STATES JOB—PRECEDENTS UPSET BY PROMOTION OF ILLINOISAN, AN INDEPENDENT VOTER, WHO ARRIVED AT CAPITAL 28 YEARS AGO WITH BUSINESS COLLEGE CERTIFICATE—ONCE DECLINED BUDGET DIRECTORSHIP RATHER THAN FORFEIT CLASSIFIED STATUS**

(By Raymond P. Brandt)

WASHINGTON, January 13.—Until Daniel Wafena Bell, of Kinderhook, Ill., was promoted to the Under Secretaryship of the Treasury, the position had been filled by ambitious and comparatively young men who qualified politically under the Hamiltonian tradition of government by being rich, well-born, and able, whether they were Democrats or Republicans.

Bell, now No. 1 man in the classified service, is a different type of public official. During the past 28 years he has risen from a \$700-a-year clerkship to the second highest office in the Treasury Department. He is a "career man" who has dedicated his life and his talents to the Government. He says he would rather have a \$15,000-a-year Government salary than a \$75,000-a-year business salary in New York.

Of his nine predecessors in the office of the Under Secretary, five were graduates of Harvard College or the Harvard Law School, two were graduates of Yale, one of Dartmouth, and one had been a student at Cornell. Two were elevated to the Secretaryship of the Treasury. One, the late S. Parker Gilbert, became a partner of J. P. Morgan & Co. and the remainder won substantial success in law or business.

#### CLERK AND BOOKKEEPER AT 20—HIS STEADY RISE THE HARD WAY

In 1911, when Bell was 20 years old, he arrived in Washington with a diploma from the Gem City Business College of Quincy, Ill., which certified to whom it might concern that he had completed the full commercial course, including bookkeeping, shorthand, and typing. He had also passed the civil-service examinations for clerk and bookkeeper. While in the Treasury Department he obtained a law degree from the National University of Law and a degree of bachelor of commercial science from Southeastern University, where he specialized in higher mathematics. He expects to stay in Government work; and if the Under Secretaryship reverts to its customary political status, he will return to a classified civil-service position in the Treasury.

To the hundreds of thousands of employees in Federal, State, and municipal governments who have been encouraged to believe in the merit system, Bell's recent promotion is a noteworthy—and needed—demonstration that the civil service offers outstanding careers to industrious, ambitious, and intelligent young persons. It also draws attention to some of the glaring deficiencies of the present law and the need of greater and more permanent incentives in the form of higher salaries and larger retirement benefits.

Bell's rise to high governmental position by the hard way of continuous work is not unprecedented. Ebert K. Burelew, who entered Government service in 1910, is now First Assistant Secretary of the Interior; William H. McReynolds, formerly of the Treasury Department, who entered the Post Office Department in 1906, is an administrative assistant to the President; George S. Messersmith, who started as American consul at Fort Erie, Canada, in 1914, was recently named American Ambassador to Cuba after serving as an Assistant Secretary of State; Wilbur J. Carr, former Assistant Secretary of State and Minister to Czechoslovakia, started his public service as a clerk in the State Department in 1892; and the late Alvey A. Adee became Second Assistant Secretary of State during a half century of service.

When Bell's appointment was proudly announced at a press conference by President Roosevelt before Congress had convened, reporters, knowing the past political implications of the Under Secretaryship, tried to find out if he was a Democrat or Republican. He is an "independent" voter and is so registered in Illinois, where he has regularly voted. Not one of his ballots, he says, has been unscratched.

#### AN OPPORTUNITY FOR SERVICE TO GOVERNMENT AND PERSONNEL

Bell regards his present post as one which will give him his greatest opportunity for service to the Government and the classified personnel. He knows the machinery of our Federal Government as few other men have ever known it. He has rejected business offers of three to five times his present \$10,000 salary because he believes that by staying in the Government service he can raise the standards and increase the security of his fellow workers, thousands of whom he knows by name and by their accomplishments.

When he was Commissioner of Accounts and Deposits, a position sometimes called the "greatest bookkeeping job in the Nation," he refused to accept President Roosevelt's offered appointment to the Directorship of the Budget, although his compensation would have been increased from \$8,500 to \$10,000 a year. His reason was simple

and sincere. He did not want to lose his civil-service status by taking what was essentially a political appointment. He became Acting Budget Director and continued supervising the work of the Division of Accounts and Deposits. As Acting Director he completely reorganized and enlarged the Bureau of the Budget to give it direct and intimate insight into the workings of all the executive departments of the Government. With this task almost completed, he turned his organization over to Budget Director Harold D. Smith, who is carrying out his detailed plans. Without losing his civil-service status he became an assistant to Secretary Morgenthau, and he would not take the Under Secretaryship until he had been assured that his promotion did not jeopardize the classified standing for which he had worked for more than 25 years.

Bell has seen improvements in the civil service during his stay in Washington, and he believes other great changes are coming.

"For instance," he explains, "I came to Washington to a job paying \$700 a year. That same beginner's position today pays at least \$1,440. In those days even civil-service positions were greatly affected by changes in politics. When one administration went out, division chiefs were demoted to mere clerks and clerks were promoted to division chiefs. Thousands of lesser employees were let out to make places for political appointees. When the other party was returned to power, the shifts were reversed."

#### BUT THERE IS STILL WASTE AND INSECURITY DUE TO POLITICS

"Within the past 10 or 12 years only the top positions have been affected. Promotions have been made on merit. Salaries have been increased, so there is less temptation for valuable men to take higher-paying business positions. Some of the very best men were annually lost that way.

"But there is still waste and insecurity because of politics. In this Department there is every reason why deputy collectors of internal revenue should be given permanent civil-service standing. As it is now, we spend 4 to 8 years training these men and women, and when a new administration comes in, out they go with all their experience."

Bell is in hearty accord with President Roosevelt's recommendations to Congress to raise the limits of classified compensation from the present \$10,000 to a figure which will insure the retention of the relatively small number of highly trained men who hold positions of great responsibility. He likewise believes that eventually the pensions on retirement will be increased. In his own case he can retire under the present law when he is 68 years old, after 48 years' service, on a pension of \$1,600 a year, to which he has made a 50-percent contribution. Any large financial establishment wanting to get an executive of Bell's ability could well afford to buy an annuity for triple this amount if it wanted to lure a highly trained person from the Government service.

When the President announced Bell's promotion, his immediate predecessor, John W. Hanes, urged Congress to make the position of Under Secretary permanent "so long as it is held by the incoming Under Secretary."

#### PERMANENT UNDER SECRETARIES FOR POLITICAL DEPARTMENT HEADS

Perhaps Bell's friend, Chairman PAT HARRISON, of the Senate Finance Committee, will sponsor such legislation. But Bell and others intensely interested in the Civil Service are expecting that the White House Commission, headed by Justice Stanley Reed, of the Supreme Court, will soon recommend that in every executive department now headed by a political appointee, the position of permanent Under Secretary be created, to be held by a nonpolitical civil servant who will serve through all administrations, as is now the general practice in the British Government. These permanent Under Secretaryships would insure a continuity of Federal policy which is now lacking. The Reed commission is also expected to support the President's recommendations for higher top-bracket civil-service compensation and more equitable retirement benefits.

Bell's career is a model of how an industrious, ambitious, and intelligent young man without political pull can attain one of these high positions.

His father was a farmer and thrasher-machine owner, who later became a carpenter after he moved to the town of Kinderhook, with its population of 300. Daniel was the oldest son and the third child in a family of six children. None of his family, he says, had any inclination toward figures, and he took the "full commercial course" at the Gem City Business College in nearby Quincy, because he wanted to go west with a little business training. He earned the money for his schooling by working on the railroads and in the ice cream parlor at Kinderhook.

#### INTO CIVIL SERVICE BY ACCIDENT

It was an "accident" that led him into the civil service. A colleague at the Gem City school was eager to enter the Government and "just to keep him company" Bell took the civil-service examinations with him. He passed with high marks and almost immediately was called to Washington. He says he doesn't remember whether his friend succeeded in getting a job.

His first assignment was that of bookkeeper and clerk in the office of the Treasurer of the United States. The next year he was transferred to the office of the supervising architect at an increase of \$100 a year. Shortly thereafter he alone was writing the architect's annual report which formerly had been a three-man job.

When the United States entered the World War, he applied for the first officers' training camp, but Secretary McAdoo refused to

release him. Twice he was drafted and twice the Secretary insisted that he would be of greater service in the Treasury Department. This irked Bell, and he resigned to join the Army. Had he been willing to take a clerical position he could have had a captaincy. He wanted to go overseas immediately so he enlisted as a private in the Tank Corps. He was sent overseas but did not have front-line service.

The rigid Tank Corps physical examination was easy for Bell because he had kept himself fit as a sand-lot baseball player. He was on several church teams as pitcher and second baseman and was a member of the Treasury Department team that won the tricity championship for Washington over Baltimore and Richmond.

#### BACK IN THE TREASURY

Almost immediately after the armistice he was released from the Army to return to the Treasury, where he began handling the war loans. By 1923 his salary had been increased to \$4,000 a year. The next year he was named deputy commissioner of accounts and deposits, which is really the bookkeeper's office of the Department. He succeeded to the commission when his immediate superior, Robert G. Hand, died, many think from overwork. Bell's salary was increased from \$6,500 to \$8,000.

When young Lewis W. Douglas resigned in 1934 as Director of the Budget because of disagreement with President Roosevelt's spending policies, Bell was offered the post. He declined to take the title of this position because it would have cost him his civil-service status and identified him too closely with the Democratic regime. He agreed to become the Acting Budget Director and retain his classified standing as Commissioner of Accounts and Deposits. This pecuniary sacrifice was applauded by many Federal employees' groups in Washington and throughout the country.

As Acting Budget Director he became an intimate adviser of President Roosevelt and Secretary Morgenthau on budgetary matters, and more influential than most Cabinet members. He impressed reporters at the White House "seminar" on the President's annual Budget messages to Congress by his uncanny memory of exact recommendations on specific items and his ability to explain in layman's language complicated bookkeeping arrangements. He frequently corrected the President's explanations of involved estimates.

#### PROMOTIONS

The President and Morgenthau lost no opportunity to praise and advance this nonpolitical Government official. In 1935 it was found that he could be appointed an assistant to the Secretary at \$10,000 a year and retain his civil-service classification. This was done and he continued to act as Director of the Budget. After he had completed plans for reorganizing this Bureau and Smith was appointed Director, Bell was put in charge of the Department's fiscal operations and acted as a liaison officer between the Treasury and other branches of the Government. Last month, in announcing his promotion to Under Secretary, President Roosevelt in a formal statement said:

"Mr. Bell's career as a civil-service employee is a story of hard work, gradual promotions, and years in which he became the trusted confidant and adviser of many Secretaries of the Treasury. His assignment to positions of greater responsibility and trust in recent years is a recognition of his great ability and devotion to duty. He is in all respects a civil-service career man, with an unblemished record of faithful and efficient service to his Government for more than 28 years."

Until he became Acting Budget Director, Bell was not well known outside the Treasury Department. He was so self-effacing that he would not allow reporters to quote him even when he merely explained the daily Treasury statement for their benefit. With each increase of responsibility he has grown in confidence and poise, but he has retained the modesty and industry that have marked his career since he left Kinderhook.

Like many other men, he is afraid that he has a laughable middle name, and he has tried to conceal it by using only the initial. He was named Daniel after his father and the Wafena was added by his mother after she had seen a papoose about Daniel's age on the back of a squaw who was part of an Indian show visiting Kinderhook. She thought it would be amusing if she named her baby after the papoose. Bell says that he doesn't know what the name means.

## Bonneville Dam

### EXTENSION OF REMARKS

OF

HON. KNUTE HILL

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, January 15, 1940

Mr. HILL. Mr. Speaker, I ask unanimous consent to extend my remarks in the CONGRESSIONAL RECORD and to include therein a break-down, by States, of the \$8,860,034.42 purchases made so far in the construction and early stages of operation of the Bonneville Dam.

Similar figures for expenditures made in the construction of the Grand Coulee Dam, or any of the large western Federal construction programs, have been placed in the RECORD, and all illustrate the same point. I wish to call the attention of Members of this House to the way in which funds appropriated for our western projects eventually come back to benefit business in nearly every district in the Nation.

I ask you to particularly note that of the \$8,800,000 spent by the Bonneville administration, about one-half was for purchases in the State of New York and a fifth returned to Pennsylvania. As the projects are self-liquidating, there has been no "raid" on the Treasury, and laborers, manufacturers, merchants, transporters, and many others have profited by receiving business they would not have had otherwise.

## The Debt Limit

### EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 15, 1940

EDITORIAL FROM THE WASHINGTON POST OF JANUARY 13, 1940

Mr. SPRINGER. Mr. Speaker, I ask unanimous consent to extend my own remarks in the RECORD, and to include therein a very sound and timely editorial which appeared in the Washington Post on Saturday morning, January 13,

1940. In this connection may I urge every Member of the House to read and study this illuminating editorial which deals with the subject of our debt limitations as now fixed by law.

In passing may I suggest that it is quite unusual and profoundly strange that our Nation has been compelled to pass a law in order to prevent one of our citizens, who is at the helm of our own Government, from spending excessive amounts of our taxpayers' money. The people are greatly concerned because such a step was made necessary by the very generous and highly extravagant spending of the people's money, and, we will remember, this is the first and only legislative step of this character which our Nation has been required to take in order to stop a President of this country from rushing our Nation and our people into bankruptcy.

When the records in the future scan the years in the past and discover that it became necessary for the Congress to pass a law limiting our debt in order to stop our President from squandering and ruthlessly spending money which is borrowed, to the extent that our very financial structure is imperiled—when the converse should be true—I wonder what the stern reaction of the people of that age will be? Yet, those very people in that far-removed period will be struggling, without doubt, in order to pay the vast debt, and interest, which has been created by the President and his administration.

This ruthless spending must be stopped or the debt limitation will have to be increased. I am happy to say that I will not be one of those Members of the House who will aid in creating the necessity of increasing the debt limitation beyond the \$45,000,000,000 mark, as the same is now fixed by law.

The splendid editorial appearing in the Washington Post follows:

[From the Washington Post of January 13, 1940]

#### THE DEBT LIMIT

Whether the Federal debt (exclusive of heavy contingent obligations) slightly exceeds \$45,000,000,000 at the end of the fiscal year 1941, or falls just short of that total, is relatively unimportant. But the fact that the legal debt limit now stands at \$45,000,000,000 has great political significance. Public attention would be most unpleasantly directed to the trend toward bankruptcy if Congress were forced to raise the debt limit in an election year.

In his Budget message the President made it clear that the only hope of staying within the legal debt limit during the fiscal year 1941 lies in a reduction of certain expenditures, and in acceptance of new tax proposals designed to yield about \$460,000,000. Even if Congress does not overstep the budgeted outlays, current expenses will, it is estimated, exceed current receipts by nearly \$2,900,000,000, unless additional taxes are levied.

The President hopes to narrow this gap by recapturing \$700,000,000 of capital funds from various Government corporations. But assuming acceptance of all his recommendations including tax proposals, the net deficit is expected to reach \$1,716,000,000.

Anxiety over the budgetary situation is not due primarily to the fact that we are fast approaching an arbitrary legal debt limit for direct Federal obligations. The real cause of alarm lies in the knowledge that year after year total expenditures have outstripped total receipts from taxes. As Representative Woodrum of Virginia says: "It is a simple, fundamental fact that no individual and no nation can continue to go ahead spending more than he (or it) takes in."

The United States is a rich country; it can carry a heavy debt load. Hence, it would be idle to guess how long the Government can continue spending beyond its means without encountering disaster. Modern governments, moreover, have so many devices at their disposal for keeping down interest rates and financing deficits through pressure on banks and investment institutions, that the distress signals which once called attention to the dangers of chronic deficit financing are no longer so apparent.

Yet it can be said with absolute assurance that the time will ultimately come when confidence in the solvency of the Federal Government will be destroyed unless a determined effort is made to eliminate deficits.

At present many Congressmen are either ignorant of the dangers ahead or are willing to risk future national disaster for the sake of present personal advantage. Otherwise, it is impossible to explain the reckless drive for larger appropriations that would carry expenditures even beyond the limit set by the President. One congressional bloc is demanding increases in farm benefit payments. Another is clamoring for more money for flood control. But nobody appears anxious to discuss plans for levying new taxes.

A reminder that an increase in the legal debt limit will be unavoidable unless this reckless spending urge is restrained may

have a salutary effect upon Congress. For the mounting debt is a warning signal of the perilous extent to which the Federal Government is living beyond its income.

### Rural Electrification

#### EXTENSION OF REMARKS

OF

HON. ANDREW C. SCHIFFLER

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 15, 1940

EDITORIAL FROM THE WELLSBURG (W. VA.) DAILY HERALD  
OF JANUARY 13, 1940

Mr. SCHIFFLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Wellsburg (W. Va.) Daily Herald of January 13, 1940:

[From the Wellsburg (W. Va.) Daily Herald of January 13, 1940]

Private electric companies have to tell their stockholders at least once a year, and usually more often than that, what the results of their operations have been. They have to report the income they receive from their customers, their operating expenses, their taxes, the bond interest they have paid, and the dividends they have paid to their stockholders.

The taxpayers of this country, however, aren't getting such reports from some of the electric enterprises they have financed. For instance, take the Rural Electrification Administration. To date it has advanced upward of \$200,000,000 to scores of cooperatives scattered over the country which are supplying electric service to thinly settled rural areas. No one can quarrel with the objectives of the R. E. A., but it is unusual that to date no report comparable to those issued by private companies has been issued on these cooperatives. The R. E. A. has not made public the gross revenues, the operating expenses, the tax payments, or any other important financial information on the cooperatives to which funds have been allotted.

The taxpayers of the country, who have advanced this money, ought to be entitled to some information on the financial progress of the cooperatives. Repeated assertions have been made that the loans made to the cooperatives would be paid off. So far, however, there is no way of judging, because no information which would indicate whether they will or will not be has been made public.

One way of giving the taxpayers information would be to have each cooperative once a year publish a report, giving an income statement for the preceding 12 months, and a balance sheet. Such a report should be published in the newspapers of the territory served by the cooperative. The reports would supply information of interest to all residents of the area served and would give an indication of whether public assurances that the R. E. A. loans would be paid off are based on hopes or on real progress by the cooperatives.

### Citrus Fruit Problem

#### EXTENSION OF REMARKS

OF

HON. HARRY R. SHEPPARD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 15, 1940

ARTICLE BY BRUCE McDANIEL

Mr. SHEPPARD. Mr. Speaker, with the privilege granted to extend my remarks in the RECORD, I wish to again call the attention of my colleagues in the House to the adverse condition that exists in the great State of California in disposing of our citrus fruits.

We are confronted with a curtailed market and almost insurmountable transportation costs, although we have done and are doing everything possible to place upon the market regulated and acceptable high-grade fruits. We have even taken on prorate control even though other States who are producing citrus fruits have not seen fit to accept this regu-

lation. This is also causing us adversities, consequently we have been and are seeking every possible relief and method of clarifying the situation.

I wish to call your attention to the following article written by Mr. Bruce McDaniel, a man who has long been active in the production and distribution of citrus fruits in California and respectfully request that my colleagues read Mr. McDaniel's comments, as I feel that the suggestion contained therein would do much to clarify the citrus problems in the State of California:

#### SURPLUS HITCHED TO SURPLUS EQUALS SCARCITY

We urge the Federal Government to train with Federal funds 2,000 competent men and women to increase the flow of fresh fruits and vegetables through retail stores.

At a recent conference in the East this suggestion was presented to a Federal official. The purpose and effect of the plan were outlined.

The benefits to be derived are:

1. The use by consumers of more fresh fruits and vegetables is essential to maintenance of optimum health. All available data show the daily diet needs substantial increase in these necessary foods.

2. The increased volume moved will increase rail loadings and enable carriers to reduce freight rates. The rails argue that if rates are reduced they need increased volume. Under volume proration they fear restriction in shipments.

3. The increased sales by retail stores will increase their turnover and permit them to reduce their margins and still make more money. The facts show that when retail stores put special effort forth in selling citrus, their sales of other fresh fruits and vegetables also increased. This was due to the added stimulation to the produce departments resulting from the interest in pushing citrus fruits.

4. The increased sales will create more demand and tend toward price stabilization and result in stimulation of business. A retailer hesitates to buy in large volume when the market is unsteady. He doesn't wish to be caught with a volume on hand when the market drops. The fact that citrus is moving in increasing amounts daily gives him confidence. He buys in larger volume to protect himself against rising values; that is, he is in a sellers' not a buyers' market.

5. Federal lending agencies which have lent money to the railroads, to cooperatives, and to producers will be protecting their loans. The millions lent by Government to railroads, for production purposes, etc., will become assets instead of liabilities. Railroads are essential to business. They must be maintained. They must have an income to meet the costs imposed by laws respecting labor, etc.

6. The Federal Surplus Commodities Corporation which buys fresh fruits (so-called surpluses) will be helped by speeding the movement of such products to the consumer. Each year the F. S. C. C. buys apples, oranges, grapefruit, and so on. Under the stamp plan these move through retail stores. Speed up that movement and the F. S. C. C. can save its money.

7. Producers will be benefited by being able to move more good fruit into consumption. In the face of increases in production, especially from Florida and Texas, this is imperative.

8. Private and national banks will be helped by strengthening the ability of producer and other borrowers to pay back loans. No bank likes to impound funds, or load its portfolio with Government securities to the amount now in vogue. It lives by keeping its money working.

9. The men and women engaged in the work in time will be absorbed in jobs because the effects of their work will be such that alert distributors and retailers will demand their services. The objective of such a plan is to convert nonproductive labor into productive labor. Here is a way to do it.

From this very brief analysis, it is self-evident that the idea is not a selfish one, designed merely to aid producers and handlers of fresh fruits and vegetables. The beneficial effects of it will be felt in almost every major branch of our national life.

The types of persons fitted for such work are entitled to as much consideration as other groups. Thousands of ambitious, university trained men and women are available and seeking a way to serve. A young man doing this job beats putting a shovel in his hand and directing him to move dirt from pile to pile.

The cost? Well, in these days when Federal expenditures are reckoned in billions, it probably will be disappointing to some that the costs would be relatively small in proportion to the gains above set out.

Here is one way in which Uncle Sam can spend his money to achieve tangible results and build America.

They say we have a surplus of citrus fruit and of manpower.

Hitch the two together and we'll have a surplus of neither one.

Surplus manpower hitched to surplus crops will create a scarcity.

Our hats are off to the United Fresh Fruit and Vegetable Shippers Association and to its secretary, William Garfitt, for the work already done in this direction.

BRUCE W. MCDANIEL.

#### Fanfare for a Hero

#### EXTENSION OF REMARKS

OF

#### HON. FRANCIS H. CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 15, 1940

ARTICLE BY HARLAN MILLER

Mr. CASE of South Dakota. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to preserve An Armistice Day Fantasy, written by Harlan Miller for his column Over the Coffee, appearing in the Washington Post on November 10, 1939:

[From the Washington Post of November 10, 1939]

He lies on a hillside southwest of the Potomac. \* \* \* Below him airplanes rise from the drome in the lowlands and fly above the small boats in the river—a thrilling sight against the Washington backdrop, if he could but see.

On the left, beyond the formal terrace beyond the river, the gray stone buildings of the Government march from the Lincoln Memorial past the White House and the Washington Monument to the voluptuous dome of the Capitol.

There the messages were written, the speeches uttered, the laws voted with the ayes and noes and signed; there the military commands went forth which sent him across the sea to die in a foreign war, the Unknown Soldier, this most singular enigmatic hero of our century, under the marble slab in Arlington.

Hundreds have stood here whose son he may have been, whose lover or husband or father perhaps he was. \* \* \* Did he leave a son behind? An eager, militant, warlike son? A son with a bitter hatred for war? His son is trench size now.

What manner of man was he? Probably he was in his middle twenties—24 or 26. \* \* \* Was he a volunteer? Was he drafted? Did his heart leap or sink as he put on his uniform the first time? Was his blood racing with high adventure as he climbed the gang-plank?

Was he a tall, slim, silent, drawling son of the West? Was he short, husky, garrulous, passionate? Was he of Revolutionary stock or the son of an immigrant? Was he blond, dark-haired, red-haired with blue eyes? Was he shy and withdrawn, or was he the life of the party, always kidding? Was he an aristocrat like Quentin Roosevelt, or was he the obscure son of an obscure family, as unknown in life as in death? Was he a lieutenant or a noncom or a private?

What was the way of his death? Did it stalk him and find him in his trench? Did he go forth to meet it crawling in the wet, murky dawn through the stubble of some inauspicious yellow field? Did he go toward it with a rush, invincible, invulnerable, immortal?

By what sudden quirk did his death overtake him? Did he swerve to left or right to tighten a gap in the line? Did he avoid one bursting shell and praise his lucky star, only to run into another? Did death come to him with merciful swiftness? Did it torture him for agonized hours seeming like eons? Did he lie for weeks in some thicket or shellhole, half buried?

Had he ever seen this Washington, his Capital, which now lies spread out below him? Had he wandered through its avenues as a tourist with a camera? Had he once looked down from the Monument toward this Virginia hillside where he would one day lie in enviable but anonymous glory?

Had he ever strolled among these graves in Arlington, a little awed and depressed by the reminders of the illustrious dead, faintly troubled by the uneventful happiness of his own obscure, peaceful life, who is now honored for a multitude, beyond them all?

Would he smile if he stood now on these broad stone steps, watching one of his 4,000,000 buddies pose uncomfortably but stubbornly against this marble slab while a proud fortyish wife snaps a camera and the sentry marches past, eyes front, toward the canvas sentry box and the greenhouses of the experimental farm in the valley below glisten in the westerly sun?

His last hour . . . The top sergeant says we've got 'em on the run . . . Next week the war will be over . . . Anyhow, we're due to move out tomorrow . . . Damn this mud! . . . Maybe 2 weeks' leave in some dry, sunny place in the south of France . . . Haven't been dry for 3 days . . . Maybe a bottle of wine with a pretty French girl . . . Home before Christmas and a parade down Main Street . . . The job and the girl . . . The hero's homecoming . . . So much to tell . . .

## Reciprocal-Trade Agreements

## EXTENSION OF REMARKS

OF

HON. PAUL BROWN

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 15, 1940

EDITORIAL FROM THE WASHINGTON EVENING STAR OF  
JANUARY 12, 1940

Mr. BROWN of Georgia. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial appearing in the Evening Star of Washington, D. C., on Friday, January 12, entitled "Mr. Hull's Statement":

[From the Washington Evening Star of January 12, 1940]

MR. HULL'S STATEMENT

Opening his defense of the reciprocal trade agreements program before the House Ways and Means Committee yesterday, Secretary of State Hull confined himself to a straightforward, factual statement of what tariff-lowering agreements have done toward building up our foreign trade in the past and a confident but conservative forecast as to what may be expected in the future.

In urging that Congress renew the legislation authorizing the negotiation of the agreements, which expires June 12, Mr. Hull effectively attacked the principal argument which has been made against his program—that it has proved injurious to the American farmer.

He dealt first with the general picture, showing that there was an increase of 46 percent, or \$1,000,000,000, in our export trade in 1937 and 1938, when the influence of the trade agreements became important, as compared to our exports in 1934 and 1935. Taking up the specific case of the dairy industry, the alleged injury to which has been the subject of the most vociferous complaints, Mr. Hull made a most convincing showing. He pointed out that this industry already supplies over 99 percent of the domestic market. Under a system of complete embargo on foreign dairy products, he said, the dairy industry would have 100 percent of the home market, but that market would be greatly reduced as a result of the lowered capacity of foreign purchasers to buy our export goods and the consequential impairment of the domestic purchasing power of our own exporters and their employees. The same thing is true, he added, of the American cattle industry, which now supplies from 95 to 98 percent of the home market.

Most of Mr. Hull's statement was devoted to an exposition of the benefits to America which have resulted from the trade agreements and a discussion of the care which is exercised in negotiating them to avoid undue injury to any domestic interest, but he was equally convincing in his analysis of their world-wide influence. In the Star's opinion, there can be no valid dissent from Mr. Hull's dual proposition: That our Nation, and every nation, can enjoy sustained prosperity only in a world that is at peace, and that a peaceful world is possible only when there exists for it a solid economic foundation, an indispensable part of which is active and mutually beneficial trade among the nations.

The evidence is becoming increasingly clear that no tenable argument can be made against the trade agreements. So far as the opposition case is concerned, it was summed up, with surprising candor, by a member of the House committee, who, in acknowledging a difference of viewpoint between himself and the Secretary, said that Mr. Hull "takes the broad view that the whole country is helped," while the Members of Congress must think of "the interests of the people we represent."

That devotion to narrow sectional interests, understandable though it is, has been the bane of our tariff policy in the past, and is the best argument that can be made for continuing the present limited tariff adjustment powers of the Secretary of State and the President, whose viewpoint in the very nature of things is national rather than sectional.

## Zinc Ore Price Again Reduced

## EXTENSION OF REMARKS

OF

HON. THOMAS D. WINTER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 15, 1940

ARTICLE FROM THE BAXTER SPRINGS (KANS.) CITIZEN

Mr. WINTER. Mr. Speaker, under leave granted me to extend my own remarks in the RECORD, I include the following

article which appeared in the Baxter Springs Citizen on Monday, January 8, 1940, entitled "Zinc Ore Prices Again Reduced":

[From the Baxter Springs (Kans.) Citizen]

ZINC ORE PRICE AGAIN REDUCED—UNSETTLED MARKET AND HEAVY IMPORTATIONS BRING CUT OF \$1.50 A TON

The importation of large quantities of foreign zinc under the reciprocal-trade treaties and the unsettled market conditions that usually obtain at the turn of the year last week broke slab zinc prices on the East St. Louis market, with a resultant cut in the Joplin price over the week end. The cut in ore was \$1.50 a ton, making the new price \$37.50 for both grades.

Sales, on the other hand, were the best in 9 weeks, with smelters taking 7,240 tons as compared with 6,690 tons in the preceding period. The purchase of "floats" amounted to 3,140 tons.

The contract price for lead ores remained steady and unchanged at \$64.54 a ton, with the outside market at \$63 to \$64 in carload lots and from \$60 upward in smaller amounts. Demand continued good.

Production generally was restricted by the wave of zero weather, which caused many mills to close down until the weather moderates. At that the output of zinc ore gained slightly over the week before and totaled 5,840 tons. Forty-three mills were running, but many were seriously handicapped by the extreme weather.

The mines and mills of the St. Louis S. & R. Co. at Waco, the Lawyers Lead & Zinc Co., the Beck Mining Co., the Guaranty, and several others resumed operation after the brief holiday, while the mine mills of United Zinc and Eunamar were dropped from the active list.

Shipments of zinc ore were the largest in 9 weeks, 8,844 tons leaving the bins of operators, together with 1,233 tons of lead ore, the largest movement in 5 weeks. The combined shipment value was \$428,916.

This year-end shipment, coupled with the movement of large quantities of Oklahoma ore, which will be settled for at a later date, reduced the actual stocks in bins of the field to the lowest point in nearly 20 years, although current figures showed the supply at 10,550 tons. Stocks of slab zinc in the hands of smelters last month showed their first gain in 6 months, rising to 65,995 tons as against 126,769 tons at the end of December 1938. Imports from Canada and Mexico practically doubled last year.

Two large Kansas properties, the Federal's Muncie and Jarrett mines and mills, closed Friday because of unsettled market conditions. They will remain down indefinitely, throwing about 200 men out of work. Other plants closing down for similar reasons include the F. & M. plant in Missouri, the open-pit operation of the Oronogo Mutual, the Eunamar, and the Lawyers.

The Federal M. & S. Co. is rebuilding an underground battery locomotive formerly used in the Federal Brewster mine. The batteries are being mounted on a truck chassis, and the new auto-locomotive will be used in underground work in the Muncie mine.

Eagle-Picher, as a result of its expanded operations in the field and at its central mills, produced 148,255 tons of zinc ore last year to become an easy first place winner in the production class. Federal was in second place, with 39,709 tons, and Commerce was third, with 22,336. The St. Louis was in fourth place; Tri-State Zinc Inc., was fifth, and Evans-Wallower sixth.

Eagle-Picher likewise led in lead production, with 23,425 tons, followed by the Commerce Co., Federal, Vinegar Hill, St. Louis, and Evans-Wallower.

## Development of Aviation

## EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 15, 1940

ADDRESS BY RICHARD C. DU PONT

Mr. RANDOLPH. Mr. Speaker, aviation in this country is developing rapidly and the importance of feeder-line systems is constantly growing. The development of the pick-up device has been a noteworthy contribution.

In this connection, I include a timely address by Richard C. du Pont, president of All American Aviation, Inc., delivered before the annual convention of the National Aeronautic Association in New Orleans, on January 11, 1940.

The address is as follows:

Everyone here, I am sure, knows of the almost magical growth that is taking place in all phases of aviation; and those who travel by air are certainly well acquainted with the marvelous improvement in our regular transport service.

The fact that this service is so heavily patronized is a testimonial of its comfort and safety, and the ever-increasing volume of air

mail and express is further proof of the public's appreciation of its value as a superior means of transportation.

Things are happening so fast in aviation that even the most remarkable development nowadays only occasions slight surprise.

Transport planes with cruising speeds of 200 miles an hour, and capable of spanning the continent in 18 hours, have become common.

Military planes are attaining speeds upward from 300 miles an hour, and very little imagination is required to foresee the day when air transport schedules will be geared to these speeds.

In the face of these developments it is perhaps heresy to speak of the deficiencies of our air transport system.

Successful as it is, however, it still is a system that serves only a little more than one-fourth of our population, and only a handful of cities. With such limitations the system cannot conscientiously be called adequate to our national needs.

Considering the tender age of air transport, its present shortcomings may seem an unnecessary cause for alarm over its future. It has plenty of time and plenty of room in which to grow. That is true, but the trouble is that air transport is growing up in a strait jacket.

The speed of the airplane itself has provided such a fixed format of operation that future expansion of the system along present lines is definitely prescribed. In the rapid progress that air transport has been making, the significance of the fact has escaped general attention, although the industry itself has been acutely aware of it.

For example, our air lines each year are flying more miles, but there has been no proportionate increase in the number of cities that they are serving. The increase in mileage is due mainly to additional schedules over the same routes.

According to the figures of the Post Office Department, the air lines in 1934 flew a total of slightly more than 29,000,000 miles and served 178 cities. In 1939 they flew in excess of 52,000,000 miles, an increase of, roughly, 80 percent, but their routes included only 32 additional cities, boosting the total to only 210. The combined population of all 210 cities is slightly more than one-fourth of the country, and they represent only 5 percent of the 4,000 cities which have more than 5,000 inhabitants.

What is the cause of this extraordinary situation?

The answer to that question is a paradox.

Speed, which is aviation's greatest asset, has become the worst handicap to the general expansion of air transportation.

In addition to the fact that they afford the most abundant source of traffic, the advantages of speed in service to the public and to the economy of air-line operation is the reason why air transportation has been developed almost exclusively for the benefit of our large metropolitan centers.

The effort to make the most of these advantages is responsible for the constant trend toward faster and larger planes, which, with their added pay-load capacity, cost relatively less to operate. It also has caused the tendency toward fewer stops and longer jumps, which, unfortunately, already has cost some cities their service.

A lesser, but nevertheless important, detriment to the expansion of the air-transportation system to include additional cities is the heavy cost of providing the elaborate airport facilities required by big transport planes. Many communities cannot afford this expense, although they are eager for the service. Ample evidence of this sentiment is found in the fact that there are more than a thousand cities in the country which have made a substantial investment in airports in a vain effort to obtain air transportation. Their failure has not helped the prestige of aviation.

The situation is of the deepest significance to the industry itself. For instance, the increase in air mail last year, while substantial, was the smallest since 1935. Some analysts suggest that the volume has reached a plateau and is leveling off. I do not agree with this disturbing analysis, but it is plain that if future air expansion is governed by the present rigid pattern, where its sphere of service is circumscribed, it will not be long before mail and other classes of air traffic will hit a roof.

At the present time there is a tremendous volume of air mail moving by train. According to the annual report of the Postmaster General, the Railway Mail Service last year handled over 341,000,000 pieces of air mail. These figures add emphasis to the limitations of the present air system, and they also reveal the great opportunities for the expansion of the system that lie in the areas beyond the regular airways.

These shortcomings are not recited in criticism. The purpose is simply to show that the ever-increasing speed of air-transport operation, and the economic factors that justify it, have imposed physical limitations on the universal expansion of the air-transport system along present lines. This objective obviously requires a more flexible pattern.

Generally, the problem is not a new one. The aviation industry and the Government have been studying it for some time in an effort to find a satisfactory method of developing a feeder system to tap the potential traffic beyond the airways.

Every conventional approach, however, has encountered the same stumbling block which is typified by the difficulty of providing air service over short routes requiring frequent stops without losing its superiority as a faster means of transportation.

Interest of the Government in the matter has been stimulated by the growing agitation throughout the country for air mail. In response to this agitation, Congress passed an act authorizing the Post Office Department to experiment with new methods of providing this service. The present air pick-up routes were established under this act.

The success of the air pick-up operation has done much to simplify the feeder problem. Combining flexibility and speed it offers

ideal advantages for the establishment of short-haul routes. It has brought direct air service within the reach of every city and hamlet in the country. Their size, geography, or even the fact that they may have no airports are no longer handicaps to obtaining air service. A community may be small and produce little traffic, but with the air pick-up system it is nearly as easy to serve it as to fly over it. On a pick-up route the communities may be only a few miles apart, but this does not materially interfere with the celerity of the service. A town may have no landing field, but even that is not essential, as an air pick-up station can be erected almost anywhere.

The capacity of this new system to perform this service efficiently and economically and on high-speed schedules that preserve the advantages of air transport over surface transportation is being demonstrated daily on the two air mail pick-up routes which were set up by the Post Office Department in May 1939, for the purpose of experimenting with this type of operation.

These routes run through four States, Pennsylvania, West Virginia, Ohio, and Delaware, and include 58 cities and towns, many of which have no airports. The service requires 1,584 miles of flying, and 78 pick-ups daily. With the exception of the terminal cities of Pittsburgh and Philadelphia, the population of the communities served varies from 799 to 105,000. These communities are an average of 18 miles apart. Between some, the distance is as little as 7 miles. Contacts are made at frequencies of from 5 to 22 minutes, and schedules are maintained at an average speed of 110 miles an hour, which is not far below the average trunk-line schedules. In places where no airport is available, the air pick-up stations are located on farms, public parks, and hilltops.

The system has completed nearly 8 months of operation, during which more than 14,000 pick-ups have been made in over 325,000 miles of scheduled flying, representing a performance record of nearly 95 percent, which is really astonishing, considering that the routes lie over terrain where some of the worst flying conditions in the country are encountered. During this period successful night experiments were conducted in connection with regular schedules which have conclusively demonstrated the adaptability of the system to night flying.

On routes such as these, with towns so closely spaced, it would be folly to attempt a conventional operation. Communities without airports automatically would be excluded, and, in addition, the process of making a landing at every point would retard schedules to such a degree that the service would prove slower in many cases than ground transportation.

Imagine a modern transport plane making a stop every 18 miles on a run between New York and Chicago. Both the operation and the results would be ludicrous.

The operation of the system has shown conclusively that there is almost a limitless field for expansion among the cities and towns that do not now have regular service. Further, it has been shown that the need for air service is proportionately greater in these smaller off-line communities than it is in the more populous centers. This is explained by the fact that such communities are less self-contained and self-sufficient, that they are farther removed from sources of supply, and that local surface transportation is usually inferior. Air-mail patronage along the pick-up routes substantiates these statements. There is not a single community on these routes whose daily air-mail dispatch, on a per capita basis, does not exceed that of the biggest air center in the country.

Only four of the communities now on the two air pick-up routes previously had direct air service. The other 54 communities now enjoy an overnight service for mail and also express to practically every air-line point. A national system of feeder lines properly coordinated with the trunk lines would make it possible for every community in the country to possess the same advantages.

The trunk lines naturally would form the backbone for the creation of such a feeder system. As they are not competitive in any sense, the feeder routes would not deprive the main lines of any part of their revenue. On the contrary, the traffic that would be fed into them would provide them with new sources of revenue, materially improving their economic status as well as greatly increasing their scope of service.

It is an enticing prospect to look ahead to the day when air lines will be providing the same comprehensive transportation service as the railroads. The mechanical means are in sight, but the big question is, Will it pay?

The results of current pick-up operations provide broadly an affirmative answer, but there are phases of this question which deserve further examination and discussion.

The air-mail dispatch from any one of the communities on the present air pick-up routes, as previously stated, exceeds that of New York when reduced to a per capita basis. While such a statistical comparison exemplifies the need of air transportation in these communities, actual volume of their dispatch might in some instances cause grave concern over the economic justification of the service. Fortunately, for all of aviation, the Post Office Department does not balance these items too closely. If it did, most of our postal facilities would have to be discontinued. That includes the parcel post, the air mail, the delivery of your favorite magazine, and the Rural Delivery Service, the latter alone costing the Government almost \$100,000,000 a year. If cost had been the governing factor, the Post Office probably never would have started the Air Mail Service, which was the origin of our present air-transport system.

To some extent the air pick-up enjoys this favored status. It was created primarily as a mail carrier. The expressed purpose of the act under which the routes were set up was to experiment with new methods of providing air-mail service to small towns. There

is no suggestion in the legislation that such means, if found satisfactory and practical, shall be self-supporting. However, government generosity has its limits. It is recognized that the service must develop a reasonable amount of patronage to warrant its continuance and expansion.

Although only a few months old, the air pick-up routes are handling a volume of air mail sufficient to remove all fear that this type of feeder service will become an extra burden on the Federal Treasury.

Results to date indicate that with the improvement and expansion of the pick-up system which will permit greater operating economies; by the increased patronage of the air mail and development of additional revenues from express and passengers; and by the use of one-man planes on routes where only mail and express operations are justified the service will quickly become economically self-sufficient.

On the intangible side, the potential importance of the air pick-up in relation to the national defense justifies some Government financial assistance, although I believe aviation generally has somewhat overworked this approach.

As a measure of preparedness the Government has undertaken an extensive program to train a large corps of civilian pilots. The air pick-up operation fits into this plan perfectly. Expansion of these lines on a Nation-wide scale would give employment to over a thousand pilots. As pick-up flying technique closely resembles the technique found in certain phases of military flying, these men would constitute a reserve corps of special value from the standpoint of the national defense.

Adaptation of the system to include the transportation of passengers is a logical step in its development. A feeder line that does not perform this function is not complete. In this service it is planned to operate small multiengine planes capable of carrying a crew of two and from three to five passengers. Use of the pick-up apparatus on these planes will eliminate unnecessary landings when passengers are not available, thus overcoming many of the delays which would ordinarily prevent the maintenance of high-speed schedules on short routes.

The possibilities of a feeder system on a national scale have opened a new door to the future of aviation. Its development will take air transport out of its strait jacket, enabling millions of our people who are now deprived of direct air service to have its advantages. It will provide a new market for the aircraft industry; new outlets for capital. It will create a new and large field of employment. It will put every city and town in the country within overnight reach of each other, which will provide a big stimulus to business and industry generally. It will make available to all the benefits that are now reserved to the few.

Very definitely the next great expansion in aviation lies in this direction.

## Administration, a Foundation of Government

### EXTENSION OF REMARKS

OF

HON. JAMES A. SHANLEY

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, January 15, 1940

ADDRESS BY CHARLES A. BEARD

Mr. SHANLEY. Mr. Speaker, under leave to extend my remarks in the Record, I include the following address by Charles A. Beard before the Society for Public Administration, Washington, D. C., Friday, December 29, 1939:

The authors of the Constitution of the United States regarded it as a triumph for the human spirit in America that a new form of government could be established by the process of discussion, deliberation, and popular action, as distinguished from the age-long processes of violence. Looking backward from their time and forward into our own, we may say that they were justified in their celebration.

With reference to a far less momentous occurrence, this modest occasion, we may properly regard as a triumph for the same spirit a voluntary action of public officials and interested citizens looking to the resolute and continuous improvement of the public services. It is this action, the establishment of a Society for Public Administration, that we are ratifying and approving today. These officials and these citizens are no hirelings of a despotic power, taking orders from above. They are not seeking the aggrandizement of a class, bent on exploiting and holding down a subject people. They are not concerned primarily with emoluments, promotions, and honors as such. On the contrary, they are proposing to search their own hearts and minds, to study ways and means of making more efficient and economical the services rendered by government to the people. They do not wish to diminish either civil liberties or individual responsibilities in society. On the contrary they cherish these eternal values and intend to discover and

develop schemes and methods of administration deliberately adapted to the perpetuation of these precious elements in the American heritage.

The step taken today, though it may seem novel to some, is only the culmination of a long chain of events, extending over a period of 40 years and more. The establishment of systematic instruction in comparative administration under the auspices of the late Frank J. Goodnow at Columbia University long ago was among the great beginnings. The organization of the New York Bureau of Municipal Research was another advance. The foundation of the Governmental Research Association was still another. The spread of instruction in administration among our universities, the creation of numerous societies of public officials, the growth of civil-service legislation, the self-dedicated and distinguished careers of innumerable men and women in various branches of public administration, the deepening recognition of the vital relation between efficient and honorable administration, and the very existence of our society and form of government, all these and more have signaled through the years the coming of this day and the action which is here taken.

It is perhaps because I have been associated in an humble capacity with the history of this movement since my student days under that great and good man, Frank J. Goodnow, that I have been invited to speak on this occasion. Perhaps I am a gray and moss-covered monument, set down in time, as one of the marks on the long path leading to the present event. Circumstances invite memories, therefore, but I shall spare you any such recital, knowing full well that it is not what I say here but what you do here that will count fatefully in the history of our political system in the distant years to come.

It seems far more appropriate that I should summarize in a few sentences the main conclusions in respect of administration which I have reached in my experiences and studies. Paraphrasing the language of my distinguished friend Dr. Alfred Cohn, specialist in cardiac diseases at the Rockefeller Institute, I may remark, by way of preface, that it is the business of science, in dealing with any subject, to make true statements about it, of the utmost generality, and in the fewest possible words. Remembering this admonition, I present, for what it is worth and may prove to be worth, the following bill of axioms or aphorisms on public administration, as fitting this important occasion:

(1) The continuous and fairly efficient discharge of certain functions by government, central and local, is a necessary condition for the existence of any great society.

(2) As a society becomes more complicated, as its division of labor ramifies more widely, as its commerce extends, as technology takes the place of handicrafts and local self-sufficiency, the functions of government increase in number and in their vital relationships to the fortunes of society and of individuals.

(3) Any government in such a complicated society, consequently any such society itself, is strong in proportion to its capacity to administer the functions that are brought into being.
